FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PEGORARO: YACYRETA BEST SOLUTION TO ARGENTINA'S ENERGY DEMANDS

Buenos Aires CONVICCION in Spanish 16 Nov 80 p 8

[Interview with Jorge Alberto Pegoraro, executive director of the Yacyreta Binational Institution; date and place not given]

[Text] "The Yacyreta hydroelectric project is experiencing a crucial period, especially when one considers the size of this feat of engineering. Bids are being studied for turbines, generators, gates and locks, and the lowest price quoted for civil engineering jobs exceeds $1.5 billion. Although this is a binational undertaking, the bidding appears to be the most extensive in history. It is the result of an all-important commitment." The foregoing statement was made during an interview with the executive director of the Yacyreta Binational Institution, engineer Jorge Alberto Pegoraro, who was also emphatic in declaring: "By 1986, when the first machine in the powerplant starts operating, the dam will have proven to be the best solution for supplying electric power to the Argentine market." Following is the complete text of the interview:

[Question] What are the features of the institution that you represent?

[Answer] The Binational Institution is an entity comprised by an equal number of representatives from Argentina and Paraguay. It has an Administrative Council and an Executive Committee established in the same proportion. Therefore, the decision-making power is shared. This feature makes it quite unique, with a few differences, despite the fact that it is of the Salto Grande type and resembles the Itaipu design which, as we know, is being constructed by Paraguay and Brazil.

[Question] Generally speaking, the bids made in the various biddings indicated prices that were lower than anticipated. What comments would you make in this regard?

[Answer] When there is a great deal of competition and low prices in bidding, we can consider it successful. Such is the case with all of the bidding that we have opened during recent months. There were several reasons causing this to occur. Among them we should stress the worldwide recession, which has faced manufacturers with the need to continue producing and to sell at marginal prices. The Yacyreta project, for its part, enjoys a good reputation on the international level. Another reason is Argentina's financial prestige in the world, which has evoked confidence among international financial institutions, insuring the proper payment of the remittances.

[Question] How are the criteria for making the awards established?

[Answer] The technical aspects are considered and assessed from the standpoint of reliability and performance of the machinery. These factors raise or reduce the prices quoted. There are also, of course the prices themselves and the financing terms. The decision is in the hands of the Yacyreta Binational Institution, with advice from specialized consulting firms. We are striving to shorten the deadlines, and I think that, within the next 2 or 3 months, we shall be able to obtain replies for nearly all the bids.

[Question] What mechanisms have been used for financing this project?

[Answer] The Binational Institution is like a third entity, the property of two partners (Argentina and Paraguay) which is actually the one that contracts for the loans,assumes the responsibilities and becomes indebted. Meanwhile, Argentina provides the backing for the external requirements. The Yacyreta Binational Institution has prepared its financial plan for the entire construction period, which will end in 1990 when the last of the 20 turbines goes into operation.

Among the loans, we could mention one from the Argentine Government, through the electrical funds, which is helping to finance what is known as local expenses. I should explain that it is a loan, and hence the Yacyreta Binational Institution will return it. Of those made in foreign currency, those of the World Bank and the Inter-American Development Bank are particularly noteworthy. For the first time, both institutions are operating by mutual accord, granting loans of preeminent significance. And there are those which we term export credits, which are promotional in nature, arranged on very advantageous terms by the industrialized countries to finance potential exports of their products.

[Question] What is the status of the projects being executed in the area of the site? What will they be used for when the dam is completed?

[Answer] This year, work has intensified on the housing plan, both in Ayolas, on the Paraguayan side, and Ituzaingo, on the Argentine side, where there are already several hundred housing units occupied by engineers, technicians and administrative personnel who are directing the project. We have planned to complete a total of 5,000 dwellings on both sides, of which number about 2,000 are currently under construction.

[Question] Part of Posadas will be affected by the flooding that the lake of the dam will cause. What measures have been adopted to surmount the obstacles?

[Answer] The problem of flooding that will be caused by the large lake that is to be formed (170,000 hectares) affects the towns of Encarnacion and Posadas in particular. In the latter, for example, it will be necessary to relocate about 20,000 persons.

BRAZIL'S ITAIPU DRAWS WARNING FROM ARGENTINE LOCAL PAPER

Buenos Aires LA PRENSA in Spanish 22 Nov 80 p 10

[Text] Posadas, Misiones (NA)--The newspaper EL TERRITORIO reported: "Brazil has already located three dams on the Iguazu River," giving notice that, with the operation of Foz de Areia, the major hydroelectric powerplant on Brazilian territory, "it has a master key for controlling the water in accordance with its interests."

With a large display of photographs and text, the newspaper published a note from special correspondents asking: "What will happen in 1982, when the Itaipu dam is filled?"

The article indicates that Foz de Areia, located in the Brazilian state of Parana, will be able to generate 2.5 million kilowatts when its six turbines are in operation, each having a power of 418,500 kilowatts.

According to the newspaper, the filling of the reservoir began in April and ended in July, with the result that a section of the Iguazu River 13 kilometers long was made competely dry.

EL TERRITORIO states: "The volume of flow of the watercourse downstream resembles a jointly owned property with Argentina, with the level partly maintained through the contribution from tributaries and the opening of gates of other Brazilian dams, such as Salto Osorio and Santiago."

The construction of Foz de Areia entailed the erection of a dam 160 meters high, and the water falls through six open conduits in the middle of the rock, as far as the engine room, where six turbines are installed. The first of these went into operation last October, and it is anticipated that the second will go into service this December.

The Brazilian energy plan calls for the procurement of 12 million kilowatts in the drainage area, and most of the projects have been executed by the Parana Electricity Company (COPEL), a subsidiary of the state company, ELETROBRAS [Brazilian Electric Power Companies, Inc].

The Foz de Areia reservoir impounds 6 billion cubic meters, and regulates the entire River Iguazu system, with an effect on the watercourse jointly owned with Argentina, extending about 300 kilometers, and on the feeding from the Iguazu falls.

EL TERRITORIO observes that this situation of power and control upstream means that Brazil "has a master key for controlling the water in accordance with its interests and based on the demand on its domestic market."

The article gives a reminder that, for the Argentine hydroelectric projects, the Parana River must have a volume of flow of 5,000 cubic meters per second at Posadas; and in order to allow for this to occur, Brazil must release its reserves in the dams located on the Iguazu River.

EL TERRITORIO states in conclusion that, in Puerto Iguazu, "the river undergoes strange variations which have shocked the boatmen and the local residents;" claiming that "the large projects are changing its regimen, and hence the issue should be cause for reflection and analysis."

GAS PIPELINE FUNDING APPROVED BY IDB

Buenos Aires CLARIN in Spanish 7 Nov 80 p 14

[Text] Yesterday, the Inter-American Development Bank (IDB) announced the approval of a loan of $48.8 million to be used to finance the first phase of the program for the extension of the northern gas pipeline between Rosario and Buenos Aires.

A communique from IDB states that the loan, granted to the State Gas enterprise, covers 30 percent of the total cost of the project, which has been estimated at $161.3 million. The rest will be provided by local sources. The credit assistance comes from the bank's regular capital funds, and has been granted on terms of 20 years at an interest rate of 8.25 percent per year. The payment called for is at half-year intervals, with the stipulation that the first 6 months' payment is to be made after the date of the last disbursement, while the Argentine Government is providing the guarantee.

The Project

The project consists of the construction and installation of 310 kilometers of pipework 30 inches in diameter, from the San Jeronimo turbocompressor plant (in Rosario) to the General Pacheco terminal, in Buenos Aires Province. The gas pipeline will have 13 valves, 30 inches in diameter, and three valves with a diameter of 24 inches.

The plan also calls for the construction and installation of 110 kilometers of pipework for branches of varying diameters, which will carry gas to the settlements of San Nicolas, Ramallo, San Pedro, Campana and Zarate, all of which are adjacent to the area where the main gas pipeline will be extended.

Capacity

The IDB report indicates that the new gas pipeline will make it possible to more than double the gas transportation capacity of the Rosario-Buenos Aires system (carrying from 6 to 12.5 million cubic meters per day).

The IDB notes that, "The project will help Argentina to attain a major goal in the energy sector, namely, that of reducing the country's dependence on imported oil." It subsequently remarks that nearly a third of the national gas production has to be discarded because of the limited transportation capacity of the existing gas pipelines.

The gas pipeline that is to be built with IDB assistance will afford a doubling of the transportation capacity of the Rosario-Buenos Aires system. Next week, the international bidding on the pipe that will be required for the project is planned.

Route

The purpose of the gas pipeline to be partially financed by IDB is to increase the capacity of the northern gas pipeline through piping that will run parallel from San Jeronimo (a locality situated 15 kilometers north of San Lorenzo, in Santa Fe Province) to Campana, in Buenos Aires territory. In this way, there will be a channeling of the larger volumes to be supplied when the west central gas pipeline that also terminates in San Jeronimo is completed.

Then, because this is a high-pressure gas pipeline, highly urbanized areas are being avoided by means of a bypass in the direction of General Rodriguez, where it connects with the General Cerri gas pipeline. The fluid will subsequently be moved toward General Pacheco, where it will again join the northern gas pipeline heading toward the federal capital. In other words, a gas pipeline triangle will thereby be formed between Campana, General Rodriguez and General Pacheco (see map).

According to sources consulted by CLARIN, next week the international bidding will be held for the pipe that the project will require, wherein a local company will compete with those of the other countries affiliated with IDB, as the regulations of the latter institution requires. About March of next year, moreover, the international bidding on the line installation will take place.

The new parallel gas pipeline, with its intake in San Jeronimo, will increase the transportation capacity of the Rosario-Buenos Aires system from 6 to 12.5 million cubic meters per day.

The map shows the route of the gas pipeline with intake in San Jeronimo (Santa Fe).

NEWS OF OIL FIND IN BEAGLE REGION BRINGS ON DENIALS

Buenos Aires CONVICCION in Spanish 8 Nov 80 p 13

[Text] Yesterday, the specialized weekly publication EL ECONOMISTA announced the discovery of oil in the area of the Beagle Channel by the Interocean II platform that has been operating there since last September, a fact which would afford the country its own supply within a short time (with all the political and geopolitical implications). The announcement prompted subsequent denials from the secretary of energy himself, and from various oil businessmen.

The weekly noted: "The matter has extraordinary economic connotations, since it would afford the opportunity for the country's own oil supply within a short time. Obviously, there are also geopolitical implications, because the discovery is very close to the area of dispute with Chile."

It should be recalled that the presence of the exploration platform at the eastern mouth of the Magallanes Canal caused a ban some time ago, resulting from the intervention of a Chilean warship.

EL ECONOMISTA went on to say: "Business circles are electrified by the accounts that have been virtually confirmed, to the effect that oil has been discovered in the southern sea. The success is attributed to the Interocean II platform, which is operating in the concession zone granted opposite the Beagle Canal."

It added: "Some reports state that the certainty that appreciable sources of oil exist in the area has prompted certain boards of directors of business firms to travel abroad in order to purchase a second platform, so as to hasten the development process."

It then remarks that, "The news will undoubtedly have consequences which transcend the traditional economic context."

It continues: "In fact, few people are as yet aware that one of the firms associated with the aforementioned exploratory work is Alpargatas, which is operating through a subsidiary named Petrolar." EL ECONOMISTA concludes: "It is likely that when the news reaches the stock market, there will be one of the classic periods of euphoria among the operators which have marked other similar reports in recent years."

The repercussions on the stock market are not yet known, but there was an immediate reaction from private businessmen and the secretary of energy of the nation himself, who flatly denied the rumor.

In response to the extensive coverage of the story by yesterday's evening newspapers and the audiovisual media, engineer Daniel Brunella said that the news accounts were "totally inaccurate and unfounded."

He stated that the Interocean II platform is operating opposite the Strait of Magallanes, and not in the area of the Beagle Canal. He also remarked that this was not a concession zone, but rather an area adjudicated through the risk contract system. He added that, according to information released at 1600 hours yesterday, the drilling was completed at a depth of 1,785 meters, and gas-bearing areas which were rather narrow and had a low degree of permeability had been detected.

The official added that tests would be continued, which is the reason for the placement of a Packer (shutoff valve) at a depth of 1,500 meters.

After reiterating the fact that the stories about the oil discovery were unfounded, Brunella said that there is still optimism, and finally promised to report immediately any new information on the subject.

The Interocean II platform was contracted for by Shell to carry out exploration over a maritime area of 4,736 square kilometers assigned by Government Oil Deposits. It arrived in the country from Europe on 5 September of last year and, only 48 hours later, experienced the publicized incident with a Chilean vessel.

As a result, the Argentine foreign ministry has insured the international oil company, with headquarters in The Hague, in the Netherlands, all guarantees of liberty and security in the drilling operations, which were the source of the contradictory stories yesterday.

IMPORTANT HYDROELECTRIC PROJECTS PLANNED IN VAST DESERT AREAS

Buenos Aires LA OPINION in Spanish 20 Nov 80 p 9

[Text] Although they are not included in the extensive hydroelectric plans projected by the Argentine authorities for the period from 1980 to 2000, the projects involving the El Chihuido dam in northern Patagonia (more specifically, in Neuquen Province) and the Zanja del Tigre dam in Salta are called for in more or less immediate plans, owing to the importance that their construction will hold in promoting the development of two vital areas, as proven by the exhaustive studies that have been made by experts.

Because of their location in areas related, respectively, to the two major desert regions that the country needs to incorporate into its productive structure without further delay, they are essential projects. The final conquest of those deserts, which was a task for soldiers a century ago, now entails the efforts of the state and of private enterprise to undertake their economic development, beginning with that of their infrastructure, particularly with regard to communications, transportation and, of course water supplies for human use, livestock raising, agriculture and industry.

The El Chihuido development project is located on the Nuequen River, in the Comahue area, about 70 kilometers north of the locality of Zapala, between the Agrio and Covunco Rivers, near the site known as Bajada del Agrio.

The planned electric powerplant to be build at the foot of the dam will use a 130-meter fall and, according to the stipulations in the technical feasibility studies, the installed power in that powerplant will be 1,26 million kilowatts. Insofar as the average annual production is concerned, it is estimated that the development of El Chihuido will be able to supply 3 billion kilowatt-hours to the national system, completing the development of the Rio Negro Basin, which now has the El Chocon-Cerros Colorados complex and where the execution of the work has begun on the Alicura project on the other great tributary of the aforementioned river, the Limay.

Alicura is one of the three developments comprising the Alicopa project, including the Collon Cura and Piedra del Aguila which, when combined, will have an installed power of 3.8 million kilowatts and an estimated production capacity of about 9.5 billion kilowatt-hours.

Added to those three developments are two more on the Middle Limay: Pichi Picum Leufu and Michiguao, which together will have an installed power of over 1 million

kilowatts and an estimated production in excess of 4 billion kilowatt-hours. Finally, to be added to these projects, which are associated with the state enterprise HIDRONOR [North Patagonia Hydroelectric Company[, is the Segunda Angostura project of the Water and Electric Power company, which is also state-owned, to be constructed at the headwaters of the Limay, in Lago Nahuel Huapi, which will have an installed power of 120,000 kilowatts and an average production of over 500 million kilowatt hours.

As for the hydroelectric development project located in the far northern part of Argentina which was mentioned at the beginning, namely, Zanja del Tigre, it is situated in the upper basin of the Bermejo River, north of the Salta town of Oran.

The Zanja del Tigre dam could feed a powerplant with installed power of approximately 500,000 kilowatts, with an annual production capacity estimated at about 1 billion kilowatt-hours. Despite the significance of this project from an energy standpoint, it should be stressed that its importance (like that of the Iruya River, a tributary of the foregoing) stems mainly from the fact that it is part of an ambitious plan to complete development of the Bermejo River, as was called for over 2 decades ago in the Portillo Plan.

That plan includes the construction of two wide canals using the waters of the Bermejo, which will make it possible to establish regular shipping between the northwest and the Parana, while being used simultaneously to generate power and supply water for all uses, along the entire length of their respective routes.

Morever, the construction of the dams in the upper basin of the Bermejo (and its tributary, the Iruya) will make it possible to substantially reduce the mass of sediment emptied into the Parana and Plate Rivers in a percentage estimated at over 80 percent, which must now be eliminated by means of expensive dredging.

2909
CSO: 3010

BRIEFS

OIL EXPLORATION--The under secretary of fuel, engineer Osvaldo Calcagno, announced that, at the end of the year, three additional oil exploration platforms will be included in the same maritime area in which the Interocean one is currently operating, that is, near the eastern mouth of the Strait of Magallanes. They are platforms of the Esso, Toper and Shell companies. He also said that the increase in oil and natural gas production will fluctuate around 4 percent in both 1980 and 1981, and this will result in a slight reduction in imports of hydrocarbons and their byproducts. About 1985, it may be possible to achieve our own supply of oil. Discrediting the rumors about an alleged discovery of a large oil deposit where the Interocean platform is operating, he remarked that "only in San Jorge has a discovery been made," but he described the current price of oil as uneconomical. He estimated that, in 1981, the national oil production would amount to 29.2 million cubic meters, and imports of oil and byproducts would decrease to 2.5 or 2.7 million cubic meters. A little more natural gas will be imported, in accordance with the purchase contract with Bolivia, but liquid gas imports will decline from 200,000 to 50,000 tons, owing to the fact that the General Cerri plant, near Bahia Blanca, will begin producing, with a production of 300,000 tons per year. EAST EUROPEANS OFFER EQUIPMENT FOR ENERGY PROJECTS

Romanian, Czech Visitors

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 11 Nov 80 p 28

[Text] Brasilia--Ms Doina Ardare, Romanian vice minister of foreign trade, had three working meetings in Brasilia yesterday: the first, with Mines and Energy Minister Cesar Cals, at which developments related to the protocol signed in Bucharest during his visit in July last year and a plan of cooperation with the Carajas Project were discussed; the second, with Foreign Affairs Minister Saraiva Guerreiro; and the third with the Coordinating Group for Trade With the Socialist Countries of Eastern Europe (COLESTE) to analyze the agreements signed during the last meeting of the Brazil-Romania Joint Commission early this year.

The most important conversations were held at the Mines and Energy Ministry, where the Romaniam vice minister analyzed the situation for importing Brazilian iron ore by her country. Romania has imported 3 million tons this year and 4 million tons are forecast for 1981. Counterbalancing that, furnishing Brazilian oil rigs to Romania by PETROBRAS [Brazilian Petroleum Corporation] will be discussed in Rio de Janeiro with that company's president, Shigeaki Ueke.

At the COLESTE meeting, aspects of the agreement signed with Agriculture Minister Amaury Stabile during the Joint Commission meeting, for furnishing Brazilian soybean meal in exchange for Romanian fertilizer, were discussed.

The Romanian envoys were to reply today, or tomorrow at the latest, to the Brazilian inquiry about supplies and prices of cement from their country. According to Itamaraty [Brazilian Foreign Affairs Ministry], Brazil intends to import about 1 million tons of cement next year.

Czechoslovakia

Also arranged in Brasilia yesterday was the arrival 24 November of the Czechoslovak minister of foreign trade, Andre Barcak, to settle two important matters relating to bilateral trade with that country: Czech participation in constructing four coal-fired thermoelectric power plants and construction with Brazilian companies of cement plants using Czech know-how.

In regard to the thermoelectric power plants, immediate and future Czech cooperation in expanding the recently-inaugurated Jose Lacerda plant in Santa Catarina

by 4 more units was arranged, on the basis of furnishing 40 percent of the material and know-how.

Capital Goods Imports Feared

Rio de Janeiro JORNAL DO BRASIL in Portuguese 15 Nov 80 p 15

[Text] Sao Paulo--The nation's three leading industrial associations, ABINEE [Brazilian Electro-Electronic Industry Association], ABIMAQ [Brazilian Association of Machine Industries] and ABDIB [Brazilian Association for the Development of Basic Industries] (of the electro-electronic industry, the machinery industry and for development of basic industries), are alert to the possibility of new attempts by East European countries to introduce specially-ordered capital goods in Brazil.

The businessmen have reports that Poland, East Germany and Romania intend to sell us industrial equipment, alleging that they have trade deficits with Brazil. Einar Kok, president of ABIMAQ, is opposed to imports that might substitute for domestic products, but is agreeable to collaboration in reestablishing trade balances, as long as there is participation by domestic industry.

Recollection

Kok recalled that, in importing a thermoelectric plant from Czechoslovakia for Candiota (Rio Grande do Sul), purchase of a complete plant was a foregone conclusion. But, due to the position taken by Brazilian businessmen through their associations, the project eventually had 60 percent Brazilian components.

"Now we have imports of three cement plants for the Joao Santos group, also from Czechoslovakia. They will take place only if in the nation's interest, if they help with the trade balance between Brazil and Czechoslovakia," he asserted.

At the last meeting of the ABDIB, on Thursday, the main subject of discussion was attempts by Eastern European countries to introduce equipment already made here. The Joao Santos proposal was discussed, but a final word from the industry association will not be given until after further meetings with ABINEE and ABIMAQ.

Waldir Gianetti, president of the ABDIB, declared that the entity has a firm position against imports of equipment from East Europe without clear evidence of benefit for the nation. "In the case of ALBRAS [Brazilian Aluminum Corporation, Inc]," he added, "the recently-signed agreement between Brazil and Japan assures a large share for domestic industry, and that is the way we are going to keep it."

Fears

At the moment, producers of made-to-order capital goods fear imports of port equipment from East Germany; coalmining equipment from Poland and Romania; and cement plants from Czechoslovakia. There had been a possibility that the nation would import two thermoelectric plants, spending over $1 billion, but through discussion the order was reduced to one plant.

The Xingo power plant which the Soviet Union wants to negotiate with Brazil through financings, including equipment, is also being analyzed by the basic industries association, but they lack specific information needed to reach a conclusion. The industry contends that, having allotted a domestic component of 85 percent to the Itaipu hydroelectric plant, that rate cannot be reduced.

Another concern is that for this same Xingo project the government 2 years ago refused a $2 billion loan, the equipment being produced entirely in Brazil, by Brown Boveri. Now it is alleged that this would be included in the context of seeking balanced trade with the Soviet Union.

Einar Kok, ABIMAQ president, goes further in his comments and says that "it would now be necessary to form an industry commission to monitor COLESTE, as every day new proposals emerge that are prejudicial to domestic industry because they include imports of equipment already produced and developed here."

PROJECTS FOR MINING, HANDLING COAL ANNOUNCED

Mining Projects Nearing Goal

Rio de Janeiro GAZETA MERCANTIL in Portuguese 14 Nov 80 p 9

[Text] The Brazilian Electric Power Enterprises Support Company (CAEEB) is already receiving the new projects from state and private enterprises that guarantee production of 26 million tons of coal for 1985, the company's president, Ney Webster, informed this paper yesterday.

According to CAEEB's new plans, coal production estimates are as follows: 5,358,000 tons in 1981; 7,295,000 tons in 1982; 11,268,000 tons in 1983; 17,335,000 tons in 1984; and 23,721,000 tons in 1985. These amounts, added to the 2,500,000 tons of metallurgical coal to be produced this year, will total 26,000,000 tons. Ney Webster said CAEEB hopes to receive additional projects from the private sector in order to meet the government goal of 27,000,000 tons to be produced in 1985.

In Rio Grande do Sul, COPELMI, the national cement association and the Buzzatto construction company; and in Parana, the COPEL state enterprise submitted eight new projects for coal mining that will begin to be analyzed before the end of this year and will be implemented starting in 1981.

In the state of Santa Catarina, Prospela, Criciuma, Treviso, S. Geraldo Mining, Palermo Mining, Ararangua Company and Barro Branco have submitted 23 new projects to CAEEB that are also being analyzed, as is also the case of the Cambui mining expansion in Parana.

Present Situation

According to CAEEB's president, it has received 6 projects for producing 12 million tons of coal annually (Irue, Leao II, Cardilo, Recreio, Triunfo and Faxinal mines) worth $325 million in Rio Grande do Sul and that will enter production step by step beginning in 1981.

In Santa Catarina, CAEEB has approved 3 projects (Ararangua, Criciuma and Urussanga) worth $66 million that are producing 2.4 million tons of pre-washed coal.

Ney Webster reported that 3,236,000 tons of coal were sold from January through November of this year. There were 1,666,000 tons of steam coal delivered to

thermoelectric power plants, 934,975 tons to the cement industry and 635,413 tons to other industries.

Edilson Queiros, CAEEB director, announced that the company's mission which visited the USSR recently is submitting to [Mines and Energy] Minister Cesar Cals a report recommending use of Soviet technology for "on-site" coal gasification.

Coal Terminal Needs Cited

Rio de Janeiro JORNAL DO BRASIL in Portuguese 14 Nov 80 p 15

[Text] Brazil is investing about 30 billion cruzeiros just to set up terminals for coastwise coal shipping and, in the opinion of Liberato Paulo Gomide Sigaud, vice president of PLANAVE Technical Planning Consultants, Inc, it is now time to design ships suited to domestic merchandise and carriers.

He feels that the 2d Ship Construction Program benefited construction of standardized mass-produced ships and shipyards lost interest in special vessels, notably those for shipping chemical products. This attitude is now causing ships to be imported that could have been built in Brazil.

"Introduction of each and every new means of maritime shipping, with its equipment, must be preceded by careful studies, including those necessary to verify their adaptation to Brazilian characteristics regarding ports terminals and operationality of the ship itself. But, of course, we must be open to new techniques and our shipyards must adapt to building special ships," Mr Sigaud asserts.

His consulting company concluded that Brazil must invest about 30 billion cruzeiros in ports alone to meet the government goal of transporting 25 million tons of coal via coastwise shipping from the South to the Southeast and Northeast in 1985. Today the principal coastwise cargo is petroleum and its derivatives, followed by iron ore, coal, salt, wheat (including much traffic with Buenos Aires), vegetable oils, iron and steel products and, to a lesser extent, so-called general cargo.

PLANAVE is participating in the Charqueada Coal Terminal in Rio Grande do Sul, from which coal-carrying vessels will sail for the Rio Grande do Sul Coal Terminal. It is also working on the Santos Coal Terminal, supervising construction of the Sepetiba Coal Terminal (in Rio de Janeiro) and concluding equipment installation in the Tubarao Coal Terminal in Vitoria.

Wheat and salt will continue to be important cargoes in coastwise shipping, although the goods carried from the Northeast to the Central South do not alone compensate for the trips carrying wheat to the North.

Mr Liberato Paulo Gomide Sigaud believes that all the changes taking place in ocean shipping, through increased volume of some cargoes and through new equipment (barge carriers, roll-on-roll-off, and sailing vessels) require the shipowner to have greater knowledge of his line to better choose the ship that is suited to it.

"The II PCN [expansion unknown] induced the Brazilian shipowner to accept a ship off the shelf, as if it were a Volkswagen. But a ship is a unit that must be designed with a given purpose in mind," the PLANAVE vice president concluded.

By 1985, coal lines must transport 25 million tons

PETROBRAS GETS GREEN LIGHT TO INITIATE GAS PLAN STUDIES

Rio de Janeiro GAZETA MERCANTIL in Portuguese 14 Nov 80 pp 1, 7

[Text] PETROBRAS [Brazilian Petroleum Corporation] yesterday got the green light to begin studies preparing plans for what is to be called the Master Plan for Gas Distribution, consisting of a network of gas pipelines and coal gasification plants to meet demand in the industrial centers of the South and Rio de Janeiro. A highly-placed source asserts investments are $2.7 billion. The plan also provides for using gas from the Campos Basin and imports from Bolivia and Argentina.

Just yesterday, however, negotiations to buy Argentina gas hit a snag. PETROBRAS reservations are due to the fact that Argentina cannot guarantee constant supply throughout the entire year.

A delegation from Gas del Estado, Argentine state enterprise that has a monopoly on marketing and distributing natural gas, visited PETROBRAS yesterday, but negotiations made no progres whatever. The Brazilian position is to prefer Bolivian gas, which, after all, is the same gas that would be sold by Argentina to Brazil (Argentina buys 6.3 million cubic meters of gas daily from Bolivia and would sell 5 million cubic meters to Brazil during the winter and 10 million cubic meters during the summer). Other than a possibly lower price, the preference is due to the reliability of the Bolivian supply.

That is the unofficial position. Officially, the Master Plan for Gas Distribution prepared by PETROBRAS and submitted to the Ministry of Mines and Energy considers both possibilities. This plan is the basis for a deeper study to be made jointly by PETROBRAS and CAEEB [Brazilian Electric Power Enterprises Support Company] intended to systematize fuel gas supplies for the states of Rio Grande do Sul, Santa Catarina, Parana, Sao Paulo and Rio de Janeiro during the 1980 decade.

The first part of the plan is a survey of the potential market for fuel gas. The conclusion is that the market is "more than sufficient" to absorb all production expected from coal gas as well as from natural gas. And this does not take into account the residential market, now supplied through LPG [liquid petroleum gas], a step to be covered by the detailed phase. The study also opens the possibility of including the Belo Horizonte region, where consumption is heavy.

According to the study, the gas supply will be based upon gasification plants to be installed in Sao Jeronimo (Rio Grande do Sul), Tubarao and Sao Francisco (Santa

Catarina), which will produce a gas of average heating power (2,830 kcal [kilocalories] per cubic meter) obtained by the Koppers-Totzeh process, the technology for which has been acquired by PETROBRAS. For the other units, "market characteristics suggest producing a gas with heating power between 4,300 and 4,500 kcal per cubic meter, which will permit supplying clients in Rio de Janeiro and Sao Paulo with the same type of gas as used now," the study says. There is also provision for technological evolution to the point of permitting production of SNG (substitute natural gas), which will permit interconnection of gas pipeline networks from plants of Sao Francisco, lower Santos and Rio de Janeiro with the natural gas networks, "with the advantage of more reliable supply and ability to reach more distant regions."

The location of the gasification plants and the respective gas pipelines is already suggested in the master plan. The first plant is that of Sao Jeronimo in Rio Grande do Sul, which will use coal from the Leao mine, with options for that of Irui, Charqueadas, Arroio dos Ratos and Recreio. The gas pipeline will lead to the Greater Porto Alegre region. A second unit will operate in Tubarao, in Santa Catarina. It will use washed steam coal to arrive at a 30 or 35 percent ash content, which will depend upon what specific techniques are adopted. The gas pipelines will head south toward Criciuma and Icara and may supply Imbituba in the future.

In Sao Francisco, also in Santa Catarina, a third plant is to be located to serve the Joinville regions and, to the north, Curitiba and Araucaria, in successive steps of expansion. "A future gasification center would be established in central Parana," the study says, "depending upon appearance and identification of new coal reserves."

The Lower Santos region, from the market point of view, "is the best possible location for a large gasification complex that would serve the whole coastal area and could supply part of the market of the city of Sao Paulo and environs. It must also be borne in mind, however, that the state of Sao Paulo should receive natural gas from Bolivia and Argentina."

Rio de Janeiro would be the area recommended by the master plan for the fifth plant, to be located in Itaguai and intended to supply the regional market. "Here, one idea would be to locate the pipeline for natural gas coming from northern Rio de Janeiro State (Campos Basin) to Resende." With that, the existing naphtha gas plant that supplies Rio de Janeiro would be "hibernated," being replaced by coal gas.

Each plant will have a growing number of gasification units which, in the end, will be distributed as follows: Sao Jeronimo, 8 units; Tubarao, 4 units; Sao Francisco, 10 units; Lower Santos, 12 units; and Itaguai, 6 units. The 40 units, each producing energy equivalent to 250 tons of petroleum, will represent a total replacement of 68,000 barrels a day of fuel oil. The total cost of the investment is 2.7 billion cruzeiros, to be made during the next 10 years.

ITAIPU, GOIAS HYDROELECTRIC POWER PLANTS ARE FUNDED

Itaipu Allocated $1.5 Billion

Rio de Janeiro O GLOBO in Portuguese 18 Nov 80 p 16

[Text] Foz do Iguacu--General Costa Cavalcanti, director general of the Itaipu Binational project, said yesterday that the funds needed to pursue construction of the hydroelectric plant in 1981--$1.5 billion--are already asured. The financial timetable of the Itaipu hydroelectric plant indicates that 1981 will be the year of heaviest disbursements over the entire construction period, from its inception until its conclusion. Itaipu is budgeted for $10.3 billion.

He reported, moreover, that this guarantee results from the government's policy consensus arrived at last weekend, according to which priority in the power-generating sector was given to Itaipu, Tucurui (in Para) and Angra dos Reis (atomic energy). Costa Cavalcanti, director of the binational company and president of ELETROBRAS [Brazilian Electric Power Companies, Inc], met in Brasilia last weekend with Mines and Energy Minister Cesar Cals, at which time the priorities were established.

Of the $1.5 billion planned for 1981, Itaipu will obtain $450 million abroad and $1.05 billion in the domestic market. Of the latter portion, the National Economic Development Bank (BNDE) has promised to provide directly (not taking FINAME [Fund for the Financing of Machinery and Equipment] funds into consideration) $70 million next year and $230 million more by the end of 1988.

In regard to foreign funds, the binational is concluding a loan--to be signed in the next few days--of $200 million with a consortium of banks (including Hanover, Tokyo, City Bank and Bank of Montreal). Another fact that encourages Itaipu management was the visit that banker David Rockefeller made to the hydroelectric construction site last week. Impressed with the size of the undertaking, Rockefeller commented to General Costa Cavalcanti that the Chase Manhattan Bank will support Itaipu more strongly. So far, Chase has financed only 0.1 percent of the foreign funds contracted by the binational. Itaipu management is convinced it will raise the foreign funds needed for next year.

Ahead of Schedule

According to General Costa Cavalcanti, Itaipu construction is 2 months ahead of schedule. He believes this lead will be kept as long as funds are available.

The Itaipu hydroelectric plant, begun in 1975 and to begin operating with 3 turbines in 1983, will be finished in 1988, when its 18 turbines will be functioning. It will have installed capacity of 12,600 kilowatts, compared to the present capacity of 28,400 kilowatts for supplying the Central-South region.

The project is budgeted to cost $10.3 billion (at prices of January 1080). Of this amount, $6.6 billion will be direct investments and $3.7 billion will be interest on loans contracted. Of the total, $6.6 billion is already assured, according to Costa Cavalcanti. The domestic market provided $4.6 billion and $1.9 billion was obtained abroad. Hence, Itaipu must still obtain $3.8 billion.

By the end of this October, Itaipu had made direct investments of $3.6 billion and amortized $600 million of its debt. Although in 1980 construction is costing $1 billion, in 1981 direct investments of $1.4 billion will be needed.

Federal Funds for Goias

Brasilia CORREIO BRAZILIENSE in Portuguese 18 Nov 80 p 5

[Text] Mines and Energy Minister Cesar Cals and Governor Ari Ribeiro Valadao of Goias at noon yesterday held the signature ceremony for an agreement between the General Secretariat of the Mines and Energy Ministry [MME] and the Goias Electric Power Plants [CELG], through which 312 million cruzeiros will be appropriated by the Energy Mobilization Program for building the Balsas Mineiro hydroelectric plant in north-central Goias.

The ceremony, held in the office of Minister Cesar Cals, was also attended by the Goias secretary of mines and energy, Wolney Siqueira; special secretary Mucio Teixeira; the president of CELG, Aderval Nunes Montalvao; the MME secretary general, Arnaldo Barbalho; the director of the National Department of Water and Electric Power, Oswaldo Baugmgarten; federal deputies Guido Arantes, Siqueira Campos and Anisio de Souza; and other authorities.

Hydroelectric Plant

After the agreement was signed, Governor Ari Valadao thanked Minister Cesar Cals for his efforts to assure funds for the hydroelectric plant, which is being built by the Goias government, mentioning that it has special significance for development of northeastern Goias, considered the state's "most needy, troubled and poverty-stricken region."

"The Balsas Mineiro power station, combined with the access roads we are installing in north-central Goias, will permit emergence of a new wave of progress for that entire region, which we had defined, while still a federal deputy, as being a veritable corridor of misery," asserted Governor Ari Valadao, stressing that the hydroelectric plant is also part of President Joao Figueiredo's plan to reduce Brazilian dependency on imported petroleum.

Support

Minister Cesar Cals, replying to Governor Ari Valadao, said his ministry's General Secretariat had to redistribute funds earmarked for other agreements in order to

assure the 312 million cruzeiros allocated to the Goias Electric Power Plants. "The decision to support construction of the Balsas Mineiro plant was the fruit of our personal observation in Goias, where we could verify the state governor's efforts to build works that, besides fitting in with the nation's energy strategy, also represent an improvement in the people's living standards," Cesar Cals stated.

In his opinion, the plant's importance does not lie in its size--which is relatively modest, as it will generate 16,000 kilowatts--but in the part it should play in developing northeastern Goias, also benefiting neighboring regions of Bahia, Piaui and Maranhao.

Addressing himself to CELG President Aderval Nunes Montalvao, the mines and energy minister explained that supporting state enterprises "is a sure way of strengthening the federation, as it is they who grapple most directly with the problem of each region and are thus in the best position to promote economic and social development in an integrated manner."

Agreement

According to the agreement signed yesterday, the Mines and Energy Ministry is committed to relend CELG a total of 312 million cruzeiros. The first parcel of 112 million cruzeiros is to be released within 15 days after publication of the agreement's extract in the DIARIO OFICIAL. The remaining 200 million cruzeiros will be released in later parcels as the work progresses.

The agreement is for a period of 12 months beginning yesterday. It can be extended for an additional period, depending upon the desires of the Mines and Energy Ministry and the Goias Electric Power Plants. The funds earmarked for building the Balsas Mineiro power plant are from the Program for Energy Mobilization and Alternative Energy Sources, within its investment plan for 1980.

Requiring a total investment of 1.8 billion cruzeiros, the Balsas Mineiro plant is the second undertaking of the Ari Valadao government and is intended to solve the problem of electricity shortage in important Goias cities such as Pedro Afonso, Porto Nacional, Paraiso do Norte, Miracema, Tocantinia, Guarai, Miranorte, Pium, Tupirama and Cristalandia. CELG is also studying the future possibility of supplying energy from Balsas Mineiro to other cities such as Monte do Carmo, Natividade, Pindorama, Alma, Dianopolis and Ponte Alta do Norte.

WILLY BRANDT COMMENTS ON NICARAGUA, EL SALVADOR, REAGAN

Managua BARRICADA in Spanish 19 Nov 80 pp 1, 2

[Interview with Socialist International president, Willy Brandt, in Madrid, on 15 November 1980]

[Excerpts] His real name is Herbert Frahm, but the whole world knows him by the pseudonym that he used during the underground battle against Hitler's fascist regime. He has been a journalist, author, mayor of Berlin and chancellor of the Federal Republic of Germany. He is Willy Brandt.

Brandt, an imposing German who does not look his age of 67 (he was born on 18 November 1913 in the city of Luebeck), is the president of the Socialist International, and promoter and member of the International Committee for the Defense of the Nicaraguan Revolution.

During the 15-minute interview that he granted us in a drawing room of the Melia-Castilla Hotel during the 15th Postwar Congress of the Socialist International which has justed ended in Madrid, Brandt discussed Nicaragua, El Salvador and the American threats.

The interview took place in English. In a clear, resonant voice, with perfect diction, the former German chancellor explained his determination to create a Committee for the Defense of the Nicaraguan Revolution, an international CDS [Sandinist Defense Committee] comprised of 15 of the most distinguished political personages from Western Europe.

Madrid, 15 November 1980.

The Committee for Defense of the Nicaraguan Revolution

B.: We know that the formation of this Committee for Defense of the Nicaraguan Revolution, which was announced during the congress, was due to a motion of yours. We would like to know what prompted you, Mr Brandt, to propose that resolution to the congress?

W.B.: Yes, it was the result of a decision of mine after a frank, serious conversation that I had with the commander of the revolution, Bayardo Arce, who was here at the congress. It was due to my impression that there might be reactionary

forces in the neighboring countries that could have been misinformed about what actually might happen in Washington, and could believe that they were acting in conjunction with Washington if they began or continued to act with a policy of aggression. So, I proposed the committee (of which I am a member), suggesting that Felipe Gonzalez (secretary of the Spanish Socialist Workers Party [PSOE])be appointed its chairman. It was our intention, thereby, to emphasize our solidarity with Nicaragua and, at the same time, to show a "red flag" to people who might have bad intentions.

FSLN and the Socialist International

B.: What is the significance to the Socialist International of the presence of the Sandinist National Liberation Front at the congress?

W.B.: Well it is not the first time that we have met. I recall the spring of last year, when Ernesto Cardenal explained the Sandinists' position at the meeting which we held in Luxembourg, and we have been in contact several times since then. I myself was at the conference in Santo Domingo during the spring of this year. But it is, indeed, the first time that the Front has been present at a congress. I think that this has been appreciated by Europeans and, of course, by representatives from other parts of the world, but especially by those of us in Europe; because its presence shows us a degree of confidence, and also affords us an opportunity to participate in the experience of a movement, with the specific experiences that you have noted in the battle for liberty and individual identity.

The Nicaraguan Revolution

B.: What is the significance of the Nicaraguan revolution to the Socialist International?

W.B.: I don't really know whether there is a general interpretation of it. I shall not speak on behalf of everyone, but I think that what all of us have in common is that we view it as an individual identification of the aspirations of its people, and desires for the future. So, for the rest of us it is not a matter of making our own decision; but rather that, well, this is what it is, and we respect it.

The IS' Positions

B.: Mr Brandt, the solidarity demonstrated by this organization during the past 2 years has always been rather evident to us, but we would like to know whether this attitude toward Nicaragua is a special event in Latin America, to make common cause with the revolutionary movement in the battle against fascism and imperialism?

W.B.: Well, I, too, during my youth, was involved in the battle against a fascist regime, and this holds true for the Austrian Chancellor (Kreisky) and a certain number of us; but no one should have the impression that we intend to exert force on others. We do not wish to export our specific goals; we do not wish to replace the influence of others with our own. We only offer association, and we have the impression that in your country, as in others, or at least in a certain number of Central American countries and those beyond, it would not matter to them if the external relations were diversified, provided the diversification is based on the strict principle of association on an equal footing, and not on the superiority of anyone over another.

Reagan and the Possibilities of Intervention

B.: Mr Brandt, we have learned about the Republican platform and the statements made by Reagan in connection with Latin America, especially the Central American region. And it has been claimed many times that there is a great possibility of military intervention in El Salvador. Do your party and the Socialist organization have any preventive measures to help maintain the Salvadoran people's right to self-determination?

W.B.: Let me say, first of all, that there are various parts of the president-elect's platform which, from any standpoint, raise very serious questions, and in areas in which we in this part of the world are involved as well. But it is my experience that politicians sometimes become a little wiser than their platforms, and this possibility still exists. But I believe that we are living in a dangerous period, a period of transition wherein the reactionary forces, including those within your country and outside of it, might now put their own interpretation on what a new American administration could do or tolerate. On the issue of El Salvador, I harbor the strong hope that no one will succumb to the temptation to intervene militarily. We, and when I say we I mean not only the Socialist International but also the parties which have government responsibilities, we shall not be in a position to do anything ourselves from a military standpoint, because that is impossible. But, in any event, we must do something through political means to convince, or make it clear to the Americans that this is something that we cannot accept.

The Salvadoran Revolution

B.: What is the significance of the revolution in El Salvador to you, Mr Brandt, to your party and to the Socialist International? Do you think that any option other than the revolution exists in that country?

W.B.: Look, we have followed the advice of Comrade Ungo, who is a member of our organization, and we accept his decision to leave the Junta, as did Hector Oqueli, who was minister of foreign affairs and who left together with Ungo. But we would never say that there could be no other expedients as time elapses. For example, I think that there is still a possibility that the revolutionary forces might at some point join with part of the military, that they might join with some of the Christian Democrats who have left the Junta. What I mean to point out is that if they themselves feel that something could be accomplished with an even broader base, of course this would be met with sympathy and understanding.

The Common Struggle for Peace and Democracy

B.: I don't want to take any more of your time, Mr Brandt; one last question.... Is there any room between the lines of the Socialist International that would allow for a tactical alliance with other forces, such as the national liberation movements, or the communist movement, for the sake of certain objectives, such as peace or democracy?

W.B.: Yes. In the matter of relations with the communist movement, we have let each party decide on a given situation in its own country. We, as the Socialist International, are not interfering with that. Take my own area, for example:

Whereas, in my country, this problem does not exist, because the Communist Party is very small, in France, our friends had a relationship that was working very well but, unfortunately (they consider it unfortunate) it is no longer working well, as a result of events in that country and elsewhere. But the Socialist International does not give a uniform answer to the question of working with other forces. In the case of the liberation movements, we have accepted them as partners, even though they may have their own ideological representation that differs from ours.

We have now questioned the Patriotic Front about the different elements included in it. We have helped them, and we have been on good terms with Robert Mugabe since he took over the government. We are in close contact with SWAPO [South-West African People's Organization] in Namibia and ANC [African National Congress] insofar as South Africa is concerned; and then there is a third dimension, namely, the Movement of Nonalined Countries, now headed by the president of Cuba...from whom I have just received a cordial wire today, because we had asked him whether he would sen someone representing the movement, and he sent his best wishes, saying that the nonalined nations had decided not to take part in a meeting of various political groups, because they themselves are, rather, a mixed political community. But what I certainly want to make quite clear is the fact that we, in 1980, are people without prejudices. We have our own experience and our own convictions, and we accept external partners; however, the partners for local politics must be chosen under certain conditions within each country, individually.

BRIEFS

HONDURAS FREES NICARAGUAN PRISONERS--The Honduran ambassador to Nicaragua, Attorney Roberto Suazo Tome, has reported that Honduran authorities have already given orders for the release of three Nicaraguans who were captured in this country. The Nicaraguan citizens had been in prison in Honduras for 1 month and they were freed in consonance with the relations existing between the two countries. Ambassador Suazo Tome also reported that the equipment carried by Honduran military men who were imprisoned in Nicaragua and have already returned to Honduras has been sent back and turned over to Honduran military authorities. This equipment had been seized from two members of the Engineer Battalion and from a plantation guard who had been captured by the Nicaraguans while navigating on the Coco or Segovia River about 2 months ago. VENEZUELAN FIRMS TO AID EL SALVADOR--Some prestigious Venezuelan firms are going to help to implement several public works projects of economic interest in El Salvador, it was announced yesterday by officials of the Venezuelan Pavilion at the Ninth International Fair, who said a few days after the start of the event that the trade transactions have been successful. Pavilion director Rafael Valera said that there has been success not only in sales, but also in the technical, economic and industrial cooperation ties which have been cemented between El Salvador and Venezuela. He added that Venezuela will contribute through high-level talks with representatives of the Salvadoran Government to economic and social development through what the government of Venezuela has called "International Social Justice." Valera indicated that conversations are also taking place regarding the establishment, through the Venezuelan Finance and Export Fund, of a line of credit which will be channeled through the Central Reserve Bank and will favor both the public and the private sector in El Salvador. That credit line, it was explained, will afford the opportunity to import finished and semifinished products and raw materials from Venezuela under favorable conditions. Asked about the maximum possible aid from the Venezuelan Government to that of El Salvador, Valera stated that the more economic resources the Venezuelan Government has, the greater its obligations to countries with fewer resources. MARTINEZ DE HOZ ADDRESSES CONCERNS OF FARM SECTOR

Buenos Aires LA PRENSA in Spanish 22 Nov 80 Sec 2 p 4

[Text] Santa Fe--"The Economy Ministry is studying a refinancing mechanism for farm and industrial sectors with financial problems, as long as we are sure that the beneficiaries will make efforts to overcome their problems with time and work."

This was the major statement in the speech that the nation's economy minister, Dr Jose Alfredo Martinez de Hoz, delivered before 500 businessmen from this city and the central and northern sections of the province.

The minister had traveled to this city from Rosario on an invitation from the Industrial Union of Santa Fe, whose president, Mr Angel Lombardi, welcomed him and stressed the importance of Dr Martinez de Hoz' first visit to the provincial capital.

He had previously attended a meeting at the Government House with the head of the Executive Branch, retired Vice Adm Jorge Anibal Desimondi, and all of the ministers and under secretaries.

Leaders of the Industrial Union, the Trade Center, the Confederation of Central and Western Littoral Rural Associations (CARCLO), the Stock Exchange and the Rural Association of Santa Fe voiced their problems and concerns at the meeting, which was held at the Provincial Cultural Center, and the minister gave wide-ranging responses to the businessmen, analyzing everything that the nation's Economy Ministry has done from April 1976 to date.

He emphasized the ways credit is used by state agencies, pointing out that private companies normally operate with 30 percent of their own capital and 70 percent debts, whereas state enterprises today operate on a half and half basis.

He pointed out the significance of returning many agencies that the Federal Government used to run to private hands, stressed the possibility of making public service agencies, such as the Buenos Aires subway, private too, and mentioned that a private company might run the metropolitan railways.

He underscored the importance of having contained the inflationary spiral, noting that inflation is a sort of extremely unfair tax, the worst tax that everyone has to pay for government inefficiency.

Lastly, he mentioned the elimination of tariff protection, which was a privilege paid for by consumers, and stressed that the industrial structure that we achieve in our country must not be imposed as a result of protection and privileges; rather, it must be the result of efficiency and economic viability in an industry with lower costs so that the people can raise their living standards.

Remarks in Rosario

Rosario, Santa Fe--Economy Minister Dr Jose Alfredo Martinez de Hoz conceded that "it is possible that we might have to temporarily use several instruments that might not seem consistent with our principles of decontrol" in exchange policy; he was referring to the criticisms leveled at economic leaders to the effect that the dollar is "undervalued."

Martinez de Hoz spoke about the economy during the luncheon commemorating the 96th anniversary of the Rosario Stock Exchange.

The minister noted that the "moral support of institutions like the Rosario Stock Exchange encourages us and enables the Armed Forces, which are in charge of this process and will continue in the new cycle beginning in late March 1981, to feel that they are always accompanied by the citizenry."

"The final solution in this instance, as in so many others," he continued, "is for us to conquer inflation," which is "the great corruptor" of society because "it leads to a disruption of the social order and finally to a totalitarian state."

He added that "the root of the problem is truly political," and in mentioning the options for overcoming inflation, he stressed that "there can be no political freedom without economic freedom.

"Nationalizations, control of economic activity or the excessive intervention of the state ultimately lead to political totalitarianism, which is inseparable from economic totalitarianism."

In Martinez de Hoz' judgment, "it has been proven that what was done over 30 years cannot be undone in 5, but we are certain that in this regard the fact that the Armed Forces are convinced of this and uphold this principle assures us that government efforts will continue in this direction with increasing vigor and with our path increasingly clear of obstructions because of what has already been done."

After the luncheon, Martinez de Hoz spoke with newsmen and reaffirmed the remarks he made in his speech.

No Moratorium

When questioned as to economist Aldo Ferrer's recent statements in this city about an imminent financial collapse, the minister replied that "I think that

people are exaggerating a great deal in all this. Rumors spread quickly, and things take on dimensions that they really do not have. I am no friend of spreading such rumors."

He noted that mechanisms are under study for refinancing and consolidating the debts of farm and industrial sector enterprises, but he cautioned in conclusion that "under no circumstances will there be a general moratorium."

EXTENSION OF EMERGENCY MEASURES URGED FOR FLOODED FARMLAND

Buenos Aires CONVICCION in Spanish 16 Oct 80 p 8

[Editorial: "The Lands Still Flooded"]

[Text] According to official evaluations dated as recently as a month ago, in the areas of Buenos Aires Province affected by the May floods, almost 4 million hectares are still under water. We must add to this report that other lands which are now free of water are undergoing a slow process of recovery that should last many months. In both cases, there still is soil degradation, loss of animals and crops, and destruction of installations, fencing and other elements necessary to a reasonable and adequate exploitation.

Logically, not only are these large areas of what can be considered the most important source of agricultural and livestock resources in the country paralyzed in their production goals, but also those who exploit them are bankrupt. Aware of these unfortunate circumstances, their representatives requested that these areas be declared to be in a state of emergency and exempted from taxation. Now, since in some cases these situations have become worse because of new rains and in others the waters have not retreated within the expected time, it has been requested of the Ministry of Economy that the state of emergency be extended until 31 December 1980.

We do not hesitate to recommend that this reasonable request be granted. We are also convinced that the national government must participate much more actively, not only by providing timely help to the producers, as in this case, but also by searching for an integral solution to this problem of floods in the so-called "Cuenca del Salado" [Salado River Basin] and other areas that could be affected by the periodicity of these weather phenomena whose repetition can be described as historical.

It must be stressed that in this emergency the government of Buenos Aires Province has acted with commendable efficiency and marked responsibility, up to the limit of the province's possibilities. But we insist that this flood problem in the production areas of Buenos Aires is also, and we believe foremost, a national concern: Their products are of great benefit to the nation's economy.

ZORREGUIETA POINTS TO DEFICIENCIES AFFECTING FARMERS

Buenos Aires LA PRENSA in Spanish 22 Nov 80 Sec 2 p 4

[Text] Ushuaia, National Territory of Tierra del Fuego--
The secretary of agriculture and livestock, Mr Jorge Zorreguieta, has voiced his dissatisfaction that the prices of major inputs for farmers and ranchers, such as cars or tractors, are not yet close to international levels, "as the state continues to monopolize services that could be furnished by private enterprise."

The secretary made these remarks in opening the Ninth Meeting of the Federal Agriculture and Livestock Council, in the presence of all the agriculture ministers and secretaries from around the country. The meeting will last until 1300 hours today, when the resolutions from the plenary session of delegation heads will be made known.

The delegation heads held a preparatory meeting yesterday, after which the provincial government gave a reception for the national authorities.

Zorreguieta Speech

In his address Zorreguieta stated that in order for us to grow and become what we want to be, we must realize that only an in-depth modification of our inherited structures can create the conditions so that energies that have been dormant for so long can once again be definitively released.

In assessing his performance, he indicated that the job was not easy, "but what we cannot overlook is that we made a serious effort to change an economic pattern and a lifestyle that have been with the country for almost 40 years and that were the reason why Argentina lost its importance on the international scene.

"I think," he continued, "that I am not mistaken in saying that there are things that have changed substantially and that our country has regained much of the ground that it lost." In this connection, he expressed his satisfaction with his department's accomplishments in decontrolling the marketing of farm and livestock products; in liberalizing grain and meat laws; in eliminating export duties and in sharply cutting import tariffs.

He then pointed out that above and beyond the current difficulties faced by industrial and production sectors, which "demand our constant attention, we must not cease to visualize future growth that will be a sure thing as long as we persevere in the general path we have taken."

The Council

As far as meetings of the Federal Agriculture and Livestock Council are concerned, Zorreguieta said that over 4½ years of work they have shown their appropriateness and effectiveness in clarifying various issues.

Thus, he concluded, this final meeting with the current administration must formulate clear-cut recommendations for the future activities of this institution, which will constitute a valuable legacy for the future administration.

UNFAVORABLE CLIMATIC CONDITIONS IN BAHIA BLANCA

Reduced Plantings

Buenos Aires LA PRENSA in Spanish 20 Nov 80 Sec 2 p 2

[Text] Bahia Blanca (Buenos Aires)--A report from the Zonal Headquarters of the Roca Railway Line discusses the current conditions of fields in this section of southern Buenos Aires.

The report says that last week's weather conditions were very unfavorable for farming and livestock activities throughout the region, in particular because the winds reduced moisture levels in the cultivated fields, in grazing areas and in fields being plowed.

The report also notes that there has been a reduction in planting and plowing compared to the pace of recent weeks, indicating that when soil conditions improve, the planting of summer forrage crops, sorghum, corn, sunflower and other seeds can be intensified. The wheat, barley and oat crops are at an acceptable level of development, but "widespread heavy rainfall must come without delay in order to consolidate them and ultimately achieve a fine grain harvest with good yields."

With regard to the grazing lands, the report points out that they are recovering, showing higher levels of receptivity and providing natural nourishment for livestock; however, they unquestionably need rainfall to retain such conditions. In connection with the livestock, the report notes that they are in good condition, both in terms of their weight and health, inasmuch as no epidemic outbreaks have been detected.

Yellow Flower

The Pest Control Commission set up in this city announced that "in a second call for public bids we proceeded to commission the aerial spraying of roads and railways in the Bahia Blanca district. Thus, all national, provincial and community routes and roads were sprayed, covering a total of 3,000 hectares, as part of the program to control the yellow flower."

The checks being conducted in the various areas that have been reached indicate that the results have been highly positive, inasmuch as the young plants are dry, and the adults are gradually drying out.

Harvest Estimates

Buenos Aires LA NACION in Spanish 20 Nov 80 p 13

[Text] Bahia Blanca--The new harvest has begun on several farms in the Coronel de Marina Leonardo Rosales district, where wheat customarily reaches maturity 1 month before the rest of the region.

According to initial estimates, the wheat yield is between 23 and 27 sacks per hectare, with a hectoliter weight of 77 kilograms.

Private Estimates

Bahia Blanca--According to a study by the Cargill Company that was made public in this city, the nationwide wheat harvest will total 7,234,000 tons, including durum wheat. The yield of bread wheat has been estimated at 7,028,000 tons, and that of wheat for noodles at 206,000 tons.

Output in the province of Buenos Aires will be 4,431,000 tons, with a yield of 1,721 kilograms per hectare, the average yield for bread wheat put at 1,618 kilograms. Of a total bread wheat acreage of 5,450,000 hectares, the harvest will cover 4,343,000, a reduction of 1,107,000 hectares.

ZORREGUIETA: WHEAT HARVEST DOWN BY 2, 3 MILLION TONS

Buenos Aires CLARIN in Spanish 16 Oct 80 p 16

[Text] The Secretary of Agriculture and Livestock, Jorge Zorreguieta, and the National Grain Board [JNG], through a report, have simultaneously estimated the losses caused to the wheat harvest by the drought.

Zorreguieta believes that the wheat production, initially estimated at "close to 10 million tons," will be reduced "by 2 or 3 million tons," depending on future weather patterns.

Contracts

Concerning the influence that this situation would have on existing wheat export contracts, he pointed out that for the moment, "we cannot say" that we will fail to meet these agreements, though he explained that such agreements have clauses providing for cases beyond our control which prevent "producing enough to export."

In its report, the JNG estimates the size of the affected area and the effects of the problem on production.

It says that there are between 2.3 and 2.7 million hectares "seriously affected, with significant losses," an area which equals between 40 and 45 percent of the area cultivated in the country (6 million hectares) according to the organization's projections of expected crops.

Of the remainder, only between 1.6 and 2.2 million hectares would be normal, since between 1.2 and 1.5 million will have problems with their unit yields.

Estimates

On the basis of these considerations, the JNG forecasts that "if the overall area to be cultivated were 6 million hectares," wheat production could fluctuate between a maximum of 8.4 million tons and a minimum of 6.7 million, so "we would expect" some 7.6 million tons.

This figure is obtained by assuming that the harvest-to-sowing ratio will fall between 79 and 87 percent and the average crop yield will fluctuate between 14 and 16 quintals per hectare.

SIX NEW PARTIES REGISTER FOR 1982 ELECTIONS

Sao Paulo FOLHA DE SAO PAULO in Portuguese 9 Nov 80 pp 8, 9

[Text] All bureaucratic steps have already been taken by the six new parties for their registration and consolidation to replace the extinct MDB [Brazilian Democratic Party] and ARENA [National Renewal Alliance]. The six groups sent their petitions for provisional registration to the Superior Electoral Court and now enter into the phase of holding municipal, regional and national conventions. The heirs of the two parties, the Brazilian Democratic Movement Party [PMDB] (formerly MDB) and the Social Democratic Party (formerly ARENA), are the ones who are further ahead in the process since they already had a machine in place, while the other four, the Popular Party [PP], Democratic Workers Party [PDT], Brazilian Workers Party [PTB] and the Workers Party [PT] are moving more slowly because they are being formed from dissident groups and from new political groupings.

Their de facto and legal existences, however, will only be decided by the 1982 elections, when each of them will have to receive at least five percent of the votes cast for federal deputies and a minimum of three percent in nine states.

The party which does not reach those figures will have to wait until another election four years later for a new test at the polls. It is for the testing in 1982 that the new groups are preparing, with the exception of the PMDB and the PDS, whose ranks are sufficiently strong to erase the danger of not reaching those figures. The majority of observers believe the PP should also pass that test with ease.

In the last general election, nearly 34 million voters cast valid votes, the MDB obtaining 16 million and ARENA 15 million. In case the present criteria of the electoral legislation were to be valid by that time, each new party would have to obtain at least 1.7 million votes for the Chamber of Deputies in order to participate in the Legislative Branch.

According to political observers, admitting that the PDS, PMDB and the PP manage to obtain that minimum of votes with relative ease, the remaining valid votes will have to be fought over by the three lesser parties (PT, PTB and PDT), it being possible that one of them could fail to register.

The survey of the present party situation in the country was made by the correspondents, agencies and local services and coordinated by newsman Marco Antonio Moraes.

Advantages Are Greater For The PDS

The heir to the estate of the extinct ARENA and with the solid support of the state administrative machines, the PDS is the party which has been obtaining the most positive results in the process of establishing party regulations. It was based on this reality that the secretary general of the party, Deputy Prisco Viana, said in Brasilia after the municipal and district conventions held in 3,044 of the 3,992 Brazilian municipalities, that "The PDS will ask the Superior Electoral Court for final registration this year."

As has always happened, it is in the states of the north and northeast that the government party is in the best situation. In the southeastern and southern regions, the organization was also efficient but in them the party faces a better structured, more determined opposition with greater prestige in public opinion.

Sao Paulo Example

Such is the case of Sao Paulo, for example, where the PDS grew by comparison with the old ARENA but has not yet managed to obtain its alleged majority in the Assembly.

The state leadership asserts that the party has 39 deputies (against 39 from the opposition and one independent, incidentally a former member of ARENA, Nabi Abi Chedid), although not all of them have signed their membership cards and some, although supposedly of the PDS, have already voted against decisions by that party.

At any rate, control of the party by the group supporting Governor Paulo Maluf appears almost certain. Maluf obtained an important victory when he caused the defeat of the so-called "municipal slate," which intended to contest the state leadership and minimize the influence which Former Governor Laudo Natel has in the interior of the state.

In Rio, a traditional opposition bastion, things are not going very well for the government party. It had no problems in the creation of committees in the 63 municipalities and 25 zones of the capital. It has the traditional members of the old PSD, who are loyal to the bionic senator, Amaral Peixoto (formerly of the MDB), and who are important in the interior of the state but it is facing divisions being caused by the "coordinator" of the party, a position not stipulated in the statutes, Dr Guilherme Romano, a personal friend of General Golberi for more than 20 years. It is declared in Rio that Romano wants to be governor of the state. He neither wants to see his son-in-law, the present prefect of Niteroi, Wellington Moreira Franco, as the official candidate to the governorship.

Dispute in Minas

In Minas, it is the belief of Secretary General Emilio Gallo that the party will obtain nearly 300 directorates. The provisional regional committee is already registered with the Regional Electoral Court. The presence of Deputy Abi Ackel in

the Figueiredo Cabinet strengthened the party but created a new area of controversy: Now there are three factions, that of Governor Francelino Pereira (formerly of the PSD), that of the vice president of the republic, Aureliano Chaves (formerly of the UDN [National Democratic Union] and that of Minister Abi Ackel, also formerly of the PSD.

In Rio Grande do Sul, the choice of the majority is split up among the PDT, the PMDB and the PDS. The leader of the government bloc in the Assembly, Rubi Dihel, says that all the Rio Grande do Sul municipalities already have their directorates installed or in the process of installation and he guarantees that such work was easier than in the times of the extinct ARENA.

It is around the Assembly that the party picture in the state may be determined. The PDT of Brizola will not relinguish its intentions of fighting for the presidency of the Chamber, which in the past legislatures was always in the hands of the MDB and is now held by the PMDB. And the PDS is thinking of supporting the Brizola faction in that matter as a way of dividing the opposition.

In Parana, the party has its strength in Governor Ney Braga and also in former Governor Paulo Pimentel. It created committees in all 302 municipalities and already has a single slate for the state directorate. In Santa Catarina, the PDS forces are calm for the time being. With the help of the state government machinery, it installed directorates in all 197 of the Santa Catarina municipalities.

Rebellion in Goias

In Goias, the struggle for party control is being reflected in the Chamber by the rebellion of Deputy Siqueira Campos, who voted against the government in the case of the tabled amendment on prerogatives. The party has directorates in 180 of the 223 municipalities and it inherited all the differences which existed in the extinct state ARENA.

In Mato Grosso do Sul and Mato Grosso do Norte, the status of the government party was one of relaxation. The reason for this was that while the situation of the party in the north was solid, such was not the case in Mato Grosso do Sul because of the dismissal (imposed by the government) of Governor Marcelo Miranda and the appointment to the post of Senator Pedro Pedrossian, causing some losses.

The governor believes that Pedrossian may be able to regroup the PDS forces because of his prestige among the voters, however, the episode aroused much criticism in Campo Grande.

In Pernambuco, the strength of the party is in the interior of the state, although Governor Marco Maciel has concentrated projects in Recife and acted in a broad promotional plan with the disadvantaged.

The government party has already created committees or directorates in almost all the municipalities and zonal districts of the capital.

In Bahia, the position of the party continues to be very solid, with control of almost 300 prefectures, an ample majority in the Legislative Assembly and the Chamber of Deputies under the command of Governor Antonio Carlos Magalhaes. The break between former Governor Roberto Santos (now in the PP) and Magalhaes did not harm the PDS organization greatly.

Differences in Para

The differences between the groups led by Governor Alacid Nunes and Senator Jarbas Passarinho in Para apparently do not harm the standing of the party in that state but they caused concern at the national level, which desires to give prestige to Passarinho. In an attempt to compromise, the party postponed its regional convention until January.

In Ceara, Maranhao, Piaui, Rio Grande do Norte and Paraiba, the PDS lead is practically absolute despite intense internal disputes.

PMDB Shows Optimism In Preparations

"We are larger than the MDB," this statement by an important PMDB leader in Sao Paulo shows the optimism of the party national provisional committee with respect to the municipal conventions held last 12 October. The PMDB elected directorates in more than 2,000 municipalities in 10 states. According to national party president Ulisses Guimaraes, the party created more directorates than those had by the extinct MDB.

This optimism has its reasons. After all, when those figures were presented, in terms of party internal differences, Amazonas had not yet managed to have its conventions--it will have extraordinary conventions--nor had Mato Grosso even sent in its results on the provisional national committee.

In Sao Paulo, apparently overcoming the conflicting interests of Senators Orestes Quercia and Franco Montoro, the PMDB managed at least 400 directorates, an endeavor being credited to the state party chairman, former deputy (cassated) Mario Covas.

Montoro is being viewed as the PMDB leader who insured the control of the greatest number of Sao Paulo directorates, a fact which will be extremely useful to him in the contest within the party for appointment as candidate to the governorship of the state in the 1982 elections. Quercia, however, holds a large part of his electoral strongpoints. However, the conventions revealed a new force, although still in formation, that of State Deputy Franco Baruselli, who won an important number of directorates in the upper northeast region where he has influence.

Negotiations are underway and the PMDB will emerge, it is true, with a single slate for its state directorate with Mario Covas remaining as chairman. To support that process is the praiseworthy action of the 30 party deputies in the Assembly, where up to now the defections of yesteryear have not been seen. Also, as is stated by Covas, the "party emerged stronger from the purging of the new followers."

Rumors in Rio

In Rio, where the old MDB always irritated the government by insuring a majority in the Assembly and electoral colleges, the party created at least 18 directorates in the capital (there are 25 district zones) and in 49 of the 63 zones in the interior. State leaders are Senators Roberto Saturnino and Nelson Carneiro and also the former deputy governor (of Carlos Lacerda), Rafael de Almeida Magalhaes, with economist Maria Conceicao Tavares appearing as a new contender. All those leaders, however, unanimously deny one of the rumors circulating after the municipal conventions, saying that the MR-8, an organization which took part in armed struggle at the beginning of the 70's, would have a large number of directorates guaranteed in that state.

In Minas, the PMDB faces the strength of the PDS and the PP. Senator Itamar Franco, state party chairman, claims that the PDS inherited what there was of the old ARENA and the PP received what there was of the old MDB, there being nothing left for the present PMDB. However, the party held municipal conventions in at least 168 cities and this month it still intends to create another 32 directorates.

In Parana, Senator Jose Richa and former Deputy (cassated) Alencar Furtado are the two great strengths of the party. The PMDB has directorates in nearly 250 of the 302 municipalities of the state and work is continuing.

Arraes Is A Contender

Jarbas Vasconcelos, the state chairman; Senator Marcos Freire and former Governor Miguel Arraes split up the leadership of the party in Pernambuco among them. The party has directorates in the nine districts of Recife and in 112 municipalities of the interior. The PMDB is the great opposition force in the state and is in a position to compete for the governorship.

In Bahia, the PMDB faces the strong leadership of former Governor Roberto Santos, today of the PP, in addition to the natural opposition of the PDS, which has been strengthened by the political maneuvers of Governor Antonio Carlos Magalhaes. The party has around 100 directorates.

In Rio Grande do Sul, the party already has committees installed in almost all the state and intends to keep the Assembly leadership, now in its power. It has the leadership of Senators Pedro Simon and Paulo Brossard.

In Alagoas, leaders of the Senator Tetonio Vilela force seek to win over two forces which are precious electorally: former Governor Lamenha Filho and Federal Deputy Geraldo Bulhoes, who controls a voter stronghold in the Alagoas back country which can be a decisive force in the 1982 elections. In the other states of the north and northeast, the PMDB appears as the second-place party force after the PDS.

The PTB Has The Initials But Not The Voters

The PTB of Ivete Vargas has already won a great victory this year in the Superior Electoral Court: It assured for itself the initials which it contested with former Governor Leonel Brizola, initials considered by the now deceased Minister Petronio Portela as "the best vehicle for communications with the voters." However, it turns out that the initials PTB were closely linked to the so-called "authentic" worker party members and now, without the prestige of Brizola's name, they lost part of their voter appeal.

An example of that is a recent survey made by the Gallup Institute which gave the PTB nearly 20 percent of the vote in March before it was decided who would be awarded the initials. The percentage fell to five percent in August and September (the decision on the initials was made in August) when the voters saw that the PTB was no longer tied to the Brizola group.

In the Federal Chamber, the party has only two deputies: Jorge Coury (RJ) and Vilela de Magalhaes (PR). It has no representative in the Senate. However, Ivete Vargas expects a victory soon that will strengthen support for her party so that they can have their municipal and state conventions (December and next March) and face the electoral test of 1982: The support of Janio Quadros, with whom the party is "in love." After a long trip abroad, the former president arrived in Brazil yesterday and will be able to say whether that hope is justified.

In Sao Paulo, such prospect has contributed effectively to the reversal of expectations in the Legislative Assembly. For the time being, the PTB has only one state deputy, Osmar Ribeiro Fonseca. Last week, however, Deputy Vicente Bota, formerly linked to the PDS block, said that his membership in the PTB "is an irreversible fact." According to comments, there are strong possibilities that Bota will be followed by other members of the PDS such as Deputies Ivan Spindola de Avila and Jose Silveira Sampaio.

In addition to the strength of Janio, Ivete Vargas is confident of the competition her group is putting up in Rio Grande do Sul and of the charisma of former Governor Gilberto Mestrinho from Amazonas, who heads the PTB in that state and has a chance to contest the governorship.

The situation of the PTB in Rio de Janeiro is also encouraging to its supporters. The son of the labor leader and governor of the old state of Rio, Roberto Silveira, Deputy Jorge Roberto da Silveira is confident: "I attend to the needs of legislation in the municipalities where I am politically active, by myself."

PDT Believes It Will Obtain Registration

The matter of the controversy over the PTB initials with the group led by former Deputy Ivete Vargas, as was confirmed by recent polls and surveys of public opinion, destroyed the great potential of the party name when associated with the name of former governor Leonel Brizola. The decision by the Superior Electoral Court, granting the traditional labor initials to Ivete Vargas, apparently did not frighten the group of deputies linked to Brizola, who make up an important bloc in the Federal Chamber, not in number but in political participation.

Those deputies declare that the PDT has broad possibilities of achieving its registration because they believe that in Rio Grande do Sul, Rio de Janeiro, Amazonas and Parana alone, "Brizolismo" should be the second or third electoral force, it not being difficult, therefore, to obtain at least the minimum votes in some other states.

That reasoning grants special importance to the work being done in Rio Grande do Sul and Rio de Janeiro, where the "authentic labor forces" expect the best results. In Rio Grande do Sul, with a force of 13 deputies, against 18 for the PMDB and 25 for the PDS, there is the danger that the PDT will seek some help to fight for the presidency of the Rio Grande do Sul Assembly, a fact denounced as one more "Golbery" ploy. However, there are many Brizola supporters who see the best regional prospects for the PDT in an agreement with the PMDB of Pedro Simon and Paulo Brossard.

In Rio, the party has already formally created its 23 municipal and 25 zone committees in the capital. As leaders Carmen Cinira Leite de Castro and Jose Castro Brandao acknowledge, just to comply with the minimum requirements of the law, as soon as the Superior Electoral Court confirms the provisional registration of the PDT in Rio, it will begin an intensive membership drive. They believe that the extension of the terms of prefects and councilmen, with the subsequent elimination of the elections scheduled for this year, is leading to the return of many political leaders from the interior of the state to the ranks of "Brizolismo." According to them, those politicians will opt exclusively for the PTB because it would already be registered and it would allow them to become candidates from that party for the elections scheduled for this month and postponed by government decision.

This is at the very least a dubious reasoning. The electoral efficiency of those politicians, who still believed that municipal elections for this year could still be held, is debatable. However, that theory is also used in Parana and Amazonas to guarantee that the Brizola PDT will be in a position to wrest politicians from the PTB of Ivete Vargas to guarantee it the votes needed to exceed the requirements of the new electoral legislation. Moreover, the PDT maintains some regional support in states of less importance in terms of votes. And it is counting on that to obtain final registration and guarantee its presence in Congress.

PP Initiates Attempts To Win Third Place

The PP--Popular Party--is emerging as the third political force of the country, expanding its already solid electoral bases, efficiently using the regional divisions in the PDS and--although that apparently was already taken into account in government plans for party reformulation--winning an electoral influence capable of giving the party the comfortable position of being the decisive weight in political decisions in Congress.

Up to now, however, the party has acted within the framework of its opposition status, siding with the PMDB in the majority of cases.

Its most solid voter support in declining order comes from Rio de Janeiro, where it already has the machinery of the state—State Governor Chagas Freitas is of the PP--Minas, Gerais, Sao Paulo and, now, Rio Grande do Sul.

In Minas, the PP emerges as the most important party on the basis of the alliance of the old UDN and PSD factions of Deputy Magalhaes Pinto and Senator Tancredo Neves, and also of the internal disputes in the PDS among Governor Francelino Pereia, the vice president of the republic, Aureliano Chaves, and Minister of Justice Abi Ackel.

Because of the adherence of former Governor Paulo Egidio, former Prefect Olavo Setubal and Deputies Herbert Levy and Caio Pompeu, the PP has a significant influence in Sao Paulo, although that is not reflected by the number of state deputies of which it has only one: Valdemar Chubaci.

The PP shook the structure of the PDS in Rio Grande do Sul, winning the support of former Governor Sinval Guazzelli, winning over Senator Evilasio Vieira of Santa Catarina, and in Parana, winning the support of former Governor Jaime Canet Junior to face the PDS of Nei Braga and Paulo Pimentel.

In the north and northeast, the PP is strongest in Bahia, where it has the support of the archenemy of present Governor Antonio Carlos Magalhaes, former Governor Roberto Santos. Despite this situation in the aforementioned states, the PP needs to obtain the minimum votes required in two more states of the federation.

Strategy

Political observers believe the PP has the best prospects, after the PDS and the PMDB, for meeting the requirements of the law to become established. Moreover, that appears to have been the strategy traced by politicians of experience such as Tancredo Neves and Magalhaes Pinto. To win with more than three percent of the votes in nine states in 1982, as is required by legislation, is to guarantee compliance with other requirements (five percent of the total of the votes for the Chamber of Deputies) through the collection of votes from small and sparsely populated regions.

In Maranhao, Piaui and Pernambuco, for example, the party has already complied with several phases of the legislation. In the latter state it has the forces of Tales Ramalho, secretary general of the group, and in Paraiba it threatens to make up a coalition with the PMDB simed at winning the governorship of the state in the 1982 elections.

Difficulties Faced By The PT

Against the scepticism of many politicians who did not believe in its feasibility the PD--Workers Party--formed by Luis Inacio da Silva, "Lula," and other union leaders, has been overcoming the phase for its legalization. On 23 October it presented its request for provisional registration to the Superior Electoral Court (it should be issued at the end of this month), accompanied by documents relative to the organization of regional committees in 18 states and municipal committees in 647 municipalities of those 13 states.

The PT was the last of the parties undergoing organization which asked the Superior Electoral Court for provisional registration. It managed to organize regional directive committees in the states of Acre, Rio Grande do Norte, Rio Grande do Sul, Rio de Janeiro, Ceara, Minas Gerais, Santa Catarina, Mato Grosso do Sul, Maranhao, Piaui, Espirito Santo, Sao Paulo and Goias. It also did the same in Sergipe, Amazonas, Bahia, Parana and Paraiba, but in these last five states it did not meet requirements with respect to municipal committees (legislation requires at least 20 percent of the municipalities of the state).

The PT is complying, with some difficulties it is true, with the same ritual that the other parties are fulfilling for obtaining final registration, which will be accomplished after the 1982 elections when each party in order to have legislative representation must have at least five percent of the votes for the Chamber of Deputies.

LSN [National Security Law] Threatens

Among the natural difficulties the party has been facing in making itself feasible however, is the fact that its founder, Lula, and other union officials, are being indicted by Military Justice under the National Security Law. A possible conviction would make the former president of the Sao Bernardo Metalworkers Union ineligible, perhaps destroying the chance of a significant vote that would benefit the party. The same thing could happen with respect to Federal Deputy Joao Cunha, who is being tried by the STF [Federal Supreme Court].

The PT does not depend solely on the leadership of Lula but it is in Sao Paulo that the largest force of the party is located. The bloc in the Chamber already consists of six deputies (Airton Soares, Joao Cunha and Benedito Marcillo of Sao Paulo, and Antonio Carlos (MS), Freitas Diniz Neto of Maranhao and Luis Antonio Chenicel of Santa Catarina). It also has the deputies in the Sao Paulo Legislative Assembly.

Behind the force of the union leaders who support the party, the PT appears with influence in Minas and Rio Grande do Sul through union leaders Joao Paulo Pires Vasconcelos and Olivio Dutra. In Pernambuco, Manoel da Conceicao is doing important work but faces the cohesion of a strong PMDB. In Goias, the departure of the Santillo brothers weakened the position of the party in the state, where it has only one representative in the Assembly; and in Mato Grosso do Sul, Federal Deputy Antonio Carlos guarantees that the PT will have a great influence.

ELECTION RESULTS WILL BE HONORED IN 1982, SAYS GENERAL

Rio de Janeiro O GLOBO in Portuguese 23 Nov 80 p 3

[Interview with Second Army Commander Gen Milton Tavares de Souza by several news media organs 22 November in Rio de Janeiro]

[Text] "The elections we hold in 1982 will not be a joke," declared the commander of the Second Army, Gen Milton Tavares de Sousa yesterday in Rio after the mass on the 43d anniversary of the formation of his class in the old Realengo Military School, a mass also attended by President Joao Figueiredo.

"The governors shall be elected by direct vote because the government considers the country to be in a climate of order. We shall not attract international attention and then later go through the embarrassment of not allowing those elected to take office. The elections are a great step toward democratization," added the general.

Interview

Following is the interview granted by the commander of the Second Army:

O GLOBO: How do you feel about the reestablishment of direct elections for governors?

[Answer] Once more direct elections are compliance with the promise made by the then candidate Figueiredo. They reveal that the government believes the country to be in a climate of order despite everything. It is a great step toward democratization. If it were not the proper time, the government would not have made that decision.

RADIO JORNAL DO BRASIL: Would there be some problem in taking office for the governors elected by opposition parties?

[Answer] No problem whatever. The elections we hold in 1982 will not be a joke. If we are going to hold elections, which will have international repercussions, we cannot go through the embarrassment of not swearing in those who are elected unless something arises with respect to some candidate which would prevent it. However, it would be a specific case and not casuistic.

O ESTADO DE SAO PAULO: Is there one of those specific, not casuistic cases in Sao Paulo?

[Answer] No, there is not. There is going to be an election in Sao Paulo and there is already a mountain of candidates for candidates to the governorship. After all, the process is going to be whittled down and the final candidates will emerge. The person elected will be sworn in, there is no problem.

O GLOBO: What do you think of the investigation of the attacks on the OAB [Brazilian Bar Association] and the Rio Municipal Chamber?

[Answer] It is being conducted in the best way possible. It is not easy to find a lunatic citizen who threw a bomb at a certain corner. He lost himself in the midst of 110 million Brazilians. Any terrorist of the right or the left is a social misfit and does not have the conditions for coexisting democratically. Instead of differing within normal patterns, he acts with violence. Observe that the victims of terrorism are always innocent persons.

JORNAL DO BRASIL: Yes, when terrorism of the left was practiced in Brazil it was isolated. If it was overcome it was because it did not have the support of public opinion. The Brazilian people do not accept terrorism.

TV BANDEIRANTES: Was the attack on the OAB performed by terrorists of the right?

[Answer] I cannot say whether it was of the right, the center, left center or the left. Those definitions remind one of a soccer game. Regardless of where it comes from it is terrorism. We are moving toward a regime where the law is sovereign. We must make the law respected, regardless of who it hurts, regardless of who it affects, regardless of which class it bothers.

JORNAL DO BRASIL: Do you believe it was a group which committed the attack or was it only the suspect captured by the Federal Police?

[Answer] I do not know if he represents a group. The investigation is not within the purview of the army and it is in that of the Federal Police.

RADIO JORNAL DO BRASIL: Are you pleased with the progress of the investigations?

[Answer] The progress of the investigations is that which is possible. It is difficult, I repeat, to find the criminal. Perhaps now with the capture of the first suspects the attack may be cleared up.

TV BANDEIRANTES: Could the army participate in the repression of terrorism?

[Answer] It is unlikely. Thought could only be given to that if the process were to reach proportions similar to that of the era of leftist terrorism.

Decisive Step

The reestablishment of direct elections for governors was yesterday considered "a decisive step" toward the political opening by Minister of the Navy Adm Maximiano da Fonseca: "That shows once more the determination and sincerity of President Joao Figueiredo in the development of his democratic plan."

The minister of the navy added: "The return of direct elections through the proposal presented by the government is a very important step. It also demonstrates the trust that can be placed on the determination of the government with respect to the political opening.

Opposition

The minister declared that pursuit of the policy of opening should not cause surprise "because the president has already demonstrated his commitment to democracy many times.

"Democracy in the country is a reality, it is there. We are living under a regime of freedom. It is up to everyone of us to assume the responsibilities inherent in a democratic regime also," he emphasized.

About the opposition, he said: "Its existence, as I said already, is indispensable to the democratic system itself. The existence of opposition is what characterizes this type of system."

The minister also stated that "it is important for the existence of a democracy that there be the free and democratic alternation of power if it is considered necessary."

ARMY MINISTER SPEAKS ON TIMELY SUBJECTS IN INTERVIEW

Brasilia CORREIO BRAZILIENSE in Portuguese 22 Nov 80 p 7

[Interview with Acting Minister of the Army Gen Ernani Ayrosa; time and place not given]

[Text] A draft bill resulting from the studies now being made by the three military ministers and the armed forces staff will soon be presented to the president of the republic. It is aimed at making changes in the military pension law, it was reported by the acting minister of the army, Gen Ernani Ayrosa.

General Ayrosa also dealt with Brazilian-U.S. agreements, the development of IMBEL [Ordnance Industry], participation by women in the army--pointing out that the experience of the navy "will be of great value"--, activities of the Army Library--now in a new and intensive phase--and the search by the land force for new energy sources.

The complete interview with General Ayrosa follows:

[Question] What is the status of programs for placing the recently-approved Army Housing Fund into operation? When will the first housing be built?

[Answer] The law creating the Army Housing Fund was approved last 17 November. A commission headed by the director general of economy and finances is preparing the regulations for the recently created agency. The construction of housing depends, obviously, on the completion of the commission's work and the creation of an infrastructure compatible with the size of the undertaking.

[Question] Have the surveys of the land owned by the land forces, which will be sold or rented, been completed? Which are they and how much are they worth?

[Answer] The Department of Engineering and Communications, in cooperation with the Army Staff, prepared the multiyear plan for the sale or exchange of real estate under the jurisdiction of the Ministry of the Army. The survey of the values of approximately 100 pieces of real estate scattered throughout almost all the national territory is being done by the military regions.

[Question] Has the army been carrying out research seeking alternate energy sources?

[Answer] The army research agencies have been cooperating with civilian organizations devoted to the search for alternate energy sources. The Center for Technical Control of Alcohol Fueled Motors created in the Military Engineering Institute as the result of an agreement made with the Secretariat of Industrial Technology of the Ministry of Industry and Commerce deserves mention.

[Question] What is the status of activities by the army in the Amazon Region through construction battalions or ACISO [Social-Civic Action]?

[Answer] The Second Construction Engineering Group with headquarters in Manaus through its six battalions distributed throughout the Amazon Region performs security and construction missions, the latter through agreements made with the Ministry of Transportation and the local governments.

The presence of the army in all that area, even the regions of most difficult access, I believe confer upon ACISO in the Amazon Region some characteristics of its very own, the permanence of those actions being outstanding.

The scope and diversity of problems led the military command of the Amazon Region to propose the creation of a section in its staff, a section now engaged specifically in giving support to the civilian personnel in the area, and it has obtained excellent results in the fields of health, education, housing, transportation, food and professional training.

[Question] What new weapons and military projects are being developed by IMBEL?

[Answer] The projects for the development of new weapons continue to be realized within the framework of the Army Technological Center through research, field tests and tests of various types and not within the framework of IMBEL, whose activity is accomplished more specifically in the production of munitions, pyrotechnical devices, explosives, light weapons and communications material.

[Question] Apparently the army intends to export weapons to the entire world through IMBEL, is there any type of restriction with respect to possible foreign buyers?

[Answer] The export of war materiel is regulated by PNEMEM [National Policy on Exports of Materials For Military Use] and because of political implications and national security, it obviously depends on the authorization of the president of the republic.

In addition to producing a significant part of the war materiel needed by the armed forces, IMBEL is also active in the foreign market.

[Question] There has already been much criticism of military pensions and finances, is there some intention to change it?

[Answer] In view of the new Statute for the Military recently approved by the National Congress, the three branches began to study a proposal for a change in the Pension Law.

The studies within the framework of this ministry are being made by the army staff and when concluded will be evaluated together with those of the navy and air force by the armed forces staff. A draft bill will come from that study, which at the proper time will be submitted for the evaluation of the president of the republic.

[Question] Do you believe in the possibility of the reestablishment of Brazil-United States military agreements as was suggested recently during the visit by Gen Vernon Walters to our country? If reestablished, would these agreements have a new strategic and military objective, strictly speaking?

[Answer] The relationships between the land forces of Brazil and the United States is normal and friendly and consists basically of the holding of training courses, the sending of military publications and the exchange of information of an obvious nature. Recent understandings, pertaining to the interests of the two countries, promise an intensification of the existing exchange.

[Question] Are there studies for the admission of women into the army?

[Answer] The army has used the work of women, as is attested by the existence of nearly 7,000 office workers in the ministry.

Obviously the adoption of feminine contingents within the framework of the army would be conditioned by specific needs in that aspect, particularly with reference to nurses, social workers and similar categories.

RETIREMENTS LEAD TO NEW HIGH COMMAND APPOINTMENTS

Rio de Janeiro MANCHETE in Portuguese 6 Dec 80 pp 154B-154C

[Article by Murilo Melo Filho: "The Renewal of the High Command"]

[Text] In March next year Gens Antonio Carlos de Andrada Serpa, Walter Pires and Ernane Ayrosa da Silva are due for compulsory retirement; Gens Jose Ferraz da Rocha, Ruy de Paula Couto, Florimar Campello and Gentil Marcondes Filho will go home; Gens Benedicto Pinto de Almeida, Geraldo de Alvarenga Navarro and Milton Tavares de Souza will leave active service. Of the present members of the High Command, only Gen Antonio Ferreira Marques will survive. It will mean the complete replacement of the military summit, beginning this week with the compulsory retirement of Gen Antonio Bandeira, who will be replaced by Gen Alacir Frederico Werner, and by the swearing in as acting minister of the army of Gen Ernane Ayrosa da Silva.

Col Rubem Carlo Ludwig

He was the press secretary of the Geisel Administration and was retained at Planalto Palace by President Figueiredo as National Security Council secretary. His departure for the Superior War School, where he was enrolled, did not take place. An artilleryman, that Rio Grande do Sul man began his military career in the same class as Colonel Paiva Chaves. He was an instructor at the Agulhas Negras Military Academy and the Army Command and Staff School. In 1969 he served as aide to the deputy army commander of the Military Household, whose chief was Gen Joao Figueiredo, the president of the republic. Later he spent 2 years at the French Military Academy. On his return to Brazil he was appointed commander of the 18th Motorized Infantry Battalion of Porto Alegre, where he established excellent relations with local newsmen when he paraded the troops in honor of Press Day. He had already been appointed to command the cadet corps of AMAN [Agulhas Negras Military Academy] when he found himself invited to replace Col Toledo Camargo as chief of the press and public relations office of the Presidency of the Republic, where up to now he has performed in a manner praised by reporters and journalists accredited to Planalto Palace.

Gen Rubens Mario Brum Negreiro

He was commander of the Engineer Group in Paraiba and secretary for security of the Rio de Janeiro Administration during the term of Admiral Faria Lima. Up to this time he has been the first deputy chief of staff of the army and number one on the army seniority list of brigadier generals to be promoted to major general. When he left the command of the Paraiba Engineer Group, he declared that the 31 March Revolution did not belong to the military but to everyone, civilian and military. He is from Rio Grande do Sul and was born in Dom Pedrito. When he left the Secretariat of Security of Rio de Janeiro, he declared that crime had been contained and that the result was made possible because of the expenditures made and by the interaction among the various branches. "We have no doubt when we say that security is better today than yesterday and that crime has been contained."

He was promoted to general on 31 March 1975 after having served in the Fernando de Noronha Detachment, the Second Railway Battalion, the Agulhas Negras Military Academy, the ESAO [officer training school], the ECEME [Army Command and Staff School], the office of the minister of the army, military attache in France and chief of the office of the Secretariat of the National Security Council. He is the brother of allergist Doctor Brum Negreiros.

Gen Octavio Aguiar de Medeiros

As a colonel he was military attache to the government of Israel in Tel Aviv. He was in Tel Aviv when the Yom Kippur war broke out. He went to Israel after having been assistant to Gen Joao Figueiredo who was chief of President Medici's Military Household. Before that they had been together as instructors at the Army Command and Staff School. When he returned from Israel, he was promoted to general and Figueiredo, then chief of the National Intelligence Service, appointed him director of the National Intelligence School. He remained there until he was invited to replace Figueiredo himself as chief of the SNI. He must mandatorily be part of President Figueiredo's party during his trips through Brazil and abroad. He is also one of the "household ministers" who meet every day with the president of the republic. He comes from a traditional military family. His father was Fleet Admiral Flavio Medeiros. His paternal and maternal grandfathers were also military men: Marshal Luis Antonio de Medeiros and Gen Feliciano de Souza Aguiar. He gives the impression of being a cantankerous man but privately he is affectionate and happy and likes to play volleyball and swim. He is one of the men who most figures in the forthcoming succession to the presidency, on the eve of which he should be promoted to army general.

Gen Alacir Frederico Werner

With his promotion to the last assignment of his career, he passed over Gen Herman Bercqvist, who was first on the promotion list and who had temporarily been occupying the position of chief of the General Department of Personnel since the removal of Gen Andrada Serpa.

General Werner served in the FEB [Brazilian Expeditionary Force] as assistant to Marshal Mascarenhas de Morais. He participated in the 1964 conspiracy when he was an office aide to Gen Humberto Castelo Branco, then chief of staff of the army. He was later secretary general of the Ministry of the Army and commander of the 7th and 10th Military Regions with headquarters in Recife and Fortaleza. He has been serving as deputy chief of the Army Staff. He was a member of the same 1937 class of cadets as Gen Joao Figueiredo at the Realengo Military School. The only difference is that he is an artilleryman and the president is a cavalryman. He is regarded as one of the intellectuals of the army with great knowledge of the civilian and political area. He is a personal friend of Gen Golbery do Couto e Silva. When he left the Secretariat General of the Ministry of the Army, which he occupied during the term of General Belfrot Bethlem, he said that the armed forces were permanently engaged in complying with their constitutional mandate and concerned with the best interests of the nation, watching over the security of the people, maintaining their social integration and safeguarding their progress in a sovereign, free and democratic land.

Acting Minister of the Army Gen Ernane Ayrosa da Silva

He is 65 years-of-age and belongs to the class of 1937, the same one to which President Joao Figueiredo belongs. He is an infantryman and one of the veterans of the Brazilian Expeditionary Force. A Colonel in 1964, he was promoted to brigadier general on 25 March 1969 and in March of next year he will leave active service because of having completed 12 years as a general. He is considered a liberal and a strict adherent to the law, defender of the rule of the law and a man who does not circumvent the law. He likes to talk. He was the best Brazilian captain in World War II and the most decorated officer in it. He commanded the Planalto Military Garrison for 21 months, the Second Armored Infantry Battalion; he was chief of staff for the Second Army during the so-called Operation Bandeirante, he headed the Directorate for Armaments and Munition, headed Training and Improvement and commanded the Amazon Region Military Garrison and the 11th Military Region. He was also head of the Education and Research Department and the Army Staff. He is from Rio de Janeiro and was the Brazilian target shooting champion. He is a fan of the Botafogo soccer team, likes music, theater, television, opera, the dance and literature. He is single and has shown himself to be an extremely human militaryman with his entire life dedicated to the army. He makes no decisions without first hearing his advisers.

GENERAL OFFICERS PROMOTED, BIOGRAPHIC DATA PUBLISHED

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 25 Nov 80 p 6

[Excerpts] Although dissemination was not expected until today, as in all the last regular December promotions of past years, Planalto Palace yesterday revealed the names contained in promotion decrees of 18 army, navy, and air force officers signed by President Joao Figueiredo, all with today's date. Promotions in the army and navy take two officers to the highest ranking position in the military branches: Maj Gen Alacyr Frederico Werner was promoted to army general and Vice Adm Domingos de Mattos Cortez was promoted to fleet admiral in the marine corps.

Promoted in addition to General Werner in the army were: to major general, Brig Gens Rubens Mario Brum Negreiros, Moacyr Pereira and Octavio Aguiar de Medeiros (now chief of the National Intelligence Service (SNI) and to brigadier general, Cols Brummel Couto (infantry), Waltencir dos Santos Costa (cavalry), Almerio Jose Ferreira Diniz (artillery) and Rubem Carlos Ludwig (infantry).

In the navy, in addition to Admiral Cortez, the following were promoted: to vice admiral, Rear Adm Luiz Edmundo Brigido Bittencourt; to rear admiral, Capt Coaraciara Bricio Godinho; in the Corps of Engineers and Naval Technicians, to vice admiral, Rear Adm Aloysio Ferreira dos Santos, and to rear admiral, Capt Paulo Geraldo de Almeida Barbo; in the naval health service, in the medical corps, to rear admiral, Capt Mario Serrat Rodrigues.

In the air force, in the flying officer corps, to brigadier general, Cols Lair da Silva Andrade and Dilson Lyra Castello Branco Vercosa.

Alacyr Werner, No Surprise

Professional competence, political skill, loyalty to the system and influential friendships in and out of Planalto Palace, beginning with President Figueiredo himself, made of Gen Alacyr Frederico Werner an unbeatable candidate for the only army general vacancy in this promotion period. At no time was there any doubt in army circles that Werner was an officer on the way up.

A native of Juiz de Fora, Minas Gerais, Alacyr Frederico Werner, 64, was a cadet on 22 November 1937 at Realengo together with Gen Joao Figueiredo and became a colonel on 25 April 1964, when he took an active part in the March revolutionary movement, becoming a trusted officer of General Castello Branco. He attained the rank of brigadier general on 25 March 1971 and major general on 25 November 1976, shortly thereafter assuming the post of secretary general of the Ministry of the Army after the replacement of Minister Sylvio Frota by Gen Fernando Betlhem. Later on he assumed command of the 10th Military Region in Fortaleza and a few months ago was transferred to become the deputy chief of staff of the army. He has completed seven courses and has already been awarded 14 medals. As an army general he could possibly become the chief of the General Department of Personnel.

Major Generals

Up until the meeting of the High Command on 17 November, promotions for filling the two major general vacancies presented only one unknown factor: the name of Gen Gustavo Moraes Rego, former chief of the Military Household under President Geisel. After all, the decision to promote generals is a presidential prerogative. When the High Command sent the list of names to President Figueiredo pursuant to the sequence of the Army Seniority List, it was clear that those promoted would be Generals Brum Negreiros, Moacyr Pereira and Octavio Medeiros.

General Brum Negreiros, at this time the first deputy army staff chief, became a cadet on 10 March 1943 and became a brigadier general on 31 March 1975. He has completed four courses and has already received 12 medals. At 58 years-of-age, as a major general, he may remain in the Army Staff.

General Moacyr Pereira is 59 and a personal friend of President Figueiredo, who appointed him to command the 5th Armored Cavalry Brigade in Rio, considered the most powerful cavalry unit in the army. He was a cadet on 10 March 1943, became a brigadier general on 31 July 1975. As a major general he could become chief of the Military Service Directorate. He has completed five courses and has eight medals.

Gen Octavio Aguiar de Medeiros is 58, and is at present the chief of the National Intelligence Service, where he should remain in the status of "adviser." His promotion was uncontested, not only because of the post he holds but also because of his acknowledged professional qualities. He became a cadet on 10 March 1943 and became a brigadier general in July 1975, a rank he held as Brazilian military attache in Israel. He has completed four courses and has nine medals. Before the end of the Figueiredo Administration, he should have no difficulties in attaining the rank of army general, according to military sources.

Brigadier Generals

General Brummel Couto, 54, became a cadet on 24 December 1947, becoming a colonel in August 1972. He is an infantryman and he has been assigned to the Motor-Mechanization Directorate of the War Materiel Department. He has completed five courses and has five medals. He should now go on to command the First Border Group in Santos Angelo (RS).

Gen Americo Ferreira Dinis, 55, became a cadet on 24 December 1947, becoming a colonel in August 1973. He was chief of the Public Relations Advisory Office of the office of Minister Walter Pires, where he now occupies the post of deputy chief. In addition to being a specialist on energy policy, he is the representative of the Ministry of the Army to the National Petroleum Council. He has completed six courses and has eight medals. He should command First Army Division Artillery in Rio. He is an artilleryman.

Gen Waltencir dos Santos Costa, 54, is a cavalryman. He became a cadet on 24 December 1947 and became a colonel in April 1973. He has been assistant to the chief of staff of the army and should be appointed to command the Third Mechanized Cavalry Brigade in Bage. He has completed six courses and has five medals.

The promotion of Gen Rubem Ludwig was "foreseen" since March of this year when his name was considered as certain for December because of the changes being prepared on the promotion law for armed forces officers. The main change, later approved, has to do with the creation of a block of unranked colonels, consisting of colonels who do not have the prerequisites for becoming general, and with the provision that after being passed over for promotion twice, they would be transferred to the reserves. These changes had the objective of speeding up the flow of promotions. Obviously they did not have the purpose of favoring any officer, however, it allowed the well-known name of Colonel Ludwig to be entered immediately on the list of candidates for general officers.

Ludwig always had an excellent reputation in the army, becoming known and respected from the time he served in the Press Office of the Presidency of the Republic. "He did more than Farhat is doing now," commented a high-ranking military man once.

The Navy Follows in Order

The filling of the eight navy vacancies by the president of the republic did not cause any surprises with respect to the names selected, all of them expected. The rank of fleet admiral (highest rank in the navy, equivalent to army general) went to Vice Adm Domingos de Mattos Cortez. He will probably command the Marine Corps, where he now holds the same post since the position calls for a three-star admiral.

However, Congress recently approved a law which establishes that the rank of the commander be raised to fleet admiral.

Rear Adm Carlos de Albuquerque was promoted to vice admiral. He was the senior officer on the list. Another officer who was also a senior officer on the list was Capt Coaraciara Bricio Godinho, who was promoted to rear admiral. His last promotion was in April 1972.

Little Information

An officer of the office of the minister of the navy reported yesterday that there was not too much information on the promoted admirals and explained that their biographical information would only be revealed today. According to that officer, the information is ready but was not revealed yesterday because the Navy Public Relations Center operates out of Rio.

Two Air Force Brigadiers

The two new air force brigadier generals promoted by order of President Joao Figueiredo were the first two on the list by order of seniority.

Brig Gen Lair da Silva Andrade is a native of Rio de Janeiro and reached 50 years-of-age on 25 October. Enlisted in April 1948, he became a flying cadet in December 1951, becoming a second lieutenant the following year and a first lieutenant on July 1954. He became a captain in January 1959 and because of outstanding performance was promoted to major in January 1968. Also because of outstanding performance he was promoted to lieutenant colonel and finally to colonel in 1975.

Brig Gen Dilson Lyra Castelo Branco Vercosa is also a native of Rio. He is the present commander of the Fortaleza Air Base. He was a cadet in the same class as his colleague promoted yesterday: Lair Silva Andrade. He also attained the other promotions of his military career on the same dates. He completed the flying officer training course and others mandatory for his career. He was awarded the Silver Medal for time in Service, the Santos Dumont Order of Merit and the Distinguished Flying Medal. He now has more than 7,000 hours flying time, specializing in fighter aircraft.

SEVEN EXTREME RIGHTIST PRISONERS PRESENTED TO PRESS

Rio de Janeiro O GLOBO in Portuguese 4 Dec 80 p 6

[Text] Fortaleza (O GLOBO)--Federal Police Commissioner Antonio Carlos Monteiro of Joao Pessoa, described the seven young persons--six men and one woman--aged between 21 and 25 years, presented yesterday afternoon to the press in the Federal Police Department of this capital as "extremists of the right, opportunists, and with no ties to any political groups of the left or right." They are responisble for five acts of terrorism in Fortaleza and could be sentenced to from 2 to 12 years in prison.

The group consists of Carlos Henrique dos Santos Ferreira, 22, an agronomy student at the Federal University of Ceara; Valerio Lenin Lelis Nogueira, 25; Germana de Oliveira Moraes, 22, a law student; Jose Feltosa Dantas, 25, a federal revenue official and the sweetheart of Germana; Claudio Feltosa Dantas, 23; Francisco Marcelo Macedo Leitao, 21, a geology student at the Federal University of Ceara, and Francisco Jorge Feitosa, 23, fishing engineering student at the same university.

Escalation

First there were the painted slogans ("MAC--Anticommunist Movement" and "Down with the Communist Priests"), which appeared on many walls in Fortaleza. Later came the attacks. The first took place on 8 August, when Claudio Feitosa Dantas, Francisco Marcelo Leitao, Carlos Henrique dos Santos Ferreira and Francisco Jorge Feitosa Caneca hurled a Molotov cocktail at a magazine stand at Parquelandia Square.

On that same day, Claudio and Carlos Henrique hurled another bomb against the bank of Parangaba Square. On subsequent days, there were no more bombs but the painted slogans continued. On 10 September, however, Valerio Lenin Lelis Nogueira, Germana Moraes and Jose Dantas threw a bomb against the door of the Nossa Senhora de Nazare Church in the Montese district.

On 5 October, Valerio, Germana and Jose, put together a metal bomb at DN's Motel at Praia do Futuro in which they put two different kinds of powder. At 2030 the bomb exploded at the parking lot of the Central Student Directorate which was on the eve of elections. According to Commissioner Antonio Carlos Monteiro, Valerio threw the bomb but Jose Dantas wanted it to be thrown into a room where the students were gathered. The two had an argument over that.

Finally, on 5 November, Jose Feitosa Dantas and Germana de Oliveira Moraes plus Fernando Januario Barbos and Luis Clovis Lunica, who were not presented to the press yesterday, exploded a stick of dynamite of high destructive power at Ferreira Square near a newstand.

Investigations

Investigations began 15 November when Valerio Carlos Henrique and Luis Clovis were captured in Joao Pessoa when they tried to steal a Volkswagen. The police thought they were dealing with ordinary car thieves but in their house was found a Taurus revolver, a machinegun, grenades and sticks of dynamite. Interrogated, the prisoners revealed the other members of the group.

Valerio Lenin Lelis Nogueira and Jose Feitosa Dantas are being pointed out by the Federal Police as being the leaders of the group, which may even be receiving money from someone.

They were charged under Article 26 of the National Security Law which says: "To devastate, loot, hold up, steal, kidnap, sent on fire, plunder, commit personal attacks, sabotage or terrorism to the prejudice of national security shall be punishable by imprisonment of from 2 to 12 years. Only Paragraph: If as a result of such attack there is serious bodily harm or death, the penalty shall be imprisonment of from 8 to 30 years."

Lawyer

The families of Valerio and Jose hired the same lawyer: Padua Barroso. He said the group "has no ideological commitments."

He said: "I believe that they have no ideological training and acted naively. The explosions were only acts of anarchy, since they did not wish to harm anyone directly."

Padua Barroso has been a lawyer for 22 years and 15 years ago he defended extreme leftist terrorists. According to him, his commitment "is only to man."

After the contact with the press, the prisoners were visited by their parents. Antonio Carlos, brother of Francisco Marcelo Macedo Leitao declared:

"Up to a certain point I can guarantee that there are no political connotations in the actions of the group."

He brought his brother some books by Manoel Bandeira and Carlos Drummond de Andrade, "poets he likes very much."

No Objective

Valerio Lenin Lelis Nogueira acted as spokesman for the group. Semibald, mustachiod, short, arrogant and visibly nervous, he began by saying that he entered the Federal University of Ceara physics course in 1975 but transferred while still in the basic part to Joao Pessoa. Later he came to Fortaleza once more.

He and Carlos Henrique were plotting the kidnaping of the daughter of Pernambuco industrialist Meira Lins. The plan was thwarted because the girl was always accompanied. They were going to try for a ransom of two million cruzeiros.

[Question] What were the political objectives of the group?

[Answer] There was no political objective. What was done in the matter of placing bombs was to take care that no one was hurt.

[Question] But the bombs you threw could have killed someone.

[Answer] If we were to argue that now it would be a very big argument and it is not worth the trouble.

[Question] And the machineguns?

[Answer] Those machineguns found are the property of people other than the people who are here.

[Question] What was your objective if it was not political?

[Answer] There is no objective.

[Question] Are you of the right?

[Answer] My son it seems that your recorder is not recording (placing his mouth near the recorder). There was no political objective.

[Question] It was just a game then?

[Answer] I am not going to discuss whether it was a game or not.

[Question] What is your political position?

[Answer] I am in favor of "roller democracy," a democracy where roller skating is allowed.

[Question] Is that why you tried to attack the skating club of Recife?

[Answer] Those are things which go through people's heads.

In turn, Germana de Oliveira Moraes said that she is involved in the case because she is in love with Jose Dantas.

GUERRILLA REORGANIZATION ANALYZED, HISTORICAL REVIEW MADE

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 20 Nov 80 p 13

[Text] Many of the leftist organizations which devoted themselves to rural and urban guerrilla activity in the country in the first years of the decade of the 70's such as the MR-8 [8 October Revolutionary Movement] and the Communist Party of Brazil, the PC do B, have been trying to reorganize since the last liberalizations and amnesty, which made possible the return of the principal "cadres" and leaders.

They returned, however, with a new and prudent view of reality. They believe, for example, that short or medium-term conditions for armed struggle do not exist, although some accept popular insurrection in some still-uncertain future. That is why they have preferred to concentrate their efforts on the "awakening" of the masses.

In their last analyses, intelligence services included reports saying that minority groups consider the country "ripe" for insurrection as early as next year, but the more influential leaders have concerned themselves with curbing the "impatience" of the more impassioned, fearing a repression that could be fatal for all.

For that very reason--for having replaced the theory of the guerrilla center of operations [foco guerrilheiro]--there was surprise at the report published by the NEW YORK TIMES MAGAZINE that 12 guerrillas of the Popular Revolutionary Vanguard, VPR, received training from the PLO last year.

The report surprised not only the former members of the organization, which was the largest armed extreme leftist group of the 70's, but also the intelligence services whose reports make no specific reference to the VPR because it was considered extinct in 1973.

Former VPR members recall on the subject that the organization itself decided to disband in August 1971, long before, therefore, the death of the last members who remained in Brazil, but without any armed activity due to the lack of foreign and domestic logistical support and the condition of defeat in which all the armed organizations of the time found themselves without exception.

The militarist faction of the left, as is concluded by some intelligence service officers in Brasilia, can be considered extinct in the country because of the setbacks suffered by the present position of Cuba with respect to the guerrilla operations center theory for armed struggle, the almost exclusive support of the USSR for the Brazilian Communist Party, PCB, which is of peaceful and orthodox orientation, and because of the changes in the system of power in China, which also ceased to support some of the most bellicose groups.

Recent analyses made by security and intelligence agencies conclude, finally, that in the short and medium term no organization of the left--violent or not--has the possibility of operating successfully in the country, although in the medium term they could present some danger to the security of the present system of power, however, only if they unite, something considered improbable because of the bitter differences among themselves.

The VPR and the Guerrilla Operations Center Theory

The VPR was born in Sao Paulo in 1968 from the merger of a group of sergeants who were former supporters of Brizola and the dissidents of the organization Worker Policy, POLOP, which existed since before 1964. It was one of the first militarist organizations to appear in the country together with the National Liberating Action, ALN, commanded by Carlos Marighella, the 8 October Revolutionary Movement, MR-8, and the Brazilian Revolutionary Communist Party, PCBR.

Of all of them, however, the VPR was the largest and most warlike, perhaps because from the beginning it contained a veteran group of military personnel--among them Carlos Lamarca--as opposed, for example, to the MR-8, which had groups of very young students as a majority among its cadres, students who could barely handle a weapon and which in order to carry out its major actions generally had to ally itself with other groups.

The VPR, whose first great action was the killing of U.S. Army Captain Charles Chandler in Sao Paulo in 1968, adopted the Cuban concept of armed struggle: the doctrine of the guerrilla operations center or "foquismo," and believed that the masses would join them in their struggle in the cities. That doctrine always prevailed, although some dissident groups believed that the VPR should follow a line of masses for the long-term creation of a popular liberation army. Others believed that the militarist option was correct--this prevailed--and that is why the VPR never ceased in its attempts to consolidate the guerrilla operations center.

The theory of the guerrilla operations center is based on the principle that armed struggle should be sparked by a small nucleus, preferably rural, which would grow and multiply until the creation of a people's army, with the leadership of the movement exercised by an organization of militarized structure which precedes and prevails over the political structure. Attracted by the actions of that center, the masses would be "worked" progressively to insure support for it, primarily in the cities. Therefore, the party would only be consolidated after the victory of the revolution as a support for the new government.

It is obvious that such a theory--and those defeated acknowledge it today--could not be applied to the sociopolitical situation of recent years in Brazil. However, the leaders of the armed groups, which appeared after 1968 and whose very tragic history ended in 1973 with the complete destruction of the VPR and the defeat of the PC do B in Araguaia (Amazon Region) in 1975, incorrectly evaluated the correlation of forces and the Brazilian situation of the times and that is the reason for their failure.

Thus, none of the groups, with rare exceptions and in few cases without social or military significance, managed to obtain popular support among the workers or in the rural areas. Moreover, the majority of the members and leaders of the armed organizations came from the middle class and not always managed to communicate with their probable future followers. Thus isolated, it was easy for the security forces to destroy all of them, which resulted in many deaths in the fighting as well as by torture, a method which was undoubtedly used for obtaining vital information.

The VPR, specifically, had three phases in its development. In the first, it was greatly influenced by members with good military experience and little political training as in the case of former soldier Darci Rodriguez (today in Bauru in the interior of Sao Paulo), Onofre Pinto (disappeared), Pedro Lobo de Oliveira (abroad) and Carlos Lamarca (dead), and it adopted the Guevara concepts of armed struggle.

In its second phase, around the middle of 1969 when it merged with the Colina Commando of National Liberation, it took the name of the Palmares Revolutionary Armed Vanguard, the VAR-P. The union lasted very little because soon its leaders disagreed on the best way to wage armed struggle.

The split was made official in September 1969 during the VAR-P National Congress in Teresopolis. The division was fatal for what was left of the VAR-P: Around the middle of 1973, with the death of James Allen Luz in Rio Grande do Sul, it was considered totally dismantled. Those who remained of the old VPR were killed in the northeast that year also.

The VPR members who returned to the country do not number 50, the majority of them taken out of prison and sent abroad in 1970 and 1971 in exchange for the release of kidnapped diplomats. Many of them have already completely abandoned political activity or made a change in their thinking, preferring to act openly to advocate their ideas, always without recourse to force.

Indeed, the VPR believed itself finished around 1971, when with the majority of its members dead, imprisoned or exiled, it no longer was in a position to offer safety, not even to Carlos Lamarca, its most legendary "cadre."

In an internal document of the organization, one of its leaders acknowledged defeat in the most bitter terms: "We are defeated because we do not have the slightest political significance," and he concluded: "I lose hope of making revolution."

New Tendency After Self-Criticism

Many of the leftist organizations existing in the country in the early years of the decade of the 70's have been trying to reorganize after the latest liberalizations and the amnesty which made it possible for the principal "cadres" or leaders to return. The failure of the previous armed experience and the guerrilla operations center theories, however, led practically all of them to self-criticism and to the strengthening of the theory of masses.

That same conclusion is shared by intelligence services officers to whom such behavior was also to be expected since they always followed the movements of those "cadres" abroad. That is why they have faced "the gradual return of the political work of indoctrination, propaganda, regimentation and agitation with the use of the old techniques of front organizations, student and worker mobilization infiltration of class entities, the press and so forth," without surprise.

An intelligence service officer observes that it would also be logical to expect a union among the remainders of the old groups into a sort of monolithic bloc after the amnesty and the return of those banished and exiled, since experience revealed the defeat of the old organizations "separately," one at a time, and due to the weakness of each one. This should theoretically lead to the creation of a broad mass-oriented front of the left.

This, however, did not take place, primarily, according to analyses by these observers, because "each group or subgroup is the owner of its own truth and lacks any of the basic ideas of rank and discipline. Moreover, hates produced by internal strife are hard to overcome." Actually, even the monolithic and peaceful Brazilian Communist Party recently divided itself into two blocs, one led by Giocondo Dias and Armenio Guedes and the other by the old secretary general, Luis Carlos Prestes, who at least has the support of the state committees of Sergipe and Paraiba.

The Prestes faction also receives the support of the MR-8, which managed its reorganization with relative ease since it did not suffer too many casualties when it advocated armed struggle and its rank and file is primarily located in Rio. The MR-8 has been regrouping since 1974 in Rio and Sao Paulo. It held its first congress around the middle of 1978 and the second one in October 1979. As a reflection of the picture of liberalization of the country, it published the resolutions of the last congress in a book easily found in many bookstores. Its general guidelines at the moment stipulate the development of mass activities with a complete abandonment of armed adventures.

Of the old organizations, one has deserved special attention from the military observers: the Communist Party of Brazil, the PC do B. They believe that the PC do B is today appearing "as a truly strong structure, even well established among the students, press and the clergy, which translates into a substantial increase of its mobilization capability and the expansion of its sphere of influence."

Although recently one of its leaders, Jose Renato Rabelo, said openly in a manifesto that the party does not exclude the hypothesis of armed struggle, he made it very clear that it would only take place in a very appropriate historical situation, which does not appear likely in either the short or medium term.

The party is attempting to strengthen itself despite the serious casualties suffered at Araguaia and in the period between December 1976 and January 1977. In December the Second Army discovered a meeting of the PC do B Central Committee in Lapa, Sao Paulo. Three members of the Central Committee were killed and another four party members were taken prisoners in that operation.

Despite the casualties, which continued until January 1977, the regional leaderships were not affected, allowing the recuperation of the party. Although at that time the documents seized had provided the information that the PC do B had connections with the Communist Party of Argentina, Albania and China, it was discovered subsequently, after the seizure of new internal documents, that it concluded by breaking relations with China. Today the PC do B has close relationships exclusively with the tiny Albania.

The main watchword of the party: A single and broad opposition front, has not yet been attained because of the constant differences among the organizations of the left, and on the party and legislative plane, because of the reformulation of parties planned and executed pursuant to a strategy of Gen Golbery do Couto e Silva, as he himself revealed in a talk recently at the Superior War School [ESG].

The PC do B, incidentally, always depended on foreign support, a support, however, which was always unreliable and which from now on will be "insignificant," according to the observers in Brasilia, who believe that the tiny and far-off Albania is not in a condition to finance foreign adventures. Support, therefore, will always be verbal at the level of ideas. Therefore, concludes one official, "The PC do B, its present position being maintained, should not grow in importance in the near future." On the other hand, since 1973 the militarist organizations throughout the world ceased to receive help from Cuba, which realined itself with the Soviet Union. With respect to Brazil, it is more than well-known, that the USSR only supports the pacifist line of the PCB.

At any rate, moreover, not even the usually radical and young Trotskyite organizations even discuss the hypothesis of undertaking armed struggle in the short term. That is why the report, which few believe, that 12 members of the old VPR had been trained in an Al Fatah camp last year, caused surprise even among them.

"The militarist faction," concludes one of those analyses, "can be considered extinct because of the losses suffered and because of the present Cuban position with respect to the theory of the guerrilla operations center. By itself, in the short term, no organization, militarist or Trotskyite, has the possibility of operating successfully in Brazil."

And even though the years 1979 and 1980 were those in which the liberalization policy carried out by the government reached its highest points, with even some freedom for the reorganization and action of several leftist groups, security agencies do not believe there will be a serious confrontation soon even though, paradoxically, some leftist circles say that Brazil "is ripe for insurrection" in coming years and that the main problem now is to curb the inpatient.

Along this same line of reasoning, observers in Brasilia believe that the Brazilian left, always on the defensive since 1973 and without strategic balance from 1964 to 1978, is now mounting a counteroffensive, benefitting from the policy of "opening" but without becoming radicalized to prevent a "closing," which would be fatal to it. And, although divided into three factions; one orthodox Marxist-Leninist, another Trotskyite and another "revolutionary," they have a very common strategy: to work for the institution of a "liberal state" where democratic freedoms may be exercised to the maximum, and only as of that time move toward socialism.

In the latest report on the activities of those organizations there is a very clarifying confirmation: In recent years "No terrorist acts of any type have been committed by the left. All organizations are engaged in the mass front struggle." It is also a matter of a struggle practically in the open. The main groups even have their own newspapers: The PC do B expresses itself through TRIBUNA DA LUTA OPERARIA, the Giocondo Dias wing of the PCB through VOZ OPERARIA, the MR-8 through HORA DO POVO, the Trotskyites through CONVERGENCIA SOCIALISTA and through EM TEMPO.

LIBYAN PEOPLE'S BUREAU REPLACES EMBASSY

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 15 Nov 80 p 6

[Text] The representation of the Libyan Government in Brazil is perfectly defined. That country has been officially represented by the People's Bureau of Libya since its members presented themselves at Itamaraty and received accreditation from Ambassador Joao Fragoso, chief of protocol, after meeting with Middle East Division Chief Luciano Osorio Rosa.

Any misunderstanding between the new and old members of the Libyan embassy are of no interest to Itamaraty nor can they have any influence in the representation of the country in Brazil. All the process necessary to make its new representation official in Brasilia was taken at its own risk by the Libyan Government. Through the Brazilian embassy in Tripoli, the Libyan Government informed the Figueiredo Government that the methods of diplomatic representation would be changed. It explained that it was a decision of a general nature which only affected the Tripoli government and that similar provisions were being adopted toward other nations. It also requested credentials for its new representatives.

In view of that official request, Itamaraty immediately granted the entry visas requested by the Libyan Government to the five members of the People's Bureau operating in Brasilia. In a talk with Ambassador Fragoso, the Libyan representatives said that an executive secretary, Abdulatif Boker, would now speak formally in his name and in the name of his country. The Brazilian Government then accepted the representation at the level of charge d'affaires, keeping in mind that if the figure of the embassy no longer existed, automatically the figure of the ambassador ceased to exist.

The function of charge d'affaires was also adopted in that case, more because it is the closest thing existing, although in theory, at least, only embassies understood formally as such have the position of a diplomat, who not being an official ambassador of a certain country, provisionally performs those functions.

Since the members of the People's Bureau of Libya talked officially with Itamaraty in recent days, normal diplomatic channels with Brazil were established. While a closer contact between the new Libyan representation and the other Arab embassies in Brasilia does not exist, according to diplomatic circles that is due to the fact that the decision by the Libyan Government is recent. The lack of closer relations, according to the same sectors, should not be understood to be an attitude of hostility or distrust for the Bureau.

POPULATION FORECASTS AFFECTED BY FERTILITY DECLINE

Rio de Janeiro O GLOBO in Portuguese 19 Nov 80 p 6

[Text] The president of the Brazilian Institute of Geography and Statistics (IBGE), Jesse Montello, said yesterday that the decline in fertility in the last decade--from 25 to 30 percent--was the factor that most contributed to the fact that Brazil did not reach the 120 million inhabitants forecast. After declaring that the country should have nearly 116 million inhabitants, he observed that generally, migration caused an exodus from the southern region and an increase in the population of the northern region.

The collection of figures--first phase of the populational census--ended throughout Brazil, with the exception of Sao Paulo. In many states the numbers are still being reviewed and studied and will subsequently be sent to the IBGE computers in Rio. Official figures on the new population of Brazil will be revealed on 31 December. Up to now the results are preliminary, subject to revisions and minor modifications.

The following are provisional results:

Amazonas--1.4 million inhabitants. In 1970 there were 960,000; Manaus has 736,000.

Para--3.4 million, 1.1 million more than 10 years ago. Belem has 939,000 inhabitants.

Rondonia--The 116,000 inhabitants of 1970, grew to 500,000, the greatest demographic growth in the country. Porto Velho has 136,000 inhabitants.

Roraima--73,300 inhabitants compared to 41,600 in 1970. Boa Vista has 63,600 people.

Amapa--179,300 inhabitants. In 1970 there were 116,400. Macapa has 140,600 people.

Acre--306,500 inhabitants. In 1970 there were 218,000. Rio Branco has 120,300 people.

Maranhao--Four million, one million more than in 1970. Sao Luis has 447,700 people.

Piaui--Ten years ago it had a population of 1.7 million people, today it has 2.1 million. Teresina has 377,900 people.

Ceara--5.3 million inhabitants, 1.1 million more than in 1970. The population of Fortaleza is 1.3 million.

Rio Grande do Norte--1.9 million persons. In 1970 it had 1.6 million. Natal has 956,000 people.

Paraiba--The 2.4 million inhabitants of 10 years ago increased to 2.7 million. Joao Pessoa has a population of 337,700 people.

Pernambuco--It has 6.1 million inhabitants, 900,000 more than in 1970. Recife has a population of 1.2 million.

Alagoas--A population of 1.9 million. In 1970 it was 1.6 million. Maceio has 397,600 inhabitants.

Fernando de Noronha--The population of this federal territory grew the least: from 1,311 persons it increased to 1,342.

Sergipe--It has 1.1 million people compared to 911,200 in 1970. The population of Aracaju is 294,300 persons.

Bahia--The count was 9.3 million persons. Ten years ago there were 7.5 million. Salvador has 1.4 million inhabitants.

Minas Gerais--From 11.6 million in 1970 to 13.4 million now, of whom 1.7 million live in Belo Horizonte.

Rio de Janeiro--11.3 million. In 1970 it had 9.1 million. There were 5.1 million people in Rio de Janeiro.

Sao Paulo--The collection of figures will end after tomorrow since the figures for six municipalities are still lacking. Up to now the state has 23.4 million people. In 1970 it had 17.9 million. The capital has 8.2 million people.

Parana--7.5 million people compared to 6.9 million 10 years ago. The population of Curitiba exceeded a million inhabitants.

Santa Catarina--The 2.9 million inhabitants in 1970 increased to 3.6 million. There are 193,000 people in Florianopolis.

Rio Grande do Sul--7.8 million people were counted. In 1970 there were 6.7 million. Porto Alegre has 1.1 million.

Mato Grosso do Sul--1.3 million inhabitants compared to one million in 1970. There are 281,300 people in Campo Grande.

Goias--3.9 million inhabitants compared to 2.9 million in 1970. There are 737,400 people in Goiania.

Federal District--1.1 million people of whom 420,200 live in Brasilia. In 1970 the Federal District had 546,000 inhabitants.

Little Interest

In the state of Rio de Janeiro, a few more than 100 persons made contact with the IBGE agencies to be counted after the organization issued a public appeal that those not counted come to, or telephone the regional headquarters.

According to the IBGE press office, the number of calls was very large, however, 95 percent of those calls were made by persons included in questionnaires already filled out by other members of the family.

In Rio, a retaking of the census--a second visit to homes where the census taker found no one the first time--will continue until the end of the month when figures will begin to be fed into the computers. The number of the overall population of the country, the total population by states, by municipality and by sex, will be revealed on 31 December.

ANDREAZZA SPEAKS ON PLANS TO HELP NORTHEAST REGION

Rio de Janeiro MANCHETE in Portuguese 29 Nov 80 pp 78-79

[Interview with Interior Minister Mario Andreazza by Marlene Anna Galeazzi of MANCHETE; date and place not given]

> [Text] In several regions of the northeast it has not rained for 2 years and it is forecast that the drought could last another three. According to the SUDENE [Superintendency for Development of the Northeast], 720 cities and 800,000 square kilometers are at the height of that critical phase, with damage of 30 billion cruzeiros, in addition to the serious problem of the victims. Seeking to resolve that problem in a more in-depth manner, the federal government announced that it will soon initiate a great program for keeping rivers flowing permanently by using surplus water from the Sao Francisco River, thus permitting the irrigation of the semi-arid regions of the northeast. MANCHETE heard Minister of Interior Mario Andreazza speak on this ambitious project.

MANCHETE: What is the project of keeping the rivers of the northeast flowing perennially?

Andreazza: It is a proposal we presented to the president of the republic for making a technical and economic feasibility study on rerouting water from the Sao Francisco River for irrigation of the area in the semi-arid region of the northeast, using part of the surplus water during floods, which could benefit semi-arid regions in the states of Piaui, Ceara, Pernambuco, Paraiba and Rio Grande do Norte. This initiative is based on preliminary studies made by the National Reclamation Projects Department (DNOS). It is an idea which has been under consideration in the region for a long time by experts in the problem of the semi-arid northeast and whose feasibility has not yet been examined in the necessary depth.

MANCHETE: By how many will the number of drought victims be decreased by this project?

Andreazzi: Preliminary studies do not yet contain information on the estimates of the population to benefit from the project, whose feasibility study, I repeat, has still to be prepared. It is pointed out, however, that the basin of the Sao Francisco River and its tributaries occupies an area of 641,000 square kilometers, it being the only large-volume water course crossing the semi-arid region of the northeast, receiving and bringing water from rainy areas more to the south of the country.

MANCHETE: Which area will cease to be arid and become fertile?

Andreazza: This is another aspect of the problem which depends on the preparation of the plan to be evaluated. What is known for certain is that annual flooding of the Sao Francisco River results in the loss of a considerable volume of water which drains off through the relief canals of the various dams built across that river, heading it toward the ocean without being used by the hydroelectric powerplants of the CHESF [Sao Francisco Hydroelectric Company], the irrigation projects run by CODEVASF [Sao Francisco Valley Development Company] or those of other types. That surplus runoff from the flooding of the Sao Francisco River, which is wasted every year, is estimated at 14 billion cubic meters and cannot be stored in the existing reservoirs along that river, such runoff deriving from rainfall which take place during the short period of four months, approximately between December and March. Meanwhile, particularly in the areas located in the zones of the semi-arid regions and therefore more distant from the Sao Francisco Valley, they suffer the difficulties of a scarcity of water for drinking and for the production of food as a result of periodic droughts. First reports from the studies prepared and already concluded by the DNOS indicate the possibility of impounding that water, using the Sobradinho Dam and by building a system of canals which would allow the transfer of that surplus to make those rivers, which flow only periodically, into permanently flowing rivers or to be stored in reservoirs to be built in the aforementioned states. As of that time there will be the possibility of irrigating a region whose surface area is around 780,000 hectares, which would mean an increase of nearly 440 percent in irrigable land for growing food. An extensive area would thus be incorporated into the regional productive system.

MANCHETE: What is the social scope of the project?

Andreazza: The amount of social benefits from that initiative will only be revealed at the time the preparation of the plan is accomplished. Because of the general characteristics of the proposal, however, the wide-ranging scope of its social effects can be foreseen and among the group of priorities they will be the first objectives to be reached.

MANCHETE: What benefits will that initiative bring to the dwellers of the regions it will cover?

Andreazza: The dwellers of the semi-arid region of the northeast suffer, in the first place, from the effects of a scarcity of water for drinking and the production of food. The first benefit of a proposal such as this will be the amelioration, or even the elimination, of those problems through the support of

irrigation projects and the possibility that the farmer will be able to remain on his land free from the worry of having to join the legions of migrants who leave the region during the periods of prolonged drought.

MANCHETE: What is the estimated agricultural production of the areas covered by the project?

Andreazza: For the same reasons explained previously, it is impractical at this time to make an estimate of agricultural production of the areas which could be helped in the future.

MANCHETE: How long will it take for the increase in agricultural production to pay for the accomplishment of the project?

Andreazza: The answer also depends on the plan. The proposal, as was emphasized, is a first step in the preparation of the plan which when finished will then go into details, which will be the proper time for the economic feasibility studies of the project, analysis of cost and so forth.

MANCHETE: With the surplus runoff of the Sao Francisco River being used, are the possibilities for flooding that river's valley eliminated?

Andreazza: Everything indicates that the possibilities of floods in the Sao Francisco Valley will at least be reduced through the implementation of that project. That is the result of the basic guidelines of the proposal which suggest the development of the project in two phases:

1. Construction of a system of canals and their respective reservoirs in the eastern part of the northeast so as to attend to the needs of the states of Pernambuco, Paraiba, Rio Grande do Norte and Ceara. To supply that system, water at Sobradinho will be pumped to a higher level of from 60 to 20 meters depending on the site chosen for taking the water. From there it will be distributed to all the states (Tributaries of the Sao Francisco River in Pernambuco, the Jaquaribe and Salgado Rivers in Ceara and the Piranhas River in Paraiba and Rio Grande do Norte).

2. Construction of a similar system involving small canals and reservoirs in the western part of the northeast, aimed at benefitting the southern part of the state of Piaui through the tributaries of the right bank of the Parnaiba River.

There will be no need for pumping water at Sobradinho to supply this system.

MANCHETE: How soon will the project make its effects noted and how much is the cost of its operation? What benefits will it bring to the agricultural infrastructure?

Andreazza: It can be said in advance that in case it is considered feasible, a number of agricultural infrastructure and social works will be determined. However, their discussion and justification will only be possible if the project is put into effect. The same applies to the time of completion of the project and

the cost of its operation. Indeed, even if the study to be prepared determines its technical, economic and financial feasibility and the social benefits deriving from it, the project should only be accomplished in the long term and it could or could not be initiated by the present government. At this time the intention is only to make an examination of its practicality and contribution, offering possible solutions to the problems of the semi-arid region of the northeast. Moreover, the execution of the project--or the sharing of it--should be parceled out during a period of time. It is worth mentioning on the subject that the government of the state of Pernambuco is already making studies which when completed will be joined to those which should be prepared by the Federal Government. Once their feasibility is confirmed, they could cause the definition of the first phase of the future project. In that aspect, the Ministry of Interior should give continuity in 1981 to its already-approved programing for the semi-arid region of the northeast aimed at increasing its capability for resisting droughts. And that is based on the execution of projects such as those of POLONORDESTE [Program for the Development of Integrated Areas of the Northeast], Project Sertanejo [Hinterlands Project], the Water Resources Program, as well as the irrigation projects operated by the DNOCS [National Drought Control Department] and CODEVASF, always with the concern of attending primarily to the small and medium rural producers.

Indeed, the studies to be done on rerouting the water of the Sao Francisco River, if the feasibility and social significance of the project are confirmed, could contribute to expanding the total number of the projects and viable alternatives to be considered by future governments in the establishment of their regional development programing.

PORT SYSTEM EXPECTED TO MEET ALL EXPORT NEEDS IN 1981

Port Conditions Reviewed

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 14 Nov 80 p 18

[Text] The National port system will generally meet the export shipping needs of the country next year. In the opinion of Minister of Transportation Eliseu Resende it will not be for lack of port facilities that Brazil will fail to export its products. However, his ministry's plans to specialize some ports for certain types of cargo is causing much discussion.

The businessmen who produce manufactured goods in the south, north and northeast are dissatisfied. Those of the south because the principal port of the region, that of Rio Grande is, and will be increasingly so, specializing in basic products. Those of the northeast, specifically those of Recife, complain about the very poor conditions of the port of the capital of Pernambuco and of the interminable work at Suape, the future alternative.

However, there are ports such as those of Paranagua in Parana, where everything is going very well, and where like Santos and Rio de Janeiro, the expansion and modernization of equipment allowed an increase in ship movement without any decline in the quality of service.

The Ministry of Transportation, together with other ministries, has been studying a way of responding to an old complaint of Brazilian exporters: bureaucracy. It may exist to a greater or lesser degree in each port. However, it always makes the life of exporters difficult.

Despite Everything, Santos Continues to Break Records

Despite 85 days of rain up to now, the 5 days when it was completely paralyzed because of a strike by 12,500 employees, the various strikes by truck drivers, the limitations of the highway and railway systems, in addition to its chronic problem, bureaucracy, the port of Santos continues to break records.

In the first three quarters of this year exports reached 5.1 million tons, compared to 3.5 million tons in the same period in 1979. Exports were even higher than the general movement of 1979, a record at that time of five million tons of exports.

From January to September, from the docks of the then port concessionaire, Companhia Docas de Santos, today CODESP [Sao Paulo Development Company], 4.8 million tons were exported, producing foreign exchange revenues of 213 billion cruzeiros, with more than half of those receipts being for manufactured goods (122 billion). In the same period, exports of around 300,000 tons were recorded from the privately owned terminals of COSIPA [Sao Paulo Iron and Steel Company], Ultrafertil and Dow Chemical, with an unknown amount of foreign exchange revenues.

General cargo, with 2.8 million tons (58 percent) leads exports at the old concessionaire of the port, followed by bulk liquids with 1.1 million tons (23 percent) and bulk solids with 900,000 tons (19 percent).

Among export products, sugar is the leader with 650,000 tons, sent almost exclusively to India. Following is palletized citrus pulp with 374,000 tons and soybeans with 336,000 tons. Only after these does coffee appear with 310,000 tons, citrus juices with 278,000 tons and diesel oil with 250,000 tons.

Although foreseeable since last year when the government had already established its economic policy, the increase in exports caused unexpected changes in the general month-to-month movement of the port of Santos. For years this port maintained a tendency: decline in movement between November and February and an increase between March and October, with July and August competing for records. This year, however, 1.7 million tons were moved in January, a mark only exceeded in April when 2 million tons were moved. The following months showed increases and decreases totally different than all expectations.

Despite so many negative factors, the port of Santos was able to receive the 2,700 ships arriving there up to September and it expects to service satisfactorily the 950 ships which should dock up to the end of the year for a total of 3,650 ships, an exact average of 10 per day. Former officials of the port believe that this average can only be reached because of the improvements made on the port at the beginning of the decade of the 70's.

An example is the substantial increase in the volume of merchandise exported in containers. This year alone it reached a ratio of 11 percent of general exports, which was equal to 328,000 tons. All this took place before the terminal for containers, built on the left bank of the estuary, was inaugurated. Prominent with almost the same volume, were the operations of the "Lash" barges, which belong to the ship itself and are left at the dock for loading or unloading and later recovered, and operations using the roll-on-roll-off system, with ships equipped with mobile ramps for the traffic or loading of vehicles.

"One of the goals of the Ministry of Transportation will be to specialize the port of Santos for general cargoes of quality processed products, in addition to coffee and sugar. After the inauguration of the largest container terminal in South America (still without a scheduled date) the port will be ready to perform its functions more adequately," said Minister Eliseu Resende.

In contrast with modern technology, the port of Santos operates with equipment from the beginning of the century. The cranes date back to 1911 and 1917 and can only be operated by old crane operators, men who learned all the secrets and idiosyncracies of the old machines after many years of work.

However, it is not for that reason that private enterpirse directly linked to the port of Santos is complaining. The greatest complaint is about bureaucracy, an inheritance left by the old concessionaire, Companhia Docas, to CODESP. Agencies, shipping clerks, customs offices, shipping companies and exporting firms hope that one of the first measures adopted by CODESP will be the reorganization of the inherited bureaucratic system in an effort to speed up the processing of paperwork.

The Rodrimar office, for example, recalls that shipping permits accompanying a shipment of merchandise destined for export can take as much as two days to be issued. That delay many times can be fatal because the shipment may miss the ship which would carry it.

Shipping companies such as Deicmar, also complain about the delays by the Federal Revenue Office in Santos in releasing the final approval for the shipping permits for merchandise. This approval, they say, takes between 30 and 40 days, which makes banking operations difficult.

The most dissatisfied, however, are the coffee exporters. They believe that conditions in Santos are the best but they wind up exporting through Paranagua because of financial advantages.

Paranagua, the Only One Causing No Concern

If there is one port in Brazil, which does not worry the government and almost completely satisfied its users, that port is that of Paranagua. To have a clearer understanding of this statement, the exporters active over there have only two complaints to make: disorganization of the Paraguayan companies and a certain "protectionism" in the distribution of railway cars which depart from Curitiba during the harvest season. Outside of that the users are unanimous in saying that the Paranagua is the best.

In the opinion of the majority of exporters, the port "is the cheapest, safest and calmest in the country." For the large companies, these qualities derive from the ease they find for installing their own terminals. Companies such as Sanbra and Cargill operate their own terminals for the exports of cereals with high degrees of productivity, and in addition to a low rent, they receive a 50-percent discount in user fees.

However, it is not only the large companies which are satisfied with the movement, safety and, particularly, prices. Those who depend on the installations of the port or the services of third parties also say that conditions are the best.

"For us the only way to reduce the costs of services is to operate our own terminal, which can be done without great difficulties by the port, which shows it is very interested in private investments in its area," say the leaders of the Parana Agricultural-Livestock Central Cooperative.

With all these advantages, it is natural that the movement of the port increase. In the first three quarters of this year alone, more than two million tons of the most varied products were moved through Paranagua. In a like period last year, the total reached 1.5 million tons and the administration of the port and the users say that this increase in the movement of cargo did not affect the efficiency of the port.

"Paranagua is the most important Brazilian port for the movement of cereals and byproducts," declares Engineer Luiz Amatuzzi, the port superintendent.

Indeed, in the last 2 years, Paranagua became the greatest exporter of cereals, particularly soybeans, soybean meal and oil. Of the 5.1 million tons of soybean meal exported by Brazil last year, 2.5 million tons were shipped from Paranagua. Similarly, the Parana port was outstanding in the exports of oils--40 percent of Brazilian exports--and more outstanding still in the exports of grains, reaching the mark of 70 percent of the total exported.

In part, port technicians explain the increase in exports via Paranagua because of the easy access to the port, which handles the production of Parana, a significant part of the soybeans of Mato Grosso, part of those from Sao Paulo and the northern part of Santa Catarina and the ever-increasing flow of products from Paraguay.

But there are also internal reasons to justify the greater use of the port services of Paranagua. Well equipped, the port today has seven large loading gantry cranes on a 4,500 meter-long docking platform, nine loading conveyor belts with a total capacity of 5,400 tons per hour, 11 warehouses in the external area with an area of 32,000 square meters, and 21 warehouses in the internal area with an area of 63,360 square meters.

In addition, it has five large silos with a capacity of 200,000 tons, which are easily able to handle the demands of exporters, facilitating the removal of crops from the harvest area. That is why cases of fines for delay in shipping are rare, even during harvest peak times. On the contrary, what usually happens is that the port pays premiums for quick shipment to practically all its users.

"With its installations recently expanded (the construction of a 100,000-ton silo and a terminal for the parking of trucks with controls for loading and unloading) the port of Paranagua is functioning satisfactorily," comments Minister of Transportation Eliseu Resende. It operated normally in the movement of all the Parana harvest of this year without any problems.

"The refurbishing of the port will allow the export of combined cargos," continues the minister, "this means the loading of part of the ship with agricultural products and then complementing the cargo with some other product, for example, iron ore at Vitoria. This type of cargo is basically destined for the Far East. On their return, the ships could bring coal from Australia or petroleum from China. The operation was already tested this year in Paranagua itself and it was fully successful.

Rio Grande, Only Basic Products

The two main problems faced by Rio Grande do Sul exporters in the area of maritime transportation are the low frequency of calls by general cargo ships at the port of Rio Grande and the price of freight, particularly with Chile and Argentina, markets which are expanding. The port of Rio Grande, which this year should move nearly 10 million tons of export and import cargoes, devotes less than 10 percent of that movement to general cargo.

There is a reason for this. The economy of Rio Grande do Sul, devoted to a system of exporting basic products--meat, wheat, soybeans and tobacco--turned the port of Rio Grande (a city approximately 300 kilometers from Porto Alegre) into a maritime terminal specializing in the shipment of these products, with little attention being paid to the others, mainly manufactured articles.

"For the shipment of soybeans and their byproducts, meat, tobacco and grains in general, the port is so well equipped that to speak of a port problem for exports would be a lie," declares Clovis Farina, director of COTRIEXPORT [Wheat Export Cooperative], official in charge of the wheat and soybean terminal of COTRIJUI [Ijui Wheatgrowers Cooperative].

Last year, 4,702,300 tons were exported, of which 1,880,247 were soybean meal. This year, of the 3,499,046 tons handled up to August, no fewer than 1,375,491 tons were soybean meal. General cargo, however, following the trends of previous years, showed a movement of only 674,412 tons. This, according to Rio Grande do Sul exporters, explains the shortage of general cargo ships.

"As long as the exporters do not wake up and form a pool for exporting their manufactured merchandise, it is unlikely that this aspect will be modified. If that were to happen, it would also resolve the problem of containers, which many times have been insufficient. There is one reason for that: The ships carry the containers with merchandise but later they return empty. Now we all know that no shipowner wants to see his ships loaded with empty containers," comment Farina.

It appears that the federal government is not responsive to the complaints of the Rio Grande do Sul exporters of manufactured goods. The main goal, according to Eliseu Resende, the minister of transportation, is to specialize the maritime port system of Rio Grande do Sul more and more in the movement of grains and meals.

"The largest terminal for handling wheat and soybeans in all of Latin America will be in operation in Rio Grande in April of next year. That terminal is located beside the installation of COTRIJUI, through which all the soybean production of Rio Grande do Sul already passes. The transportation of the Rio Grande do Sul crop to the port next year may be done by waterway, railway or highway, all of them being integrated with the activities of the port of Rio Grande," said the minister.

As long as the problem of general cargo is not resolved, some Rio Grande do Sul exporters are sending their merchandise to the port of Santos to be shipped out. But that necessarily makes the product more expensive and prices many times cease to be competitive on the international markets. However, if the goal is exports to Latin America, the solution is transportation by highway regardless of the price of petroleum.

Sepetiba To Be Ready in 1981

The minister of transportation wants to see a complete port system in the state of Rio de Janeiro by the end of the second half of next year. That will truly be possible when the Sepetiba terminal to be used for the export of iron ore and the import of coal is inaugurated.

"When Sepetiba is functioning," declares Minister Eliseu Resende, "the port of Rio de Janeiro will be freed for the movement of bulk cargo and specialization in general cargoes of high-quality products in containers."

The delay in the docking of ships at the port of Rio was eliminated a long time ago. Congestions no longer exist there and if a ship remains anchored offshore, it is purely for the convenience of the shipping companies. Pedro Batouli, president of the Docas do Rio de Janeiro Company [CDRJ] is responsible for insuring this.

Last year the port of Rio shared 55 percent of the total cargo handled by the ports administered by the CDRJ, a total of 27.34 million tons. Those figures represent an increase of 17 percent by comparison with 1978 and the preponderance of cargo movement was in long-distance exports, which totalled 15.52 million tons, an increase of 5.1 percent with respect to the previous year.

Movement of ships recorded in 1979 was 3,077 ships arriving, compared to 3,041 ships in 1978, which represents an increase of 1.2 percent. However, according to the president of the CDRJ, Rio de Janeiro is capable of handling as many ships as wish to dock there.

Its equipment is modern and sophisticated, allowing the handling of any type of cargo. Soon--requests for bids have already been made--the work for handling roll-on-roll-off ships will begin. This system consists of the shipment of cargo loaded on motorized vehicles, using ramps which are part of the cargo ship, obviating the need for using port equipment and installations of any type.

Another problem, about which exporters generally complain, is bureaucracy, which was partially resolved. That, also, according to Pedro Batouli:

"To facilitate the work of the port users, there are in operation along 8,000 meters of docks, booths of the second and fifth inspecting offices as a promotion of CDRJ/Banerj [Rio de Janeiro Export Bank]. Any difficulty the businessman may encounter in the transportation of his products is merely a matter of documents. Among them may be the requirements of the pertinent agencies responsible for the shipment of oil abroad [presumably soybean oil]. Here at the port all he has to do is to present his export permit authenticated by Federal Revenue and make the payment of tariffs stipulated in specific legislation, which are known to all users.

The main products exported through the port of Rio are iron and steel items, iron ore, frozen chickens, horsemeat, quartz, granite, coffee, agricultural products, automobiles and others.

Last year participation by ships (nationally-owned or not) flying the Brazilian flag of the total was 28.5 percent in long-distance shipping (2,177) and 66.1 percent in coastal shipping (960).

Suape, a Solution After 60 Years

Every evening after 1700, a group of old shipping clerks gathers at Bar 28 on Alfredo Lisboa Avenue, which runs parallel to the docks of the port of Recife, to reminisce about the good times of the anchorage. They tell stories which are hard to believe today, always with a note of yearning. The situation was very different.

"Listen, things are so bad that when a ship blows its whistle announcing its arrival in Recife, the people shoot off fireworks to celebrate," says one of them.

The port of Recife, in operation for 60 years, is an example of poor maintenance. Its 36 cranes are in poor condition; the action of the sea is destroying the line of docks and the warehouses are caving in; numbers three, four, five and six may collapse. An example is number three, which poses a serious danger to the workers and should be condemned.

"When it comes to improving the port of Recife, we only count time by tens of years. We work by decades," speaks out Francisco Claudino, president of the Business Association of Recife, after enumerating a number of messages sent to the federal government asking for steps to expand, restore and modernize the port. In Brasilia, Minister of Transportation Eliseu Resende promises to take the steps requested. However, this will not be done in the short term because he belives that the schedule is compatible with port growth. Eliseu Resende, like many other persons of influence in the state, believes that the solution for Pernambuco maritime exporting lies in the terminal of Suape, 25 kilometers from Recife.

Suape, an industrial port complex, is located on a broad estuary formed by five small rivers and protected by natural reefs. At a cost of almost two billion cruzeiros, the government of Pernambuco has already built a part of the South Jetty, which reaches 2,500 meters into the sea, and the trunkroad; is preparing the land for a tank farm, has built three breakwaters, installed the administrative center and established the areas for the installation of the first 25 industries.

All this without counting the branch railroad, which should be in operation in February. The secretariat of Suape, which indirectly administers Suape, today has 100 officials, mainly technicians. In addition, it has another 3,000 unskilled workers responsible for the construction of the roads, breakwaters, pier, jetty and branch railroad, hired to work for contracting companies.

As long as Suape is not completed and the port of Recife does not receive the promised improvements, businessmen present solutions for the old port of the capital: coastal vessels which on predetermined days would make stops at national ports and transport merchandise to the ports which are centers for exports.

Other businessmen, tired of waiting, export their merchandise by highway. There are cases of candy factories sending their products by truck all the way to Santos so that they may be taken to Buenos Aires even though they know the cost of highway transportation between Recife and Santos is twice as much as the cost by sea between Recife and Buenos Aires.

Ports Handle Large Tonnage

Rio de Janeiro O GLOBO in Portuguese 13 Nov 80 p 25

[Text] National ports should end 1980 by handling approximately 240 million tons and if present trends continue, the volume of merchandise for export will be greater than imports, according to statistical technicians of PORTOBRAS [Brazilian Ports Enterprise].

This forecast is contained in a report sent by the president of PORTOBRAS, Arno Markus, to Minister of Transportation Eliseu Resende, according to which from January to September 181 million tons were handled by the main Brazilian ports. This represents an increase of 13 percent by comparison with a like period last year.

Figures indicate an increase of 14 percent in the movement of exports (101 million tons in 1980 compared to 89 million in 1979) and 11 percent in imports (79 million in 1980 compared to 71 million in 1979). However, it is on coastal shipping that PORTOBRAS is concentrating its major efforts to encourage its use through the adoption of practical measures such as the extension of exemptions on the taxes on port improvements (TMP), which expires next December, and the reservation of special warehouse areas at the ports.

The percentage of increase in coastal shipping was 17 percent, going from 32 million tons in the January-September period of last year to 37.5 million tons in the same period in 1980, with the ports of Sao Sebastiao, Santos, Rio de Janeiro and Angra dos Reis being outstanding in this area.

In addition to the increase in the share of interior shipping by the river and lake network of the ports which serve Belem, Porto Alegre, Manaus, Rio Grande and Pelotas, another item of the report sent to Minister Eliseu Resende refers to the

increase in the movement of containers: 704,000 tons in 1979 compared to 987,000 tons in 1980, an increase of 39 percent. Santos and Rio de Janeiro are responsible for nearly 80 percent of that movement. According to PORTOBRAS technicians, with the inauguration of the container terminal in Santos scheduled for the beginning of next year, there will be a centralization of operations at that Sao Paulo port. Thus, containers for imports and exports coming from other ports will have in Santos a center capable of handling the movement of that type of cargo efficiently.

BASIC PROPOSITIONS OF 10-YEAR MINING PLAN OUTLINED

Rio de Janeiro GAZETA MERCANTIL in Portuguese 15-17 Nov 80 p 9

[Article by Sergio Danilo do Rio: "The Basic Propositions of the New 10-Year Plan"]

[Text] To promote and support participation by national private enterprise in the activities of the mineral sector, creating new incentives to make this activity more attractive; to expand state activity in the preinvestment phase of the sector; to reach self-sufficiency in the production of various mineral raw materials in short supply today during the decade (nonferrous and energy materials); and to institute a mineral policy in which the power of decision on exploration and use of mineral resources will belong to Brazilians, those are the basic recommendations of the Second 10-Year Master Plan on the Use of Brazilian Mineral Resources which should be approved this Monday in Brasilia at a meeting of the Superior Mining Council chaired by Minister Cesar Cals.

The document (21 pages distributed previously to the council members for reading and editing) recommends reduction of imports of mineral goods and suggests that minerals which do not exist in national subsoil should be acquired abroad, preferably through barter. Direct purchases shall only be allowed when the resources obtained through international barter have been exhausted.

Foreign Market

It also suggests that Brazilian companies expand their participation in the international minerals market, even participating in the mining and prospecting of minerals abroad. "Foreign investment must go beyond the contribution of capital," and should offer "possibilities of the transfer of mineral technologies, jobs, knowledge of new management methods, promote the training of national technical personnel and promote the program of development of mineral exports."

It also recommends that "The pure and simple purchase by foreign companies of developed deposits or projects in operation in the country should be discouraged unless it is in the interest of national private or state companies." In this case, the "ideal thing would be to have a share of up to 49 percent of foreign capital in the project, or the adoption of the method of 'thirds' today used by the petrochemical industry (one-third national capital, one-third foreign capital and one-third state capital)."

Another novelty related to the sale of deposits between foreign groups without the prior knowledge of the government is the suggestion that it "become mandatory that prior authorization by the government be granted for any sale or transfer of a mineral undertaking."

Reduction of Imports

The Second 10-Year Plan foresees that considering the mineral investments already known in organization and installation, during this decade the country will be self-sufficient in gold, copper, fertilizers, potassium, phosphate, bauxite, zinc, nickel, titanium and kaolin, and will also become the greatest world exporter of iron, niobium, manganese, tin, gems and precious stones. At this time Brazil occupies that position in the export of niobium and second place in the export of iron, fourth place in manganese, fifth in tin and has a small share in the official trade in gems and precious stones.

To private and state companies, the document recommends priority in the discovery and production of the following minerals: asbestos, bauxite, bentonite, coal, lead, copper, chromite, tin, iron flourite, phosphate, gems, lignite, manganese, nickel, niobium, gold, potassium, tantalite, titanium, tungsten, peat, uranium, slate and zinc.

Production

Brazilian mineral production, according to the plan, did not reach levels which could be described as a "mineral boom" during the past decade. With a low share in the PIB [Gross Domestic Product] in 1970, the growth per capita was six times greater in 1980. The document acknowledges, however, that such growth is not enough to take care of the consumption development of national industry. In 1971 Brazilian mineral production provided 53 percent of the needs of the domestic market. In 1979 that rate decline to 49 percent.

In an analysis of the percentage share of mineral goods in 1979, excluding petroleum and gas, the document of the Second 10-Year Mining Plan points out; 1) the group of nonmetallic minerals had a share of around 55 percent, considerably larger than that of the two previous years; 2) the group of metallic minerals had a share of 38 percent, less than in 1978; 3) the group of energy-producing minerals, in this case only coal, had a share of 5.9 percent, more than in 1978; 4) the group of gems and precious stones had only a 1.1-percent share of Brazilian mineral production.

In another study it is admitted that the Brazilian mineral sector "at no time" had enough financial resources available for the execution of its programs and for that reason "46 years after the creation of the National Mineral Production Department, the country still does not know its mineral potential."

The plan emphasizes that because of the lack of financial resources of national companies, more experienced foreign capital finds safe investment factors in the Brazilian mining sector. Under those conditions, it replaced the national businessmen. That is why there is the recommendation for increasing incentives for the strengthening of national business groups and for the creation of a new

system for financing the mining companies on the basis of a suggestion by the Mineral Resources Prospecting Company (CPRM), that "mining money" be created, which means the repayment of financing with mineral products themselves.

The great question which should attract the attention of the plenary session of the Superior Mining Council should be, however, the discussion on the origins of the financial resources to make the plan viable. There is no reference to budgetary appropriations for the execution of the ambitious plan in the document presented by Minister Cesar Cals to the members of the council.

BRIEFS

KOREAN HOWITZERS PURCHASED--The army is purchasing 28 Model 155, self-propelled howitzers from South Korea by means of a contract signed this week between Brazil and the firm International Trade Group Limited. The howitzers will be brought by sea to Brazil this month and will go to several artillery units. This is the first purchase of war materiel made by Brazil from South Korea and, since last October, an army materiel inspecting committee, headed by Maj Gen Engineer Mauricio de Freitas Moraes, has been in Seoul to comply with clauses in the contract for the purchase and sale of artillery materiel signed between Brazil and the International Trade Group Limited. REAGAN VICTORY SEEN AS TRIUMPH OF REALISM OVER IDEALISM

San Jose LA NACION in Spanish 6 Nov 80 p 14 A

[Editorial: "The Meaning of Reagan's Election"]

[Text] Many persons in the United States and outside it had accepted the probability of a victory for Ronald Reagan, but certainly very few thought the victory would be as overwhelming as it was. The American people seem to have tired of a preaching, philosophizing president whose tendency was more to evangelize with his human rights doctrine than to safeguard the security of the world and of his empire. When time came round for a decision, they preferred the figure of a leader, of a pragmatic politician, who would be more realistic, more conservative and more energetic.

The decline of the United States's power and of its dominant authority, which had for some time been being read into by eminent American and European political analysts, finally came home dramatically to the American public during this last year of the Carter administration.

A chain of concessions, of weak responses, of indecisions and compromises that for some rightist commentators began with the Panama Canal treaty, in which the United States relinquished control of that important strategic waterway, and which was followed shortly by the issue of the American Embassy hostages in Tehran, the Soviet Union's invasion of Afghanistan, the lack of decisive support by the Atlantic Pact countries, the Soviet advance throughout the Caribbean area, and that culminated in the spectacular and demoralizing failure of the bunglingly conceived and undertaken rescue attempt by President Carter's military team, which inflicted on the United States the greatest humiliation in its history, had permeated deeply into the consciousness of the voters.

In our opinion, the theme of war and peace was not decisive in this election, above all if we consider that in the television confrontation of the two candidates the differences in their positions in this respect narrowed considerably, thus relieving the people's minds of the fear that a change in leadership would mean an about face with regard to relations with the Soviet Union.

That which weighed most heavily with the voters was compelling desire of the American people to bring to the White House a leader capable of reinstating United States prestige and authority in the world, of restoring the imperial, yet nonimperialist, standing of that great nation as an effective means of preserving peace.

Confronted by a great aggressive power whose ideological gospel is its prime weapon for breaking the human spirit and whose plans to rule the world are on display and become more ominous every day, Carter's human rights doctrine, conceived and implemented obliviously of the geopolitical, historical and human peculiarities of each region, could not but contribute to the aims of the enemy, who in turn had no scruples about establishing trade, technical and military cooperative relations with rightist dictatorships. For, while human rights is a noble and beautiful doctrine, the fact is that it is also the doctrine on which terrorism has drawn to justify its horrendous depredations.

Notwithstanding that Carter's humanistic message has been a victory for the civilized world and will go down in history as a step forward in the liberation of mankind, it could never replace the essential and primary ingredient of any true policy, namely, the exercise of authority, the firm and realistic leadership of a people, and the consolidation of the power that fate has entrusted to a nation as great, as powerful and as democratic as is the United States.

The American people do not want war. What they want is the vigorous and persuasive presence of the United States as guardian and leader of the free peoples of the Western world. Reagan's image is for the Americans the one that most fulfills this historic desideratum.

DECLINE OF INDIVIDUAL LIBERTIES IN NICARAGUA DEPLORED

San Jose LA NACION in Spanish 10 Nov 80 p 14 A

[Editorial: "Beginning of the End of Liberties in Nicaragua"]

[Text] The banning of the political rally the MDN [Nicaraguan Democratic Movement] had planned to hold in Nandaime, by the Sandinist government, under the flimsy pretext that it could mean a deviation from the priority national reconstruction effort, has more ominous significance as a premonitory symptom of the beginning of the end of individual liberties in Nicaragua than as a violation of the legality that still holds sway, at least formally, under the new regime.

Those in command who are of Marxist-Leninist leanings, who are currently the real bosses in Nicaragua, fear their power will gradually erode and are for this reason reacting sensitively and suspiciously with respect to any free movement on the part of any legally constituted political party or group they do not control. This fear is rooted in the conviction, which may or may not be sincere but which is in any case sectarian and dogmatic, that only they, with their Marxist-Leninist party and apparatus, can lead the reconstruction and development process toward a just and free society because they are the sole expression of the interests of the people.

The ideology they profess, not always well digested, and the vague notion that their revolution forms part of a more vast process of worldwide dimensions, in which they are but one of the necessarily subordinate pawns, ends up imbuing that conviction with a Messianic force that is blind, of course, but that compels them to hold on to political power by whatever means necessary.

The symbolic ambivalence the Nicaraguan daily LA PRENSA is still allowed to point to as one of the regime's strange contadictions and falacies, by virtue of which Sandino is pictured as supporting Lenin, has a very clear intent. Sandino is playing the same role as did Marti in the Cuban revolution. In both cases, the ploy responds to the need to falsify history, an art of which the Soviets are past masters, to create in the popular mind the mythology that will ensure their perpetuation in power.

Once again, the deceptive formula of a dictatorship of the proletariat, camouflaged for the time being, which is nothing other than dictatorship by a necessarily minority party managed by a monolithic committee of supreme leaders, is taking over in an underdeveloped, economically agrarian country that has never really known either the democracy or the freedoms for which it spilled so much blood.

We do not know what Arturo Cruz, the Catholic who attends mass daily, is still doing there. What we do know is that very soon--as soon in fact as the hegemonic process has matured--he will be one of the many traveling companions to be purged without any second thoughts whatever.

If the embryonic dictatorship of the Sandinists does not truly guarantee the legal recourses for the full and free exercise of the political rights of all the parties and sectors of Nicaraguan society, and the enjoyment of the freedoms they promised, during the armed struggle, to institute and respect, they will have their way and mire Nicaragua in the same morass in which Castro's Cuba has flailed for over 20 years.

FORMER PROMINENT CUBAN REVOLUTIONARY INTERVIEWED

Rio de Janeiro O GLOBO in Portuguese 30 Nov 80 p 38

[Interview with Carlos Franqui by Albino Castro Filho of O GLOBO in Italy; date not given]

[Text] "I can very sadly assure you that there are more political prisoners in Cuba today than during the Batista dictatorship," declared writer Carlos Franqui to GLOBO. He was a comrade of Fidel Castro during all the fighting in the Sierra Maestra and has been in exile for 12 years in the Italian city of Montecattini in the region of Tuscany.

Still describing himself today as a socialist, Franqui, perhaps the most intellectually gifted of the group which carried out the Cuban revolution, finally fell into disgrace when he protested against the Soviet invasion of Czechoslovakia in 1968 which destroyed the "Prague Spring."

At 59, Franqui today lives from the books he writes and from frequent articles for the press. He has written several books during these years in exile on history, plastic arts and poetry, among which are "Cuba, the Book of 12," "Diary of the Cuban Revolution," "The Painting of Miro" and "The Circle of Stone."

A newspaperman, in 1952 he joined the group of Fidel Castro, publishing the newspaper LIBERACION. From 1955 to 1959 he performed outstandingly in the guerrillas, at the same time making contacts abroad to obtain weapons for the Sierra Maestra and publishing another newspaper, REVOLUCION.

After the overthrow of the Batista dictatorship, he was called upon to be the minister of culture. He did not accept. He chose to lead the "Movement for the Popular Encouragement of Culture" and to continue publishing—legally now—the newspaper REVOLUCION. A friend of Che Guevara, he began to fall from grace when disagreed with the alliance made by Fidel Castro with the Soviet Union. Before being imprisoned and later expelled from Cuba, he organized the Museum of the Revolution in Cuba.

The Interview

[Question] Why are you, who spent years in the Sierra Maestra waging guerrilla warfare at the side of Fidel Castro, now a Cuban dissident?

[Answer] After the revolution triumphed, I began to disagree. I was a radical, like all those bearded ones, but a humanist. I dreamed of a democratic Cuban socialism, which would not in any way fall into the sphere of influence of the Soviet Union. I was against, for example, the communist party having any function in that revolution and in which, as is known, it did not participate.

On the contrary, the Cuban Communist Party preferred on many occasions to support the Fulgencio Batista dictatorship than to support the bearded ones of the Sierra Maestra. The Cuban Communist Party joined the revolution after our victory and it joined because of opportunism.

[Question] Well, and then?

[Answer] I began to disagree, as I said, since Raul Castro was a communist and pro-Soviet. I believed that in order to really win in the humanist sense, the revolution should turn to the cultural roots of Cuba and develop unionism, that is, new forms of sharing by the workers in the means of production.

That was my battle. I managed to keep up my battle from January 1959 when the revolution triumphed, until 1968. As Fidel Castro delivered himself completely to Moscow, the revolution came to an end.

[Question] What kind of socialism did you envision?

[Answer] Above all, socialism had to be imposed in the Cuban spirit. It should be happy, a festival in keeping with the tradition of our people, and not austere and authoritarian as it is now. It would have to be based on the values of Cuban culture and particularly on its black roots. However, instead of our Afro-Latin American culture, Soviet bureaucracy was imposed.

The whites in Cuba, even the ones who carried out the revolution, always had much difficulty in accepting our black culture. The Cuban revolution could have headed along an original and humanist path, unlike others, since it had nothing to do with the communist party nor with Stalinist ideology.

[Question] But do you believe that from the economic point of view the revolution has also failed?

[Answer] Obviously it has. I agree that the revolution should be very radical from the economic and social point of view, abolishing large estates, foreign exploitation, in short, capitalism as such. But it should always be based on the principles of freedom. Because that freedom did not exist and the economic system was imposed from the top to the bottom via Moscow, we did not diversify the economy and 20 years after the revolution, the country is still living from sugarcane.

That means that as long as a single-crop system persists, Cuba will continue to be a slave. We were conquered by the Spaniards first, then by the United States and now by the Soviet Union. All the changes after 1959 were made by decisions at the top. The people had no say in them. The Cuban bourgeoisie were replaced by a bureaucracy "made in the USSR."

Large estate owners no longer exist that is true, however, the workers continue to live exactly as before without even the right to a union. And a bureaucrat now lives in the home of the large estate owner. That, also, is not only a problem of Cuba, but that of all the countries of the so-called "real socialism."

[Question] And was Che Guevara against that dependence on Moscow?

[Answer] Not at first, but later when he saw the first disasters of that alliance, he became disgusted and began to have a very critical position toward the Soviets.

[Question] For years Cuba symbolized a sort of "paradise of revolution" to the Latin American left. Do you believe that image remains?

[Answer] I do not believe so because there has been much political change in those past years. The idea that Cuba is the only liberated country in Latin America is completely mistaken. Cuba emerged from the control of the United States and it fell under Soviet control. Meanwhile, due to the extreme right regimes which cover Latin America, some persons sometimes fall into the temptation of believing that the antidote to fascism is "real socialism," but it is not.

Cuba is living one of the most difficult moments of its economy. Fidel Castro himself had to admit last year that 200,000 persons were unemployed. The three myths of the Cuban revolution have fallen by the wayside: There is much unemployment, education does not work (unless it is for the privileged children of the bureaucracy) and the balky public administration is undermined by corruption. Obviously those things are kept a secret under a lock with seven keys.

[Question] What do you think about Cuban military meddling in other countries?

[Answer] The Soviet Union is using Cuba, in exchange for an apparent economic help, to meddle everywhere in the world, even in Afghanistan, giving the appearance of a progressive force, exploiting the image it still has in many places of being the same young idealists of the Sierra Maestra.

But nothing about them is progressive. It is purely and simply a matter of a force which is acting at the instance of Soviet imperialism. Cuba is acting in the Third World as the Warsaw Pact does in East Europe. It is an occupation force.

[Question] Do you believe that Maj Hubert Matos, released after spending 20 years in Cuban prisons, can successfully oppose the regime of Fidel Castro?

[Answer] Hubert Matos is a very important moral reserve. He spent 20 years in Cuban jails for having said one thing: that he wanted a communist revolution [as published]. Exactly that. A year later, in 1960, Fidel Castrol made that same choice but Hubert Matos remained in prison. Historically he is a figure of great importance.

Our concern is that there be a distinction between the opposition we carry out and that which the CIA incites. We want a humanist socialism and not the return of the bosses. This means that we want to nationalize the state. The workers do not revolt in a factory as happened in Poland because they want the return of the bosses but because they want to directly control production. They want to make decisions and do not accept the bureaucrats who, moreover, are incompetent.

[Question] Two bombs exploded this year in the Soviet area: first, the invasion of Afghanistan and later the strikes in Poland. How do you view those facts?

[Answer] Afghanistan is a new Vietnam, with only one difference: The western newspapers generally attribute less importance to the genocide committed by the Soviets than that of the Americans in the last decade. From Afghanistan comes the lesson that when people want to resist a foreign invasion, it is possible to do so. Resistance by the Afgans is extraordinary. On the other hand, what is happening in Poland is likewise extraordinary.

I identify completely with the Polish workers who rise against bureaucracy and fight for their hegemony in the socialist state. However, honestly, I have a great fear that the Soviets will conclude by destroying the socialist gains of a people once more.

[Question] And how would you describe yourself politically?

[Answer] Above all, I am a man capable of freely saying "no" to any tyranny in any part of the world. I say "no" to Pinochet and Fidel Castro. I am in favor of democracy based on the rank and file, that is why I believe a union organization is more important than a communist party.

What interests me is a permanent struggle against tyranny, social injustice and lack of freedom. I believe that the only way of changing the world is to change man. Fidel Castro is different. He loves war. His orgasm is war.

[Question] Do you know how many political prisoners there are in Cuba today?

[Answer] I can very sadly assure you that there are more political prisoners in Cuba today than there were during the Batista dictatorship. There are at least 1,000 political prisoners who have been in prison for more than 10 years. This is not to speak of the "new" ones (with eight, five, three and two years). There are also the many "rehabilitation camps," which are true "lagers" (a German word meaning concentration camp). The homosexual camps on the Isle of Pines, for example, are full.

Humiliated and deprived of their rights and freedom, they are forced to work in quarries. I wanted to say one more thing: The problem is not that there are more prisoners now than during the Batista tyranny--which is very serious--but of having to admit that we are imprisoned by those same bearded ones of the Sierra Maestra of whom we were comrades. Batista, after all, was our natural enemy, but the present regime was born of our struggle for a socialism with freedom.

REPORTAGE ON BENIN FOREIGN MINISTER'S VISIT

Havana GRANMA in Spanish 27 Oct 80 p 3

[Excerpt] Cooperation Agreement Signed

Havana (AIN)--A cooperation agreement between the ministries of foreign relations of the Republic of Cuba and the People's Republic of Benin was signed Saturday in this capital.

Foreign Minister Isidoro Malmierca, member of our Communist Party Central Committee, and Foreign Minister Simon Ogouma Ifede, member of Benin's People's Revolution Party, signed the document.

First Vice Minister of Foreign Relations Rene Anillo and vice ministers Pelegrin Torras and Jose Fernandez de Cossio attended the event which was held at the Cuban Foreign Ministry.

Also participating were Ignace Adjo Bocco, member of the Politburo of Benin's People's Revolution Party and president of that country's National Revolutionary Assembly, and Pierre Edon, charge d'affaires of that friendly nation in Cuba.

Guy Landry Hozoume, minister counselor at the Benin Embassy in Paris, was also present.

Meeting With Rafael Rodriguez

Havana (AIN)--Saturday morning, Vice President of Councils of State and of Ministers Carlos Rafael Rodriguez met with Simon Ogouma Ifede who was accompanied by Pierre Edon and ministry advisor Alfred Guy.

During the meeting they discussed aspects of the international situation and bilateral relations, highlighting the close bonds of friendship and cooperation between Benin and Cuba.

Present at the meeting were Isidoro Malmierca, vice-presidential advisor Carlos Martinez Salsamendi and Oscar Oramas, MINREX [Ministry of Foreign Relations] director of Sub-Saharan Africa.

Benin Embassy Reception

Havana (AIN)--Isidoro Malmierca attended a reception given by the Benin Embassy in this capital in honor of Simon Ogouma Ifede's visit.

The celebration was also in honor of the eighth anniversary of the proclamation of the Benin people's revolution; Ignace Adjo Bocco also attended.

Also present were Guy Landry, Pierre Edon and Pelegrin Torras.

Visit to Valles de Picadura

Madruga (AIN)--Simon Ogouma Ifede visited the Valles de Picadura livestock district, devoted to the development of animals with high genetic potential for vaccine reproduction.

He also toured the communities of Pena del Leon and Victoria de Viet Nam, accompanied by district International Relations official Silvia Fernandez, who showed him the modern residences of the area's farmers, who were disadvantaged before the triumph of the revolution.

SUPREME COURT RULING ON CASES INVOLVING THOSE LEAVING CUBA

Havana TRABAJADORES in Spanish 6 Nov 80 p 3

[Summary of People's Supreme Court ruling, by C. Lafita]

[Text] The National Assembly of the People's Government, by means of Resolution No 36, adopted during its first regular 1980 session, voted to confirm and give full legal effect to the policy followed by the government regarding antisocial elements, former criminals and certain categories of criminals who entered the Peruvian Embassy or expressed a desire to leave the country.

To regulate the disposition of criminal cases remaining before the courts involving those people either as accused or convicted parties, the Governing Board of the People's Supreme Court has issued Ruling No 95. Its first section states: "Cases before the courts in which the sentence has not been pronounced or has not been confirmed will be entered in the record, and the proceeding will be provisionally halted, if it is established, through information furnished by the National Revolutionary Police or another organ of the Ministry of the Interior, or known to the court itself, that all the accused have left the country."

"For resolution of this matter, a writ will be issued that provides for filing of the case on these grounds, and the following will be ordered:

Forfeiture of the bond posted by the accused to remain at liberty.

To continue gathering evidence, in conformity with the provisions of Article 271 of the Criminal Procedure Law."

The second section states that for cases in which some of the accused have left the country and others have not, the courts will provisionally suspend the proceeding for those who have left the country and will continue it for the others.

If the proceeding is terminated for one or more of the accused involved, the measures referred to in the previous section will be taken, when appropriate, also.

If the oral proceeding has begun, it will continue, statements concerning the absent accused parties being included with the verdict ending the process.

The third section states that when the sentence in a case has been pronounced and confirmed, all the procedures concerning it will be carried out, where appropriate, and a record will be made of the proceeding.

The fifth section provides that in the foregoing cases, when an appellant has left the country, the appropriate division of the People's Supreme Court will consider his appeal withdrawn and will uphold the sentence, returning the case to the court where it was first tried for implementation of the provisions of Section Three of this ruling. If that case involves other appellants who have not left the country, the process will take its normal course.

The procedure described in the preceding section, adapted to the circumstances, will be followed for cases in which an appeal has been entered under the provisions of Article 380 of the Criminal Procedure Law, according to Section Six of Ruling No 95.

COLOME IBARRA PRESIDES AT SOVIET ANNIVERSARY FETE

Havana VERDE OLIVO in Spanish 16 Nov 80 p 55

[Article by Mario Rodriguez: "18th Anniversary of the Great October"]

[Text] With Maj Gen Abelardo Colome Ibarra, a member of the Central Committee of the party and first alternate to the Minister of the FAR [Revolutionary Armed Forces], presiding, the main ceremony held by our Revolutionary Armed Forces in connection with the 18th anniversary of the triumph of the Great October Socialist Revolution was held recently.

The solemn ceremony, which took place in the Universal Hall of the MINFAR [Ministry of the Revolutionary Armed Forces], was also attended by Vitali Vorotnikov, the ambassador of the Union of Soviet Socialist Republics to Cuba, Lt Gen Sergey Krivopliazov, in charge of the Soviet military experts working in our country, and FAR generals, commanders and other officers.

During his address, Col Francisco Cruz Bourzac, speaking on behalf of the Minister of the FAR, noted how the example of the Great October, the most important historic event in the 20th century, has expanded with tremendous force to all continents, and he said that the historical development of this event represents a date commanding commemoration by all of progressive mankind.

After noting the development the Soviet people have achieved on all levels, guided by the teachings of the first socialist revolution in the world and the wise leadership of the glorious Communist Party of the Soviet Union, the speaker stressed:

"The October Socialist Revolution made the advance of the international communist and workers movement and the national liberation movement possible. The military power of the USSR serves as a brake on the militaristic plans of the imperialists.

"For all Cubans, and for our soldiers in particular, this anniversary is a source of great happiness."

Finally, Colonel Cruz Bourzac stressed the indestructible friendship, solidarity and collaboration existing between the parties, governments, peoples and armed forces of Cuba and the Soviet Union, while at the same time conveying warm greetings to the Soviet military experts working in our country, extending them to all the combatants in the Soviet armed forces.

Maj Gen Ziebzov Lobanov spoke on behalf of the military experts. He began his address by reviewing the main triumphs of socialism in the USSR, which have made it possible for the country to be transformed into a powerful socialist state.

Major General Ziebzov then went on to speak of the importance of the most recent session of the Supreme Soviet, at which the increase in the economic and military potential of the USSR, as well as the increase in farm production and the general well-being of the entire Soviet people, were made manifest.

"The Great October Socialist Revolution," he said, "is of extraordinary importance from the international point of view, because it paved the way toward the future."

Then, after speaking of the collaboration which exists between the USSR and all of the other member countries of the socialist community in the military, economic, political and ideological fields, the speaker said that Soviet-Cuban friendship continues to strengthen with every passing day. As an example of this he cited the joint space mission carried out by the crew including astronauts Romanenko and Tamayo. And in conclusion he said:

"Comrades in arms, we will spare no effort, knowledge or skills in rendering you aid in the strengthening of the Revolutionary Armed Forces of socialist Cuba."

NEW UJC ID'S PRESENTED TO FAR CIVILIAN WORKERS

Havana VERDE OLIVO in Spanish 16 Nov 80 p 56

[Article by Jorge Luis Blanco]

[Text] New Union of Young Communists (UJC) ID's were issued to a group of members of the FAR (Revolutionary Armed Forces) Construction and Housing Board Planning Center in a solemn ceremony held on the esplanade opposite the Museum of the Revolution.

During the ceremony, presided over by Brig Gen Filiberto Olivera Moya, a member of the party's Central Committee, Engineer Humberto Perez, secretary general of the UJC Planning Center Committee, took the floor and reported on all the work that was done during the process of changing ID's in the young people's political organization.

Lt Vicente Alegria Perez, political instructor for the UJC from the FAR Construction and Housing Board, was charged with delivering the concluding statements.

"The process of changing UJC ID's," he said, "which began last year with general preparation, represents one of the main directions of the organization's work for the period included between January 1979 and April 1982 and will enable it to raise the efficiency, application and quality of the political record to higher levels as well as improving the system of control over members.

"But in addition to the importance of this process in terms of the organizational system," he emphasized, "implicit in it are the profound political objectives that are materializing through individual encounters, among the objectives of which is the pursuit of even closer ties between the UJC's administrative agencies and rank and file organizations, between the members of these and their executive staff."

In his talk, he also mentioned the support that was on every occasion extended by the party, the board and the union in the development of the process.

"Just a few minutes ago," he concluded, "new UJC ID's were issued. Your are the first members of the FAR Construction and Housing Board to receive them. This ID carries with it a serious obligation: to guard it with heroism, dignity, self-denial, sacrifice and integrity."

Lt Col David Publio Morales, the replacement for the head of the FAR Construction and Housing Board's political task, and other board leaders and officers also attended the ceremony.

LIFE AT MACEO INTERSERVICE SCHOOL DESCRIBED

Havana VERDE OLIVO in Spanish 16 Nov 80 pp 33-37

[Article by Mario Rodriguez: "To Become an Officer and Engineer: an Opportunity for Our Young People"]

> [Text] "What I can say of this school is that, even without having gone through the war, its cadets can be rated as veteran officers."
>
> Fidel

This day acquires special significance for students of the FAR [Revolutionary Armed Forces] General Antonio Maceo Interservice School.

It will be hard for each of them to forget the details of this beautiful day on which they will swear boundless loyalty to the working people and its vanguard party.

Multicolored banners are waving everywhere on the broad esplanade where the different factions are in great martial array.

Everyone is eagerly awaiting the commencement of the ceremony that will not be long in starting, with the bugle call "All Present."

The detachment of standard-bearers is already moving into its position on the right flank of the formation. The troop commander renders homage to the director of the Military Training Center.

Then the troops pass in review, after which the head of the unit, Colonel Palacio Suarez, addresses the new cadets:

"Comrades," the director of the FAR Interservice School said, "this military vow signifies your loyalty and readiness to defend our fatherland, cost what it may, and serve the international proletarian movement wherever the party and government feel it necessary." And then he added:

"Worth remembering are the provisions of Articles 64 and 65 of the Cuban National Constitution in which it is proposed: "Defense of the socialist fatherland is every Cuban's greatest point of honor and supreme duty. Betrayal of the fatherland

is the gravest crime and those who do so are subject to the most severe penalty."

After that, there was the vow, which moved all those present, the symbolic delivery into their hands of their rifles, an eloquent demonstration of their military duty and, finally, the confirmation of the document that commits them to serving with honor and loyalty.

All of them will certainly remember that moment for the rest of their days because, as Colonel Diez Garcia of the Administration of Military Training Centers and Outside Preparation of Troops said in concluding the ceremony:

"You have committed yourselves to being loyal and firm defenders of the interests of the working people and of the teachings of our commander-in-chief."

Almost Two Decades of Efforts

In its 17 years of existence, the FAR General Antonio Maceo Interservice School has come a long and meritorious way in the important task of preparing highly qualified military cadres for our FAR.

The time spent and the experience accumulated have made of this center for the training of advanced officers a prestigious institution capable of offering its graduates superior mastery of military science.

From that 7 February 1963 when the first students arrived at the school, the center has made a real jump in quality in all areas.

Since then, its installations and teaching staff have been constantly improved until this important center for advanced military training has become what it is today.

This is completely suited to the development our FAR have gone through, provided as they are with a combat weapons and technical complex which require officers with advanced military and professional training.

At the present time, various specialties are taught at the center, all backed by the system of advanced training.

Of particular interest among them are the specialized study courses in mechanized infantry tactical command with the rating of engineer in the use of armored techniques, tactical command of engineer division troops with the rating of engineer in the use of the appropriate machines, etc. All of these are 4-year programs.

Along with these specialized programs, the center prepares professionals in 5-year programs. These are the specialists in tanks and transport with an advanced military engineer-mechanic's rating and the specialty of engineer in the field of engineering equipment with a similar rating.

But the FAR General Antonio Maceo Interservice School not only trains future engineer officers in the appropriate knowledge of military subjects.

Taking into account the fact that a modern army requires an officer cadre prepared for everything, the teaching process is structured in terms of various programs that complement the training of the future officer.

Thus, for example, the basic sciences, constituting obligatory subjects, include among others subjects as important as higher mathematics, physics, organic and inorganic chemistry, calculus, probability theory, unitary operations, etc.

At the same time, engineer training inculcates advanced understanding of technical and mechanical design, hydraulics, thermodynamics, theoretical mechanics, resistance of materials and others.

For the successful development of the entire teaching program, the school is provided with laboratories, all kinds of proving grounds, different study centers, firing ranges, special lecture halls, study rooms and areas designed for the systematic exercise of all kinds of sports.

To be added to the 15 graduations the center has already held is the next one, in 1982, at which time the school will for the first time send a contingent of officers with advanced training behind them to the universities.

This will no doubt be reflected in the future efforts of the different agencies and will constitute the best reward this group has received in its almost two decades of efforts.

Two Cadets, Two Eras

Lt Col Javier Tarrago Fernandez, at present head of the Instruction Section at the Military Training Center, is a graduate of the first study programs taught at the school.

Tarrago still remembers the first days of his admission to the school and the whole selective process which one then had to go through to be admitted as a student.

In the course of the interview, the officer relived those months of training in the Sierra Maestra including the climbing of Mount Turquino which completed that stage of his training.

So, in that way the young soldier gradually overcame every obstacle that blocked his decision to become an officer in our FAR.

The fervent desire to carry out the proposed mission at any cost led him to successfully complete his studies and realize an old dream.

His selection for the specialized mechanized infantry program brought us to the first question in what was to be a lively discussion.

"From the very first moment," he told us, "mechanized infantry was the special field that most nterested us. This was due to the fact that we were aware that it constituted one of the special fields with the greatest prospects in addition to representing the backbone of the entire military organization.

"What would any unit which included various kinds of special weapons and troops be without the centralized leadership of the head of the general mass of troops?

"That was why I realized that my decision was the right one."

We asked him: "What difference do you note between those early years of the school and the reality of today?"

"Just think, the difference is tremendous. Remember that at that time there were none of the laboratories or proving grounds we have today and which you have had an opportunity to see.

"Most of the instructors had no real experience but, furthermore, there were limitations in all areas, also as regards teaching materials, which often had to be prepared by the instructor himself the day before class.

"That is why I tell you that, when we see the progress we have made, we can do no less than marvel at this group and the effort it has made.

"We have seen the birth, growth and evolution of this school into what it is today, a magnificent center in which young cadets are trained in accordance with the latest requirements in the fields of teaching and modern military science."

Speaking about the possibilities the FAR offer our young people, Colonel Tarrago emphasized:

"I must admit that for me the FAR represents a real school. Who could have told me that in just a few years time I would find myself preparing for my candidacy. Then, that seemed to be an illusion.

"On the other hand, all this was possible thanks to the victory of our revolution and the unlimited prospects that the military profession offers."

Cadet Armando Yera Godoy is at present in his second year of study in the special field of mechanized infantry, having entered the center after graduating from the Andres Gonzalez Lines Advanced School for Fishing as a naval machinist.

For Armando the school represents an opportunity to realize an old aspiration. This was obvious from every word he uttered to us during our conversation in his home, just a few hours after receiving the pass granted him each weekend.

He feels the Military Training Center to be much to his liking, where, as he put it, "I have learned to develop an iron self-discipline as well as real study habits."

"The military profession," Armando noted, "is generally considered to be a rigorous one and that is true, but it also affords us the opportunity to acquire a broad range of useful knowledge as well as the privilege of finding ourselves in the front line of defense of the fatherland.

"That is why, when the opportunity arose, I did not hesitate to enter the FAR Interservice School. Here we have all the facilities for study and the opportunity

to graduate as engineers in the different special skills so badly needed for the defense of the country.

"Furthermore, for teaching activities we rely on modern teaching materials which help us a great deal in the acquisition of these skills.

"As regards the instructors, they all have well-rounded experience in addition to the necessary teaching and scientific qualifications and are thus capable of offering us a solid education."

In addition to the help he gets from instructors, the ever-present encouragement of his parents, who realize that the option chosen by their son deserves all their attention and enthusiasm, has played a primary role in Armando's activities.

When asked about his plans for the future, he did not hesitate to reply:

"I want to graduate as soon as possible as an engineer trained in the use of automotive techniques and begin to serve in units in which our presence is so badly needed."

The need for training cadres qualified in terms of the necessary political and ideological conditions, skilled in military science, disciplined and admirers of the military profession is the job the FAR General Antonio Maceo Interservice School has been doing with complete success all these years.

This constitutes an opportunity not to be sniffed at for our young people who are eager to learn and be useful.

ALDO SANTAMARIA CLOSES MGR EMULATION REVIEW

Havana VERDE OLIVO in Spanish 9 Nov 80 p 56

[Article by Pablo Noa: "Plenary Session for Emulation Review"]

[Text] Vice Adm Aldo Santamaria Cuadrado, member of the CC [Central Committee] of the PCC [Communist Party of Cuba], substitute for the minister of the FAR [Revolutionary Armed Forces] and chief of the MGR [Revolutionary Navy], closed the plenary session to review socialist emulation for 1979-80 in that branch.

Oilda Serrano Perez, secretary general of the Sectorial Committee of the SNTCFAR [National Union of FAR Civilian Workers] in the MGR, read the report summarizing the work done by the union sections and their affiliates in the centers and units.

The concrete achievements and the deficient aspects which, it was said, must be confronted with all the resources available in order to completely eliminate them were presented.

This session was an enjoyable meeting in which the effort of the workers was stimulated. Ten centers for different specialties received the "20th Anniversary Award" given by the national CTC [Central Organization of Cuban Trade Unions].

In the MGR, the following were proclaimed the best centers of the year: the Naval Academy, the Camilo Cienfuegos Vocational Military School in Cienfuegos, the Central Naval District, the CEPEM [Training Center for Junior Specialists] and the UM [Military Unit] 5208. These units also became candidates for socialist emulation promotional centers in the MGR.

On the individual level, the following received recognition as the best workers: Jose Valentin, Carlos Martinez, Jeronimo Molina, Estanislao Rodriguez, Douglas Rodriguez, Zeida Perez, Angela Govin, Mariano Isla, Nuris Gonzalez, Pedro Groveran and Erel Gonzalez.

The ceremony was a suitable occasion for the secretaries general of the different units to give the chief of the MGR emulation commitments for the present year.

The workers of the Granma Military Industrial Enterprise where the plenary session was held greeted the participants and exhorted them to increase demand and quality in everything in order to maintain the indices achieved.

The meeting was presided over by: the chief of the MGR; Julio Machado, secretary general of SNTCFAR; Ship Capt Joel Chaveco; and Ship Capt Jose L. Cuza.

In his closing, Vice Adm Aldo Santamaria pointed out the role played by emulation which, he said, "became a suitable vehicle to guarantee the fulfillment of our units' missions."

He pointed out the importance of the work of the civilian workers in the tasks that strengthen the process of organization and development of emulation.

He listed the weak points that are still evident and recalled Fidel's statements on the correct use of stimulus for comrades who are outstanding in their daily work.

He also emphasized the responsibility acquired by the MGR union movement in the emulation commitments that were presented since this is the year when the Second Party Congress will be held. Because of its importance, all necessary effort and attention should be devoted to giving a just and worthy salute to the congress.

NEW ARTILLERY CADETS INDUCTED AT FAR SCHOOL

Havana VERDE OLIVO in Spanish 16 Nov 80 p 54

[Article by Pablo Noa: "Military Oath Ceremony"]

[Text] As in the past, thousands of workers, students, women and children, mixing with members of the FAR [Revolutionary Armed Forces] and MININT [Ministry of the Interior], met in the plaza in the center of Habana del Este which has a monument to Camilo Cienfuegos. They met to give homage to the hero of Yaguajay on the anniversary of his death.

This ceremony officially closed Ideological Day devoted to Camilo and Che in this town; it has been celebrated since 8 October throughout the country.

For the inhabitants of Habana del Este, this commemoration has already become a tradition. For some years, new cadets have been inducted in military life on this date. On this day, the youths who enter the Artillery Cadet School of the FAR which bears the glorious name of the invincible guerrilla chief of the sierra and the invasion take the oath in honor of Camilo Cienfuegos.

The Ceremony

The call to attention filled the plaza. Then came the color guard carrying the national flag of combat and unity.

Detachments of cadets and militiamen laid their wreaths next to Camilo's monument. Pioneers, students and cadets participated in guards of honor while the national anthem filled the plaza.

After the official review, Col Adan Hernandez Gutierrez, director of the Artillery Cadet School, addressed the people there.

He pointed out the importance for the revolutionary youths to serve the fatherland and the revolution loyally; this should be a source of rightful pride.

Then Cadet Morales Nunez read the military oath.

Almost simultaneously a squad symbolically presented arms to the new cadets. Minutes later, the students signed the military oath.

Pedro Sotomayor Sanchez, member of the municipal bureau of the party and president of the People's Government Assembly in Habana del Este, summarized the mass ceremony.

He stated: "Like every year, a group of youths who have begun their lives in one of the most important combat trenches against the imperialist enemy and for the defense of socialism are with us today."

He added: "We are referring to the youths who make up the ranks of men who bravely and firmly guard our sky by day and by night. In the study of military technology and science and with their consistent position in each mission entrusted to them, they will carry the banners that guide us high and will know how to fulfill the sacred mandate that the people have entrusted to them."

Then he indicated:

"We congratulate these youths. We exhort them to continue forward, to continue with their lives the example of those who provided the opportunity to live in a happy country, those who, through their productive and blameless lives, made themselves a place in our history and in our hearts. They should continue the example of Commander Camilo Cienfuegos and Commander Ernesto Che Guevara."

Those who presided over the ceremony included: Oscar Fernandez Mell, member of the Central Committee of the party and president of the Provincial People's Government Assembly in Havana; Orlando Jimenez Ferrer, first secretary of the municipal bureau of the party in Habana del Este; and party and state chiefs, officers and leaders.

At the end of the ceremony, the troops passed in review. Then the people made an impressive pilgrimage to the shore to throw thousands of flowers on the sea as part of the traditional homage that all Cuba gives to Camilo Cienfuegos each year.

CENTRAL ARMY ARTILLERY WINS ARTILLERY EMULATION

Havana VERDE OLIVO in Spanish 16 Nov 80 p 56

[Article by Jesus Casal: "Recognition of Land Artillery"]

[Text] Div Gen Raul Menendez Tomassevich gave the artillery chief of the Central Army the banner for winning the First National Artillery Competition of the FAR [Revolutionary Armed Forces] which ended recently.

This ceremony with an artillery brigade of the Central Army served also to give homage to the artillerymen who have died in the past 20 years while fulfilling the combat missions entrusted to them by the party and the state.

The ceremony started with the call to attention. The military band of this command played for the entrance of the army chief. An artillery salvo was heard along with the notes of the national anthem.

Col Eduardo Gonzalez Herrero read the address of the minister of the FAR for Land Artillery Day. Then certificates of recognition were presented to the artillerymen who have served for 20 years.

Later the results of the First National Artillery Competition were announced. The performance of the Central Army artillerymen was magnificent.

Div Gen Raul Menendez Tomassevich, chief of the Central Army, stated that, during the ceremony, he had witnessed the enthusiasm and joy of the veteran and new artillerymen when they received the awards for the work done.

He said: "We are convinced that the artillerymen are proud of their profession. The results that will be obtained in the coming years will make them worthy of the confidence of our working people. They will continue to deserve the homage that we offer their comrades in arms."

He emphasized that, from now on, we must be better prepared, more vigilant and more convinced ideologically in the fight against our enemies. "In spite of our achievements, the international situation forces us to increase these levels of preparation and mastery of technology and armaments even more."

IMPORTANCE OF DEVELOPING PATRIOTISM IN CHILDREN

Havana JUVENTUD REBELDE in Spanish 17 Nov 80 p 2

[Article from "Minisiquis" column: "Love the Fatherland from Childhood"]

[Text] Today's child, tomorrow's adult, should above all be an individual who loves his country. The sentiment of patriotism should be thoroughly inculcated in socialist society.

The earlier these ideals are awakened in him, the better will be the moral forces manifested in his personality. First the home, and then the school must play this role.

The little one's home life, his family, the patio where he plays, the street where he lives, his school, the place where he goes for walks--in sum, everything that first gives him contact with life, gives him an idea of what his surroundings are like and provides him with an opportunity to realize that he belongs to this immense and marvelous world.

Where should we begin to stimulate those patriotic feelings? With an awareness of the nature of his country, so he can appreciate its greatness; the heroism of the nation's past; his people's ancient traditions; pride in his history and respect for the self-sacrificing work of building this new socity.

Parents must teach their children as soon as they begin to understand conversations, to admire the beauty of the countryside and the native mountains, the immenseness of the sea; to listen to the singing of the birds; to appreciate the usefulness of the trees, the beauty of the flowers and the diversity of aromas and colors.

Stories about participation in historic events provide his conscience with values and attitudes worthy of imitation, so that if he has a relative, teacher or friend who has fought or been involved in the struggle for emancipation, that person should be brought into the family nucleus to tell anecdotes, to take the child to the school the person went to or to visit some monument or museum built in the name of the person's comrades. This will help the child understand better and more thoroughly the heroism and patriotism of this country.

Parents and educators should select events that serve to expand and confirm children's ideas about their country, with clear and easily understood examples. They can explain to the children how the Party and the Government are concerned about all citizens, and the meaning of those who are represented by the symbols of the fatherland.

In this manner, they can be prepared to spontaneously pay the well-deserved tribute of respect and admiration to those who are the exponents of national sovereignty.

When the family takes care to develop these ethical values in children, it is preparing them for life, for their integration into society; but none of this can be forcefully imposed, because that could lead to rejection. Nor should we ever overwhelm the child with these things. This patriotic education should be administered gradually and systematically.

There are many ways to motivate young people: our very environment, historic dates, ideological celebrations, monuments and artifacts, etc., all provide us with an opportunity to talk about our history and to learn about and appreciate our heritage.

This political-ideological training ensures the development of a solid awareness in the obligatory fulfillment of our duties to the defense of the fatherland and the sacred duty of internationalism.

(By the Department of Extracurricular Education of the Ministry of Education)

LIFE AT SCHOOL IN COUNTRYSIDE DESCRIBED

Havana JUVENTUD REBELDE in Spanish 20 Nov 80 p 2

[Article by Ramon Brizuela Roque]

[Text] "If you had a child in the Pinar del Rio Rural School, what would you want to know?" we asked a colleague. He replied, "To learn how to get there, to see how they live, what they eat, what work they do. . ."

And we have begun our report with just that, because the objective is to present an overview of how more than 6,000 basic secondary students of the municipality of Diez de Octobre, Havana City, live and work shoulder to shoulder with the residents of Pinar del Rio, and how they are undertaking what promises to be the largest harvest of recent times.

There are several alternate ways to get from the capital to the Rural School. For those who do not have their own transportation, one way could be the railroad, which has improved considerably recently; another is the bus.

Reservations can be made at the Ferry Terminal across from the Zoo, to take the bus. Buses leave Havana every Sunday for the places where the students can be found. Parents like this method, and it would be magnificent if it were maintained during all the rest of the stages.

Public service has also experienced a qualitative and quantitative leap with the replacement of the common service cars known as "direct" cars. Now one can travel between the two provinces in comfortable Hino buses, which replace the direct service to Marianao and run to the National Bus Terminal for 2.44 pesos. Buses leave every 2 hours daily. Advance reservations can be made at travel agencies.

Once in Pinar del Rio, travelers can use the intercity bus service or taxis.

Las Maravillas

Las Maravillas is the name of one of the thirty-odd camps where students stay in the tobacco regions. It is at the Empresa Hermanos Saiz in San Juan y Martinez. We went there with a view to finding out what goes on at a youth encampment.

As can be expected, upon arriving there one is overwhelmed by the enthusiasm of the 158 eighth graders and the group of seventh graders who share a common life there.

Early in the morning they leave for the nurseries where they weed tobacco seed plots, dig paths in the fields or simply plant, the latter activity becoming more and more visible throughout the province.

Mercedes Reyes, director of the camp, provided us with extensive information. She indicated that the lack of training, little familiarity with the countryside, and the short period of mobilization were factors that conspired against productivity. But that problem has been solved over time.

Miriam Garcia, a comrade from the camp's Board of Directors, also talked with us. She mentioned that the menu is very good; among the dishes served different days of the week are fish, chicken, pork sausage, ham, eggs, chicken giblets, Spam, tronchos, rice, black beans, yuca, malanga and sweet potatoes, varying with the skill of the cooks.

One noteworthy item--she asked us to mention it especially--is that this is the first time a Rural School has offered fresh milk in her experience. We saw this in other camps that we visited, but at Maravillas, at present, milk is provided at breakfast, lunch and dinner. Of course, this is an exception, because normally it is given twice a day.

Health conditions are good, and in the dining rooms the most rigorous discipline is observed. Several people confirmed this to us.

As part of the environmental conditions, there is regular artistic programming by the Culture Sector, and there is a television.

As far as medical care is concerned, there is a doctor. In general, the 30 camps have health care available, and there is also a mobile hospital set up near the city of Pinar del Rio. It can accomodate the students who need hospitalization.

We did not want to finish our visit to the camp without first learning the opinion of a Mother Fighting for Education. For that purpose we consulted Dagoberta Morales, who has been working at the Rural School for 5 consecutive years. In a few words, she sums up:

"The conditions are good; I was in Pilotos in 1974 and it was O.K., but now you can see the improvement."

At the Ministry of Agriculture we were able to see the results of all the research in the fields, because Manuel Montialo of the Office of Human Resources confirmed to us what we had already seen. He explained that this year there have been no problems with the camps, and that deficiencies were found and resolved before the mobilization. In addition, there is constant concern at the Party Office, the Peoples Government and the tobacco enterprise and the Palacios vegetable enterprise, which also takes in Havana youths.

Institutes to Arrive Soon

These are the basic conditions in all the camps, although of course some have more rustic accomodations than others, or the ships are larger. But those problems do not impede progress at the Rural Schools.

Some parents are concerned about one thing, which is understandable but impossible to change: the distance between the camps and Pinar del Rio. That distance, added to the kilometers between Havana and Pinar del Rio, means that the journey lasts 4 hours. But the tobacco must be taken to the land, because it is a very temperamental plant.

This year the pioneers were basic secondary students, who paved the way for pre-university and education students. They will take on the harvest at its peak, and together with the Pinar del Rio residents, they will fulfill the promise to break historic production records.

In order to surpass the levels of earlier years, the province must plant 3,000 caballerias of tobacco. This goal will certainly be met, because at stake is the prestige of Pinar del Rio, and we are used to such success there.

PRINCIPLE OF STUDENTS IN WORK PROGRAMS NOTED

Havana GRANMA in Spanish 12 Nov 80 p 2

[Article by Max Figueroa Araujo]

[Text] Work as a natural activity and a social need of man essential to his transformation as a factor of human development is a basic thesis of Marxism-Leninism that pervades life in the socialist society being built by the working people of Cuba. There is no room in this society for loafers or social parasites.

It is an achievement by our country that the training given the new generations in the national education system is based on the Marxist and Marti principle of combining study with productive or socially useful work. Moreover, as in the other socialist countries, among salaried professional workers it is customary to contribute free labor to the common fund. In our case, one of its leading advocates was the heroic guerrilla fighter Major Ernesto "Che" Guevara. Thus Cuban children and adolescents have followed--and are following--the example of the adults, and these, in turn, have followed that of our principal leaders. As in any social education process, that is a decisive factor in the revolutionary transformation of our people's consciousness: the example furnished by the Revolution's leaders, with our commander in chief, Comrade Fidel Castro, at the forefront.

The conclusion one reaches is that people learn primarily by example. This is as valid for education by the family and society as for education in school. In the latter, the example provided by the director, the instructor or teacher is the primary one for the student, and, in turn, the example provided by the representative of the political and mass organizations and by education officials is the primary one for the instructors and teachers.

In the case of the productive farm work performed by our students, a factor that continues to be essential is the presence and participation of the instructor or teacher in this educational activity and the attention, encouragement and supervision provided by the leaders and officials of the political and mass organizations involved. At this point, however, it is necessary to recognize and distinguish among other pedagogical principles coming into play in this productive activity.

In the application of the general principle of the combination of study with work, two principles inhere that are not mutually independent but rather form a dialectical unity: the principle of participation by the instructor/teacher or director, beside the students, in his necessary function as guide along with the project's

technicians and workers. For the students, they represent those directing the work. The other principle is that of self-direction by the students themselves. This means the tact and discretion exercised by the instructor or teacher in respecting the organizational structures adopted by the students for performance of the productive work (participation of the FEEM [Federation of Intermediate Level Students], the formation of the different types of brigades with their leadership structures, and so forth).

The proper interconnection of these two principles in the application of the general principle of the combination of study with work is essential to attainment of the educational and productive results sought for the activity.

However, if regular, punctual attendance at and participation in the productive activity by students is decisive for fulfillment of the productive or economic objective, the presence and participation of instructors and teachers is essential to achievement of the educational objectives. It is the educator who has the mission of watching over the direction of growth with respect to acquisition of the personal qualities it is hoped the students will develop so that these qualities will become a part of their daily social conduct. These qualities related to the development of abilities, knowledge, attitudes, beliefs, habits and skills are closely linked to the level of political, ideological, moral, intellectual, scientific and technical consciousness reached by the student as a future worker. Hence the importance of the attention and supervision, requiring the guaranteed participation of the teacher in the vast productive work projects developed in the schools or training centers operated by the Department of General, Polytechnic and Labor Education in the form of the orchards and productive plots and the projects run by the schools in the country and the schools visiting the country.

Both insuring the participation of students, instructors and teachers and fulfillment of the three basic indicators established by the Ministry of Education for the students' productive work (the standard, the full day, and presence in the fields) require, in addition to the attention and supervision that should be exercised by the leaders and officials of the municipal education departments (directors, assistant directors, methodologists, inspectors), the direct participation of two organs from the school itself: the staff council and the school council. For the projects involving the schools in the country and the schools visiting the country, also required is the participation of a newly established institution: the productivity committee. The resolute, enthusiastic and responsible support contributed by these bodies in the students' productive work to the instructor's or teacher's mission is essential, for it is aid needed in the performance of the high function undertaken by the latter, serving as educators of the new generation in the socialist fatherland.

WAGES, QUALIFICATIONS FOR PUBLIC ADMINISTRATORS NOTED

Havana TRABAJADORES in Spanish 6 Nov 80 p 3

[Text] Requirements refer to qualifications and years of experience.

Included are directors, department chiefs and section chiefs of the agencies of the government's central administration, as well as territorial delegations, enterprises, establishments and the provincial and municipal agencies of the Peoples Government.

Two wage levels will be instituted, a maximum and a minimum, depending on whether the manager meets the requirements for knowledge and years of service.

Whereas: The Proposition and Resolution on the Policy of the Training, Selection, Placement, Promotion and Improvement of Cadres, approved by the First Congress of the Cuban Communist Party, establish that increasing guarantees should be provided that the cadres meet the requirements of political reliability, professional knowledge and leadership capacity which are necessary in each case and at every moment, determining for that purpose, among other elements, the degree of mastery and knowledge they have of the activity they are to direct; and

Whereas: As a consequence of the above, the General Wage Reform program is designed to establish differentiated wages for the same management post, depending on whether the requirements for knowledge and years of experience are met; and

Whereas: Based on studies made for this purpose (still unfinished), and given the need to enforce the General Wage Reform program, it is deemed appropriate to establish the requirements for qualifications and years of experience which, at present, are to be demanded of workers who hold management positions, in order for them to have a right to earn the maximum wage set for those positions;

Therefore: Exercising the faculties granted me, I hereby

RESOLVE:

First: To establish for management positions, whose requirements are regulated in this Resolution, two wage levels: a maximum level, for those who meet all the requisites referring to knowledge and years of experience; and a minimum level for those who do not fulfill these requirements.

Second: The requirements for earning the maximum wages established for the positions of director, department chief and section chief in the central offices of the government's central administration agencies, are as follows:

Director: To be a graduate of the superior level and have not less than 8 years' experience in management posts in the activity to be administered.

Department chief: To be a graduate of the superior level and have not less than 6 years' experience in management positions, or 7 years as a technician, or a total of more than 6 years' experience in both, all in the activity to be administered.

Section chief: To be a graduate of the superior level or the intermediate superior level and have not less than 5 years' experience in management posts, or 6 years as a technician, or a total of more than 5 years' experience in both, all in the activity to be administered.

Third: The requirements for earning the maximum wages established for the posts of department chief and section chief in the territorial delegations of the government's central administration agencies, are as follows:

Department chief: To be a graduate of the superior level and have not less than 5 years' experience in management positions, or 6 years as a technician, or a total of more than 5 years' experience in both, all in the activity to be administered.

Section chief: To be a graduate of the intermediate superior level and have not less than 4 years' experience in management positions, or 5 years as a technician, or a total of more than 4 years' experience in both, all in the activity to be administered.

Fourth: The requirements for earning the maximum wages established for the positions of department chief and section chief in the enterprises classified within Categories I through IV, inclusive, are the following:

Department chief: To be a graduate of the superior level and have no less than 4 years' experience in management positions, or 5 years as a technician, or a total of more than 4 years' experience in both, all in the activity to be administered.

Section chief: To be a graduate of the intermediate superior level and have not less than 3 years' experience in management posts, or 4 years as a technician, or a total of more than 3 years' experience in both, all in the activity to be administered.

Fifth: The requirements for earning the maximum wages established for the posts of department chief and section chief of the enterprises classified within Categories V through VIII, inclusive, are as follows:

Department chief: To be a graduate of the intermediate superior level and have no less than 3 years' experience in management positions, or 4 years as a technician, or a total of more than 3 years' experience in both, all in the activity to be administered.

Section chief: To be a graduate of the intermediate superior level and have no less than 2 years' experience in management positions, or 3 years as a technician, or a total of more than 2 years' experience in both, all in the activity to be administered.

Sixth: The requirements for earning the maximum wages established for the posts of department chief and section chief in the establishments classified within Categories I and II are the following:

Department chief: To be a graduate of the intermediate superior level or a technological school, and have no less than 3 years' experience in management positions, or 4 years as a technician or skilled worker, or a total of more than 3 years' experience in management posts and in either of the other two situations, all in the activity to be administered.

Section chief: To be a graduate of the basic secondary level or a technological school and have no less than 2 years' experience in management positions, or 3 years as a technician or skilled worker, or a total of more than 2 years' experience in any other situation, all in the activity to be administered.

Seventh: The requirements for earning the maximum wages established for the post of section chief in the establishments classified within Categories III through V, inclusive, are as follows:

Section chief: To have an approved level of education, having completed between the sixth and the ninth grade, inclusive, of the Regular Education System, and to have no less than 1 year's experience in management positions, or 2 years as a skilled worker, or a total of more than 1 year's experience in both, all in the activity to be administered.

Eighth: The requirements for earning the maximum wages established for the posts of director, department chief and section chief of the provincial agencies of the Peoples Government are as follows:

Havana City Province

Director: To be a graduate of the superior level and have no less than 8 years' experience in management posts in the activity to be administered.

Department chief: To be a graduate of the superior level and have no less than 6 years' experience in management positions, or 7 years as a technician, or a total of more than 6 years' experience in both, all in the activity to be administered.

Section chief: To be a graduate of the superior level or the intermediate superior level and have no less than 5 years' experience in management posts, or 6 years as a technician, or a total of more than 5 years' experience in both, all in the activity to be administered.

Other Provinces

Director: To be a graduate of the superior level and have no less than 6 years' experience in management positions in the activity to be administered.

Department chief: To be a graduate of the superior level and have no less than 5 years' experience in management positions or 6 years as a technician, or a total of more than 5 years' experience in both, all in the activity to be administered.

Section chief: To be a graduate of the intermediate superior level and have no less than 4 years' experience in management positions, or 5 years as a technician, or a total of more than 4 years' experience in both, all in the activity to be administered.

Ninth: The requirements for earning the maximum wages established for the posts of director, department chief and section chief in the municipal agencies of the Peoples Government are as follows:

Director: To be a graduate of the superior level or the intermediate superior level and have no less than 6 years' experience in management positions in the activity to be administered.

Department chief in municipalities I and II: To be a graduate of the intermediate superior level and have no less than 4 years' experience in management posts, or 5 years as a technician, or a total of more than 4 years' experience in both, all in the activity to be administered.

Department chief of municipalities III and IV: To be a graduate of the intermediate superior level and have no less than 3 years' experience in management positions, or 4 years as a technician, or a total of more than 3 years' experience in both, all in the activity to be administered.

Section chief in municipality I: To be a graduate of the intermediate superior level and have no less than 3 years' experience in management posts, or 4 years as a technician, or a total of more than 3 years' experience in both, all in the activity to be administered.

Section chief of municipalities II and III: To be a graduate of the intermediate superior level and have no less than 2 years' experience in management positions, or 3 years as a technician, or a total of more than 2 years' experience in both, all in the activity to be administered.

Tenth: For the positions in which two alternate levels of education are established, the government's central administration agencies and, where applicable, the agencies of the Peoples Government, shall determine the appropriate level, based on the qualification requirements specified for the positions subordinate to the position in question.

Eleventh: This Resolution shall be effective upon publication in the Official Gazette of the Republic.

Given in the City of Havana on 24 October 1980.

Joaquin Benavides Rodriguez, Minister-Chairman
State Committee on Labor and Social Security

NATIONAL ARBITRATION HEAD NOTES PROGRESS IN FIELD

Havana JUVENTUD REBELDE in Spanish 13 Nov 80 p 3

[Interview with Dr Miguel Reyes Salia, chief arbiter; passages enclosed in slantlines printed in boldface]

[Text] (His responsibility inspires respect, his simplicity inspires confidence and his career inspires admiration. Dr Miguel Reyes Salia, chief arbiter of the National State Arbitration Organ, granted an interview to JUVENTUD REBELDE a few days before those organs begin operating throughout the country.)

[Question] There are questions that Decree No. 23 of the Council of Ministers can answer and others he can answer. Why, for example, is there a delay in the functioning of the National State Arbitration System?

/Article 2. The State Arbitration System has the following objectives:/

[Answer] The factors that have helped cause the delay are, first, the process of preparing the legal instruments, a difficult task. The only experience in our country was the arbitration committees that functioned from 1962 to 1967 but which were very different from state arbitration.

This made it necessary for us to obtain legal literature from the socialist countries and exchange experiences with the leaders of that activity, especially in the USSR. We also had to make studies and, keeping in mind our own conditions, elaborate those legal tools.

/a) To strengthen the legal system that governs relations between legal persons and natural persons which are the subjects of economic contracts;/

Another factor was the selection of the arbiters. Revolutionary integration and reliability as a revolutionary cadre were considered first. Professional qualifications came second. They must be jurists, economists or economic control graduates. That is, they must be jurists with a knowledge of economics or economists with legal knowledge; this is not easy to find in this country.

It was necessary to look for comrades with those conditions in each one of the 14 provinces. We had been directed to find trainable cadres; this led us to develop a plan for technical training in legal and economic matters.

Arbiters Are Trained

We began the seminar in January 1980. Those proposed by the provinces and by the organizations of the Central State Administration participated. Later we undertook a series of meetings in which the national arbiters taught their comrades in the territories and the organizations.

Another factor that delayed the beginning of arbitration was the almost total absence of legislation for economic contracts, especially regulation of general and special contracting conditions.

/b) To increase the administrative efficiency and discipline that the state organizations, subjects of economic contracts, should achieve in the execution and fulfillment of their respective plans as a guarantee of the realization of the Single Plan for Economic and Social Development;/

[Question] (A professor at the Law School of the University of Havana, he has also worked as a jurist closely tied to production and services.) By the way, Reyes, does everything begin with contracting?

Raw Material for Arbitration

[Answer] The raw material for arbitration is the economic contract because arbitration settles conflicts that are caused by their lack of fulfillment.

We were worried because JUCEPLAN [Central Planning Board] fixed the dates of the contracts but it is not its job to supervise them. There is no general organization devoted to this.

Since the 1980 contracts, we had the task of initiating this work in a rudimentary form in the provinces, obtaining information from the people's government planning offices.

The arbiters sent letters to the directors of enterprises that had not signed contracts stating that this was a violation of socialist legality which hurt the economy and the plan. In the immense majority of cases, the letter had results and the number of signed contracts increased considerably.

/c) To defend the social interest and,at the same time, to guarantee the interests and rights of the socialist economic entities and other parties in their contractual relations;/

Pending cases were summoned in order to analyze the causes and motives with the parties. All this was unofficial since it was not obligatory. State arbitration was not functioning yet.

It was a matter of reconciling interests. In many cases, this could not be done due to problems of quality, for example, caused by technological equipment. The contracts of many enterprises were reviewed and this gave us more elements; we saw how bad contracting was in the country.

Its absence before 1979 demonstrated to us that there were no contracting customs or they had been lost. The contract was seen as merely a formality. There were

problems with legal representatives (who were comrades without authority) and with blank clauses that were filled in after signing with no value for the products, no specifications of quality, no specific assortment, no conditions for packaging the products, no guarantee clauses, etc.

Resistance to Signing

Meetings were held with all the comrades of the enterprises that participate in contracts in the provinces. The arbiters explained these problems to them and how to write contracts. There is an interesting phenomenon.

In the 1981 contracts, there has been more resistance to signing the contracts since the people sit down to discuss them and work on the problems more. Qualitatively they have improved but quantitatively the situation is delicate....There is greater concern that the contract be written well.

Whose Jurisdiction

[Question] What would happen, Reyes, if an arbiter were wrong?

[Answer] Let me explain the overall process first. All the organs of the system have to function at the same time. Under the assumption that some provincial arbitration organ does not meet all the conditions in order to begin..., another province would hear the cases.

If there were a conflict between enterprises under an organization that did not have an arbitration organ, the plaintiff would have to appeal to the territorial or national organ depending on the amount or nature of the matter. When it involves differences between enterprises of different organizations, the dispute goes to the national or territorial arbitration organ depending on the amount involved.

If there are conflicts at the stage of writing the contracts or if the value of the contract is greater than 250,000 pesos, the national organ hears the case. If the amount is lower, the territorial organ hears the case. The territory of the residence of the appealing enterprise establishes the jurisdiction.

If there is an appeal during the stage of carrying out the contracts, it goes to the national organ if the claim is for more than 25,000 pesos and, if it is less, it goes to the appropriate territorial organ.

(From 1959 until 1966, he was legal chief of the organizations that govern the sugar industry and he was also a university professor—after 1961—in administrative law and labor law. His students do not forget him because of the clarity of his explanations and the depth of his opinions. They recognize that it will now be more difficult for him to decide conflicts than to grade their examinations.)

Except

There are exceptions that fall to national arbitration at any stage of the contract: conflicts in which one of the parties carries out foreign trade or scientific-technical collaboration abroad; when it involves a priority project of the Executive Committee of the Council of Ministers or JUCEPLAN; and when one of the parties is a

branch of the FAR [Revolutionary Armed Forces] or MININT [Ministry of the Interior].

If Arbiter Is Wrong

Based on the above, I will answer your question. /The arbiter is independent in the execution of his jurisdictional duty. He is only subordinate to the law. When he decides a case, it is the only, unappealable decision. It does not function like an arbitration panel; his decision is binding./

Now if the arbiter is wrong, the national organ can suspend execution of the decision when it feels that the decision might hurt the economy. The affected party has ways to request a review by the national organ.

Exceptions

1. When it is felt that there are new elements that were not properly considered in the development of the process and that can change the decision.

2. When the affected party feels that he was not heard or the evidence that he presented was not considered.

3. When the decision is not adapted to objective reality or the law was applied incorrectly.

This review process is an exception. It can be used even against the decision of a national arbiter. My decisions can be reviewed; I would be obliged to appoint three arbiters who would function as a panel.

Arbitration Is Not Voluntary

It should be stated that arbitration is obligatory for all subjects of the economic contract. It is not a voluntary process. The reasons are obvious. The economic plan which is stipulated in the contractual relations is involved.

/The subject of the contract who feels he is hurt is obliged to resort to arbitration./ If an enterprise acts negligently and does not appeal to the appropriate organ, the system will have inspection mechanisms. At the same time, when it hears from the political and mass organizations that this has occurred, it can order that the process be initiated and force the enterprise to present the claim.

/d) To contribute to the improvement of the SDPE [Economic Management and Planning System] and the strengthening of the method of economic calculation on which the management of the enterprises and their unions is based;/

[Question] Miguel, you mentioned the lack of national precedent to initiate arbitration. From what countries have we borrowed experience?

[Answer] Mainly from the USSR, the GDR, Bulgaria and, in general, all the member countries of CEMA. Every year there have been conferences of state arbitration chiefs. Cuba has participated as an observer since 1975 and as a member since 1978. Technical advice is being discussed with the USSR at this time.

Already Constituted

[Question] In short, you say that the National State Arbitration System will officially begin functioning. In what state will the organs begin work?

[Answer] The preparatory phase--organization--is already finished. The National State Arbitration Organ made up of a chief arbiter, deputy chief arbiter, five state arbiters and a secretary was established along with the offices of support for finance and planning, cadres and training and scientific-technical development. The inspection offices will also have an independent department of international relations.

Except in Granma

There is one organ in each province. They are already constituted except in Granma where the cadres have not been completed. It will be a smaller staff, 18 people, including a chief arbiter, two arbiters and the support personnel.

The city of Havana will have 25 workers on the payroll. It will also take care of the Isle of Youth.

The territorial systems will be subordinate to the national organ. The organizations have double subordination: administratively to the chief of the organization; and methodologically, legally, technically and functionally to the National State Arbitration Organ.

There are arbitration organs in 15 organizations of the Central State Administration where their subordinate enterprises have contractual relations among themselves. Even when some regulations of general and special contracting conditions have not been approved, state arbitration will begin soon facing the urgent need. We will begin to hear conflicts between the different subjects of the economic contracts.

/e) To help constantly increase quality in production and services and strengthen discipline in the socialist enterprises and other state enterprises in the fulfillment of norms and other standards in the quality management system and its materialization in the corresponding contractual stipulations;/

[Question] He was the legal director of the Ministry of Labor from 1966 to 1968 and president of the labor justice review council. Since this past year, he has been tied totally to the University of Havana although he collaborates with some organizations. Dr Reyes Salia, in order to understand better, could you give an example of how an enterprise should proceed to establish a claim?

[Answer] An enterprise is considered hurt, for example, by failure to deliver a product in a supply contract. First, it should carry out the appropriate negotiations for the delivery of that article by the other enterprise, using the autonomy that the SDPE grants it and the regulations of the state enterprise.

After these negotiations are exhausted without any positive results, the enterprise presents its claim to the appropriate arbitration organ. Let us say that the claim is for 280,000 pesos; it presents it to the National Arbitration Organ. It is assumed that the legal representative (the director) or a person he authorizes will present the claim.

Claim Presented

He has to send a copy to the defendant. The arbitration organ grants the defendant a certain number of days to respond. Once he has the claim and the response, the acting arbiter analyzes the case and accepts the evidence that he feels is appropriate so that he can evaluate the matter. This does not mean that he will reach a final decision.

He can request support from one or more advisers, technicians or specialists who will assist him in his duties. After this procedure is completed, the arbiter summons the parties for the reconciliation stage of the process. Each one of the parties explains his opinions and reasons and they attempt to reach an agreement, always within the law. If it is reached, the case is over.

Continue to Disagree

If this does not happen, it immediately goes to the arbitration stage. At this time, the arbiter would have to hear a new plea from the parties, hear other evidence and make a decision.

He dictates the final resolution, the finding. The parties are notified within a certain number of days of the binding decision. If it feels it has been hurt by lack of fulfillment, the enterprise that is the plaintiff has to quantitatively establish the damage caused. It has to prove the amount of the indemnization.

/f) To contribute to the strengthening of socialist legality;/

(A member of the Foreign Trade Arbitration Court since its establishment in 1965 until a few days ago--he could not be both a state and international arbiter--the Executive Committee of the Council of Ministers appointed him chief arbiter in its agreement No. 481 of 20 March 1979.)

We can see that arbitration is a fundamental link in the application of the SDPE. It can help the contracts have better quality and reflect and be a concrete expression of part of the Single Plan for Economic and Social Development. It will defend the legitimate interests of the enterprises in conjunction with the interest of society.

It will help strengthen the economic awareness of leaders, officials and workers so that the enterprise will develop its own management and frees work that intermediate levels of leadership frequently impose.

Not a Magic Wand

[Question] And finally?

[Answer] /Arbitration is not a magic wand that will solve all the economic problems of the country,/ of course. We are going to fight for it to be as efficient as possible. However, we know that because of our little experience and the concrete conditions of the country, state arbitration will have successes but will also make mistakes.

Note: The paragraphs in boldface correspond to Article 2 on the objectives of the State Arbitration System in Decree No. 23 of the Council of Ministers of 3 July 1978.

TESTING FOR AFRICAN SWINE FEVER IN GUANTANAMO

Havana GRANMA in Spanish 17 Nov 80 p 1

[Article by Orlando Gomez]

[Text] Biological tests performed thus far in Guantanamo Province among hundreds of "follow-up test" hogs kept where there were outbreaks of African swine fever have uncovered no signs whatever of the deadly virus.

Once these tests have been satisfactorily completed, in December, all these animals--called "follow-up test subjects" by the veterinary technicians because by being present at previously infected sites they indicate whether or not the virus remained--will be sacrificed. They will then be examined again macroscopically in Guantanamo before being sent to the National Swine Fever Laboratory in Havana, where they will be examined microscopically.

If the final results of these very exhaustive tests demonstrate that no "follow-up test" hog was affected by the virus, the CENSA [National Animal Health Center] will propose to the government that hog-raising be resumed in Guantanamo Province, beginning naturally with the state units where the strictest protective and hygienic measures will be observed.

While this has been taking place, in anticipation of authorization to resume hog-raising there, the province has been preparing to raise, during the next few years, an impressive number of hogs of high-quality stock that will guarantee a supply of a part of the animal protein needed by inhabitants of Guantanamo and will provide meat for the rest of the people of Cuba.

An example of those preparations is the modern feeding facility with a capacity of 10,000 hogs under construction on the outskirts of the city of Guantanamo. It has all the technical elements and provisions for animal and human safety required of an installation of this sort in our country.

The project will be completely finished and turned over by the builders, Architectural Enterprise No 23, Brigade 81-42, to its sponsor, the Guantanamo Hog Enterprise, during the first quarter of 1981.

This hog-feeding facility--whose various elements are already, on the average, 80 percent complete--will automatically supply the 10,000 animals feed based on food garbage from the nearby city, which will be converted to liquid feed in the

facility's processing plant. The feed will be piped directly to each compartment or pen housing hogs.

The facility also has a complicated plant for the treatment of liquid and solid waste. This will insure processing that precludes any pollution of the water table and the transmission of disease to human beings. The resultant sediments will be removed dry and will serve as organic fertilizer used in agriculture.

One of the chief characteristics of this project, which provides a high degree of health protection for the animals, is that it is divided into two well-separated sections: one that is completely sterile and one that is not. Also worthy of mention are all the rigorous anti-epizootic measures taken, not only there but throughout the country, for the raising of this valuable animal species.

DORTICOS DISCUSSES ROLE OF STATE ARBITRATION

Havana GRANMA in Spanish 25 Nov 80 p 2

[Speech given by Dr Osvaldo Dorticos, member of Political Bureau of CC of PCC, vice president of Council of Ministers and minister of justice, on 17 Nov 80, Year of the Second Party Congress, at the Palacio de las Convenciones when State Arbitration Organs System initiated its jurisdictional work: "At First, State Arbitration Must Play Very Important Role in Precontractual Phase"]

[Text] Comrades of the presidency:

Beloved comrades:

This ceremony, in spite of its simplicity, has a certain solemnity explained by the official beginning of the jurisdictional work of the organs of the State Arbitration System. This completes one more link in the SDPE [Economic Management and Planning System] in accord with the resolution adopted at the First Party Congress.

In our brief speech, we want to again emphasize the special importance of the initiation of arbitration activities for the difficult and complex purposes of progressive implementation of the SDPE. It is basically related to planning and contractual discipline. In reality, as has been explained on previous occasions to the economic organizations, the enterprises and the entities that participate in daily economic activities, the obligatory nature of their duties arises not only from the plan but also from contracts. The latter complete the legal nature of these obligations. Since arbitration is directly involved in contractual discipline, it participates in the process of making contracts and settles disputes that arise during their execution. It is obvious that these organs must play a very important role in the objectives that contribute to that discipline. In reality, the obligation of a production, service or supply enterprise--in other words, the economic entities that participate in the socialist economy--does not end with the economic administrative provision implied in the plan but with its contractual complement. This leads to the obligatoriness of contracts and the concept that emerged in socialist law about the so-called planned economic contract. To fulfill the plan means to fulfill an obligation of the state economic administrative law. By itself, it does not mean to fulfill all the obligations of the economic entity that emerge from the plan because the plan, in the last instance, is materialized or made concrete in terms of assortment, specifications of quality and delivery conditions. This means the concrete economic contracts that the entities must make in the exercise of monetary-trade relations in the socialist economy. It is good to recall that this has

a lot to do with a doctrine that is widely debated in the socialist legal field about the nature of these legal obligations of socialist enterprises and organizations. We are not going to try to figure out that question; we have formed an opinion in the legal system of our country and we will abide by that opinion. It is the old question about the autonomous existence of economic law independent from civil law. I call attention to this because only one socialist country--Czechoslovakia--supports the thesis of the independence of economic law through the promulgation of an economic code. The other countries subscribe to civil law which covers economic contracts; our country follows this thesis in its past and new laws. It is the civil law nature of these obligations to which we are alluding. From the economic administrative law which is the plan comes the civil law obligation for the enterprises, first, to make the planned economic contracts. This is concretely translated into the practice to which we want to refer. If that legal obligation is not fulfilled, it endangers the plan itself since the economic contract is what makes the obligations emerging from the plan concrete with the details which we mentioned before. Without the contract, the plan can be totally fulfilled but, nevertheless, not satisfy the requirements of the national economy. Therefore, in our opinion, arbitration at the beginning, in its debut or inauguration, will have to play a very important role in the precontractual phase--that is, the stage of making the contracts. It is curious to examine, although superficially, recent contractual experience in our country. Based on a report on contracting by the National Arbitration Organ in collaboration with the State Committee for Statistics and with the cooperation of the organizations involved, our report on contractual experiences--I am referring to the 1980 economic contracts and the beginning of contracting for the 1981 plan--cannot be very optimistic. In the first place, if we observe some characteristics, we can note immediately, since this practice started in our planning discipline, to what extent the problem of contracts is to many a mere formality and not an important problem. In the first place, nonagreement or failure to sign contracts for reasons that show a certain lack of understanding about the practical requirements of the contract and about the conduct that the enterprises must follow in that respect arises with relative frequency in the sample examined. The following representative or important causes for failure to agree on these contracts have been detected: supply contracts that have no guarantees to receive what it should offer on time and in the correct form so they do not reach agreement or they try to make their obligations conditional; transportation enterprises that do not guarantee the transportation of merchandise to certain parts of the country or purchasing enterprises that disagree about paying for transportation supplied to them; discrepancies about parameters of quality or failure to establish these parameters by superior organizations; disagreement with clauses that one of the parties proposes; lack of presentation or possession of the figure assigned by the buyer; general lack of a complete procedure that sets forth the steps, communications, guidelines and other mechanisms that make relations between enterprises in different territories feasible; and lack of approval of the appropriate form for contracts for complete plants. In many contracts, a common circumstance is failure to express value--that is, the price--which is indispensable for the consummation of the contract. This is due, on occasion, to presentation of supply in general terms, not listing a value. Offices for transportation fees do not list fees for some port cargo. The majority of the reporting enterprises, nevertheless, did not report on the value of their contracts and did not explain the reasons for this absence of prices.

In other cases, according to reports we were given at a recent meeting with territorial arbiters who have been collaborating unofficially in reconciliation procedures

in the stage of making the contracts, we find that these contracts are even signed while blank. That is,a model is signed and the blank spaces corresponding to the basic clauses of the contract are not filled in. On other occasions, the buyers--that is, the consumers--do not demand from the suppliers specifications of quality in the products to be supplied; there is not even a reference to the existing norms. Essential elements of the contract are missing. This is what, a moment ago, we referred to concerning a merely formalistic concept of the contract, forgetting the role that it plays in the economic dynamics of the country. Therefore, as the jurisdictional work of arbitration begins, the arbiters, with the little experience from the work they have done unofficially in these previous months, have a serious responsibility and an important commitment: to create awareness about the obligatoriness of contracts and about the essence itself of contracts; to use patient educational persuasion with the enterprises and economic entities involved in precontractual conflicts in order to increase their awareness and stimulate mutual understanding; and, finally, to make decisions through the corresponding findings, establishing the basic stipulations of the contracts and insuring and guaranteeing their fulfillment.

Arbitration Starts With Certain Problems

Arbitration starts with certain problems. We want to allude to them because they are going to be daily events in the solution of conflicts and disputes submitted to their jurisdiction. In the first place, there are problems in the task, this institution, which is beginning for the first time in our country. In the second place, there are legislative deficiencies. First, we do not have a socialist civil code. As is known, socialist civil codes contain broadly developed basic norms--one on basic economic contracts--in their provisions concerning the theory or law on obligations and contracts. We do not have this. We are working on elaborating this code but the day when a reliable bill can be the object of our consideration is still distant. We are also beginning arbitration under conditions that, technically, mean we cannot begin it--that is, without having approved the majority of the regulations for the general and special conditions of economic contracts, even those that have special significance to our economy--the contracts concerning foreign trade activities. This must cause a technical problem for the arbiters who must supply them based on already conceived guidelines and doctrine and the specific stipulations of each contract. I think that the beginning of the jurisdictional work of arbitration will stimulate effort in everyone to shape legislation as quickly as possible concerning regulations for general and special conditions of economic contracts.

The comrades who have worked on the arbitration organs have developed certain activities aimed at learning directly, almost physically, the economic affairs of our country at the level of the enterprises. They have undertaken training to attain minimal technical training in addition to their previous professional training that permits them to assume this responsibility today. Since the national organ was constituted, it has developed its budgetary, financial, statistical, planning and personnel supervision activities. The 14 territorial organs develop these activities as administrative branches of the national organ. There has been rigorous selection of cadres and workers in the national organ as well as in the territorial organs. Referring to material conditions, all the provincial organs and the national organ, after serious efforts, have their offices and the minimum conditions required to begin their activities.

The 15 Central State Administration organisms that have arbitration organs are organisms with a lot of subordinate enterprises that have contractual relations among themselves, sources of possible arbitration conflicts.

Training as a basic part of the jurisdictional work of the organs of the system has been undertaken. Once the cadres to be trained have been selected and placed, there have been different activities aimed at that objective. This task was undertaken initially in January with the first national state arbitration seminar; 95 comrades proposed as arbiters or secretaries in the provinces and organisms participated. The basic legal instruments in the State Arbitration System and economic contracting were covered and there were talks on the different categories of the SDPE.

This seminar was considered a starting point for legal and economic training of the arbiters and secretaries. In March 1980, there were new courses on economic legislation taught through meetings by the national arbiters to the arbiters and secretaries of the provincial organs and organisms. Through coordination with the Office of the National Economic Management School, the arbiters and secretaries of the provinces have participated and are participating in short courses and seminars in the provincial schools.

They have increased their knowledge of provincial economic activities.

Concerning economic contracting and the 1980 plan, the territorial arbitration organs in the provinces, in coordination with the planning offices of the local and provincial people's government organs, did work concerning making economic contracts in order to achieve agreement between the parties, through unofficial reconciliation, when they disagreed while making the planned economic contracts corresponding to the 1980 plan. The experience acquired in this work reflected serious problems in the process of discussion and elaboration of contracts to which we have already referred. Therefore, the National Arbitration Organ held meetings in the provinces with comrades from the delegations of the economic entities, agricultural cooperatives and the provincial offices of the National Association of Small Farmers. Here the comrades from the territorial state arbitration organs in the provinces insisted on the need for planned economic contracts; they are not merely a formality but the materialization of the plan of the entity. They indicated the problems noted in the 1980 agreement with guidelines related to contracting for the 1981 plan.

A system of complementary statistical information has been created and has been operating before the jurisdictional work of the organs begins. There has been a broad publicity and popularization campaign.

The national state arbiters have given talks in the provinces and in the organisms with the participation of institutional, political and union leaders. In collaboration with the DOR [Revolutionary Orientation Department] of the CC [Central Committee], a system of talks was set up within the party by speakers of the party.

Concrete Aspects That Arbitration Must Immediately Cover

There are some concrete aspects that arbitration must immediately cover with great energy and interest. One aspect that we want to mention concerns the problem of quality in production and services. It is one of the aspects on which the

arbitration system will have to work hardest and where it can make the most useful contributions.

The practice and evaluation of this practice and this experience of unofficial reconciliation in the 1980 economic contracts yield one truth: the absence of essential and deep concern for the problem of quality, not only by the supply enterprises but also by the consuming enterprises. On many occasions, they do not even demand verification of these specifications of quality or mention of the norm or reference to samples that guarantee the production of a minimum quality.

Apart from the work of the State Committee for Standardization, the progressive implementation of the Standardization, Metrology and Quality Control System, the efforts of party organizations and the orientation of the party leadership, it is through disputes over the economic contracts that, concretely, immediately and very palpably, this phenomenon must be noted. It is the responsibility of the arbiters to fight a hard fight during the phase of making the contracts based on the principle that there cannot be an economic contract for supply of products, for example, without specifications of quality or reference to the corresponding norm in the contract. If this is not considered, at the time of arbitration to settle conflicts in the process of execution of the contracts, the action of the arbitration organ should not be based only on what the parties request but on its responsibilities. Quality constitutes one of the most serious problems and one of the blemishes in our economic activity, inconceivable in a country that, in addition to fighting for the wellbeing of its people and their standard of living, has a great economic dependence on foreign trade under conditions of a highly demanding contemporary market. It is necessary to train awareness, practice, habit and discipline.

The arbiters have to have the opportunity, while resolving the disputes, to discuss with the parties involved in the process of making the contracts the reasons for lack of fulfillment of the plan and management conduct in a very concrete, very detailed manner establishing the causal relationships in each situation. If this is carried out with real meaning, seriousness and responsibility, it will no longer be an anecdote or the mere reflection of a quantitative statistical idea of management conduct. Instead, there will be the concrete, explicit and well explained determination--I repeat, with establishment of causal relationships between the effects of lack of fulfillment and the reasons for them--which the arbiter is obliged to preestablish in order to settle a conflict. He not only has to do the jurisdictional work and come up with just, efficient and useful findings for our economy but carry out preventive activities that, according to legislation, fall to the arbitration organs. That means he must discover measures to implement and mechanisms to perfect and make his contribution, as the wisdom and experience of the arbiters grow with the fulfillment of their duties, to the improvement of the national economy and the improvement of the SDPE. The importance, therefore, of the creation of a statistical and qualitative information system within the context of the integral system of the arbitration organs which can be achieved and shaped with active, daily and organized relations and constant communication between the different organs will help reach conclusions full of analyses, experiences and serious evaluation to permit the management of the national economy to improve its methods and planning. This is one of the contributions that, in the course of its work, the arbitration organs can make along with others of great effectiveness for the national economy.

There is a problem that we want to cover because it has appeared in the practice of contracting. It is the attempt by some enterprises to condition the obligatoriness of the contracts to certain circumstances. This is dangerous. It is related to the problem of the doctrine of blame as a subjective element in the punishable lack of fulfillment of economic contracts; that is the problem we want to present. It is true that Decree Law No. 15 on basic norms of economic contracts establishes blame as an indispensable condition in the declaration of lack of fulfillment of a contractual obligation. The problem is based on the question of burden of proof with which the one who alleges that he has not fulfilled the contract for reasons beyond his control has to exonerate himself. It is necessary to be very strict or arbitration would, from the beginning, face a situation of failure if each lack of fulfillment is legitimized on the basis of lack of fulfillment by a third party. Under these circumstances, the entity or enterprise that has not complied and is punished can, in turn, complain about the other entity that has not complied with it. We cannot use the doctrine of blame as an excuse for lack of fulfillment. Since this has come up already in the phase of making contracts, we want to warn strongly about this. Comrades, we want to begin with a spirit of fraternal relations, educational work, helpful work and advice to the enterprises. It is a matter of constructing contractual relations but it is also a matter of beginning the jurisdictional work of the arbiters with the minimum severity required. We appeal to them. On a night like this when we inaugurate their respective responsibilities, we trust that, by fulfilling that duty, they will contribute to the national economy what the people, the government and the party expect from them. Thank you very much.

SOVIET AGRICULTURE ADVISER NOTES CUBAN DEVELOPMENT

Havana ANAP in Spanish Oct 80 pp 4-5

[Interview with Fedor Timokhin, Soviet agriculture adviser, by Manuel Buendia: "Neither Economic Blockade or Aggressive Tricks of Yankee Imperialism Can Slow Down Advance of Cuban Development"]

[Text] "We can say with satisfaction that neither the economic blockade or the aggressive tricks of Yankee imperialism can slow down the advance of socialist development in Cuba since it has faithful and staunch friends."

Fedor Timokhin, Soviet adviser to the Cuban Ministry of Agriculture, stated this when we interviewed him for the 20th anniversary of the reestablishment of diplomatic relations between the peoples of Cuba and the Soviet Union.

He added: "In the past two decades since the triumph of the Cuban revolution, our relations have acquired a deep and multifaceted nature. The friendship and solidarity between the USSR and Cuba are an example of new relations between states based on the principles of Marxism-Leninism and socialist internationalism."

He recalled that during the hard years of the economic blockade imposed on Cuba by imperialism, the countries of the socialist community, especially the USSR, offered the Cuban people disinterested help in defending their revolutionary conquests. "That aid not only let Cuba confront the imperialist tricks but defeat the mercenary intervention at the Bay of Pigs in April 1961, resolve the 1962 Caribbean Crisis peacefully and attain considerable achievements in the development and radical change of the entire structure of the Cuban economy."

After indicating that the CPSU and the PCC [Communist Party of Cuba] headed by comrades L. I. Brezhnev and Fidel Castro play an important role in the strengthening and deepening of the unbreakable Cuban-Soviet relations, Timokhin referred to the fruitful exchange of visits by top statesmen from both countries.

Brezhnev's Visit to Cuba

"The visit to Cuba by the secretary general of the CC [Central Committee] of the CPSU in January-February 1974 made a great contribution to the development of Cuban-Soviet relations and the consolidation of Cuban international prestige. As Fidel Castro indicated on that occasion, it was the most important visit that had ever taken place in the history of Cuba."

When L. I. Brezhnev spoke at the meeting held in Havana in honor of his visit, he said: "Millions of persons are promoters today of Soviet-Cuban friendship."

Timokhin recalled that, on that occasion, Brezhnev and Fidel Castro signed a joint Cuban-Soviet statement. Its concrete materialization was the long-term trade agreement and the agreement for economic and technical cooperation for 1976-1980 signed at the beginning of 1976.

[Question] Can you cite some concrete aspects of these 20 years of cooperation between the two countries?

[Answer] About 200 industrial objectives have been constructed in the past 20 years with technical assistance from the Soviet Union to the government of this island of freedom. the amount of economic cooperation during this 5-year period considerably surpasses the total volume in the years before cooperation.

After some moments of silence to collect his thoughts, the top Soviet official provided figures concerning that collaboration.

He said: "The trade exchange between our countries has increased 27 times, reaching more than 4 billion rubles. The Soviet Union supplied Cuba with more than 23,000 tractors, 96,000 automobiles, more than 130 million tons of oil....

"In exchange, the USSR bought 46 million tons of raw sugar, 345,000 tons of nickel concentrate, citrus and other important products from Cuba."

Training of Cuban Technicians

In answer to another question concerning education, the Soviet adviser to the Cuban Ministry of Agriculture reported that, during the years of cooperation between the two countries, more than 3,000 highly-skilled Cuban specialists were trained in the USSR. At this time, there are about 6,000 Cuban students and postgraduate students studying more than 100 specialties in Lenin's country.

He added that there is also broad development in cultural and scientific relations which contributes to the mutual enrichment of both peoples. One example is the Intercosmos program.

Timokhin feels that the fraternal friendship between the peoples of the USSR and Cuba develops and becomes stronger from year to year. Contacts among mass organizations, ministries and enterprises grow each year. "The Soviet Union does everything possible so that Soviet-Cuban relations will be solider and more effective."

Aid to Agriculture

He then cited the words of Fidel Castro in his speech to the 25th CPSU Congress: "Our people are proud of the relations with your great country. They are an example of the practice of internationalism, mutual understanding, respect and confidence.... Only socialism makes such relations between peoples possible."

Since agriculture is Timokhin's field, we asked him about Soviet aid to Cuba.

"Our country gives multifaceted aid to the fraternal people of Cuba for the development of this important sector. Investments in the agricultural sector increase from year to year, production increases and the supply of agricultural products to the people as well as tractors, combines, machine tools to make parts, chemical products for plant health, agricultural equipment, etc., has improved."

He announced that Soviet and Cuban specialists are working on the problems of mechanization, use of chemicals in agricultural production, construction and exploitation of irrigation systems, development and selection of rice, consolidation of veterinarian and plant health services, conservation and exploitation of land, development of livestock, scientific research and other tasks.

Then he referred to the transformation in the rural sector due to the increase in hospitals, schools and agricultural installations, increased mechanization of agricultural tasks, formation of cooperatives and the creation of peasant free markets. All of this notably improves the standard of living of the peasantry and the supply of agricultural products to the people.

Last, Timokhin recalled that this is the year of the 110th anniversary of Lenin's birth, the 35th anniversary of the victory over fascism, the 27th anniversary of 26 July and the year of the Second Party Congress. "Remembering the glorious revolutionary path of the Cuban people, we can say with satisfaction that neither the economic blockade or the aggressive tricks of Yankee imperialism can slow down the advance of socialist development in Cuba since it has faithful and staunch friends."

AREAS OF RAISED BEDS SUGARCANE PLANTINGS INCREASED

Havana TRABAJADORES in Spanish 6 Nov 80 p 3

[Article by E. Barrero: "Raised Beds Sugarcane Plantings to Be Extended to Several Provinces With Black Soil and Poor Drainage"]

[Text] Villa Clara experiment, noted by Fidel at Sugar Growers Congress, to be exploited.

Raised beds sugarcane plantings are to be extended to provinces such as Granma, Sancti Spiritus, Ciego de Avila, the southern coast of La Habana and other regions where there is black soil with poor drainage which produces losses of up to from 20 to 30 percent of the plant population.

Engineers Sixto Hernandez and Pedro Pablo Acosta of the Ministry of the Sugar Industry explained the work that is to be done in connection with this at the Second Sugarcane Harvest Information Seminar for newspapermen who cover this sector which is in progress at the ministry's vocational school.

They said that the Villa Clara experiment, noted by Fidel at the Sugar Growers Congress, will be exploited by other provinces in which the population and plantation yields are still being considerably affected.

Raised bed or bank — as it is also called — planting consists of digging two furrows, one shallower curving up in the form of a ridge or raised strip of ground and the other deeper to promote drainage.

The [project] heads from the Ministry of the Sugar Industry explained that Jaronu 60-5, which works well for the whole crop, together with Cuba 8751 will be the basic varieties that will be developed in the next few years, along with seven or eight others, which will make up what they describe as a good combination, better than that of previous years.

They asserted that more important than the varieties themselves is the use that is made of them and called on growers to use each of them effectively, both in planting and in cutting according to their characteristics of germination and maturity.

NEW MECHANIZED VEGETABLE PLANTER UNVEILED

Havana GRANMA in Spanish 11 Nov 80 p 4

[Article: "Agustin Hernandez Tells Us About the Stanhay Machine and the Area Where Vegetables Are Being Introduced"]

[Text] Agustin Hernandez, in charge of enterprise vegetables, is the comrade on whom the Stanhay S-870 machines project, which our commander-in-chief referred to in his closing speech at the 16th Sugar Growers Congress, to a large extent depends.

Cuquito, as this efficient technician is known to everyone, spoke for GRANMA:

"The Stanhay is a very complete and sophisticated piece of equipment which in the planting of vegetables offers us an opportunity to get what we want, whether it be in terms of the distance between plants or groups of plants. It also represents a great saving in terms of our labor force, a saving in seeds of between 40 and 50 percent and, of course, because of its precise operation, it assures us of high yields at the end of the harvest.

"It is undeniable," he added, "that the technical complexity of the equipment requires that the operator and all of us who have anything to do with it be trained, but in this aspect of the matter we have not run into any problems since our operators are versatile and, furthermore, have been very much on the ball and ready to accept guidance from the experts and make use of the equipment in the proper way. In our enterprise we at present have three comrades from Granma Province who are being trained for the introduction of this equipment in their province at some future time.

"Another important feature of the Stanhay is that a larger number of plants can be successfully grown. The number that could be planted in a [square] meter before can now be doubled which, of course, means more productive ares. Concerning the 4 caballerias [1 caballeria = about 33.5 acres] on which vegetables are being introduced, which we are taking care of in our enterprise, I can tell you that we started on them on 7 January of this year under the guidance of our commander-in-chief who, with his repeated visits, offers us great encouragement in our work and is concerned with each little detail on each of the varieties and species we are planting."

And Hernandez went on:

"Here in the experimental area, we have varieties that can be called unknown or of low consumption to date, high vitamin-content varieties that will enable us to increase our population's consumption of vegetables. Among them, we may list: kohlrabi, cauliflower, leek, Brussels sprouts, parsley, saltwort, eggplant, hot chili pepper, broccoli, mustard, dill, chive, chicory, squash and others for a total of 64.

Finally, in his extensive explanation he emphasized the great advantage of having equipment like the Stanhay with which through computations planting is programmed and holes are punched in the belts, according to the type of seed and the type of planting, by the man in charge of vegetables and the man in charge of mechanization. Furthermore, test raised beds are planted first to avoid any errors in the regular planting.

MEETING DISCUSSES NEW TYPES OF SUGARCANE TO BE USED

Havana JUVENTUD REBELDE in Spanish 13 Nov 80 p 1

[Article by M.A.P.]

[Text] During the 1981 and 1982 plantings, the Barbados 4362 and 42231 varieties (affected by rust and coal respectively) will be completely replaced in the country's canefields.

This was announced by MINAZ [Ministry of the Sugar Industry] First Vice Minister Raul Trujillo at the inauguration of the Fourth National Conference on Sugarcane Varieties and Seeds which will be in session until tomorrow at the Ministry of the Sugar Industry Training Center.

During his talk, Trujillo made a detailed analysis of the work that has been done on the varietal program since the first specialized conference was held in 1965.

He explained that this Fourth National Conference was being held following a thorough rank-and-file (districts, enterprises and provinces) effort in which 12,500 researchers, professionals, farm workers and farmers studied and analyzed the points to be discussed at the conference that is being inaugurated today.

"The appearance of rust," Trujillo said, "suddenly upset the country's cane cultivation insecticide situation. This disease attacked the Barbados 4362 variety which had been planted on some 30 percent of the country's canefields and the plantations suffered harvest losses of more than 50-60 percent at some mills and in some provinces."

To counter this disease, in the past year a group of 12 varieties that could replace the Barbados was rapidly developed. During the last 2 years of the 5-year period shortly to come to a close, 114,000 hectares were planted with these.

Thirty-four centers for registered seed, coinciding with the same number of agro-industrial sugar-cultivation areas the country is divided into, were set up and a gigantic effort was made to transfer and plant the outstanding varieties so that they could be propagated during the second half of 1979 and this year.

Trujillo emphasized the work that is being accomplished in the geographical shaping of sugarcane cultivation, which has made possible greater utilization of available land, concentration in some areas or recovery of fallow land, [improvement, elimination, etc. of] poorly located or overly wide canefield paths that merely serve

to harbor weeds which work counter to technical farming plans and mechanization.

Proper organization of the land enables us to carry out the definitive irrigation and drainage projects that are so necessary for the development of [high] sugarcane yields.

The productivity of the manual and mechanized labor involved also benefits from the organization of the cane-growing areas into compact blocks of from 75 to 100 hectares (for planting as well as for harvesting) while at the same time the control over and management of farm activities are facilitated.

In connection with this the MINAZ has outlined a plan extending until 1985 which contemplates the organization and concentration of over a half a million small fields into some 20,000 blocks containing similar stocks and varieties and on which the same mechanized farming techniques are used, permitting the increased productivity of both labor force and sugarcane.

Trujillo stressed the research effort in the field of sugar production that has evolved these past few years and encouraged experts and specialists to continue the path they have been following as concerns the agronomic improvement of sugarcane varieties.

Tomorrow morning the 1976-1980 varieties program will be discussed and after that the delegates will meet for different working sessions.

Diocles Torralbas, a member of the party's Central Committee and minister of the sugar industry, Luis Martell Rosa, secretary general of the Sugarworkers Union, and a delegation from the people of our sister republic, Nicaragua, which is developing its activities in the domain of sugar production, presided over the inaugural ceremony.

CORDE ENTERPRISES SEEN FACING BANKRUPTCY

Santo Domingo EL CARIBE in Spanish 7 Oct 80 p 1 C

[Article by Minerva Isa and Tulio Navarrete]

[Text] The deficit enterprises of the Dominican Corporation of State Enterprises (CORDE) will go bankrupt if they do not improve their financial condition, in the opinion of economist Bernardo Vega.

Vega believes that if that situation persists, the only suitable alternative will be to sell those enterprises.

These opinions are contained in the book, "Evaluacion de la Adminstracion de las Empresas de CORDE 1962-1977" [An Evaluation of the Administration of the CORDE Enterprises, 1962-1977], in which Vega analyzes the condition of those enterprises during that period. It was placed in circulation yesterday at La Atarazana Restaurant.

In his conclusions, Vega indicates that the analysis demonstrates "how costly it has been for the nation to subsidize part of the state economic patrimony.

"With the coolness of perception gained from the 19 long years which have passed since the historic events of 1961 and supported by an objective analysis of the figures, we believe that the mystique of the nontransferability of state enterprises must give way to an attitude of withholding investment from nonpriority areas and to a rigorous participation in strategic areas more suited to state activity," he says.

He concludes that "if the deficit enterprises do not improve their situation or their sales, it might well be that they will meet the fate of the eight CORDE enterprises which have already closed their doors, in which case their sale at this time is obviously a more suitable choice."

Vega points out that those enterprises have not contributed to the process of accumulating public capital, nor have they been a motive force in development.

He says that CORDE, acting as a holding company, has made no transfers since 1970 to the national treasury from its net profits as owner of the stocks of 33 public enterprises.

He says the profits it receives from productive enterprises and from its stocks in retail enterprises are used, rather, to subsidize those which are failing, through

loans which are of "doubtful repayment" possibilities. "The 33 enterprises themselves have contributed to the treasury, but at a slower rate than the contributions from the rest of the economy. In addition, a single enterprise--the Tobacco Enterprise--pays 79 percent of all the taxes paid by CORDE enterprises, and the tax rate on cigarettes was increased in 1974," he indicates.

At the same time, if it were not for this, the fiscal income of the CORDE enterprises would not have increased.

Vega says that the number of employees in the 33 enterprises, as well as in the CORDE offices, is excessive with relation to their production and sales. He maintains that sales have increased since 1962 "much less than the national economy, and those enterprises have not demonstrated an agressive sales policy."

The economist, who presents a series of statistical tables in his book, notes that the net profits, before income taxes, in 1962 of all 33 enterprises together were 4 million dollars.

Fifteen years later, in 1977, they had increased to barely 5.2 million, and in 1978 they did not even show any joint profits.

"During those 15 years, 19 enterprises had losses and only 16 accumulated profits. The joint profitmaking potential of those 33 enterprises in 1977 represented barely 8.9 percent on the investment, a rate equal to what is received on term deposits in this country," he indicates. He points out that in no case have the CORDE enterprises stimulated national agricultural production, and he cites Virginia tobacco, cotton, oleaginous products and sisal.

He indicates that in those 15 years, only five enterprises significantly increased their production capacity to cope with increased demand.

The economist maintains that "their contribution to the balance of payments decreased because their exports dropped compared to the volume of exports before 1962 (salt, gypsum, marble), and they were unable to replace imports with local products.

"In addition, their deficits and working capital requirements were financed in part with foreign loans at commercial rates and terms. In 1978, CORDE and its enterprises owed 75.6 million dollars--6 percent of our foreign debt," he says.

Vega says that CORDE and its enterprises established, during those 15 years, "a whole infrastructure of created interests linked to the enterprises."

He adds that "this includes surplus workers and employees who resist being laid off; the interests of political parties in managing those enterprises, so that they can place more party members in them and obtain funds; a network of suppliers of goods and services for them, etc.

"This entire infrastructure would resist the transfer of these enterprises to the private sector."

Vega also concludes that few of the CORDE enterprises have the characteristics usually applicable to the "state enterprise, which typically has come about at the initiative of the state--and not as a political accident--in the Third World."

Vega referred to one of the recommendations contained in his book concerning the sale, in some cases entire and in others partial, of the stocks which CORDE owns.

He said that the book differs from previous studies published by the Economic Commission of the Academy of Sciences of the Dominican Republic, because it is the work of a single author, and the specific subject is the evaluation of the administration of the CORDE enterprises during the 16 years from 1962 to 1977.

Vega was the main speaker at the ceremony introducing his fifth book on economics. The economist has published three works on archaeology. The ceremony was attended by the vice president of the republic, Jacobo Majluta; the director of CORDE, Dr Mario Fernandez; Pedor Troncoso Sanchez, president of the Academy of Sciences of the Dominican Republic; Jose del Castillo, president of the Manuel Garcia Arevalo Foundation; and Jose Niguel Bonetti, president of the Dominican Industrial Society, among others.

JUNTA MEMBERS DISCUSS ELECTIONS, REFORMS IN COJUTEPEQUE

San Salvador EL MUNDO in Spanish 3 Oct 80 p 3

[Text] The members of the Revolutionary Government Junta reemphasized in Cojutepeque "that the present regime is a temporary one and that among its priority actions are elections in which the citizenry, formed into political parties, can select its future government."

The junta visited Cojutepeque, the departamental seat of Cuscatlan, yesterday, in another of its trips into the interior of the country to maintain personal contact with the inhabitants and get to know their problems and most urgent needs, according to official sources.

Of the five members of the junta, the only one absent was Col Jaime Abdul Gutierrez who, according to an official bulletin, was not able to go due to an urgent engagement in the capital, but he sent cordial greetings to the people.

In addition to the members of the junta, several ministers and subsecretaries were present, and the authorities of all of the municipalities of the Department of Cuscatlan, as well as the local inhabitants, listened to the visiting officials.

The four members of the junta spoke of the breadth of the political, economic and social reforms which every day are becoming more secure. The official bulletin indicates that the government leaders were in agreement in assuring that the revolutionary process based on the Proclamation of the Armed Forces of 15 October 1979, "is irreversible" and they stressed that "the basis of success is and will continue to be the participation of all elements in the country, always with the goal of favoring all the people, especially the most needy majority classes: the peasants, workers and underprivileged."

At this event, which took place in the Cojutepeque City Hall, the officials said, "everything is changed in comparison with the situation that existed in the country before 15 October" and that "the oligarchy has disappeared and riches have stopped being a spectacle since now, thanks to the agrarian reform, the nationalization of the bank and of foreign trade, social justice has begun to be meted out, and the land belongs to those who work it, the peasants."

It is reported that at the request of several citizens, a minute of silence was observed in honor of Dr Mario Zamora Rivas, who was from Cojutepeque and was assassinated this year.

MILITARY GRADUATES ARE NATION'S FUTURE

San Salvador EL MUNDO in Spanish 8 Nov 80 p 14

[Speech by Col Roberto de Jesus Monterrosa, director of the Armed Forces Studies Center [CEFA], at the Center's graduation ceremonies on 7 November 1980; place not given]

[Excerpt] "The armed forces are, by our criterion, essentially democratic and the defender of the people's rights," said Col Roberto de Jesus Monterrosa, director of the Armed Forces Studies Center, in a speech given yesterday at graduation ceremonies for several army officers and addressed specifically to them. Colonel Monterrosa's remarks were essentially as follows:

"In the case of military solidarity and esprit de corps, this is quite obvious (referring to solidarity with the victories of others). We feel that it is in you--as it was in ourselves and in earlier generations, and as it will be in those to come--that the army triumphs and advances. For that reason, as a first thought, let me tell you that in each of you I see the entire army of the republic. And from this thought, as simple as it is important, springs logically, in a flash, a contemplation of the immediate as well as the distant future. In other words, the second thought is this: Each one of you is the future of the country, and we are not thinking of a future which is too distant, or at all distant. Remember that time, which used to be measured in centuries, is now measured in decades, 5-year periods, years, months and even hours. You know only too well how the winds change and how people pass from the scene. But here we are entering the maelstrom of extremely grave danger. Does this mean we must permit ourselves to be carried away by the whirlpool and that there are no longer any permanent values to defend? Here, gentlemen, is the third thought, which seems to contradict the others! Listen carefully: We, in the midst of the whirlpool, in the midst of the fire, like the petrified sentry of Pompeii, must keep ourselves secure. Are we speaking, perhaps of hanging on to fleeting schemes, to outdated ways of thinking, to established interests, to irremediable vices, to traditions which do not make sense? We ask you, as gentlemen, to hear us with good will! Because this is the most timely moment, the most dramatic circumstance, in which we, the military, must validate, in all its enormous significance, the position of firmness which defines and characterizes us. And there is one great truth which is so simple and solid that many reject it indifferently: Only he can remain firm who knows where he is standing, on what foot he is standing, and, better yet, who knows he is standing on both feet.

"May we expand these ideas a little? Because we carry them very deep within us, and that is why we want to express them. It is because we believe that these ideas are a part of military honor, of the ethics and mystique of the men who bear arms. We believe that human life, like the entire universe, which is the work of God, is ruled by certain standards. Each people in particular, and in this case our Salvadoran people, is the expression of his power. And we, called to a sublime and special vocation in the defense of this portion of the divine inheritance, know from the first that we must respect that people and those who follow.

"For this reason we venture to say that, while it is true that there are armies in the totalitarian countries--and it has even been said that the army is, in itself, a neutral institution, capable of functioning in democracies as well as in absolutist regimes—the truth is that armies, where they serve totalitarian regimes, are forging their own vocation and presenting the grotesque spectacle of an historic contradiction. Let history itself be witness to this statement. The armed forces are, by our criterion, essentially democratic and the defender of the rights of the people."

Referring to the concept of war and peace, Monterrosa said, "While it is true that under special and temporary circumstances, war is like an iron band encircling peace, under normal conditions it must be a true and solid peace from which the specter of war keeps its distance." And he explained "that our peace must be so great, so solid, so enjoyable and brotherly that it will in itself be the best assurance against any war."

REAGAN INFLUENCE ON U.S. PRESS VIEWS TOWARD REGION NOTED

Guatemala City DIARIO DE CENTRO AMERICA in Spanish 21 Nov 80 p 2

[Editorial: "American Newspapers Change Their Outlook on Guatemala and the Social Situation in Central America"]

[Text] The foreign investment in Central American was reduced by over half a billion dollars as a result of the implementation of the human rights policy promoted by President Carter's administration. The violation of the aforementioned rights increased, and the dissociation from the United States grew.

In the case of Guatemala, the government was criticized for violating human rights, the U.S. military aid was halted and, simultaneously, the political violence increased and the capital went abroad. This statement was made by THE MIAMI HERALD, in an article signed by Alfonso Chardy, published in the financial supplement on Monday, 17 November.

It is interesting to analyze the way in which the American newspapers are changing their outlook on the Central American situation since Mr Ronald Reagan won the elections in the United States.

THE MIAMI HERALD quotes the statements made by President-elect Reagan in Los Angeles at the first press conference that he held after the election, declaring that he was opposed to the line pursued by the United States keeping that country aloof from nations which are basically friendly, as a result of disagreements stemming from some aspect of human rights, with the subsequent discovery that the result has been the loss of all human rights in that nation.

According to THE MIAMI HERALD, it is the opinion of American businessmen that the human rights policy destabilized governments friendly to the United States, to the detriment of United States economic interests.

The president of Chase Manhattan Bank, Mr David Rockefeller, remarked in Rio de Janeiro after visiting five South American countries: "I believe that the Reagan administration will take a more pragmatic view of Latin American problems."

The aforementioned newspaper points out that the projection of the human rights policy has been connected with United States military and financial aid, affecting governments which are anticommunist and in favor of business.

Reagan's election has been giving increased indications that the businessmen are resuming an attitude marked by confidence, in contrast to the attitude that was evinced upon observing the flight of capital from a Central America in a state of upheaval.

LIBERAL CANDIDATE SUAZO CORDOVA PRAISES CONSTITUTION, PARTY

San Pedro Sula LA PRENSA in Spanish 13 Oct 80 p 80

[Text] Tegucigalpa--Dr Roberto Suazo Cordova was named the presidential candidate for the Rodista National Movement at the convention which took place yesterday at Danli, El Paraiso.

The official presentation of the liberal candidate marked the beginning of his electoral campaign in that city, a campaign which will continue at the national level until next year's elections.

The president of the National Consituent Assembly stated in his speech that his government will work with the most honest and capable men to further the development of Honduras.

He categorically stated that on election day they will get the votes of all the liberals although there are campaigns in progress which tend to hinder the unity which should prevail in the red-white-red party.

Threesome for Peace

Suazo Cordova, the political heir of the "lion of liberalism," Modesto Rodas Alvarado, said that workers, peasants and private enterprise form a threesome for peace, a key support for the social tranquillity we are now experiencing.

In this context it has been demonstrated, in his opinion, that we Hondurans are sufficiently capable of solving our own problems without needing to resort to the importation of exotic theories.

Democratic Constitution

The Rodista leader, applauded by hundreds of fellow party members from various parts of the country, stressed that the new constitution of the republic will express "the longing of the people for recovery and peace.

"In it, we are not going to trample on the workers and peasants; we will try to consolidate their gains, but we will never be against private enterprise or fail to respect it," Suazo Cordova emphasized.

In another connection, he explained that the National Constituent Assembly is practicing true administrative austerity and hence no action will be taken which is contrary to the economic interests of the people.

He asserted that the liberal officials of the present acting government are working under instructions to that effect, realizing that public administration must not be treated as a personal domain but should be exercised for the benefit of the people.

Call for Registration

The Liberal Party (PL) presidential candidate called upon his followers to get their documents in order and register if they have not already done so, so that they will be able to vote in future elections.

With faith in God and in the spirit of Rodas Alvarado, Suazo Cordova ended his speech by asserting that he will win in the 1981 elections and promised to form a government of unity.

CST LEADER REAFFIRMS WORKER UNITY AT FSLN RALLY

Managua BARRICADA in Spanish 21 Nov 80 p 7

[Speech by Ivan Garcia, secretary general of the Sandinist Workers Federation (CST); date and place not given]

[Text] Speech by Comrade Ivan Garcia, secretary general of the CST, on behalf of the mass organizations in our country and the Union Coordinating Association of Nicaragua:

The united people will never be defeated!

The armed people will never be crushed!

Comrade members of the National Directorate of the FSLN [Sandinist National Liberation Front]; comrades on the National Reconstruction Government Junta; comrades on the Council of State; my brothers in mass and union organizations; my worker brothers in general:

I felt that I should make several remarks today, as the people of Managua reaffirm once again their solidarity with and unqualified support for the National Reconstruction Government and the vanguard of this revolutionary process, the Sandinist National Liberation Front.

Since the very day of the revolutionary triumph, 19 July, we workers have been giving an example, but even more than that, pursuing a policy consistent with the national reconstruction process.

We have seen how despite our major limitations and the degree of poverty in which we still live, the workers have been exerting intense efforts, as I pointed out previously, to get this country's economy moving again and to rebuild Sandino's homeland. And if we have not, take a look at the attitude of the workers in factories, take a look at the attitude of the workers in the fields, devoting themselves day after day, hour after after, minute after minute to boosting production, convinced that to the extent to which we workers boost output, we will be moving forward in consolidating and developing the Sandinist People's Revolution. This is also a good time to point out that while our workers and our people are exerting these efforts, a number of hesitant, reactionary sectors are joining the counterrevolution instead of becoming part of the national reconstruction process.

During this entire year we workers have given evidence of our unity; we have progressed in our unity, convinced that worker unity is fundamental for developing and preserving the Sandinist People's Revolution.

The union organizations in this country recently took a big step forward along this path and set up the Union Coordinating Association of Nicaragua. On the same occasion we denounced the opposition to national unity voiced by several parties such as the Nicaraguan Democratic Movement, the Democratic Conservative Party and others. We workers can see how instead of joining in the call for national unity so fervently voiced by the FSLN and our people, they are engaged in efforts contrary to national unity and the national reconstruction process.

The union organizations belonging to the Union Coordinating Association of Nicaragua, and the mass organizations of the FSLN reaffirm their desire for unity. We appeal to patriotic sectors to join us in the tasks of national reconstruction and we point out once again that the workers and the people in general will know how to respond to the maneuvers of the reactionaries and the imperialists.

Long live the Council of State!

Long live the National Reconstruction Government Junta!

Long live the Sandinist National Liberation Front!

PARTIES, COSEP SCORED FOR CREATING 'ARTIFICIAL CRISIS'

Managua BARRICADA in Spanish 17 Nov 80 p 3

[Text] The political game being played directly by the minority rightwing political parties has been completely exposed. They sent up the trial balloon of the "artificial crisis," which was burst by our people's revolutionary energy, thus relegating them to total political isolation.

These tiny groups, the MDN [Nicaraguan Democratic Movement], PCD [Democratic Conservative Party], PSC and PSD, which call themselves parties, employed the "scissors tactic." On one side they essayed their principal attacks against Sandinism and staged "the withdrawal" from the Council of State and, after their failure, they are now presenting their other apparently good-natured side of wanting to help "resolve" the situation. A vain endeavor, because with their nationwide rally the masses have put things in their place.

These parties have been meeting and making joint pronouncements to prepare for their political maneuver. They intensified their activities in recent weeks:

1) On page 9 of the 5 November issue of LA PRENSA, these groups published a joint, proimperialist pronouncement supporting IAPA [Inter-American Press Association]. The declaration was signed, in fact, by PCD, PSD, MDN and several reactionary representatives of economic and trade union organizations. The operation was without doubt directed by these political groups.

2) On 6 November LA PRENSA published a news item in which the MDN extended an invitation to other "political parties" and "worker federations" (page 9).

3) On 9 November LA PRENSA reported on a meeting of these parties to make common cause with the MDN. Once again these groups announced that they would be meeting with representatives of economic and trade union organizations.

4) In addition, these groups, the PSD, PCD, MDN and PSC to be exact, have been advertising their radio programs on Saturday and Sunday (see LA PRENSA, 8 November, page 12).

5) To create an atmosphere of suspense, the day before the assembly of the Council of State they spread the rumor that they would probably withdraw from the council meeting. A radio station broadcast the item, in fact, and what is more, a cable agency publicized the account internationally.

6) Early this week the most reactionary leaders of COSEP [Higher Council of Private Enterprise] published a full-page communique in LA PRENSA containing their main attacks against the revolutionary process in the political, economic and social spheres.

It is easy to demonstrate that these political and social attacks are the same ones that the minority rightwing groups had previously been leveling at Sandinism. In other words, it is plain to see that these parties had indicated how the pronouncement should read.

7) The COSEP statement contains the same basic attacks on Sandinism as the minority groups themselves had previously launched. To be more exact, these political arguments had already been published on page 5 of the 4 November issue of LA PRENSA under the amusing title of "Resolutions of the Great Conservative Convention."

These are the same attacks that the MDN has spread around overseas by means of a "canned" interview with Robelo on a Peruvian TV channel.

The Mobilization of the People Will Expose the Minority

The energetic mobilization of our people in defense of the Council of State, in defense of the people, in defense of national unity has exposed these tiny political groups. Seeing themselves exposed, they tried the other blade of the scissors...The first blade was like a "tragedy" with the note of suspense that they created in spreading the rumor of their withdrawal from the council... but now their tactics, once exposed, are like a comedy.

The PCD is now publishing a pronouncement claiming that it "is worried about the dangers confronting the revolution" and, like midnight virgins, proposing "eight points for freedom," thus endeavoring to fool its own members. They portray themselves as negotiators and as "doctors" of the revolution when they themselves are the disease, when they themselves have staged the "artificial crisis."

If we analyze their "points for freedom," we see that they are nothing new. They are contained in the COSEP pronouncement of early last week and are also listed on page 5 of the Tuesday 4 November issue of LA PRENSA, where they outline their electioneering platform and even call for the "organization of nationwide campaigns."

The above shows that the farce has been exposed. With their latest communique they have again unmasked themselves. Their so-called "points for freedom" do not contain a single point that would benefit the people.

There is not a single proposal, suggestion or idea that would be of benefit to the people. They are only trying to gain more political space, because the masses have narrowed it so much with their nationwide mobilizations.

The people are mobilizing and calling for unity with the honest, not the charlatans. They are calling for national unity against imperialism and to rebuild the homeland. Meanwhile, these tiny groups are against unity and for imperialism.

They have been cutting themselves up with their "scissors tactics." The energetic masses continue to take to the streets to forge national unity against imperialism and the reactionaries and for the homeland and the revolution.

PCD URGES EVALUATION, REVISION OF REVOLUTION

Managua LA PRENSA in Spanish 15 Nov 80 pp 1, 9

[Text] The Democratic Conservative Party of Nicaragua, conscious of and concerned about the dangers confronting the Nicaraguan Revolution, both because of the internal shortcomings and diversions of its usufructuaries and on account of their repercussions and consequences in other countries, mainly in neighboring nations and those without whose support and aid it would not have been able to achieve its triumph of 19 July 1979, echoes the timely call for national unity voiced by Mrs Violeta Barrios de Chamorro in her message of 7 November to the Government Junta and to all Nicaraguans. Moreover, in the wake of political development in recent days, the National Reconstruction Government Junta has come out insistently for national unity and political pluralism.

The Conservative Party feels that the current situation can and must urgently be assessed by the political forces in our country that made up the complex front of combat unity without which victory would not have come over the Somoza dictatorship, both in the armed struggle and in the no less difficult field of international politics.

Unfortunately, this national unity front, originally based on a clear-cut and open political pluralism, was not structured with the legal and political solidity that the historic juncture and democratic realities required. Thus, amid the interplay of partisan and personal ambitions and ideological preponderances, it has gradually deteriorated and has practically been displaced by mounting mistrust of government plans and by confrontations between ever broader segments of the Nicaraguan people with the single party system that they seek to establish in Nicaragua.

This trend, which runs counter to democratic pluralism, and the Marxist direction and orientation of the government party have to a degree placed the Nicaraguan Revolution outside our country's historical context and hemispheric realities in geographic and geopolitical terms. Recent political changes via elections in countries in the Americas have more sharply outlined this context, leaving little room for more or less confusing moves towards orbits and systems outside the continent. Under these circumstances, it is all the more obvious that our Nicaraguan Revolution will be able to develop as revolutionarily as it wants only in accordance with the democratic parameters of the West and, more specifically, of the American continent. In fact, it was based on such an agreement and under the auspices of the Organization of American States that the Nicaraguan people

carried out their revolution. This ideological position was clearly embodied in the government program promulgated on 18 June 1979 by the National Reconstruction Government Junta.

In light of the dangers threatening our revolution and in light of the serious economic situation that in the months to come could reach catastrophic levels and cause painful developments for our long-suffering people, a supreme effort is required to consolidate a national unity capable of staving off these tremendous evils.

The revolutionary process must be immediately reassessed and made to square with original projects, with the government program of 18 June 1979, which contained the revolution's commitment to the Nicaraguan people and to the democratic governments of the continent that lent it their most resolute support.

The Democratic Conservative Party feels that the assessment we have called for must be begun as soon as possible. The following would be the main points to this end:

I. Pluralist organization of the National Reconstruction Government Junta.

II. Restructuring the Council of State with a balanced representation of political forces and eliminating the military presence on it.

III. Establishment of authentically national Armed Forces and police, without the partisan designation and nature that they currently have, as set forth in Point 1.12 of the Political Area of the 18 June 1979 Government Program and Article 24 of the Fundamental Statute.

IV. Full guarantees of freedom of the press and of information, as called for in Point 1.4 of the Political Area of the 18 June 1979 Government Program, and revoking Decrees 511 and 512, which encroach on this freedom.

V. Compliance with Point 1.1 of the Political Area of the government program in connection with the legislation needed for the organization and unfettered operations of political parties without ideological discrimination and on an equal footing.

VI. Establishment of a multiparty commission to draw up an electoral bill that the Government Junta would have to submit to the Council of State under Article 18 (as amended) of the Fundamental Statute, as well as a Law of Municipalities.

VII. Setting specific dates for municipal elections and the election of members of the Constitutional Assembly, and specifying the nature of these elections according to the provisions of Article 28 of the Fundamental Statute.

VIII. Setting a date for the restructured Council of State to draw up the draft political constitution called for in the Fundamental Statute.

IX. Revision of the laws permitting unjust confiscations and attachments of private property; the elimination, in practice, of arbitrary and illegal measures against owners, and review of cases of obvious and proven injustice.

X. Compliance with the recommendations of the International Commission of Jurists and the OAS Human Rights Commission, mainly in connection with the autonomy of and respect for the judiciary and the improper functioning of the special tribunals.

XI. Publication of the general budget of the nation, and informing the public as to the use and handling of budget items, as well as of the confiscated assets that the state is administering.

XII. Revision of study programs and educational policy, based on the right of parents to choose what kind of education their children ought to receive, a right enshrined in Article 26 of the Universal Declaration of Human Rights, which the Revolutionary Government promised to respect.

XIII. Based on the temporary nature of the current government, an agreement on the quickest and most appropriate process enabling our people to decide the definitive course of their revolution through free and honest elections.

Immediate consideration of these points and others that might emerge by all of the country's political forces would strengthen the revolution and avert the danger of confrontations and violence among Nicaraguans, because we would be resolving our problems and differences in the civilized and democratic way that befits a people who struggled for their self-determination and freedom in opposition to any sort of outside control and oppression.

Managua, 12 November 1980
Democratic Conservative Party of Nicaragua
God, Order, Justice

EDUCATION VICE MINISTER DISCUSSES WORK-STUDY PROGRAM

Managua LA PRENSA in Spanish 17 Nov 80 p 9

[Interview with the vice minister of public education, Dr Miguel de Castilla, by Adriano Guillen; date and place not given]

[Text] The vice minister of public education, Dr Miguel de Castilla, has granted LA PRENSA an interview on the work-study program, an issue of major interest to Nicaraguans.

Dr Castilla began by saying: "I understand LA PRENSA's interest in posing direct questions to me regarding the charge leveled at the work-study program in connection with its Marxist-Leninist theoretical roots. I understand this in the sense that even before 19 July the enemies of our revolution have accused our leaders and accused our revolution to the effect that we were going to be a second Cuba or that all of our economic and cultural programs were going to be brought in from communist countries. In light of this charge against our revolution, and due to the very fact that it calls itself a revolution (because it is, and one of the best, even before 19 July, when Ernesto Cardenal said that we were going to be a new Nicaragua, not a new Cuba), it is to be expected that our people with very low levels of political instruction and the enemies of the revolution, the traitorous bourgeoisie and the imperialists would try to tie this in with and to find in every Education Ministry project the characteristics of an ideology that is strange to them.

"I am asserting," he continued, "that the work-study program stems basically from national needs and has a national background, not from the precise moment of the revolution but from 10, 12, 20 years of ongoing education, such as the rural teachers school in Esteli, which was developed under Point 4 of the American program, whereby the students grew their own food.

"This is a Nicaraguan project, and we are proud of it," the vice minister stressed. "It is a project by Nicaraguans, and

what bothers us is not that they think it is a program with influences from outside our society and our own brains, but that the comrades who so criticize the program think that our people do not have the ability and are offending the intelligence of our people and of the intellectuals allied with our people, this country's progressive and revolutionary intellectuals.

"It bothers us that they think that we needed, that our guerrilla leaders, for example, needed Cuba or other revolutions to wage war in this country.

"It bothers us that they think that in order to formulate our health care and economic programs we have to turn to other brains to pursue the programs that our people and progressive intellectuals are carrying out in this country. That is what bothers us, because they underestimate us. In this regard, I want to assert definitively, once and for all, the following (it's a shame that as late as today I still have the opportunity to say this, because if they don't believe us, it's their problem): the work-study program that will be conducted from 1 to 20 December is a program born of production needs, since the schools will be open when the four commodities are being harvested. Students have traditionally dropped out of school during this period because a lot of them join the harvest and don't go back to school because they have lost a lot of days. We have to lend continuity to the most Nicaraguan teaching development in our country, the CNA, since the schools were founded in 1875 during the era of the conservatives. The closest forerunner of this project is the National Literacy Campaign."

Common Ground in Capitalism and Socialism

Castilla mentioned that the common ground between the capitalist and socialist theories of education is the result of historical experience. "To us these are historical needs for our educational system in its ongoing search for new educational methods to break with Somizist education and create a new kind of man who will lend continuity to the revolution. I would like to make it absolutely clear that the work-study program was formulated in the Education Ministry, with ANDEN, in other words, with this country's teachers, with student organizations and with parents," the vice minister said emphatically.

"It is our specific educational and production needs that force us to propose and pursue projects such as this one," he added.

Philosophical Foundations

Question: With regard to your argument about the national origin of the work-study program, I would like to remind you that the material that LA PRENSA had in its possession...

Answer: No, the minister quickly said. The material that you had in your possession, the pamphlet "Philosophical and Psychological Foundations of the Work-Study Principle," which is from Cuba, 10 pamphlets that were distributed in the occupational guidance and professional training workshop of my ministry, is different from the work-study project. The work-study project is being worked out in the educational programming division of the Planning Vice Ministry. The other thing was a very specific seminar by the school counselors.

Question: But that material will be used by the school counselors nationwide. And the only one of the 10 documents that deals with the philosophical principle of work-study is the Cuban Marxist-Leninist document, which talks about the training of young people through work-study to develop themselves as young communists to establish a socialist society that will eventually become communist. And it is a publication of the Cuban Education Ministry.

Answer: To respond to your concerns in this regard, I will tell you first that it was not the Occupational Guidance and Professional Training Section that drew up the work-study program. These are two different things. The seminar was for the theoretical, conceptual and technical training of our school counselors throughout the country, basically for their everyday work in intermediate schooling institutes. But the entire student community, even the school janitors, are involved in the work-study program. It is the Educational Policy Division of the Education Ministry Planning Department that is formulating the work-study program, which has been printed in pamphlets that are going to be distributed nationwide, he emphasized while presenting me a copy.

Question: But isn't the material that they studied at the workshop going to be applied by the counselors in performing their functions?

Answer: Of course, the vice minister answered, adding:

The Right to Culture

[Answer continued] But what is the story with this document? As of 19 July 1979 our country won the right to universal culture, when it fought behind the vanguard of the FSLN [Sandinist National Liberation Front]. An extraordinary list of forbidden books was found at customshouses. In August 1979 we wondered who might have the three volumes of Karl Marx' "Das Kapital" and we looked for the people who might have hidden them away. In Costa Rica this literature is right next to Reader's Digest books, and it was banned here, my interviewee reminded me.

To continue, it was my job to study education over the last 100 years in our country and to demonstrate the degree of "Pentagonization" of education in our

country since 1952, since Truman's Point 4. The program was supervised directly from Washginton, and the ODECAROCART books were part of an imperialist plan in Central America. The 1974 educational plan was worked out by American experts with a small counterpart group of three Nicaraguan experts in Somoza's Education Ministry. There was no chance for progressive UNESCO thought at the time.

But the former teachers and experts at the Education Ministry have now won the right to inform themselves, and each Friday we instruct them by means of a Nicaraguan lecturer and by combatting previous practices.

We believe that the method of historic and dialectical materialism has been verified as a scientific method of grasping reality.

We think we can predict developments so that we can plan them perfectly, so that social developments do not take place on their own. Somozism and the bourgeoisie were interested in concealing reality, but we cannot refuse to learn these methods and apply them along with others such as American pragmatism. So then, the big commotion over a Marxist-Leninist document is countered by the right that our people won, and it is the people who are making use of this right at the state level. We are not bashful revolutionaries, as in the past, when we had to hide "Che" Guevara's books from which we learned socialist planning.

Question: Nevertheless, a number of books have currently been taken out of circulation in Nicaragua; works by Sweezy, Betelheim that were part of an INRA [National Institute for Agrarian Reform] were not distributed.

Answer: No, that cannot be, de Castilla replied.

Question: I would like to get back to the work-study program. You said that the ministry is interested in meeting current production needs through the program. But hasn't it taken into account the level of unemployment among laborers and peasant farmers? Isn't the ministry's proposal a bit unrealistic in this sense?

Answer: We have proposed three ways of pursuing the project. One, work at schools, whereby the state is going to save a lot of cordobas having students fix school furniture. Two, work in the communities, where we are going to save enormous amounts of cordobas putting up blocks of houses, cleaning ponds, ditches, forests. And three, coffee production work.

Who do we think are going to be involved? The people who have always been involved. We are simply declaring an official vacation break so that they do not drop out, so that, instead, they get the school's permission to work in the coffee harvest. It is not true, then, that we are going to bring 5,000 new workers into the coffee, cotton and sugarcane harvests. We hope that most of the students remain in the communities, concluded Miguel de Castilla Y Urbina, the vice minister of education who is responsible for educational planning in Nicaragua.

Question: Getting back to a previous point, when you quite correctly noted a historical development as the "Pentagonization" of education, I would like to convey to you through this question a concern that parents have expressed in the pages of LA PRENSA. Isn't our school system becoming "Cubanized"? Since the topic is so important, however, I would like to ask you for another interview right now.

Answer: Bring the necessary documentation in this regard, because this is a delicate and very serious matter that I am, of course, willing to take up publicly in any conspicuous forum. Of course I will grant you the interview that you are asking for, Vice Minister de Castilla concluded politely.

CUS PROTESTS INCREASING DECLINE OF LABOR FREEDOM

San Jose LA NACION in Spanish 6 Nov 80 p 10-A

[Excerpt] The Nicaraguan Committee for Labor Unity (CUS) has accused the present Nicaraguan Government of committing a number of abuses, from union persecution to persecution of public employees in that nation.

CUS made the accusation during the 12th regional congress of the Confederation of Central American Workers (CTCA-ORIT [Inter-American Regional Organization of Workers]) held in San Jose at the end of October and the beginning of November.

The participating delegations also brought up aspects of employment and under-employment, worker education and social and economic problems in Central America.

Nicaragua

The Nicaraguan representative to CUS, Jose Espinoza Navas, said that a special phenomenon is taking place in his country, since in that nation the "democratic revolutionary forces which created the revolution are only used as traveling companions for delegations going to other countries, and that they have no right to express their opinions, since that is an exclusive right of the direct representatives or leaders of Sandinism."

He said that in Nicaragua there is no right to strike, nor can collective conventions be held, and anyone who does so is arrested.

He also said that in that nation "we find ourselves in a Sandinist revolution which has created a powerful, total mechanism which enters all national levels, from the school to the army, and promotes the idea that there is no room for any other tendency, and that the objectives they fought for are daily becoming further and further away from the true goals of that people."

In another part of his accusation, Mr Espinoza said that Sandinist Maj Tomas Borge has accused the CUS of instigating the problems at Bluefields, where, according to reports, there were popular uprisings last month because of displeasure with the Sandinist government.

He added that a similar situation occurred in Esteli, "where the Sandinist militia destroyed the CUS offices and took away all the furniture."

Finally, he said that the present situation of the free and democratic trade unions and the public employees is extremely difficult, since the government of that country has vowed it will destroy the CUS because it is antirevolutionary.

He said the struggle against dictatorship in Nicaragua has become something worse, and that it is believed much will have to be done in the nation to achieve total liberation.

BRIEFS

AMBASSADOR DENIES GOVERNMENT CRISIS—The Nicaraguan ambassador in our country, Javier Chamorro, says that that country is not in crisis, as it has been made to appear in international news items published here, and that there is an orchestrated attempt to make that country seem to be in crisis. Mr Chamorro referred to well-known events such as those at Nandaime, where the political party led by Alfonso Robelo was prevented from carrying out a proselytizing demonstration, and he said that that was due to a current law which prohibits political activity and also because at that time, security measures were being taken in view of events which were expected in the northern zone. He also said that the reason for the withdrawal of several groups from the Council of State was to make it appear that there is an internal crisis in the country, but this is not so, the ambassador said. In addition, concerning the news items about incursions into Honduras, he said this is also an orchestration to try to pretend that a state of crisis exists in Nicaragua. "All these maneuvers are part of a premeditated plan of groups and sectors which, along with the Nicaraguan right, are trying to destabilize the revolutionary process," he emphasized. Ambassador Javier Chamorro said the Government Junta has complete popular support and that Nicaragua is moving toward reconstruction and consolidation of the revolutionary process. In addition, he said that the government's plan will continue with its characteristics of freedom, a mixed economy and political pluralism. COMMENTARY URGES STRONGER POLICY INITIATIVES ON CARIBBEAN

Caracas RESUMEN in Spanish 23 Nov 80 pp 4-6

[Commentary by Jorge Olavarria: "Venezuela's Role on the Criticial Caribbean Scene"]

[Text] Mr Reagan's election as president of the United States will certainly not be "blameworthy" for the imminent and almost inevitable development of certain critical trouble spots in the area next to Venezuela, which could (everything is potentially explosive in the world in which we live) have complex consequences both inside Venezuela and internationally, in the broadest sense of the word.

But "blameworthy" or not, the Reagan affair could be one of those self-motivating prejudices that of their own strength force men to behave as people think they are supposed to behave, even though they do not intend or want to do so. In any case, the preexistence of intensely critical trouble spots that could be damaging to Venezuela's interests and security in the short or medium r t is a fact that with Reagan, without Reagan, for Reagan or against Reagan (or what he is thought to represent) we will have to confront and grapple with.

Outlined in its most elementary terms, the scenario is one of a widespread "collapsible" situation in a group of tiny countries in the Caribbean area that have no economic or political weight on a world level but that carry considerable weight in terms of their strategic position. The small island of Grenada is the most eloquent illustration of this point, but it is not the only one. On the continent itself, Guyana and Suriname are states that could be "kidnaped" by powerplays (almost police powerplays) that would suddenly place them in the orbit of the superpower outside the continent, so that they could thus serve as permanent bases for subverting Brazil's socially most sensitive region, the northeast, or Venezuela's economically most vulnerable region, which is virtually within hand's reach of Guyana. Skipping the always potentially critical scenarios in the dozen or so minicountries in the Antilles chain that stretches from Puerto Rico to Trinidad, and without analyzing the internal situation in the Bahamas archipelago right off the Florida coast, and above and beyond Cuba, we must focus on the traditionally explosive trouble spot of the island of Hispaniola, with Haiti, the continent's poorest and most backward country, and the Dominican Republic, which is apparently splashing about with difficulty in the midst of seeming democratic stability. Jamaica has just surprised a great many people and is a sort of "consolation prize" amid a generally adverse panorama. This panorama's main trouble spot, marked by the most brutal and bloodthirsty violence, in which Venezuela is inevitably involved, is the tiny country of El Salvador.

El Salvador

Its statistics should not fool us. Twenty-one thousand square kilometers and a population of 5 million, half of whom live in cities, give a population density of 238 inhabitants per square kilometer.El Salvador has one-fifth the territory of its neighbors Honduras and Guatemala, but double Honduras' population and almost half Guatemala's, whose population density is just 64 inhabitants per square kilometer. Such statistics are not, of course, unwarranted. El Salvador has fertile lands, a good climate and the highest degree of industrial development in Central America. Politically, however, El Salvador has had to endure an oligarchical structure that is stubborn, pigheaded and blind to everything that signifies social progress. The complexities of its internal political schemings are irrelevant to the fact that for a long time now, and without anyone bothering to notice it, El Salvador had been in a classic prerevolutionary situation, to which an institutional solution was not found; on the contrary, it became worse and worse until what we are seeing today was unleashed. If the matter had been left alone, perhaps it would have had the same outcome, but confined within this small country. Today, however, it is impossible for any revolutionary movement to give out on its own; rather, it immediately becomes part of the polarization involving the "antis" that are automatically triggered by their opposite, the "pros." Salvadorans are being killed today with arms and ammunition and political or strategic support from overseas. Oddly enough, it is an open secret that the final outbreak of the daily and macabre spectacle of assassins and more or less clandestine, waylaying assassinations waited until after the U.S. elections. An open confrontation in Central America would obviously have had an impact both on the American election itself and on the United States' actual behavior towards the conflict. Now, with the cards on the table for the new hand that will have to play them, with the load of prejudices he shoulders and the no less heavy burden of promises and threats, the El Salvador issue poses a dilemma without simple answers or quick solutions. On the one hand, American military aid to the Salvadoran Junta is obvious and open, just as Venezuelan economic aid is undeniable, and just as Mr Napoleon Duarte's affinities with the ruling party in Venezuela are undeniable. On the other, it is true that at least some opposition sectors, which have an irreversible tendency to cluster around the group connected with the Castro-Sandinist faction, are receiving economic and military aid from these two centers. With the lines thus drawn, we do not yet know how long the conflict can last as it presently being waged. This would punish the masses senseless, slowly but surely erode the prestige of a government that is showing itself incapable of controlling this anarchy and linger until the occasion presented itself for a change in the wake of a power vacuum (as happened in Cuba) or a collapse and flight (as happened in Nicaragua). We do not know whether this is or is not the strategy that has been planned. But what we do know is that as a result of those strange and at times unpredictable paths of politics, Venezuela and the United States are de facto allies and supporters of the Government Junta of El Salvador. Developments over the next few months will prompt numerous and complex conflicts, but the final confrontation...or its outcome, is a terrifying dilemma. If El Salvador falls within the Soviet orbit, we will have a small country of 5 million inhabitants concentrated in an area of 20,000 square kilometers, with a Pacific coastline and bordering on Honduras, Guatemala and Nicaragua, acting as a pincer, along with Nicaragua, for the

immediate destabilization of the governments and the zone and their potential fall within the other orbit of power. If, on the other hand, Mr Reagan, the Republican, does what he is expected to do, he will do what Mr Johnson, the Democract, did when he sent 40,000 Marines into the Dominican Republic, based only on the word of an ambassador with an active imagination, never on a situation like the one that El Salvador is unquestionably in today. Remember that the Dominican Republic is a country with 5 million inhabitants (the same as El Salvador) and an area of some 50,000 square kilometers (double El Salvador's). If Mr Reagan the Republican acts in this instance in proportion to what Mr Johnson the Democrat did, he could send twice as many troops to El Salvador as Johnson ordered to the Dominican Republic. And in that case, what would the Venezuelan Government do? How would such a move be viewed in internal Venezuelan politics? What would we write in RESUMEN? Would we applaud it as "salvaging" democracy? Or would we remember that the Marines were the ones who installed Machado in Cuba, Trujillo in the Dominican Republic and Somoza in Nicaragua and that under the shadow of the guns on American vessels Gen Juan Vicente Gomez staged the 1908 coup d'etat that brought him to power?

Furthermore, would it be possible to explore the possibility of having several countries on the continent (Mexico, Venezuela, Colombia, the United States) send a humanitarian police force to effectively halt, with the consent of the Salvadoran Government, the cruel, inhuman and daily carnage there and guarantee a gradual return to some sort of democratic institutional framework? Would this be an acceptable or a dangerous precedent? Are there any better alternatives than these? Can we wait idly by for the announcement that the Marines have landed or that Castro-Sandinism has taken power in El Salvador?

Last week, Mr William Rogers, the under secretary of state for Latin American affairs under the Nixon administration and when Henry Kissinger was secretary of state, was in Caracas. I do not know whether he talked about these matters with Venezuelan officials or not, but it is not difficult to assume that at least the issues were addressed in their broadest respects. It was officially announced at the same time as this visit that a Venezuelan mission of the highest level, consisting of the secretary of the presidency of the republic, Gonzalo Garcia Bustillos, and our former ambassador in Washington, Julio Sosa Rodriguez, would be traveling to California to meet with President-Elect Ronald Reagan.

As always, such moves prompt diverse reactions in the countries taking them. There are already posters and graffiti in some Caracas streets, and in particular at the Central University, calling for COPEI's [Social Christian Party] withdrawal from El Salvador. In the past several verbal skirmishes between AD [Democratic Action] and COPEI highlighted, on the one hand, the irresponsible, cruel and unconstitutional shipment of Venezuelan arms and ammunition by C.A. Perez' administration to Nicaragua, which are today stored in Costa Rica and have wound up in the hands of the Salvadoran left or in the bodies of the people slain by them, and on the other hand, the economic aid and political support of the COPEI government for their Salvadoran companions-at-arms. Without engaging in an analysis of the main point of the matter, its moral, political or strategic justification, these are the facts. What we have to ask ourselves now is whether this is a response (correct or not, depending on the standpoint from which it is

viewed) to the dilemma of erring because of action taken or because of omission. The dilemma is identical for a small country like Venezuela and for a superpower like the United States. It is a matter of potential and magnitudes. But now we have to ask ourselves: Is this the dilemma? Are these the only two ways? Isn't there a third or fourth solution, rather than going in with fire and sword or standing idly by and watching someone else do so? This is the area to be looked into. Total inaction and open intervention with military or police forces must be the last resorts when every other one has been exhausted. Such resorts are not, of course, prohibited for Venezuela, whose only limitation would be the potential of its forces to take action, which could lead to inaction. Mediation, collective action and pressure on the combatants' supply centers are just three of many options. But if these have been exhausted or if we are faced with the critical scenario of an imminent offensive, what are we to do?

Each case has its own parameters. For example, the last two countries that have fallen into the Cuban-Soviet orbit in the area, Nicaragua and Grenada, undeniably presented a morally untenable option on the other side: Somoza, a troublesome and anachronistic continuation of a dynasty established in the 1930's by the U.S. Marines, and Eric Gairy, one of the most corrupt little figures of the Caribbean island-states. But looking back today, the situation is quite clear: the "guarantors" of democratic hopes for the movement that overthrew Somoza, Mrs Chamorro and Mr Robelo, are out of the government. There can be few doubts about the ultimate destiny of the Nicaraguan Junta, which has already begun to play the card of prejudice surrounding Mr Reagan. For its part, Grenada, through its mouthpiece Mr Bishop, is not hiding its support for Cuba and the USSR. Closer to Margarita or Puerto Ordaz than the latter are to Caracas, Grenada virtually dominates the entrance to the Orinoco, the door to the north and northeast navigation zone of the South American continent and the entire eastern part of Venezuela, in addition to the islands of Trinidad and Tobago, both of which areas are rich in oil. Its strategic importance is beyond any doubt. Mr Bishop has made this the point of support for his de facto government, which has shattered the admirable tradition of democratic government changes carried on by the English-speaking island states in the Caribbean. It is no longer a secret that an airport capable of handling heavy planes is under construction on Grenada, and there are persistent, unconfirmed rumors that a naval base capable of harboring submarines is also being built. Can Venezuela remain idle in light of such developments? What should it do? For the time being, it would seem imperative to revitalize and reoutfit the air and naval forces that Venezuela has available, aside from whether thought is or is not given to their use. Perhaps some thought has already been given to bringing them in line with these new geopolitical realities, but it is obvious that Venezuela must have at its disposal a properly trained force, either amphibious or capable of being airlifted, if it does not want to look on powerlessly, as in the past, as others perform in its area of interest and influence the policing or preventive tasks that events call on them to carry out. There are precedents. Trinidad and Curacao once asked Venezuela for help to control potentially uncontrollable situations that might have been taken advantage of by other countries in the area with the ability to take action with the quickness and effectiveness that such emergencies require, after which the force of faits accomplis transforms the situation in the direction of unpleasant surprises. Hypnotized as we are in a

nitpicking discussion of delimiting ocean areas with Colombia, have we perhaps not realized the potential danger posed to Venezuela by the island of Grenada and, above all, by a repetition of what happened there in Aruba, Curacao, Bonaire, Tobago or Trinidad, Guyana or Surinam? It is not a question of letting ourselves be carried away by our imaginations in an exaggerated show of fear; rather, it is a question of anticipating predictable critical scenarios and reassessing our diplomatic, political, economic or military capabilities to deal with them with the celerity that they might require.

FUEL PRODUCTION STATISTICS FULFILL EXPECTATIONS

Buenos Aires LA NACION in Spanish 26 Nov 80 p 7

[Text] In commenting on the fuel production statistics, the under secretary for that area, engineer Osvaldo Calcagno, told LA NACION that, this year, the estimate originally made for local production of 28.4 million cubic meters of oil will be fulfilled.

The Report

The usual report from the Energy Secretariat on fuel and electricity production states that, during the first 10 months of this year, 23.7 million cubic meters were produced, a figure 4.5 percent higher than that for the same period last year. The extraction for October of the previous year was 2.5 percent higher than that for the same month in 1980.

As for oil imports, during the first 10 months they totaled 2.1 million cubic meters (23.9 percent more than in 1979), and caused an outlay of $443.6 million, an amount 52.9 percent higher than that required during the same interval in 1979.

The official report also notes that the total fuel imports (oil, byproducts, natural gas, liquid gas and coal) thus far in 1980 cost $902.4 million, which represented a reduction of 4.8 percent in the amount that was necessary during the same period in 1979 ($948.3 million). It also indicated that the most significant reduction occurred in the gas oil category, with a 98.2 percent decline in purchases.

For their part, fuel exports (petroleum byproducts and residual coal) thus far this year totaled $204 million, a figure 570.4 percent higher than that recorded for the same interval last year, which was $30.4 million.

Gas and Coal

During the first 10 months, the injection of natural gas in the intake of the gas pipelines amounted to 8.3292 billion cubic meters, a figure 8 percent higher than that for the same period last year. Last month, 852.1 million cubic meters were injected; in other words, 4.9 percent more than in the same month of 1979.

Marketable coal production for the first 10 months (256,200 tons) was 42.5 percent under the figure for the same period last year. In October 63,200 tons were produced, that is, 45.9 percent less than for the same month last year.

Electricity

Finally, the report from the Energy Secretariat states that, during the first 11 months of this year, 29.8 million MWh were generated, an amount 8.8 percent larger than that for the same period in 1979. In October, 2.9 million MWh were generated, exceeding the figure for the same period last year by 1 percent.

More energy was produced this year (10 months) than during 1979 by Water and Power (1.7 percent); EPEC [Cordoba Provincial Power Company] (8.7 percent); HIDRONOR [North Patagonia Hydroelectric Company] (55.0 percent); and other lesser entities (5.4 percent). On the other hand, less was produced by: SEGBA [Greater Buenos Aires Electrical Services] (17.7 percent), the former CIAE [Italo-Argentine Electric Power Company] (10.4 percent); DEBA [Buenos Aires Power Administration] (16.9 percent) and CNEA [National Atomic Energy Commission] (17.2 percent). Added this year was the contribution from Salto Grande, which produced 2.4 million MWs. Apart from the official information, it should be noted that the water supplies in the area of the Chocon-Cerros Colorados system have made it possible to use a larger amount of energy of hydric origin, affording lesser use of the fuel consumed by the thermal powerplants.

FORMER YPF OFFICIAL SCORES ENERGY POLICY

Buenos Aires CLARIN in Spanish 24 Nov 80 p 14

[Text] The lag in the oil production plans and the delay in the other areas of energy were underscored by Arturo Sabato, former presidential representative in YPF [Government Oil Deposits] during the administration of Dr Arturo Frondizi, in a lecture given at the National Studies Center.

Sabato remarked that the progress made since 1976 has proven insufficient, and questioned the operation of the state companies in the energy field.

YPF

In discussing Government Oil Deposits, Sabato stressed that "it has a debt of $3.7 billion," and that "the service on the debt is equivalent to $2.7 million per day; but, since YPF charges $76 per cubic meter of oil, and it costs $136, the losses total $6 million per day."

He also claimed that, "the Water and Electric Power deficit is almost the same as that of YPF," and that, "8 million cubic meters of gas are being burned, the equivalent of about $2 million worth of oil, owing to the lack of adequate infrastructure."

Coal

After citing the importance of coal production, and noting that our country has sufficient coal reserves for 100 years, he said: "If the government continues its present energy policy, Government Coal Deposits [YCF] will go bankrupt."

He emphasized that in 1979 YCF produced 750,000 tons, and that in 1980 it only yielded 410,000 tons. He stressed that the drop in production "is not the fault of the company," but rather due "to the lack of adequate infrastructure for transporting it from Rio Turbio to the consumption centers."

Private Capital and State's Role

He remarked: "Our position concerning the role of private capital is well known." And he insisted that, "if attractive terms are offered to the investor, which are compatible with the nation's interest, there will be on the part of private capital;" and then stressed that this cooperation should be sought in all areas of energy production. He added that "the state should program, guide and control the productive activity, but the state should not be the entrepreneur."

ENERGY UNDER SECRETARY VOICES SATISFACTION WITH PROGRAM

Buenos Aires LA PRENSA in Spanish 23 Nov 80 p 1

[Text] The under secretary of electric energy of the nation, Bernardo Bronstein, acknowledged the fact that the electric rates in Greater Buenos Aires will maintain a rate of increase exceeding that of inflation, stating that, "in 2 or 3 months," they would "reach the pertinent economic levels," after "lagging again" to comply with government guidelines in this area.

He also said that the rates used by the Water and Electric Power Company "are low" and that a new program is being studied that "will indicate the appropriate rate" to eliminate that situation.

Bronstein made statements today at the Ezeiza International Airport, shortly before departing for Bogota to participate in the 10th Regional Meeting on Electrical Integration, heading a delegation that also includes the head of the Water and Electric Power Company, Anibal Blanco.

The Plan Until the Year 2000

On this occasion, Bronstein reiterated that the electrical development plan devised by the government until the year 2000 "is being carried out reasonably well" insofar as construction is concerned, and that the exploitation " is being conducted satisfactorily, with reasonable reserve that befits the circumstances."

He also said that there has been a "great expansion" in the interconnected system, which will produce 5,900 Mw up until 1985, and for which "all the machinery has been purchased and the contracts signed."

Hence, he remarked, the electric power reserves in the interconnected system at present amount to 27-30 percent, "a reasonable figure," despite the fact that, "on certain occasions we have had critical situations owing to the accumulation of unfavorable circumstances that have occurred too close to one another."

He said that this all fits in with Salto Grande, "where a turbine goes into operation every 2 or 3 months," and with Alicura, Yacyreta, Piedra de Aguila, Parana Medio and the nuclear plan.

MALVINAS WILLING TO UNDERTAKE JOINT OIL EXPLORATION ACTIVITIES

Buenos Aires LA NACION in Spanish 29 Nov 80 p 11

[Text] Puerto Stanley—There is a colorful folklore in the Malvinas regarding the question of whether or not oil exists in the islands or in the sea surrounding them.

The silence that the government of occupation has maintained on the matter made certain local political observers at the time think that it was concealing the presence of oil to prevent the Argentine claim from becoming stronger and more serious. The issue of oil was taboo for the Malvinas natives and the British residing here; for when it was mentioned, even in passing, that sufficed to evoke their claim of total ignorance regarding the matter.

Formal Treatment

But since last Tuesday, when Nicholas Ridley formally put the matter of oil exploitation up for discussion by the Malvinas natives, the latter and foreign residents here have recalled in an instant everything about it; and, what it even more surprising, in any conversation we are told, "We must search for the oil with you Argentines, so as to prevent the Soviets, Poles and even North Americans from doing so." They add: "Let it not be they who find and extract it."

The other day, in the Town Hall, Ridley directly backed their proposal for the establishment of a "back-lash" in the Malvinas archipelago, telling the inhabitants that, in this way, "they could freely exploit the existing oil deposits and fishing resources in their jurisdictional waters."

This was how the issue of oil which has ceased to be taboo cropped up here, like the other one, that of fishing, which provides the local government with about 30,000 pounds per day for port permits, not exploitation. Many Malvinas inhabitants, who are not so enthusiastic but more realistic and practical, tell us: "The Malvinas have abundant oil, but to date there have only been studies."

OIL PLATFORM REPORTED DISPATCHED TO TIERRA DEL FUEGO UNIT

Buenos Aires LA PRENSA in Spanish 27 Nov 80 Sec 2 p 7

[Text] The group comprised of ESSO Argentine Exploration and Production, ASTRA Perez Company and CADIPSA announced that the platform assigned to exploration work in the areas awarded to it at the appropriate time has been transferred to the II-East Tierra del Fuego unit, wherein it has begun the drilling of a first well.

The map accompanying this article indicates the location of the well. It should be emphasized that the depth of the water on the job site is 150 meters, and the program established for the drilling is for approximately 3,100 meters under sea level.

ULLUM DAM BEGINS OPERATIONS, POTENTIAL NOTED

Buenos Aires LA PRENSA in Spanish 2 Dec 80 p 12

[Excerpts] San Juan--At 1000 hours tomorrow, the Quebrada de Ullum storage dam, considered to be the most important hydroelectric works project executed in the province to date, will be opened for operation.

The Dam

The Ullum storage dam (designed mainly to insure a volume of flow for agricultural irrigation during the production cycle and to regulate its distribution in a rational manner, impounding reserves) resulted from the need to improve the systems for utilizing the water resources.

The background information and studies carried out on the San Juan River since 1862 determinted the site of the facility, because in that location the density of the alluvial deposit in the gorge does not exceed 10 meters; and this facilitated the direct foundation on the rocky bottom.

The dam's heavy wall is about 300 meters long at its top and 52 meters high from the level of the riverbed.

The spillway was designed to attain a discharge capacity of 2,560 cubic meters per second. The volume of flow from the river's flood that exceeds the dam's capacity will empty onto the top of the spillway, running off for 72 meters, and falling into a collector that will reduce the turbulence.

The middle of the conduit for irrigation is divided in two, to supply water for the future hydroelectric powerplant at the foot of the dam. Each outlet has two valves.

The Ullum dam will impound 440 million cubic meters of water, covering an area of 3,000 hectares.

A few hectares are currently being irrigated with the water from the San Juan River, and that number will now be increased to 66,000 hectares. But, since the Ullum dam will also allow for the constant replenishment of the underground water deposits, and the use of the reused water for irrigation, the total area to be irrigated with these water resources could amount to approximately 110,000 hectares.

Supplementary Projects

By way of a supplement to the present dam, other projects will be executed which will help to consolidate and increase the benefits that the regulation of volumes of flow will bring for the economy of San Juan and the entire region. Hence these projects have obtained the financial backing of the National Regional Development Fund.

Noteworthy among those projects are the construction of the saddle dam, on the divide between Ullum and Zonda; the expansion of the Soldano dam at the very mouth of the Zonda gorge; the canalization, waterproofing and piping of the Zonda swamp; the creation of parking facilities and forestation in the areas surrounding the dam, which is part of a tourism and recreational complex; the construction of the 134-unit Ullum Dam district; the relocation and paving of provincial route No 14; and the construction of the hydroelectric powerplant and of a fishing station in the reservoir area.

General view of the projects, with the spillway in the foreground and the two discharge valves through which the water from the reservoir will be poured in the direction of the watercourse of the San Juan River.

BRIEFS

FOREIGN INVESTMENTS--The Italian Government has approved the affiliation of a state company of that country with an Argentine oil company to form an association, with investments totaling some $250 million, will engage in drilling oil wells, both in this country and in the rest of South America, according to a disclosure made by the Ministry of Economy. It was said that the Italian Ministry of State Participations notified the heads of the Italian Government company, SAIPEM and the Argentine oil company, Bridas, through the National Hydrocarbons Institution (ENI), that approval had been given for their affiliation to form a new company which will operate under the name of Rio Colorado. It was noted that the brand-new company would acquire 70 drilling rigs, with a total outlay of about $250 million, and that, when it is in full operation, there is a possibility of its creating about 3,500 jobs, mainly in Patagonia. NEW FIRM TO SUPPLY ELECTRICITY; FRENCH COMPANY INADEQUATE

Paris LE MONDE in French 2 Dec 80 p 42

[Article by B.D.: "The EDF's Difficult Winters in Guadeloupe"]

[Text] A group with an electrical generating capacity of 20 megawatts will soon go into production in Guadeloupe. It is time for it. According to AUDEG [expansion unknown], a consumer association created in June of this year, faced with the shortage in electrical generating capacity in this overseas department--"The EDF [French Electric (Power) Company] stopped guaranteeing the continuity of public service more than two years ago (...), in certain areas the outages have lasted more than 10 hours and during the darkest periods the outages lasted several days and in fact several weeks." At EDF they confirm that they have had a long series of major breakdowns (broken motors and a lightning bolt striking a transformer) which in fact forced them to effect many "outages" in August and in September. The scant means of local production, added to the natural isolation of the island (it is not possible, as it is in mainland France, to call another generating plant, even a foreign one in case of difficulties) and the long periods of downtime (when it is necessary to order materials or technicians from Paris) are at the bottom of this situation.

However, they also insist at EDF on the great increase in consumption since the nationalization carried out in 1975, resulting from the relative decline in prices (a fall of 50 percent--in constant francs--in 3 years). While the marginal production (necessary for the maintenance of the diesels and also in case of a breakdown) amounted to 60 percent at that time, it has fallen to less than 50 percent. However, they report, with the entry into production of this 20-megawatt group, that margin will reach 80 percent and it will be 120 percent in the fall of 1981 after the installation of a second 20-megawatt group. They should then be "almost" in the same position as metropolitan France in the spring while they wait for construction of a new thermal plant in a new site. However, in view of the peculiarities of overseas island departments, shouldn't the productive capacity be relatively greater than in mainland France?

This is what AUDEC is asking, as it estimates at 30 megawatts the supplementary generating capacity necessary to pass the winter of 1981-1982. Before dashing into combat for the indemnization of people who suffered losses through EDF's fault. This is something entirely different, in view of the ministerial decree which authorizes outages in case of difficulties in the electrical network.

CONSUMPTION OF GASOLINE, REFINED PRODUCTS IN 1981 FORECAST

Caracas RESUMEN in Spanish 23 Nov 80 p 39

[Text] It has been predicted that tax revenues from the consumption of refined products will amount to 669.9 million bolivars. This estimate has been made for the 1981 Draft Budget that is being considered in the National Congress. Of those revenues, 635.5 million bolivars will come from the tax on gasoline consumption, and 34.4 million will come from taxes on other refined goods.

"This estimated amount has been calculated based on the behavior of domestic demand, maintaining high participation: the consumption of gasoline, specifically medium- and high-octane fuels, which are subject to taxes," it is stated. "The estimated revenues from gasoline are based on a taxable consumption level of 10.629 billion liters, which represents an increase of 10 percent over estimated consumption for 1980. Of the sectors which make up this demand," it is added, "the industrial and domestic use sector determines market changes, accounting for approximately 84 percent of the growth in total demand. In that sector, motor gasolines account for about 55 percent, while in terms of taxation they represent 94.8 percent of the total for refined products, although it is felt that their tax yield is low considering current sales prices, which are well below the cost of production."

CONCERN OVER HIGH COST OF ORINOCO DEVELOPMENT

Caracas EL DIARIO DE CARACAS in Spanish 25 Nov 80 p 20

[Text] The bottleneck that will characterize the coming years in terms of large-scale processing plant projects will have an as yet undetermined effect in Venezuela. If it is assumed that, internationally, a $1 billion project is a "superproject," what can be said of an $8 billion project such as the Development of Southern Monagas and Anzoategui (DSMA) project which LAGOVEN has put up for bidding in the Orinoco Belt? Moreover, the DSMA project will last until 1988; that is, it will take place during the biggest crisis in world plant construction. Finally, the LAGOVEN bidding contains an inflationary escalation clause which means that in real terms--monetary values after subtracting the inflation rate--the cost will rise year after year. Various studies point out that in the construction of oil and petrochemical projects, the real increase in costs could amount to more than 10 percent a year.

However, in addition to DSMA, there are other projects of that type or similar types. There are the different changes in the refineries (change in pattern) as well as the projects of the other operators to develop the Orinoco Belt. Investments of this decade in the oil area alone could reach more than 40 billion bolivars, at current prices.

Same Enterprises

As can be seen in the central report, the enterprises that are facing an "avalanche" of construction orders are the large organizations that are also operating, or hope to operate, in Venezuela: Fluor, Foster Wheeler, Bechtel, Technip and others. They are the same companies that won the bidding on the change in pattern of refineries in Amual, Cardon and Puerto La Cruz. They are the ones that participated in the mysterious bidding that LAGOVEN held for the largest megaproject in the world: DSMA.

Now that the general framework has been established, it is easy to see that with these powerful construction companies, we will be competing with the most select group in the world oil and petrochemical sector, including the United States. The obvious question is: Can we compete on an equal footing?

The scarce equipment that does exist on the market will be sent to Venezuela or the United States by those companies. Venezuela depends on foreign countries for 40 percent of its oil industry equipment. It is possible that the dependency will increase for those large projects, considering recent statements by local metallurgical industry spokesmen.

Necessary Reflection

The Venezuelan megaprojects are coming at a difficult time. Given the internal conditions and those of the world construction equipment and engineering market, it is necessary to fine tune our decisions in order to minimize the negative impact on the country. The experience of the final stage of Guri, which began with a cost of 5.5 billion and ended up at about 17 billion, cannot be repeated, especially in the Orinoco Oil Belt, which in addition to being a great hydrocarbon reservoir, covers a geographic zone with very special economic and social characteristics.

The internal and external conditions are clear in the sense that they point to the advisability of a less "megaproject" orientation.

CIV PRESIDENT AGAINST FOREIGN FIRMS DEVELOPING ORINOCO

Caracas EL DIARIO DE CARACAS in Spanish 28 Nov 80 p 11

[Interview with Jose Luis Garcia Gonzales, president of the Venezuelan Engineers Association (CIV); date and place not given]

[Text] "Neither foreign firms nor technicians of other nationalities should be allowed to participate on the management or decisionmaking level of the development of the Orinoco Oil Belt."

This was stated by the president of the Venezuelan Engineers Association (CIV), Jose Luis Garcia Gonzales, in an interview with EL DIARIO DE CARACAS.

The Association feels that "it would be a threat to the security of the state and the future of the nation if the decisionmaking process in the development of the belt and the management of that plan were in the hands of foreign professionals and companies."

The CIV president asserts that the Association is not opposed to learning the technological advances of other regions of the world. Quite the contrary. It just wants to stress the idea of Venezuelan participation.

"We have had contact with Venezuelan Petroleum, Inc. (PDVSA) and its subsidiaries. They already know our position on national participation in oil enterprises, on the part of our engineers, architects and other related technicians," said Garcia Gonzales.

"In the 22-year history of our Association," stated the CIV president, "we have made great achievements in those enterprises. Proof of that is that when the nationalization law was signed, a great number of its directors were holding strategic positions in the subsidiaries."

Enforce Participation Law

[Question] How would the Association go about achieving its aspirations as a guild of Venezuelan professionals?

[Answer] We are going to enforce the Participation Law, and it is within our power to do so. This is very clear. If these enterprises do not comply with the law, we will prosecute them, in accordance with Articles 26, 27, 29, 31 and 35, within a prudent period of time and depending on circumstances.

Garcia Gonzalez also announced to EL DIARIO DE CARACAS that on Tuesday, 2 December Minister of Energy and Mines Humberto Calderon Berti will meet with them to express his concern about the development of the Orinoco Oil Belt.

For this reason, a commission has been formed of members of the Association, including former presidents of the Venezuelan Engineers Association. Members are: Edgard Pardo, Federico Baptista, Jose Martorano Batisti, Domingo Casanova, Fernando Travieso, Eswin Arrieta, Juan Carlos Iedra, Eduardo Roche and Joaquin Silva Diaz.

BRIEFS

INTEVEP LAB IN ORINOCO--The Venezuelan Institute of Petroleum Technology (INTEVEP) Center for Petroleum Development and Research will install its first field laboratory in San Tome, El Tigrito, very near the geographic center of the Orinoco Oil Belt. This laboratory will undertake research projects and pilot tests to streamline the development of the largest deposit of heavy crude in Venezuela. The laboratory is expected to cost 5.8 million bolivars, and will be coordinated by INTEVEP. The latter has a large infrastructure in Los Teques, and is responsible for research in the oil belt. Services will be rendered and projects will be carried out in the lab that would otherwise fall outside the purview of the operators. [Text] [Caracas EL DIARIO DE CARACAS in Spanish 28 Nov 80 p 31] 8926

ORINOCO OIL PRODUCTION PROJECT--MENEVEN will invest nearly 10 billion bolivars in three large programs that will be carried out between 1980 and 1988, according to industry sources. The coordination of the basic program will be in the hands of the Venezuelan Petroleum, Inc. (PETROVEN) operator and Geoman, a company in the Gulf Group. According to reliable sources, a list of international enterprises was drawn up, and they have been invited to submit bids. Depending on the responses, a more restricted list will be made of the firms interested in the projects. For each project there will be a main contractor who will be responsible for all activities and will subcontract portions of the work. In the first stage of development of the projects, a study will be made of resources, feasibility and optimization. In the second stage, they will be implemented, and there will be more studies, services and classification of enterprises. The following stage will consist of detail engineering, process engineering, construction and operations. It is estimated that up to 50 percent of the materials to be used may be obtained in Venezuela, using criteria of delivery time, quality and prices. The main project is Guaripa 100 Mas, which is aimed at developing a potential production of 100,000 barrels a day in the Orinoco Belt in order to increase the production capacity of that enterprise to 166,000 barrels in that area by 1988. The cost of the project, which is sure to yield many benefits, is 5.61 billion bolivars, without considering unforeseen events and inflationary pressures. The second-most important project is the modernization of the MENEVEN (MBM) refinery in order to increase its refining capacity to a production level of 41,000 barrels of gasoline per day, 7,000 barrels of diesel jet fuel and 17,000 barrels of heavy fuels. The refinery will be adapted to process Merey type crude. [Text] [Caracas EL DIARIO DE CARACAS in Spanish 2 Dec 80 p 8] 8926

NAVY COMMANDER ON NAVAL AIMS, ACCOMPLISHMENTS

Stuttgard MARINE RUNDSCHAU in English 11 Nov 80 pp 643, 645

[Interview with Armando Lambruschini, admiral, commander in chief of Argentine navy, date and place not given]

[Text]

Sch.: What have been your objectives as head of the Argentine Navy?

La.: My goal as commander-in-chief of the Argentine Navy is the attainment of its consistent and permanent working toward the achievement of the national objectives. From an eminently operative point of view, my goal is to develop and maintain a naval power integrated by combat means, personnel and infrastructure, necessary and sufficient for the achievement of the tasks which might be imposed upon the navy.

Sch.: What is the most important problem which confronts the navy today? Do you see a solution to it?

La.: The rapid technological advance and the sophistication in the use of the combat means presents the navy with a continuous challenge to maintain itself in optimum operational condition. We must take into account the present state of those means and the difficult economic situation of the country, which does not allow for rapid and complete renovation, but only for a judicious dimensioning of the means to be obtained, compatible with the desired capabilities to be achieved, both in the long and middle runs. Likewise, the technical training of personnel in every phase parallels what I said previously as the most important problems to be resolved. In effect, a plan for the renovation of the means and for the technical-professional schooling, which will solve the above, have been developed and are being executed.

Sch.: What sacrifices has the navy made in the fight against terrorism?

La.: The navy has not made a sacrifice in fighting against subversive terrorist aggression, having employed its maximum operative strength and its most suitable means to anull those elements which tried to destroy the nation, because that was a national objective. In spite of this, permanent readiness for the strictly professional duties was not neglected. It stands clear that the navy's contribution to dismantle the subversive terrorists' military apparatus was appreciable, as well in personnel as in the means it employed.

Sch.: What do you think of »Unitas«? Does it have military worth for Argentina? Political worth?

La.: Operation »Unitas« has a great military value given that it allows our navy to cooperate with the American navy, a country who leads the world with the continuous development of its means and its operational tactics. Moreover, it makes possible to conduct joint operations with other South Atlantic navies which brings about a better knowledge of men and nations, and thence its true political worth.

Sch.: For more than three decades an »Organization of the South Atlantic Treaty« which might conceivably consist of Argentina, Brazil, and the Republic of South Africa has been talked about. What future possibilities do you see for this?

La.: With respect to the organization which you mention, there are no indications at this time other than those which can be obtained from the press. That is, there is no official position on our country's behalf, nor of the countries which hypothetically might be able to take part in it. This does not prevent the nations of this area or those with interests in it, especially in maritime communication lines, if the opportunity came, of seeing themselves in the need of adopting coordinated defensive measures in the face of a common threat. Personally I think that it is premature to speak of a defense organization of the South Atlantic, although, as a personal opinion, if it became a reality, it ought to be established on a regional basis, with no hindrance to the maintaining of working relations with other similar defense organizations.

Sch.: What is the immediate future of the *25 de Mayo*? Will it be equipped with new planes? What kind?

La.: The Argentine navy, through its spezialiced naval repair shops, whose capability and fitness for everything which refers to maintenance and repair of naval units have been put to the test on numerous occasions, will prolong the useful life of this important unit further than what is normal for a ship of its age. Thus, it is foreseen that she will remain in active service during the entire decade of the eighties. In conjunction with this maintenance program, another modernization plan is being elaborated which includes the acquisition of new sensors. In reference to the Naval Air Group, a squadron of attack planes, type »Super Etendard« of French construction, will be acquired.

Sch.: What is the long-term future of naval aviation in the Argentine navy? Will the *25 de Mayo* be replaced by an aircraft carrier?

La.: Naval aviation conforms to be one of the components of naval power and its very existence and »raison d'être« is intimately linked with the surface units and with the marines. Every modern navy includes a naval air component; wars at sea, since a long time, are always conceived with the active participation of naval aviation, ship-based as well as land-based. In the short term the replacement of the aircraft carrier ARA *25 de Mayo* by another carrier of naval aircraft will be studied. In this aspect, the major navies are undergoing a process which is in full evolution; therefore, when the time has

come, we will carefully analyze the best solution for our own needs.

Sch.: Weapons coming from Western Europe are each time more costly. Russia has offered weapons at a very good price to many countries. Has Argentina received any offer in this regard?

La.: Weapons coming from every part of the world are more expensive each time since the technology placed at its service becomes daily more perfected. In other words, each time they have a greater added value. I personally am unaware of the existence of offers on the part of the USSR for the sale of arms to the navy.

Sch.: Argentina recently has purchased modern warships from England, France, and Germany. Will this present problems in standardization?

La.: The European market complements itself within its own limits. A ship built in the German Federal Republic will be assembled with French, English, Dutch, American, and Italian equipment, weapons, and systems. In some aspects, one particular firm imposes itself in the world market, and the maritime industry orients itself toward it to provide its equipment for their ships; be it some kind of radar, sonar, computer or missile system. The dockyards are the terminals where ships are assembled, receiving the international deliveries in free competition within the limits of the so-called western world.

Sch.: Argentina built 2 *Type 209* submarines and *Type 42* destroyers each by means of binational agreements. What are the benefits and the problems with these programs?

La.: The benefits of these programs may be seen in the fact that, with the contribution of national workmanship, as a resultant the formation of capable personnel is attained. The experience gained up to now will be used advantageosly for the next constructions. Likewise, I ought to point out the contribution of national industry, which has been important in many aspects of these programs.

Sch.: Could you tell me some details about the new frigates which will be built in Germany? How many, where, when, the characteristics?

La.: The frigates which will be built in the Federal Republic of Germany have been designed to comply with the real needs of the Argentinian navy. The ships will be very versatile – surface-to-surface, surface-to-air, air-to-surface. The latter will be provided by two helicopters which will be permanently carried on board these units. These helicopters will also serve to project antisubmarine action by means of torpedo attacks on enemy submarines detected by a very modern and efficient sonar. Its guns will allow the ship to participate in naval gunfire support actions for marine units during landing operations and at the same time will constitute a tight antiaircraft and antimissile defense. They will be equipped, besides, with a complete electronic warfare system which will increase its efficiency as a combat unit in an environment saturated with electromagnetic emissions. Its sensors and integrated command and control systems will permit the operation of the ship from a sophisticated operations room. Owing to the modern containerized system of construction, the navy will have these units within a relatively short time.

Sch.: What would you say with regard to new submarines?
La.: They will be conventional ships, that is, with diesel-electric propulsion, equipped with the most significant advances achieved up to now for this type of unit. They will have great range and maneuvering capability and will possess a very modern weapons and fire control system. As for the first series of units ordered, the first two will be built in the Federal Republic of Germany at the Thyssen Nordseewerke dockyard in Emden and the remainder at the submarine works which is being constructed in the vicinity of the TANDANOR yard, southern section.
Sch.: Besides the frigate and submarine programs, will any ship be built in your country for the ARA in the near future?
La.: Recently construction has been completed on three transport ships of the class »Costa Sur«, (Southern Coast): an oceanographic ship and a hydrographic ship, whose names, respectively, are *Puerto Deseado* and *Comodoro Rivadavia*. Moreover, the Astilleros y Fábricas Navales del Estado (AFNE) yard, in collaboration with the Blohm + Voss dockyards in the Federal Republic of Germany, will shortly begin construction of modern corvettes, equipped with surface-to-surface missiles, and is completing construction of the destroyer ARA *Santísima Trinidad*, the twin of *Hércules*.
Sch.: A short while ago Argentina bought two French *Type 69* ships. Do you foresee any similar acquisitions in the near future?
La.: At the end of this year, the third corvette of this series, which will bear the name of a distinguished figure in our naval history – *Granville* – will be delivered to the Navy.
Sch.: Has the recent increase in the price of oil affected the level of preparedness in the ARA?
La.: The increase in the international price of oil has not affected the operations of the navy, given an almost self-sufficiency in fuel through national production.

MODERNIZATION OF NAVY, SOUTH ATLANTIC LINKS SURVEYED

Stuttgard MARINE RUNDSCHAU in English 11 Nov 80 pp 702-703

[Text]

Strategic Importance of the South Atlantic

The maritime area of the Southern Hemisphere extending from the African to the South American continent and from the »Atlantic Canyon« to the Glacial Antarctic Ocean constitutes an area of ever increasing strategic importance. On the African water front the majority of the countries has agricultural exportable balances and forestry provides plenty of timber for exportation. Mining constitutes a prevailing branch of the economy of these countries with important exploitations of chromium, nickel, gold, diamonds, uranium, platinum, manganese etc. The access from the Indian Ocean to the South Atlantic has its predominant point in the Cape of Good Hope constituting one of the main passages of the oil route from the Middle East to Western Europe and North America. There is no regional naval power on this front of the South Atlantic, this absence being in part compensated by the Republic of South Africa with her modern communication centres, her capabilities of exercising naval control of shipping, and her port facilities. It should also be pointed out that the Soviet Union has some coastal bases in Angola, Guinea, and on the Cape Verde Islands providing her with a capability of projecting both naval and air power to the African continent, thus offering a threat to the sea routes of the West. On the American front the three countries, Brazil, Uruguay, and Argentina, also have exportable agricultural balances and they have undergone a considerable economic evolution in the last two years, particularly as far as Argentina is concerned. In regard to the mining activities of these countries Brazil is the first world exporter of iron-ore, manganese, and nickel while Argentina is self-sufficient in uranium and will soon become an exporter of both manganese and copper. The Passage of Drake located between the Cape Horn Islands and the peninsula projected by the Antarctic continent towards the American continent may be of great strategic importance, once the Panama Canal cannot be used due to a nuclear attack or guerrilla actions. On the Atlantic front the Antarctic continent gives rise to speculations on the existence of an off-shore oil sedimentary basin in the eastern part of the Antarctic Peninsula. Argentina maintains permanent bases of scientific research and controls the only place on the Antarctic continent where larger airplanes with conventional landing gear can operate round the year.

The unpredictable rises in oil prices by the oil-producing countries making any budget estimates in the industrialized countries impossible transformed a critical material shortage into a political problem. Those countries that may quicker solve their energy problems will be better equipped to cope with their technological development and maintain an adequate security level. After a period of almost two decades of establishing alliances against each other the USA and the Soviet Union embarked on a policy of »détente« by which the USSR increased her military power challenging the USA on all oceans of the world. With the oil crisis beginning in 1973 the end of »détente« could be foreseen and new tensions arose. The combined Soviet-Cuban strategy has recently made it possible for the USSR to intervene in regional conflicts without directly compromising itself as has, in particular, been shown on the African continent. This strategy aims at denying African resources to the West and at controlling the rear of Western Europe in the Southern Hemisphere. In Central and South America Marxist guerrilla movements serve the same purpose of strengthening the Soviet Union's position. In his conclusions the author states that the South Atlantic is the natural maritime link between the North Atlantic Nations and those of South America, Africa, and Asia; that the resources existing in the shelf areas are of great economic and geopolitical importance; the favourable posi-

tion of South Africa, Brazil, and Argentina constitutes a strategic asset to the vital interests of the Western world and that Argentina in itself offers a great reserve of hydroelectric energy in full development with important fields of natural gas, petroleum, uranium, copper, and coal while the cultural level of its population renders it possible to furnish skilled labour.

Fighting Ships For the Argentine Navy

Like so many other navies the Argentine Navy could not help following the general trend of replacing its relatively unsophisticated fighting ships of the prewar period by a comparatively smaller number of units carrying more and more sophisticated weapon systems, sensors, and equipment. As their firepower and capabilities increased their procurement costs, construction times etc. rose to an unexpected height. This – and the requirements for technically skilled personnel – is about to set limits to the defence expenditures a country can afford.

After having enumerated the pre-World War II purchases of the Argentine Navy the author states that the Navy abandoned its policy of exclusively buying ships from foreign nations for the mere reason that, on the one hand, ships could no longer be bought from Europe and, on the other hand, only obsolescent ships could be purchased in the USA, which was, of course, a temptation in the light of the low prices demanded. This led to the procurement of two cruisers, nine destroyers, five frigates and corvettes resp., four submarines, and other smaller units. In the 1950s the first ice-breaker of the southern hemisphere built in Germany was commissioned. In order to replace the obsolescent battleships by aircraft carriers playing now the role of capital ships the Argentine Navy was fortunate enough to buy a Dutch carrier which was subsequently modified and modernized and received the name *Veinticinco de Mayo*. She now constitutes the only carrier attack unit of South America operating with A-4 »Skyhawk« aircraft. At the same time the Navy placed orders for the construction of warships with national shipyards to an ever increasing extent. Thus minesweepers, patrol ships, frigates, and a sailing ship for training purposes were built in national yards.

The 1970s, particularly the second half of that decade, brought about a turn of the tide. The USA were no longer the favorite contractor due to a ship embargo to Latin America. But Argentina's industry and economy had recovered and Europe was back on the market. When Britain placed orders for the construction of her guided-missile destroyers *Type 42* the Argentine Navy ordered its destroyer *Hercules* as second unit of this series while orders for another destroyer were placed with AFNE. With their long-range anti-air capabilities these ships will considerably increase the carrier's employment potentalities, since the three ships are interconnected by modern data-link systems. Orders for two FPBs were placed with Lürssen, Germany, and bids were asked for the construction of two submarines. Aside from other projects, the Navy is going to make full use of the containerized ship, electronics, and weapon systems as realized by Blohm + Voss. Four *Meko-360* frigates will be built in Hamburg and six *Meko-140* corvettes by AFNE. All in all, the following ships have been commissioned during the last eight years or are under construction awaiting completion: 2 guided-missile destroyers, 4 frigates, 8 submarines, 9 corvettes, 2 FPBs, 4 patrol ships, 3 transports, 1 landing craft, 1 ice-breaker, 2 surveying ships, and 2 tugs. As a result, the combat effectiveness of the Argentine Navy will enormously be increased. Since the Soviet Fleet has no »syndrome of the tropic« NATO's Naval Staff might once be glad to have a powerful pro-Western navy ally in the South Atlantic to counter the world-wide threat by the Red Fleet even though leftist movements all over the world have so far agitated for their marxist brethren because of the Argentine government using Draconic laws against terror organizations.

Is the Argentine Navy for Real?

Wartime performance is the only valid yardstick for the combat effectiveness of a navy, all other gauges being inconclusive. Before lightly dismissing the recent wartime experience of the Argentine Navy as non-existent we should note that the Argentine armed forces have been fighting an ongoing war against terrorists since 1974. Fighting an enemy which sabotages ships in drydock, assassinates family members, and fires rockets into schools the Navy does not forget traditional naval weapons such as task forces at sea, nor does this fight provide the type of training associated with conventional combat. But this environment does produce an *esprit de corps*. The Second post-World War II combat experience of the Argentine Navy was the removal of Juan Perón in September 1955, the Navy being the interpreter of the Constitution. The successful attempt by the Navy to remove Perón began on September 16, 1955 with seizing key shore and sea commands a day earlier. On the 18th two naval aircraft bombed an oil storage area near the submarine base at Mar del Plata which the Navy had been forced to evacuate earlier. Positioned 5 miles off the coast, cruiser 9 *de Julio* and 2 destroyers bombarded this area at 7 a. m. and continued slow intermittent fire for four hours. Following the bombardment three frigates landed a force of about 350 marines and naval personnel. This landing party captured Mar del Plata, meeting only light resistance. The three major warships shifted fire to the anti-aircraft school which surrendered and joined the revolt after only a few rounds were

fired. This act was repeated against various ground force units which either surrendered or retreated.

True, most tactical lessons learned in the 1955 conflict have lost their timeliness; however, two operational applications were proven and they form cornerstones in the Argentine Navy's wartime history. First, naval aviation would be the *coup de grâce* of the fleet and, second, the Marine Corps would be essential to the Navy's success. A training exercise conducted by carrier *Independencia* reflects the primary role assigned to sea-based aviation by the Argentine Navy, illustrating also the classic carrier versus carrier role of the Argentine Navy's commitment to an attack carrier capability.

The *25 de Mayo*'s three negatives – small, slow, old – are compensated by a single positive – peerless. She is the only carrier in the South Atlantic carrying attack aircraft, and carries U.S. built A-4Q Skyhawks, S-2A Trackers, and helicopters. Approximately 20 airplanes can be accomodated, depending upon the mix carried. In 1981–82 the French Super Etendards will replace the Skyhawks. The second lesson from the 1955 action was the added strength given to the Navy by an »amphibious« Marine Corps. Working hard to develop an amphibious capacity the Argentine Marine Corps was jugded to be »well on the way to becoming the best trained and most efficient landing force in Latin America« by a U.S. intelligence publication in 1950. The Corps is approximately 7,000 strong and concentrated in three locations. Today the Argentine Navy has 1 LSD, 15 LCVPs, 20 LVTPs, and 15 LARC-5s, all U.S. built, plus 1 LST and 4 LCMs built in Argentina. Amphibious tracked vehicles have traditionally been acquired from the United States.

The most significant peacetime challenge to the Navy is protecting the 200-mile limit, there being the constant danger of poachers. Judging the hardware, the Navy has a bright future when measured by the quality and quantity of warships recently acquired and those under contract. It obtains vessels from four sources: binational agreements, indigenous construction, foreign yards, and purchase of »used« ships, the binational agreements being the hope of the future. They are construction agreements with developed European shipbuilders which specify that part or all of the combatants are to be constructed or assembled in Argentina. If successful, they should ultimately lead to independence in indigenous construction, repair, and overhaul.

By 1985 the entire Argentine combatant fleet will be composed of modern warships, the sole exception being the carrier. Is the Argentine Navy for real? Judging by experience, peacetime operations and hardware the answer must be yes.

Naval Headquarters — New Possibilities of Operational Control

Due to the unfavorable geographic conditions and the numerical superiority of the potential enemy the German Naval Staff must have adequate means to make use of the principles of mass and economy of forces in countering any threat by timely and effectively committing the naval forces available. The Commander of the Fleet charged with this task will from now on be able to accomplish his mission of exercising operational control over all units through computerized CCISs, i. e. over all national and attached surface ships, submarines, and naval aircraft. At the same time he is part of the NATO command structure in his capacity as Flag Officer Germany. As both Commander of the Fleet and Flag Officer Germany (FOG) he takes part in a close and comprehensive exchange of information with both the Commander-in-Chief of the Federal German Navy and the Ministry of Defence as well as with all other NATO and national commanding officers in order to coordinate naval operations in the narrow geographical area available.

All items of information gathered at his naval headquarters are evaluated and converted into an up-to-date and comprehensive picture of the situation. All data collected are processed, stored, transferred, disseminated, and displayed by about 100 different working centres comprising those for guiding all kinds of signal communications, transmitting, receiving, and processing messages, decyphering and decrypting, displaying the actual situation, and data processing.

The functional structure of the naval headquarters may be subdivided into functions of transferring and disseminating messages and such functions concerning operational control. The naval headquarters is, therefore, organized into a communications centre and an operations centre, the former collecting all items of information and disseminating them to all personnel concerned in the operations centre or transmitting them from the operations centre to their counterparts. As a matter of course, all terminals are computerized, the exchange of data being automatical. All messages received are automatically analysed, documented, and disseminated. At the operations centre they are also automatically stored and can be displayed, if necessary. The operations officers working at the operations centre evaluate and assess all target data, update the combat situation and use the data received for their planning tasks. All this must be done without delay in order to rapidly display the actual combat situation for decision-making and issuing operational orders. Technically the system concept allows for the organizational division of the equipment into the following four components: central computer, situation display screen, radio equipment, and wire communications. The central computer constitutes the

core of the whole system, storing, processing, and disseminating all messages and data for display. The display component consists mainly of a large-scale display screen newly developed by Fa. IBM making full use of the most modern laser technology. All components of the communications centre working automatically are now directly connected with the central computer even as far as the wire communications are concerned. Storing, filing, decyphering and decrypting as well as disseminating are done automatically. Another new invention in the field of technology constitutes a modern security concept for the whole system designed in cooperation with Fa. ADV/ORGA F. A. Meyer GmbH.

The first development phase comprising all functions of conventional message and situation processing will by operational in October 1980. By 1983 all measures for duplex traffic will be taken. Thus the Commander of the Fleet will have an operational command and control system helping him in processing all items of information, converting them into an up-to-date picture of the combat situation, decision making, and rapidly issuing operational orders.

OFFICIAL EXPLAINS INDUSTRY'S DEPRESSED SITUATION

Buenos Aires CLARIN in Spanish 24 Nov 80 p 13

[Text] The undersecretary of industrial development blamed the failure of manufacturing concerns on obsolescence, expressed the view that the productive apparatus is being updated and remarked that bankruptcies are giving way to the attainment of greater efficiency.

Yesterday, the undersecretary of industrial development, Horacio Tédin, commented that, "Many of the industries that are failing and shutting down had an extremely antiquated and obsolete production structure." He made statements before leaving for Salvador de Bahia, where he is to attend the Latin American Petrochemical Congress.

Among other things, the official cited the opening of the economy: "In making a gradual opening of the economy, through import tariffs, what we want is to promote the stimulation of competition through the external sector." Tedin added: "We have achieved this and the private industrial sector has responded to this message in an extremely efficient manner."

Shutdowns

With regard to the shutdowns that have been noted in various industries, Tedin expressed the opinion that they are due to different factors. Among the latter he mentioned "the change in the financial policy that has prevailed for 30 years in the country, through subsidized credit."

In the case of the business firms whose failure was affected by the opening of imports, Tedin thought that, "It is simply a matter of updating the productive apparatus, and it is inevitable that some firms must suffer the damage stemming from a joint effort by the country and the government to update this productive apparatus and put it in a competitive position."

Unemployment

The undersecretary denied that these changes have social implications: as for unemployment, it is "a problem which, fortunately, does not exist in Argentina," and he backed the claim with "the extremely low indexes of unemployment." Thus, he observed, the shutdown of certain types of industries which cannot compete, whether for reasons of capital depletion or obsolescence of their production equipment, "simply results in a transfer of income to sectors which can produce on a larger scale and with greater efficiency."

CHURCH GRAVELY CONCERNED WITH WORKERS' ECONOMIC PROBLEMS

Buenos Aires LA PRENSA in Spanish 23 Nov 80 p 7

[Text] The archbishop of Santa Fe, Msgr Vicente Zaspe, departed for Santiago, Chile, heading a delegation comprised of seven bishops, to whom three more will be added during the function.

Traveling with Zaspe were the archbishop of Parana, Adolfo Tortolo; the archbishop of Salta, Carlos Perez; and the bishop of Catamarca, Juan Torres Farias; of Gualeguaychu, Pedro Boxler; of La Rioja, Bernardino Whitte; and of Viedma, Miguel Hesayne; as well as the auxiliary bishop of Cordoba, Estanislao Karlic.

In the afternoon, Bishop Justo Laguna, of Moron, Bishop Jorge Casaretto, of Rafaela, and Emilio Bianchi de Carcano, the auxiliary bishop of Azul, departed.

Finally, in Mendoza, the head of the diocese of that province, Candido Rubiolo, joined the delegation.

Statements

Shortly before leaving Ezeiza, Zaspe said that the Church "views the socioeconomic situation in Argentina with grave concern," and "will do everything in its power to seek ways of surmounting it."

He also described the fact that an Argentine bishops' mission is going to Chile to participate in the final ceremonies of the Eucharistic Congress in that country as an "affirmation of brotherhood."

On this occasion, Zaspe added: "Every religious event in Latin America has repercussions which transcend the exclusively ecclesiastical realm and reach other areas of human life." He cited in this connection the National Marian Congress, which "not only represented a tribute to Mary, but also an affirmation of Argentine-Chilean brotherhood."

He noted: "The same spirit of unity that is of course being applied to the Eucharistic Congress will have repercussions on the Eucharistic Congress; because it is the desire of two peoples who want to solve their problems peacefully."

The Workers

He was then asked whether the Church was concerned over the status of workers who are currently experiencing problems because of the economic crisis that has forced the closing of establishments in which they were rendering services; whereupon he replied: "The Argentine bishops have an entity to deal with this situation, called the Social Pastoral Bishops Team."

He said that this group "is receiving not only labor leaders, but also memoranda describing the serious situation and the many grave conditions that many business firms, and hence our Argentine workers, are experiencing."

Zaspe added that the Church views "this situation with profound concern, and will do everything in its power to seek ways of surmounting it."

Then he denied having received a trade union petition which union leaders claimed to have sent; but he expressed the view that it might arrive within the next few days.

"As of yesterday, the document had not reached the Bishops Secretariat nor my hands. I personally asked the bishops present at the final meeting whether any of them had received it, and they answered negatively. This is why we learned about it in the newspapers, but I have no doubt that it will reach us soon, and we shall analyze it as we have any document that reaches the bishops' office."

On the other hand, he confirmed the fact that a group of leaders from the Justicialist women's branch had appeared at San Miguel seeking the Church's mediation in obtaining the release of Maria Estela Martinez de Peron.

He said: "Yes, the leaders visited me, and I notified the bishops' office of that request."

Finally, he denied the existence of any type of connection between the fact that the document approved by the bishops' office will be published next May and the fact that the new president, Roberto Viola, will take office at the end of March.

He remarked: "No, we are doing this in May precisely so that they would be no connection;" and he noted that the document to be published next year "will illuminate the entire national situation, from the Church's standpoint."

WHEAT, CORN RECORD PLANTINGS REPORTED

Buenos Aires CLARIN in Spanish 21 Nov 80 p 18

[Text] According to estimates made by the Secretariat of Agriculture and Livestock, the area planted with corn and sorghum during the current agricultural campaign has increased 8.8 and 27.4 percent respectively.

The planting of corn has been estimated at 3.6 million hectares, a figure representing an increase of 290,000 hectares in comparison with the 3.31 million hectares planed with that grain during the previous campaign.

As for sorghum, the cultivated area anticipated by the state agency amounts to 2.4 million hectares, or 516,000 hectares more than during the 1979-80 campaign, when it totaled 1.884 million hectares.

Comparative Data

Despite the greater percentage of increase estimated for sorghum, its inclusion in the areas planted during the past 10 years reveals that the intentions for planting anticipated for this campaign represent only a recovery of the losses recorded in 1979-80. However, it is a lower figure than that in the data for all the previous years.

The situation is different with respect to corn, because the 3.6 million hectares estimated for the current coarse grain crops is the highest figure for the past 5 years. The current estimate is only surpassed by the areas cultivated during the first 5 years of the last decade, with areas exceeding 4 million hectares in all instances.

According to Province

The official report also states that the planting expectations exceed the figures for last year in all provinces for both crops, with the sole exception of corn in La Pampa Province.

In the case of corn, the relative variation between this campaign and the last one is 10.3 percent in Buenos Aires Province, 11.4 percent in Cordoba, 8.3 percent in Santa Fe, 13.7 percent in San Luis and 54.8 percent in Entre Rios.

As for sorghum, the percentage of increase is estimated at 12.3 percent in Buenos Aires Province, 6.6 percent in Santa Fe, 17.5 percent in Cordoba, 120.7 percent in Chaco, 43.9 percent in La Pampa and 87.1 percent in Entre Rios.

FIDE REPORT SHOWS DOWNWARD TREND OF INDUSTRIAL SECTOR

Buenos Aires CLARIN in Spanish 24 Nov 80 p 12

[Text] During the third quarter of the year, the industrial added value reportedly experienced a reduction of over 5 percent, and the rate for the agricultural-livestock sector was negative as well. This disclosure was made in the No 27 edition of the specialized publication, "FIDE-Current Situation and Development" (put out by the Research and Development Foundation [FIDE]), noting that the "meager results" of productive activities would be offset once again, thanks to the increment in the categories providing services. The report estimates that, therefore, the total gross domestic product for the third quarter would remain on a level similar to that attained during the same period last year.

As a forecast for the last quarter, FIDE remarks that no significant changes in trend are expected, and hence it may be predicted that manufacturing activity "will continue to be curtailed," although it anticipates that the "slightly dynamic" effects that the marketing of the harvest will acquire should be in evidence.

For the entire current year, the hypothesis for economic growth amounted to 0 percent, but within the total, there is a marked participation of tertiary activities and imports.

Exchange Policy

The FIDE report stresses the uncertainty surrounding the expectations for exchange, considering the decisive role that the exchange policy assumes in the financial area.

In this connection, the publication cites as an example the fact that, if a million dollars had entered the country in June 1977 and had been converted into pesos, and deposited on fixed terms, repeating the operation every 30 days, by October 1980 the holder would have a volume of pesos equivalent to $2.76 million, with a 176 percent gross profit in current dollars, when all the operational costs had been deducted.

This is why it describes the interest that can be accrued in Argentina for speculative capital from abroad as the highest in the world.

However, FIDE observes, the entry of short term financial resources contributed to the increase in the foreign debt, which, according to various sources, now totals between $24 and $27 billion. It is here that the factor of uncertainty regarding exchange

comes in because (the report points out), "Despite the large gain that the operators receive from the entry of external financing funds, the potential risk of taking new loans or renewing those already in existence increases as the lag in exchange is maintained or increased." In this regard, it reveals that, during recent weeks, certain foreign companies, although they formalized the renewal of their debt abroad with the BCRA [Central Bank of the Argentine Republic], concurrently assumed a position in dollars, purchasing them in money-exchange offices.

Discouragement for Investment

Elsewhere in its analysis, FIDE cited the lack of encouragement for investment in reproductive capital, which has been displaced by the attractive features of short-term loans. As a cause of that distortion, it blames the high internal cost of capital. It cites as an example the fact that, during the past 12 months, the real active interest rate for top-ranking firms has been about 35 percent per year, whereas in the United States it was nothing. Then the report states: "This is in addition to the recessive conditions that prevail on the domestic market, which not only necessitates the postponement or abandonment of plans, but also has led a large number of business firms to a very high level of indebtedness, giving rise to the formation of bank clubs, whose positions have, in turn, become vulnerable."

However, it gives a reminder that it is not the intention of the economic authorities to "save" the affected business firms, by resorting to special rediscount lines.

NEED FOR DEEPWATER PORT REMAINS CRUCIAL ISSUE

Buenos Aires CONVICCION in Spanish 22 Nov 80 p 15

[Text] An agro-exporting country which prides itself on being such (although that is not its only productive activity) should have a deepwater port through which to convey its shipments, and even more so if the predominant type of agro-exports is grain or oleaginous products. In both instance, the shipments are made in bulk; hence the greater relative importance of having ports with sufficient depth to allow for larger cargo, at lower cost and under the best conditions.

At the present time, Argentina does not have any deepwater port; and this is only another one of the lags in the country's infrastructure.

Traditionally, the nation's exports of grain and oleaginous products have been made from the ports of Rosario and Buenos Aires and, primarily, Bahia Blanca.

Rosario has a depth of only 22 feet, Buenos Aires has 32 feet and Bahia Blanca, with constant dredging, occasionally reaches a depth of 38 or 39 feet. Nowadays, a large bulk carrier leaves port completely loaded with a draft of about 50 feet.

As one can observe, times have changed; and, as in everything else, what was good in 1930 has little relationship to what is needed for 1980.

In short, there is no alternative other than to build a port capable of dispatching "full" bulk carriers. It should be noted that a ship which does not leave port filled represents increased operating costs, resulting in a more expensive freight charge that eventually deprives the product transported of competitive status, even if that product should be grain.

It is even more serious when one considers the loading operations in several of the nation's ports, which are carried out consecutively so as to allow a bulk carrier to depart as full as possible. For example, a ship would dock in Rosario, load up to 22 feet, then dock in Buenos Aires, filling another 10 feet, and finally sail to Bahia Blanca, where it would take on between 5 and 8 feet of cargo volume. After all this troublesome work, it would be better not even to mention costs.

In brief, the savings that would result from the port's construction would be between $40 and $200 million per year, depending on the size of the harvest.

As for the site, nature indicates that it should be located in the San Antonio Oeste area, in Rio Negro Province, because the necessary conditions are there: ideal access and depth. However, the preport infrastructure is almost nonexistent. Roads, railroads, communications and distance from the production centers (Northern Buenos Aires and La Pampa, because the production from the south leaves through Bahia Blanca, Santa Fe, Entre Rios and Cordoba) conspire against that site.

Therefore, although at a higher cost for the construction per se, the location selected is Punta Medanos, in Buenos Aires Province, between the seaside resort areas of Pinamar and Mar de Ajo.

The cost of the project will not amount to $1.4 billion (at current prices), and the depth will be 50 feet. It should be noted that the complete amortization period for the undertaking may be estimated at no longer than 10 or 12 years. Of the total amount, the state would have to supply about $600 million, while the rest would be provided by international agencies.

It now remains for the government to make a policy decision to agree on the initiation of the project. If it does so immediately, it will have begun by early 1982, and the port might be able to operate partially by 1987. If it does not do so immediately, the lag will have to continue.

BRIEFS

PLANT SHUTDOWN--Last night, company sources stated that the La Cantabrica metallurgical company will close its doors before the end of the year, as its board members notified the military auditors in the Metalworkers Union. The closing of the plant, located in the manufacturing zone of Haedo, will affect a total of 1,200 workers, and it was attributed by those same sources to the serious financial problems that the business owner group has been experiencing for months. In a note sent yesterday to Capt Fermin Barriouuevo, auditor in the Metalworkers Union, the board members also mentioned the possibility that 1,500 workers may be laid off from the Bragado Steel, Bragado Steelworks and Bragado Trafilacion, belonging to the same group. The note sent to Barrionuevo stated that the decision would be implemented "to insure the funds to cover the payment of compensation for the layoff of personnel from La Cantabrica, the closing of which will take place before the end of this year." As a preliminary step before the shutdown of the Haedo establishment, the company will lay off 550 of its workers as of 1 December. In view of the difficult situation confronting the personnel, the factory's liaison and mobilization committee released a communique during the afternoon declaring itself in "a state of alert." U.S. HUMAN RIGHTS POLICY FOR AREA DISCUSSED

Effect of Reagan's Win

Santo Domingo EL NACIONAL in Spanish 21 Nov 80 p 10

[Article by Dr Jose Abigail Cruz Infante: "Ronald Reagan and Latin America"]

[Text] The American election campaign that has just ended, leading to the victory of the Republican candidate, Ronald Reagan, has been one of the most interesting election campaigns in the United States. It held the attention of all the active sectors on the continent's upper echelons, as if the chances of continuing the struggle or not depended on it. In the Dominican Republic, many forecasters were proven wrong. Newsmen, analysts, politicians and molders of opinion suddenly discovered that, where elections are concerned, there is a considerable difference between what is desired and what happens; because the vast majority of Dominicans who ventured an opinion before the final count considered President Carter to be the winner, because he seemed to them to be the "lesser of two evils." But very few, or none of the forecasters made an analysis of the electoral behavior of the American people and the nation's attitude toward the Carter administration.

We Dominicans, who are used to simplistic judgments lacking in the analytical element, wherein the commonplace and value judgments are most often reiterated, had very little information with which to be able to understand the electoral phenomenon that brought Reagan to the presidency. The polls and reports from the respective election headquarters are not sufficient to provide a realistic view of what might happen in a situation such as the one being discussed.

In these American elections, it must be realized that the average citizen voted in the most conscious and rational manner when he voted for James Carter against Gerald Ford, which was a rather emotional and symbolic vote. It was a vote against the specter of Watergate; it was a vote for the search for a new image, an ethical stand and a standard of conduct, in which the decisive factor was the personage of the candidate who said that he "would not lie to the nation."

The reasons that the American people chose Reagan over Carter are varied and extensive, and deserve to be commented on in more detail. Here, we shall only state that the pragmatic sentiment of the American voters guided them against continuing to uphold myths or symbols. What the people want is effective political action that will solve concrete, everyday problems, not abstract or academic formulas that say nothing to the average man, the man on the street.

The image that many individuals had formed of Ronald Reagan gave the impression that this kind of man could not attain the presidency of the United States; but if a careful analysis and observation were made, only this kind of man could do so. The American people are a simple people from a political standpoint; they do not like complications, nor intellectual or philosophical riddles; they prefer direct action. This is why their politicians, in their campaigns, place so much emphasis on the programs of action, on what they will do, and how they will do it. President Carter could never display real accomplishments by his administration; he could not deal successfully with the energy problem, the unemployment problem, inflation, the high cost of living and increasing taxation; so, the ordinary citizen felt that Carter was a good and honest man, but that he could do nothing to solve the everyday problems of every American, and that carried great weight.

The foreign policy problems are secondary. The crisis in Iran, the Salt II Treaty and the human rights policy were not decisive factors in the electoral process; because those events did not affect the daily lives of the voters. They are aspects of the nation's foreign policy, on which the vast majority of citizens are informed by TV. They are matters for academic discussion, but not issues on the street.

We in the Dominican Republic have a government very similar to the Carter administration, in outward respects of course. Therefore, two reactions were observed after Reagan's victory: one which attempts to predict what will happen in the country, electorally speaking, in 1982, pointing out that the PRD [Dominican Revolutionary party] and its government will be in the same situation as the Carter administration; and the other which attempts to show that the Reagan victory was based on the same intelligence that those in power used in their desire to remain at the head of the country's government. Reagan now has allies and "friends" in the government of the Dominican Republic, as we have learned since 4 November; previously, the friend and protector was James Carter, the man for human rights, etc. Now, the man is Ronald Reagan, the pragmatic, realistic, etc., man.

A clearcut lesson remains:Carter and his humanistic human rights policy were an effort to lend an ethical content to an outworn, discredited foreign policy; but they were not formulas capable of coping with difficulties in the socioeconomic realm; and hence his electoral weakness.

Now, a new episode is starting: let us see what will appear on the scene. Meanwhile, we Dominicans are making calculations, observing the problems that we have, and how they are being treated, to see the results. We are all observing.

Lopez Portillo, Guzman Stand

Santo Domingo EL CARIBE in Spanish 27 Nov 80 p 14

[Editorial: "Satisfactory"]

[Text] The concern over the respect that should be shown for human rights, expressed by the presidents of Mexico and the Dominican Republic during the vist that the latter paid to Cancun the day before yesterday and yesterday, is very timely and of vital importance.

This should not be considered surprising, because the constitutions of both countries guarantee the full benefit of civil, political and social rights for human beings. The two nations are also signatories of international agreements intended to confer universal force on those rights. However, the fact that, in meeting on Mexican soil, Antonio Guzman and Jose Lopez Portillo have concerned themselves with this vital issue makes it clear that the foreign policies of the governments that they head recognize that, at this point in time, there are no frontiers for human rights, that tney have supranational application and scope, and that they are binding alike on all nations and all regimes obligated to uphold them.

No one could fail to notice the occasion of the Dominican-Mexican reaffirmation of the respect that must be given to the constitutional guarantees protecting the individual. The violation of human rights is an everyday occurrence in the world. It happens in all latitudes, and has resulted in reprehensible dictatorships of both the right and the left; in developed countries, as well as in underdeveloped countries and, what is even worse, in regimes which, owing to their democratic, or pseudodemocratic nature, are dutybound to have a more respectful attitude toward their people.

In many countries of the communist orbit, dissidents are confined in lunatic asylums, or exiled to desolate places or where it is presumed that they will unable to speak out; in other countries, emergency laws, martial law and other similar expedients are used to legitimize the repression of individuals and groups. In still other places, the government terrorism as well as that of the opposition groups thwarts all efforts to maintain a state of law. In many Third World nations, the leaders are more concerned about their own prestige or image than about the protection of individual liberties.

This means that the problem of human rights can be summarized (although it may be a simplification) in the battle between the rights of the individual and those of the state. Hence it is highly satisfactory that two Latin American heads of state have paid particular heed to this critical issue.

It is also encouraging that the Dominican and Mexican presidents have not subscribed to the theory,which is so much in vogue among the Third World political leaders, that political freedom and human rights are a luxury that the poor and developing nations cannot afford. We all know (and this belief has obviously been reinforced in Cancun) that, although political democracy is incomplete without economic and social development, the latter cannot be fully achieved without the former.

Human rights should be the concern of everyone alike, of those who govern as well as of those who are governed. Hence the satisfaction that the heads of two American governments have expressed their faith in this noble ideal. This assumes importance because at the present time many governments are using the international agencies, with increasing brutality, to sponsor or back proposals aimed at curtailing civil and political liberties.

Violations in Haiti

Santo Domingo EL CARIBE in Spanish 1 Dec 80 p 12

[Editorial: "The Policy of Violence"]

[Text] The Duvalier family has removed its mask again and the ferocious countenance of its brutal repression has reappeared. Last weekend, the agents of the repressive

services made a roundup of members of the opposition, including journalists and heads of civic and political organizations.

That was to be expected; there is no halfway democracy. And, as might have been expected, the highly publicized liberalization of the Duvalier regime has proven to be an infamous farce. With the option of democratically sharing power, listening to public opinion and allowing opposition, or subjugating its opponents with more brutality than ever, the Duvaliers have chosen the second option. Faced with a dilemma, the "lifetime" president, Jean Claude ("Baby Doc") Duvalier has realized that the political system left him by his father is incapable of withstanding the free action of ideas and political forces which insure the enforcement of democratic principles.

That is, pure and simple, the reality of the situation in Haiti. The Duvaliers cannot allow opposition, because no tyrannical regime can afford that luxury. The Duvaliers cannot go along with democracy, because democracy is not a game; it is, on the contrary, something very serious, very living and very real, which requires something that they are incapable of accepting: the fact that rulers must answer to the people for each and every one of their actions.

Hence, there is no reason to continue the pretense of liberalization in Haiti. And what remains for the Haitian people, and for all those in the world who yearn for human rights to be respected, is a constant struggle for the establishment of a democratic society in which there is no room for either the Duvaliers or any of those who are now cooperating in the repression that they have resumed intensively.

All those who think otherwise are deceiving themselves, and are doing tremendous harm to the cause of freedom.

El Salvador and its people are undergoing another tragic episode in their agitated history.

However, what is happening there is quite different from what is occurring in Haiti. El Salvador has a government which is not a result of free elections either, but which, insofar as it is possible under the difficult circumstances at present, has obviously attempted to seek a solution to the serious social, political and economic problems of the Salvadoran society.

Thus far, it has been impossible for that government to find a formula that would fulfill the sectarian ambitions of the different groups contesting for political and ideological supremacy in the Central American nation. The right and the left are becoming exhausted in a bloody, brutal and apparently irreconcilable confrontation. And the government, which is not based on an established political persuasion, is obviously operating in a no-man's land. It is exposed, almost powerless, to the crossfire of the various movements that are attempting to prevail. The Salvadoran Junta, incapable of disciplining some of its own members, and obviously unable to bring order to a society that is in a virtual state of civil war, is drifting.

It may be claimed that a government incapable of imposing order should not remain in power. But, to whom should the command be turned over? To the reactionary right, or the extreme leftist guerrillas?

Let no one tell us that there are other possibilities. Anyone who examines the situation objectively and dispassionately (something that is not easy, because the political divisions do not appear to stop at the borders of El Salvador) must necessarily reach the conclusion that the polarization of forces at present does not leave any room for moderation. The assassinations that are committed daily are not the work of a single sector. Thus far, the victims have been leftists, centrists and rightists. And, if those who are killing and committing depredation are not situated in just one place in the political spectrum, then to whom should assistance be given?

To determine guilt from this vantage point is, in any event, something obviously quite difficult at present. And it is most likely that any effort made in this respect, rather than clearing up the situation, would evoke sectarian disputes as unreconcilable as those taking place on Salvadoran soil. However, it does seem that, if anyone with a little influence on the conflicting sides were to wield it in an effort to achieve moderation and propose solutions that could lead to an open popular consultation, there would still be hope of cooling this conflict, and also of restraining the destructive course of violence.

But that may be as easy as asking for the impossible.

PROTESTS AGAINST UNEMPLOYMENT, REPRESSION REPORTED

Port-au-Prince LE PETIT SAMEDI SOIR in French 8-14 Nov 80 pp 11, 13

[Article by Jean Caleb: "Cap Haitien--Against Unemployment and Police Repression"]

[Text] This Friday, 31 October, the atmosphere was heavy in Cap Haitien. The funeral of Jean Rene Dervil, 18 years of age, a high school student who died several days earlier following the bloody drama which occurred at the city port, was being held. The story is a heart-rending one. The people of La Fosette accompanied the deceased to his last resting place. His parents were inconsolable. As the cortege proceeded, people dissolved in tears. Mothers could not contain their emotions. Consternation and anguish--these were the feelings which prevailed on this particularly sad occasion preceding the burial of this young man whose only crime was going forth in search of life and wanting to escape unemployment.

Thus the people wept and continued to do so for a considerable time. Than they began to sing softly. The volume increased. It was as if their nerves received an electrical charge. They began to chant after the fashion of our sublime barefoot beggars in the days of the heroic struggles for freedom and independence--the battle chant the words to which are most evocative: "Grenadiers, attack. Ca ki mouri zafe a yo." At this stage, it was already a demonstration with demonstrators. The emotion of the people of La Fosette changed to anger. Mass rebellion was a certainty. Then they began to march toward the prison. A hail of stones rained upon the building. There was panic in the barracks. Police agencies, entirely confused and caught by surprise, drew their revolvers and fired in the air to disperse the crowd. The crowd stood firm, holding its ground and demanding the liberation of all the illegal travelers who had been arrested and thrown in prison. And so the matter ended, without anyone's really knowing what had been achieved. What is certain is that peace was soon reestablished. The people hastened back to their respective homes after having once again challenged the forces of law and order, putting their lives at peril.

But how was this point reached?

This story is no less tragic. Tortured by the poverty and the unemployment which never ceased to prevail in the country, dozens of northerners decided to become boat people. Everything was ready. They moved toward the vessel awaiting them not far from the port of the city of Cap Haitien. The police had got wind of the project, and they burst forth at the site. Suddenly shots rang out. Then a great panic developed in the course of which masses of people threw themselves into the sea.

The next day, the bank already stank of flesh and blood. Bodies, four of them, were recovered. Among them was that of Dervil, a young man full of ideals and confidence, and very serious-minded, but ill-favored by fate and suddenly brought face to face with himself in the whirlwind of life. It was, then, this fine example of youth which the people of Cap Haitien saw again last Friday. And it was this limp body just yesterday bubbling with life and hope, stretched out in a wooden box and en route to that world from which one never comes back--yes, it was this son, this comrade, this tireless combatant for whom they wept. And they said to themselves that this must never happen again in the heroic north. A second reason which doubtless led them to demonstrate against a system on which they have placed all the responsibility for this bloody drama, so tragic and moving too.

Despite everything, it will be noted that such incidents are no novelty here. They develop, are hushed, and leap up again unceasingly. Naturally, they take different forms, depending on the circumstances and the nature of things. But they inevitably put the regime and the people of the north at loggerheads. Put in another way, this is the traditional image of the ever present, paternalistic state and the subjected, alienated and brutalized people it is grinding down. These are the people governed who, in the midst of the apathy and the passivity of the rest of the citizens of Haiti, are demanding to play a more active role in the management of public affairs. They want to be citizens in full. This is vaguely proclaimed in official speeches, with no real wish for it. But the people themselves hear it and take our leaders at their word and try to shape the clay of reality to make it fact.

These desires are far from being subjective, not to say "subversive," as one might be tempted to conclude in haste. The facts are there to prove it. One has only to follow the film of developing events to see the evidence of it. Cap Haitien has on numerous occasions risen in protest against the central regime and has demonstrated. In the one case it is a question of defending a right, and in the other, of exercising one. It may also be that it is a question of a reaction against a situation of chronic misery (unemployment and inflation), or against the police repression which has in recent years become a way of life and an institution.

Demonstration Against Unemployment and Inflation

Let us go back a bit. About 2 years ago, during the 1978 legislative elections, Cap Haitien put the candidate Gabriel A. Lerouge in power. He was the only independent in the electoral campaign. Today, despite his hesitation, he has separated and distinguished himself from the 52 other "pourrassistes." We see here the work of the descendants of Henri Christophe, on whom the deploying of force and intimidation has never worked. All of the maneuvers of the regime to halt Lerouge have been pitiful failures. The people did not vote for Lerouge as a person seen as such, but for his program. And what did it include? A campaign against inflation, unemployment and high living costs. In other words the people had had enough of their chronic poverty and above all had become aware of it. Thus if last Friday they went so far as to throw stones at the building housing the prison in which the clandestine travelers were incarcerated, it was less a demonstration of their desire to challenge than a reaction against the system the failure of which led the distinguished sons of the north to take to the sea like the others, to become the prey of the sharks eager for human flesh. If Dervil had not been driven into unemployment, he would never have found himself in this situation which led him to die in the flower of his youth under the dramatic circumstances known to all. Thus this was above all a demonstration against unemployment, inflation and poverty.

Demonstration Against Police Brutality

The people of Cap Haitien do not tolerate injustice, arbitrary action and unjustified torture well. They evidence a singular temeprament and an attitude of challenge.

Their courage is exemplary. In their eyes all sacrifices are possible when it comes to defending justice and freedom. Last June, they proved this in the affair involving Capt Michel Cesaire. In fact, the latter, as will be well remembered, had savagely and unjustly beaten the lawyer Harry Sanchez and the technician Miguel Casseus. The tale they themselves told of their calvary in the court in Cap Haitien moved and repelled the population, who took to the streets demanding the head of the torturer. He took to his heels in flight. That day, bayonet and machine gun were defied. The affair was highly publicized. Captain Cesaire was taken to general headquarters for questioning. He was to appear for sentencing last Tuesday but the trial was postponed until the next day. Wednesday there was another postponement until a later date.

And the most recent demonstration was that which took place last Friday in connection with the funeral of the young Rene Derville. It was meant to be both the response of the population to their regrettable conditions of life and a protest against the men with a ready trigger finger.

One does not know now what tomorrow will bring. But one thing remains certain, and it is discussed, moreover, everywhere--that is that the people of the north have decided to wage a new battle like that in 1804, that of Haitian democracy. And like their valiant forefathers Dessalines, Christophe, Capois La Mort, Antenor Firmin, Demesvar Delorme, and Jean Price Mars, they have embarked resolutely on the "upward and rocky path" of freedom. To defy the forces of the regime and their whole arsenal in defense of freedom and human rights--this is the noble and perilous undertaking to which the sons of the north, to the exclusion of the rest of the citizens of Haiti, have dedicated themselves. This is a worrisome venture and its developments should be followed.

BIOGRAPHIC INFORMATION ON PRIME MINISTER SEAGA PUBLISHED

Tegucigalpa EL CRONISTA in Spanish 3 Dec 80 p 5

[Article by Lew Wheaton: "Leading Man in the Jamaican Drama"]

[Text] The new Jamaican prime minister, Edward Phillip George Seaga, is a former U.S. citizen and Harvard graduate, who studied sociology and religion before entering politics and acquiring a reputation as a solid economist and financial wizard.

He was born in Boston, Massachusetts in 1930 to Jamaican parents of Scotch and Lebanese origin. He gave up his American citizenship in the fifties.

Seaga's pensive and sometimes timid manner makes his appear cold in public, but his supporters go mad to touch him at political rallies. They rub his arms, grab him around the neck or lift him and pass him from one person to another toward the speakers platform.

Seaga enrolled at Harvard with intentions of studying physics but changed to sociology and graduated with that major in 1952.

He returned to Jamaica and devoted himself to the study of religious cults, spending long periods of time in the interior of the island nation. Those experiences and his studies in sociology gave rise to two books and to his deep interest since then in the African and Caribbean roots of the Jamaican people.

Seaga was responsible for returning to Jamaica the remains of Marcus Garvey, a black man born on the island who advocated the international black movement "Return to Africa" and who was established as one of the first national heroes of the country.

Seaga ran for the lower chamber of parliament as a representative of one of Kingston's poorest neighborhoods. He was later named minister of development and welfare in independent Jamaica's first cabinet.

After the 1967 elections he became finance and planning minister. He conceived and founded several of the Jamaican government's financial institutions and introduced fiscal reforms which led to the development of local industry and to the decreased need to seek money from foreign countries.

All his programs were largely dependent--as is the economic growth model that he is now advocating--on voluminous private investment to create jobs and industry.

Nevertheless, he has never forgotten his poor Kingston neighborhood and has converted the notorious run-down area into an elegant complex with playgrounds, classrooms for pre-schoolers, sports facilities, etc.

In 1965 Seaga married Mitsy Constantine, who was crowned "Miss Jamaica" the preceding year. They now have three children.

In addition to his government responsibilities Seaga has been an official in the World Bank, the IMF, the Inter-American Development Bank and the Caribbean Development Bank.

From the beginning Seaga launched his electoral campaign accusing Micheal Manley's government of administrative errors. In taking over the reins of state Seaga finds himself with an economy in such poor condition that it is doubtful whether the country can continue until the end of the year importing food and fuel while servicing a costly foreign debt.

Seaga has estimated the deficit which needs immediate attention at some 220 million dollars. In order to meet this deficit he has reportedly gathered loan commitments from international entities, private corporations and foreign governments.

Seaga states that he has also organized the financing of a major part of the country's needs in order to return Jamaica to the road to prosperity, although he admits that the entire foreign debt will have to be renegotiated.

ACCUSATIONS AGAINST JORGE SALAZAR DEPLORED

Managua LA PRENSA in Spanish 22 Nov 80 p 2

[Article by Humberto Belli: "Jorge Salazar"]

[Text] Jorge Salazar was a good man. He was not ordinary or common. He was something special. And I do not extol him because he is dead, as is often done with those who pass on. I say it with sincerity and conviction: Jorge was special. Those of us who had the good fortune to know him know that with his death, we were diminished. Because with his momentary but painful passing, our world was impoverished. It is as if today there were fewer trees in the landscape and fewer smiles about us. For Jorge was one of those individuals with whom only a superficial contact revived one's spirit, one of those persons who inspire great confidence and calm, one of those whom one realizes, at a distance, are tremendously honest.

I do not know how they killed him nor why. They say he was involved in a conspiracy.

For those familiar with his character and the conciliatory attitude he had been adopting, even on the day before they killed him in Matagalpa, it is difficult to believe that Jorge could have been working in favor of a violent alternative. Let us suppose, however, that Jorge was conspiring. The question would be, then, for what? For if he was engaged in conspiracy, I can conclude that he was wrong, but I would have to recognize that he was honestly wrong and honestly doing what he believed just. And this should give us all cause for thought. For Jorge was not a braggart or one to sell out his country. Jorge Salazar, all things considered and with some of the defects we all share because we are men to a greater or lesser extent, was a patriot. He was an upright man, profoundly identified with the problems of his country and his people, prepared to lose everything, including his life, to achieve a better society. And those of us who knew him can attest to that--from the combatants in the FSLN [Sandinist National Labor Front], with whom he planned the Fuente-Pura-Santamaria de Ostuma ambush during the war, to the peasants hidden in the valleys of Matagalpa and Jinotega, with whom he worked so hard, organizing and serving them. Why then would a man like Jorge Salazar, a worker, opposed to Somoza, a fighter and a patriot, have been involved in a plot?

Why couldn't the FSLN keep the friendship of a man who at a given time in his life had given it his full support and confidence, even at risk to himself? What alienated Jorge Salazar from the regime, to the point of embarking on a conspiracy against it, as the government reports claim?

The answers from the little Marxist handbook are easy and simple: "Salazar moved away from the FSLN because he saw his class interests or the hegemony of his class threatened." But no one who knew Jorge could have said this to his face. Because it was not concern with his class and its privileges which underlay his conduct, but the desire to see a better, a free, a just Nicaragua.

For this reason he was ready in his actions to sacrifice convenience, property and life. Because his motivations were nobler.

If the enmity of the evil is something which should please us, the enmity of the good is something which should worry us. If those who head the FSLN today had known Jorge Salazar, they would be concerned now because they would have realized that he was a good man. For in Jorge, many of the virtues most highly valued in men, many of the most precious characteristics of patriots, came together, and when good men and patriots begin to turn their backs on us, something is going on.

Something is happening which should cease to happen. For it is very painful that death should have to continue to occur in Nicaragua. It is very painful that the human lack of understanding which plagues this country has reached the extreme of claiming yet another life of such value.

The death of Jorge should lead us to question, to reflect. It should lead us as those who govern and those who are governed to ask what is happening. For the likes of Jorge Salazar, Felipe Estrada, or the ordinary fellows throughout our land should not continue to die.

Those of us who had the immense good fortune of knowing Jorge will always have him with us. And the memory of him will be an encouragement, an encouragement for the defense of life, for the preservation of the lives of men as precious treasures. An encouragement to fight for a Nicaragua in which these treasures are valued, respected and loved, for a Nicaragua in which no one opens fire, either with a rifle or the tongue or the heart, on these treasures.

CONAPRO WITHDRAWAL FROM STATE COUNCIL EXPLAINED

Managua LA PRENSA in Spanish 21 Nov 80 p 9

[Text] We have received the following communique dated 17 November 1980 in Managua.

Communique

The assembly of delegates to the Confederation of Professional Associations in Nicaragua (CONAPRO), meeting on 17 November in extraordinary session, deems it desirable to set forth the following clarifications for the information of all professional workers in the country and the people in general:

1. The CONAPRO, on making its decision to withdraw from the Council of State, did so on the basis of the great responsibility it bears within the legislative body, not only to all professional workers, but to the entire Nicaraguan people.

Within this framework, the repressive steps taken against another organization represented in the council must necessarily earn our repudiation, because they have seriously damaged the pluralistic spirit of our revolutionary process. These now familiar actions:

a. Show a lack of culture and ignoble feelings contrary to the special nature of our people.

b. They discredit the government and the people who tolerate them.

c. They hinder the free development of any civic activity.

d. They represent a return to a past which we do not even want to remember.

It should also be made clear that the decision adopted by our president was confirmed by the assembly of delegates in its session on 12 November 1980, with a unanimous vote of confidence.

2. In compliance with the general mandate dated 28 August 1980, the board of directors of the CONAPRO prepared a draft law regulating the exercise of professional activities which was published on 4 November of this year in LA PRENSA. This draft law was widely discussed with a delegation appointed by the FSLN for the purpose, and as of this date no agreement has been reached.

The attitude of the CONAPRO is governed by the fact that the draft law submitted to all of the citizenry and the FSLN for consideration reflects the desires of the professional workers and the national interests.

SANDINIST NATIONAL LIBERATION FRONT-ARMY RELATIONSHIP CRITICIZED

Managua LA PRENSA in Spanish 20 Nov 80 p 2

[Article by Haroldo Lacayo R.: "Party-Army Hindrance to Democracy"]

[Text] It is extremely utopian to think that the existence of democracy is possible when an "armed" party is in power. Because of the fact that it is armed, the foundations of the support of the regime and its "eternal" nature are evident.

Nicaragua has been characterized throughout its history by the existence of political parties with their own armies. Some in power, others demonstrating it. This had led to a number of contradictions: we have never had democratic elections and each change of government has been brought about by the force of arms. Thus each party which has come to power has had the intention of governing the country indefinitely.

The General of Free Men, Augusto C. Sandino, was the first citizen to oppose the private, partisan, sold-out and thus antinationalist nature which was sought for the recently created national army, whose mission, seemingly, should be to serve the country, the whole of the people without distinctions of political and ideological creed. For this reason General Sandino was assassinated.

Since then, the national army has practically been a part of a political party. The results are only too well known. Once this government "model" was legalized, with an armed party in power, democracy lost its opportunity. The alternation of parties in power became impossible and pluralism was reduced to a mere political game.

The Martyr of Public Freedom, Dr Pedro J. Chamorro C., when he said that "there is no one to vote for," summarized the rejection of the existing system of government by the people, clearly indicating their impotence against the powerful party-army. Like General Sandino, Dr Chamorro Cardenal was the victim of a vile assassination.

Some things in history repeat, since we currently find ourselves in a somewhat similar situation: the party-army structure as a regime prevails. We have an armed party in power.

However, now the people have in fact learned a lesson of history. It is not possible to have a democracy when prior to the elections, a political party has established control of an army with vested interests. The people, truly aware, understand that "there will be no one to vote for" so long as this special situation prevails.

An armed party in power is the primary support base for any totalitarian regime. Otherwise, why would such parties insist that the "apolitical" army represents the will of the people, while at the same time imposing certain characteristics and names upon it which prove the contrary?

With the triumph of the revolution, it was hoped that many things would change to the benefit of the people. Without a doubt, some things have improved. But what good can the improvements do if the basic structures which violate the basic freedoms of the people are maintained--the party-army, the state-army, the state-party?

It is obvious that there is no separation of powers within the state itself, since it is a party (the front) which controls all the branches, and it can be presumed that it will control the whole of the process for any elections held in 1985.

Our people have battled to eliminate for good the "models" of government which stand in the way of true democracy. The government junta, which supposedly represents the interests of the people, has a program which says "the legislation necessary for the organization of a regime of effective democracy will be promulgated." Therefore, if the government junta truly represents the real interests of the people and not a political party (as it has revealed), it has the duty and a historic commitment (for which Sandino and Pedro Joaquin died) to carry out a complex of political and monetary reforms so that there will be no insuperable obstacles to the achievement of true democracy.

Basically, the FSLN [Sandinist National Liberation Front] could offer the people two alternatives: making itself a political party "officially," leaving the military duties to an army called Nicaraguan. In this way it could carry out a true "civic" struggle to govern with "arguments," so that it would be the people who decide on their own fate.

The second alternative would be to abandon the political aspect and take up the functions of a true army. In this way, it would be possible to realize the "true" concepts of General Sandino, which have nothing to do with the exotic doctrines to which some groups try to relate them and which are unrelated to the national reality.

If basic structural changes are not effected, we will not see democracy in this country, however much the people may desire it. Those who state that democracy is possible with an armed party participating in the electoral dispute are entirely demagogic. Those who believe these demagogues are entirely naive.

YOUTH MINISTER REVIEWS HERRERA'S ADMINISTRATIVE PROBLEMS

Caracas EL DIARIO DE CARACAS in Spanish 22 Nov 80 pp 16-17

[Text] The following is a report submitted on Tuesday at the First Interdisciplinary Seminar of Master Classes, by Allan Brewer Carias [minister of youth]. It has been published by EL DIARIO DE CARACAS and contains an analysis of the proposals in the Maracaibo Charter and Luis Herrera Campins' Government Program, on the subject of public administration.

It is quite customary to criticize public administration, but it is not so customary to propose methods for resolving its problems. Therefore, the efforts to improve it should be hailed. Our administration has actually been diagnosed sufficiently; and we should not continue making diagnoses. We know what the problems are, and a list of these problems is contained in President Herrera's Government Program and in the Maracaibo Charter prepared by FEDECAMARAS [Association of the Chambers of Commerce and Industry] in 1980.

We need not continue to seek new problems; to solve those which have been posed is perhaps what we need, so that public administration may cease to be that "reign of arbitrariness," which is sometimes a "reign of difficulty;" that "reign of fear," which public officials often experience in making decisions; that "reign of negotiators," which is produced by complicated procedures; and that "reign of irresponsibility," which so often exists.

With respect to administrative corruption, for example, it is quite commonly thought that this is confined to thefts of sums of money directly from the state. However, the major administrative corruption is really poor administration, caused by the shortcomings in public administration and its irresponsibility. For example, it is in waste that the corruption has existed throughout recent years.

In any event, all these administrative problems require an organization to assume them, direct them and guide them, and to prompt the state to improve its administration. If not, unfortunately, we shall observe the Government Program elapse without a proper implementation in this area of administrative reform.

What is needed is the policy decision to deal with and resolve these problems, which have been diagnosed, and brought up, even with methods for solving them; a policy decision that is not only national,but state and municipal, because the problem has cropped up with all its individual features on all levels of administration.

The Misfortune of the Maracaibo Charter

The Maracaibo Charter, basically, contains an analysis of the organization of the administration, and the proposals that it makes are for the structural reform of the latter. However, in this respect, relating to public administration, that document is really not helpful.

In fact, it brings up organizational problems that have already been resolved to a considerable extent; it somewhat ignores what has been done in Venezuela by way of structural reform; and it is also a confused document, which copies organizational systems that would be difficult to apply in Venezuela. The Maracaibo Charter criticizes the organization of the executive branch, and also makes some proposals for reform.

The Proliferation of Ministries

Insofar as the criticism of the executive branch organization is concerned, this document mentions "mixed and parallel responsibilities," claiming that there are "internal contradictions," and this, it says, "precludes an orderly delegation" from the president to the ministers; and, on the other hand, it says, this binds the president to deciding on certain matters that he could have delegated, and hence could have used that time for other activities.

Moreover, it cites the "proliferation of ministries," stating that, as a result, there is a "contradiction in the formulation of policy" and an inefficient, excessive process of "interministerial adjustment."

The problem of public administration is not the number of ministers or ministries; the problem is, rather, the sectorial organization of the ministers. Up until 1976, it could be said that there was no organization of this type; but, since the reform of that year, none of those diagnostic assessments are really valid or relevant at present.

The Maracaibo Proposals Are an Imitation

Unfortunately, if one makes a detailed analysis of the document, he realizes that it does nothing but offer a poor imitation of the proposed reform of the United States Government of 1971, which President Nixon submitted to Congress and which the latter did not accept. In fact, it proposes the demarcation of "top-ranking ministries," and uses the expression in the sense of head ministries over other ministries, which should only administer the production process.

The idea that it attempts to express with the "top-ranking ministries" taking precedence over other ministries is actually contained in the reform of the Council of Ministers included in the Organic Law of 1976, which, in May 1979, gave rise to the establishment of five sectorial offices for the areas of defense, security and policy; economic management; social management; cultural management, and physical development and regulation of the territory.

However, whether or not these sectorial offices are in operation is no longer a problem of organization, but rather of functioning of the administration, of government but not of organization. Therefore, what the document proposes with regard to public administration has no validity nor value.

LHC's Program

It is the proper time to revise President Luis Herrera's 1979-84 Government Program, and it is worthwhile recalling it, to see if it is being implemented and executed. It devotes two chapters to public administration. In one, it mentions the changes that should be made in the state to make a a promotional state; and, in the other, it brings up the problems involving the functioning of public administration in particular.

Presidential Power and Promotional State

Among the changes to be made in the state, in order to enable it to act as a promotional state from the standpoint of administration, it called for the "decentralization of the presidential power." After an imperial presidency such as the one we had during the term of the last government, it became necessary for the ministers to be able to acquire a rank that they had lost.

The ministers have received greater power, and more delegation of authority, and there has been a more ministerial government, as the program states; but I, personally, think that this has occurred as a great mistake: namely, that, instead of one government, we have created 17 governments, because each minister governs, but the government's overall consistency has been lost.

The Secretariat of the Presidency Is Not Functioning

Concurrently, there is a lack of an institutional mechanism that would lend the government administrative consistency, which is called for in the Organic Law on the Central Administration. It is none other than the Ministry of the Secretariat of the Presidency, created as part of the reform bill of 1972.

I think that we are running the risk of dismantling the government and (I insist) heading toward 17 governments; because the Ministry of the Secretariat has not functioned thus far, as a ministry integrating the government's administrative action.

There Must Still Be a Rearrangement

The second point cited in the program regarding administration is the "rearrangement of the decentralized administration." Now then, this rearrangement has not been carried out to any great extent; because there is a lack of a fundamental legal instrument, namely, the Organic Law on the Decentralized Administration, the draft of which was submitted to Congress, also on the occasion of the Administrative Reform Plan of 1972.

Among other aspects, it cites the need for setting up autonomous assets without corporate status, to prevent the proliferation of decentralized entities. Therefore, the rearrangement still remains to be made.

The National Authority to the Regions

The third point cited in the program relates to the decentralization and deconcentration of the national authority to the regions, an essential feature of our administration.

There is not the slightest doubt that our state and administration have been devised as centralized entities. Centralism is stifling this country, and if anyone can sense this best it is those who live in the provinces. It is essential to undertake reform of the local, state and municipal entities, as well as the regionalization process.

Unfortunately, the national authority has had very little interest in the reforms that are being made in the states. The national authority had no interest in the two experiments in the state of Yaracuy and the state of Aragua. I think that only if the states themselves start to reaffirm themselves and demand powers, it might prompt the national authority to at least be concerned about what its legislative assemblies and government entities are doing in the states.

The Best Example of Political Scheming

The other aspect of the decentralization and deconcentration of the national authority relates to the local area of the municipality. I have had occasion to observe the municipal problem from many angles, and I think that we would agree that the municipal administration is the most clearcut example of inefficiency, political scheming and arbitrariness in Venezuelan administration.

It is imperative that everything be changed. However, which legislative assembly and which state government has been concerned about municipal reform? Where are the studies on territorial arrangement, to indicate which will be the municipalities that remain and which will be the districts to assume the status of a municipality, or not?

It would appear that the Ministry of Interior, the authorized entity for territorial political division, is concerned only with centralizing, instead of decentralizing. In any event, President Herrera's Government Program has yet to be implemented in these respects.

The State's Actual Responsibility

Another point in the program is the state's actual responsibility. In fact, we have traditionally had an irresponsible state. Here, the administration does not answer, and has never answered for anything. To be sure, it does not answer for the payment of interest when it is owed for months and years to contractors; but if the latter oweincome tax, they are indeed charged interest. Nor does it answer for the damage and harm that it causes the citizens every day.

And, while we do not have a responsible state, it may be said that we do not have a state of law either. I have always thought that legality is not the only principle of a state of law; neither legality nor juridical status, but rather the institution of justice, in other words, the possibility for judges to really oversee the state and require responsibility of it.

The Requirement System

Another major point in the Program is that on regulating the administrative procedures and limiting the discretionary powers of public officials. We have been

progressively invaded by the widest variety of administrative requirements, by the requirement system, one of the administrative ills of Venezuela.

Administrative complications have thereby become a common procedure: the more complicated the administration is, the more agents there will be; the latter solve the problems and have the government official share in their profits. In any event, their proliferation would be reduced by simplifying procedures and insuring free access and information to the citizen concerning the administration. But we have not done any of this: the Law on Administrative Procedures is still a bill that Congress has not discussed seriously.

And the executive branch, instead of solving problems, complicates them; for example, by regulating the agents. In the Ministry of Transport and Communications, a regulation on agents was issued, establishing a new permit: the agent's permit.

Corruption Has Reached Alarming Levels

Finally, President Herrera's Government Program discussed overseeing efficiency in government action and the battle against corruption. Unfortunately, it has not improved the efficiency of the government, and the corruption in certain areas has reached really alarming levels, particularly on the lowest echelons of administration, often because of the complicated nature of administrative processes.

The vast majority of the changes that President Herrera proposed to form a promotional state are, unquestionably, yet to be made, and it is important to demand that they be made.

Functioning of Public Administration

The other chapter in the program directly poses the problem involving the functioning of public administration. In the first place, it cites the need to reinforce the agencies backing the president of the republic; in other words, the nonsectorial ones, the central offices. This has been accomplished gradually, but the Central Office of Budget has not been properly organized, and it is still subordinate to the Finance Ministry.

Holding Companies Based on Sectors

An administrative reform would be incomplete if it did not include a reform of the decentralized administration. The program mentioned the assignment of these entities to, and their overseeing by the ministries, but the lack of a law on decentralized administration has limited the actual overseeing.

The program also cited the need to combine the state enterprises into holding companies based on sectors, with the ministers responsible for overseeing the management. None of this has been achieved. The bill for an electric holding company has been thwarted by the government's inconsistency, stemming from the varied positions of the ministers.

The Red Tape

The final point mentioned in the Government Program relates to the use of modern management techniques in running public administration, so as to reduce the red tape, save space, cut costs, improve public services and achieve savings. All these

vitally important aspects directly affect the standards, procedures and work methods in the administration.

However, so long as there is no national agency responsible for directing this process of improving the management, unfortunately, the latter cannot be achieved either. It will be necessary to revitalize the Commission on Public Administration, which engaged in such activities for 20 years.

Whether We Like It or Not

During recent decades, public administration has been undergoing a process of considerable expansion, and this has caused the administrative institutions and the state's action to physically penetrate all areas of economic and social life. Whether we like it or not,, everything that is done in the country is done under the aegis of the state and its administration.

IMPLICATIONS OF GUAYANA SOCIAL, ECONOMIC PROBLEMS REVIEWED

Caracas EL DIARIO DE CARACAS in Spanish 20 Nov 80 p 32

[Text] When one thinks of Guayana, one disregards how closely its problems affect us. To many, the names ALCASA [Caroni Aluminum Company], VENALUM [Aluminum Company of Venezuela], INTERALUMINA and SIDOR [Orinoco Iron and Steel Works] do not signify anything but aluminum foil or the government propaganda about the nationalization of the iron industry. Puerto Ordaz is too far away, as is the Orinoco. But what exists there is not merely an economic, management, political or strategic problem.

For a long time, there have been disclosures about the enormous losses of the companies in the aluminum complex. There has been a greater awareness of the matter since the famous speech by Leopoldo Diaz Bruzual, when he showed the incalculable losses of the companies financed by the Investment Fund that he headed, in August 1979.

But it would not appear that the problem is simply one of disclosing that there are losses of half a million a day in FERROMINERA, or that there has been an administrative and planning disaster in SIDOR. Is it actually in the country's interest to stop financing iron and aluminum, or to ignore the fact that the Orinoco Oil Belt requires development?

The Guayana technicians, with their perpetual "remember, it is a very personal opinion," all say the same thing. The political interests of Venezuela in the hemisphere which include making us autonomous in the management of the market and production of aluminum, demand that use be made of the electric power produced by the Orinoco River, the oil in the Belt, the bauxite in Los Jiguaos, which is very close to the Colombian border, and the companies which already exist for development. The human potential also exists in Guayana, and the urban structure of Puerto Orgaz makes it unnecessary to add to the plans to spend millions on the development of Bechtel in the Belt the construction of a town, when there is a supply of 6,500 apartments in the depressed urban zone of Puerto Ordaz and San Felix.

For 3 days, a congressional mission headed by Valmore Acevedo Amaya, and including Pompeyo Marquez, Pablo Herrera Campins and Simon Antonio Pavan, toured Guayana, seeking solutions and listening to the comments from management and unions concerning the exploitation of the Oil Belt, the losses of the CVG [Venezuelan Corporation of Guayana] companies and the problems involved in the transfer of technology. But the problem is far more deep-seated. It is not merely a matter of having to decide on the development of Puerto Ordaz, nor on national growth in comparison with Colombia and Brazil. Now, it is a matter of Venezuela's survival without oil.

In Guayana, the Venezuelans running the state companies are agreed on what their main problems are.

Poor debt-capital ratio. In ALCASA, it is 5.32 to 1. During fiscal 1979-80, that company paid 166 million in interest; its capital totals 1.9 billion, and the debt is 1.6 billion bolivares. In SIDOR, the accumulated debt is 1 billion bolivares. In VENALUM, there has been a debt of 250 million since its founding in 1978.

Contracts unfavorable to Venezuela. In VENALUM, which is a mixed capital company with 80 percent native capital (CVG-FIV [Venezuelan Investment Fund]) and 20 percent from six Japanese industries, the country has a contract for the procurement of alumina powder, which is extracted from bauxite and is the raw material for aluminum, whereby a posted price has been maintained for the price of aluminum that is between 13 and 16 percent negotiable.

As a result of an amendment that was made in February 1980 in the contract, all of a sudden Japan imposed the highest price on Venezuela. If the alumina were negotiated on the international market, 50 million bolivares could be saved in the 2 remaining years of the contract. But the jurisdiction of the contract is located in Geneva, and the Japanese want to litigate there.

The technology contracts have not been successful either. The "Venezuelization of development" has been difficult, and the Venezuelan plant managers demand active participation in the companies' decisions. At the present time, they are little more than assistants to the foreign managers.

The major problem is reducing the cost of raw materials. Pertinent in this regard is the problem of the disadvantageous contract for producing alumina with the Japanese companies, and the development of Los Pijiguaos, a mountain area with proven bauxite reserves amounting to 500 million tons, located 40 kilometers from the Orinoco and 500 kilometers southwest of Ciudad Guayana; which would make us self-sufficient in aluminum production.

The indifference toward the problems of Guayana has resulted in hearing about it only when there are strikes in the iron producing area. The exacerbation of the labor problems has added to the prediction of losses a series of delays, caused by an inept labor policy.

Managerial problems. Venezuela's inability to control the companies technologically, to purchase raw material on fitting terms and to dominate the sales market has hampered the level of efficiency considerably. The Venezuelan managers do not control either the aluminum nor the iron business. They claim to be "pushed around" by the Americans and the Japanese.

Puerto Ordaz is a city planned by men. What was a lost town on the banks of the Orinoco has become a very large modern city; but one with thousands of problems.

At a meeting held in VENALUM, Pompeyo Marquez commented: "This was a city planned over a period of time, and chosen. The problems of Ciudad Guayana need not be the same as those of Valencia, Maracay and Caracas."

"But," replied the president of VENALUM," not enough was invested in infrastructure; Congress did not appropriate funds for it...."

"All of us," remarked Sucre Figarella.

"No, all of us is too many people!" interrupted Marquez.

Sucre Figarella continued: "Until 1968, there was structure, housing and services in this city. Since then, and up until the present, I have no answer; but that is the truth."

The conversation dissolved into further interruptions and shouting. But the problem continues. There are waves of holdups in Ciudad Guayana; there is social unrest. San Felix remains on the sidelines, lacking in the most fundamental things. And the human capital of the CVG companies is located in that city.

The reasons for stimulating the development of the aluminum and iron companies are their "assets".

The aluminum companies are the second-ranking source of hard currency for the country, after oil. In 1980, the combined sales of VENALUM and ALCASA amounted to 3.5 billion bolivares, with 500 million on the domestic market alone.

It is currently being proposed that the contract with the Japanese companies participating in VENALUM be renegotiated.

The exploitation of Los Pijiguaos would allow for autonomy in aluminum production. The bauxite would be exploited in Los Pijiguaos, the alumina would be produced by INTERALUMINA and the aluminum would be processed by ALCASA and VENALUM, using the energy from the area.

It is proposed that the CVG companies' debt be refinanced from short to long term. In this way, the debt-capital ratio would become more tolerable.

The development of the Orinoco Oil Belt would contribute to the independence of aluminum exploitation. The production of petroleum coke, which is a source of refinancing, would allow for the production of aluminum, reducing costs. Petroleum coke is used to produce anodes in the process of separating the aluminum from the alumina.

The development of the Belt would also allow for the development of Puerto Ordaz and San Felix, which are now economically depressed areas. The Bechtel plan to build a town around the Belt's exploitation area to accommodate 36,000 inhabitants has been rejected by the people in Puerto Ordaz, who have seen a repetition in Guayana of the same experience involving the decline of the oil towns. In Ciudad Guayana, instead of building a town, it is proposed to construct a bridge that would connect the exploitation camps with the urban area of Guayana, and would make it possible to build up Guayana's industry from construction (there are 6,500 vacant apartments in the area) and to give an impetus to the region.

From a geopolitical standpoint, Venezuela needs total control of the aluminum industry and a stimulation of the iron industry. Brazil has an aluminum industry, and

no other country has the combination of an investment capacity, hydroelectric power and sources of raw materials that Venezuela possesses. In addition, it is an alternative source of national support, which could support the country independently of oil. If the plan for the exploitation of bauxite and the production of petroleum coke in the Belt is carried forward, 95 percent of the input would be native. Aluminum is not used only to make foil and pots and pans; it is used in the space, automobile and aviation industries.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BRAZILIAN-URUGUAYAN ENERGY TECHNOLOGY TO BE EXCHANGED

Brazilian Technology for Uruguay

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 26 Nov 80 p 25

[Text] Porto Alegre--Mines and Energy Minister Cesar Cals announced yesterday in Porto Alegre that Brazil will furnish energy technology to Uruguay in the areas of oil, coal, wood, vegetable oils and wind generators. Cals met in Livramento with Uruguayan Industry and Energy Minister Francisco Tourreilles to discuss this matter. At the end of the meeting a document was signed in which the two ministers agreed to establish joint study groups to select various projects in implementation of the accord. The two groups have 60 days in which to complete their studies.

In addition to the transfer of technology, interest was expressed by the governments of the two countries in integrating their electric power systems. There are currently four lines supplying Brazilian electric power to Uruguay: the circuits are Livramento-Rivera, Quarai-Artigas, Chui-Chui and Jaguarao-Rio Branco. At present, thses systems are limited to supplying certain Uruguayan cities. Coverage on a national scale will now be studied, using hightension lines. It is also necessary to determine how to make the cycles compatible--the Brazilian system being 60 cycle and the Uruguayan 50. The study groups are to present suggestions in this regard.

In other energy areas Cals said that a joint plan for seismic research will be drawn up for oil prospecting within the ocean and territorial limits of the two countries. Once the prospecting is completed, each country will exploit its reserves independently. The minister indicated that the situation might be different with coal, saying that exploitation of coal deposits on the Uruguayan side could be carried out through joint ventures.

Other aspects of the agreement are Brazilian technical cooperation in the supply of wood and vegetable oils as alternate sources of energy. Brazil will also share its technology in wind generators.

Uruguay: Areas of Cooperation

Rio de Janeiro GAZETA MERCANTIL in Portuguese 26 Nov 80 p 9

[Article by Delmar Marques de Rivera]

[Text] Brazilian Mines and Energy Minister Cesar Cals' meeting with his Uruguayan colleague, Francisco Tourreilles, in the border city of Rivera in Uruguay, which ended yesterday, could open the way toward negotiations on technology, equipment and even Brazilian coal. The Uruguayan minister expressed interest in Brazil's efforts to restore equilibrium in its trade balance and plans to analyze everything which is being done--from experiments in the use of windpower to a mixture of vegetable oils with diesel fuel, to the possibility of gasification of coal to replace fuel oil burned in its thermoelectric power plants.

The status of Uruguay's energy balance is rather delicate and, a few days after a meeting was held in Bogota, Colombia, devoted to the energy problems of countries which belong to the Latin American Integration Association (ALADI), the minister of this sector acknowledged that his country has very little to offer as a contribution toward reducing its dependence on foreign energy sources. Only now is Uruguay beginning to concern itself with this problem despite its allocating 50 percent of the oil it imports to the fueling of thermoelectric plants.

Oil Account

Uruguay's oil account--$400 million annually--represents about 60 percent of this country's exports. National Energy Director Alfredo Behrens estimates his country's peak consumption of electric power to be 600 MW. Thermoelectricity contributes half of that peak demand. Hydroelectricity supplies the rest; but the most important project in this sector, being carried out in conjunction with Argentina in Salto Grande, will not reach its total potential until 1990 when it will have 12 turbines in operation.

Behrens explained that, in the meantime, his country does not have funds to invest in the undertaking, estimated at $1.5 billion, and must therefore pay the Argentines in power. For this reason and despite the fact that Salto Grande already has six turbines, only one is supplying Uruguay power (each has a capacity of 135 MW).. Argentina consuming the rest as payment for the investment. Rincon del Borrete and Baygorria, the other Uruguayan hydroelectric power plants, belong to the same water system--the Salto Grande--and dry periods in that area, at least one every 3 years, jeopardize the entire supply.

It is now hoped to combine the energy networks of Uruguay and Rio Grande do Sul via Candiota, in Bage, as a way to guarantee power supply during critical periods. This hookup would offset occasional shortages until the completion of Salto Grande. Minister Tourreilles also expressed his willingness to invest in the prospecting of coal deposits existing in his country. He will also seek foreign investments for this purpose. Andrade Ramos, president of Mineral Resources Prospecting Company (CPRM), believes that the Rio Grande do Sul deposits might extend to Uruguay; at least, a geological survey points to this conclusion. He said that his firm would undertake the necessary research.

Export

Flavio Brinckamann, president of Rio Grande Minerals Company, hopes that the prospecting will bring results: "In that case we shall be able to contribute with projects having to do with exploration and the supply of equipment, for we already have internationally recognized experience," he said. He does not discount the possibility of exporting gasified coal to Uruguay in the near future. The offer has been made and the Uruguayan authorities have expressed interest in that project as well as in the technology of the Rio Grande Science and Technology Foundation in the gasification of coal in fluid state. According to Director Behrens, it would be impossible to adapt thermoelectric power plants to fuel oil through the direct burning of coal, but it is quite feasible to use coal producer gas in the same boiler after minor changes.

Regionalization

In Cals' opinion, collaboration begun with Uruguay should be extended to all Latin America. In the Bogota meeting Brazil is to present a joint proposal with Mexico, Venezuela, Ecuador and Colombia aimed at energy integration of the entire continent: "Maintaining the current commitments every time a country's demands increase should imply giving preference to Latin American suppliers. In like manner, when their current contracts expire, Latin Americans should have priority. Producer countries are endorsing that proposal, manifesting "interest in contributing to restoring the energy balance of all ALADI countries," the Brazilian minister said.

Through the hastily arranged meeting held at the frontier precisely for the purpose of avoiding the delays which occur when official visits are sought through diplomatic channels, Minister Tourreilles is trying to take advance measures to guarantee the supply of surpluses from the neighboring country. The initial result of that meeting will be the installation in Uruguay—for experimental purposes—of a 10 kw winddriven generator of Brazilian manufacture. Even the possibility of dealing in oil or its derivatives was discussed. This subject will be studied more carefully. A study group composed of experts from both countries will be established to assure continuity in the negotiations begun at the Rivera meetings.

NEW PETROCHEMICAL COMPLEX INAUGURATED BY FORMER PRESIDENT

Rio de Janeiro MANCHETE in Portuguese 6 Dec 80 pp 130-134

[Article by Ib Teixeira: "Petrochemistry, A Revolution In The National Economy"]

[Text] How can we insure a renewable energy source while increasing the number of automotive vehicles in Brazil at the same time? How can we increase the supply of food while reducing the imports of agricultural products at the same time? How can we extend the borders of our national economy, decreasing the overall dependence of the country on petroleum imports? There is only one answer to all these questions: petrochemistry.

"We are facing a new industrial revolution," said former President Ernesto Geisel at the inauguration of the petrochemical complex of Camacari in Bahia. In fact, only on the basis of the implantation of a strong basic chemical industry can the country break the dependence on foreign supplies in the area of vital raw materials, insure fuel for agriculture, and, finally, free itself from the exclusive use of hydrocarbons by using alternate petrochemical sources such as alcohol, oil shale and coal.

Petrochemistry itself means a higher quality treatment of an energy source on the way to becoming extinct. According to an estimate by the Industrial Association of Japan, whoever saves 100 liters of gasoline per week is allowing the production of 160 meters of plastic pipe for civil construction; 21 polyester shirts; one automobile tire, 3.5 inner tubes, 21 sweaters and 500 nylon socks.

Alcohol and coal are already taking the place of petroleum in Brazilian petrochemical production. In Alagaos, near Maceio, dichloroethane is already being produced from alcohol. In the south, a PETROBRAS [Brazilian Petroleum Corporation] company, PETROFERTIL, initiated a genuine coal chemistry revolution by converting a terrible low-density pollutant from coal into an extremely valuable raw material. In Sao Paulo, the polystyrene and polyethylene industry, because of the shortage of ethane from the Cubatao refinery, very successfully resorted to the dehydration of alcohol. Thus, a common sugar byproduct, always disdained on the international raw material market, overnight became an essential item for the manufacture of packaging, electrical appliances, throw-away items and even toys.

According to technicians of the Brazilian Petroleum Institute, ethyl alcohol is already earmarked as a partial substitute for hydrocarbons.

Chemistry is capable of other miracles also, however. National coal was always considered to be of low quality. With the petrochemical revolution, things have turned around. The country, which was extremely dependent on sulfur imports, now has in Santa Catarina a strategic source of sulfur, a basic ingredient of vast applications in several industrial sectors.

Now, in the coal-bearing basin of Santa Catarina, nothing is lost, everything is converted. Coal became thermal electricity. The high polluting wastes are now used in the form of gypsum, avoiding damage to the environment. Finally, another raw material up to then not utilized, pyritic wastes, is increasing the domestic supply of sulfur in the form of sulfuric acid or phosphoric acid, in other words, in the form of fertilizers.

In terms of the continuous cycle of the use of Santa Catarina coal, an important industrical complex was born in Imbituba. A sulfuric acid plant can produce nearly 900 tons daily. Previously, in order for such plants to be practical, the country needed to import 100,000 tons of sulfur costing $15 million.

Agricultural-Livestock Production Will Be Superdeveloped

Now petrochemistry allows the use of pyritic wastes, encourages coal production and the industrial complex has a 10,700-kilowatt thermoelectric powerplant. It is from there that the electricity comes for supplying Imbituba. Moreover, the residues of byproducts are also used. Just with the gypsum wastes resulting from phosphoric acid, it was possible to install a cement plant with an annual capacity of 400,000 tons. The processing of that waste will provide a quantity of sulfur sufficient for a second sulfuric acid unit. With the iron oxide wastes, it will be possible to supply paint, varnish and ceramics factories. The chemical gypsum available will also allow the installation of a precast panel plant, panels which will be used for building prefabricated walls with a subsequent reduction in the cost of civil construction.

President Joao Figueiredo said recently: "It is in agricultural-livestock production that the Brazilian people are going to find the way to better days." Actually, the last two agricultural harvests and exportable surpluses obtained indicate an exceptional behavior by that sector when compared to that of other countries which are traditional producers of agricultural products.

Soil Nutrients May Expand the Agricultural Frontiers

How can that agricultural miracle be explained? "The secret resides in the petrochemical revolution," says an engineer in agronomy. Actually, thanks to the basic chemical industry, the country can raise its average per capita consumption of fertilizers from 6.95 kilograms per inhabitant (1965) to 17.15 kilograms (1975), and is actually approaching 40 kilograms per inhabitant. Today the Brazilian consumption of soil nutrients is among the highest in the world, as can be seen in the chart below:

	Fertilizers in kg per inhabitant
Israel	145.2
United States	81.3
USSR	44.9
China	39.6
Brazil	36.1
Canada	19.8

Source: Brazilian Petroleum Institute

The expansion of the agricultural frontier is going to make Brazilian petrochemistry even more strategic. Despite our increasing consumption of fertilizers, national demand greatly exceeds domestic supplies. In the case of nitrogenous fertilizers, for example, compared to a domestic production of nearly 300,000 tons in 1979, domestic consumption rose to 750,000 tons. The national production of only 40 percent of its needs forced the country to import nearly 450,000 tons of nitrogen fertilizers.

At this time, due to the National Fertilizer Program [PROFERTIL], PETROBRAS is supplying national industry with the basic raw materials for the production of nitrogen fertilizers, ammonia and urea, through its subsidiary PETROFERTIL [PETROBRAS Fertilizer Company]. In addition to the factories existing in Bahia (Camacari), Sao Paulo (Piacaguera) and Santa Catarina (Imbituba), PETROFERTIL is building the Araucaria factory.

On the outskirts of Curitiba, this factory is going to provide nearly 1,500 tons of urea, 330 tons of ammonia and 58 tons of elementary sulfur to the fertilizer mixers and distributors per day. However, the domestic needs for nutrients are going to require an even more substantial effort from Brazilian petrochemistry.

In fact, the fate of the Brazilian chemical industry has been determined: grow or perish. Some obstacles must be overcome. Among them is the price control policy. Says Michel Harveld, director of the Brazilian Chemical Industries Association: "Three or four months from now what happened with cement could happen with petrochemistry." In other words, a country which has all the resources of capital goods and raw materials for producing all the cement that it needs is spending foreign credit to import it. Only a policy of real prices for petrochemistry can insure the profitability required for a complete program of expansion.

The basic chemical industry of Brazil was born at the beginning of the decade of the 30's when a partnership of Brazilian, Argentine and Urugusyan capital began the Rio Grande Company located at Uruguaiana. Operating with petroleum imported from Ecuador via Buenos Aires and Paso de Los Libres, the Rio Grande Company was throttled in 1936 when the Argentine Government decided to prevent passage of Ecuadorean petroleum through its territory. The company then reappeared at the port of Rio Grande—importing the fuel directly—with a daily capacity of 1,500 barrels. This refinery at Ipiranga had the first production of solvents for the nascent Brazilian tire industry.

In 1954, Brazil entered definitively into the era of petrochemistry with the construction of an ammonia and fertilizer plant by PETROBRAS. Shortly thereafter there appeared the Union Carbide polyethylene plant, the CBE styrene plant, the isopropanol and acetone plant of Rhodia, and so forth. At the beginning of the 60's, PETROBRAS inaugurated its synthetic rubber plant, using imported butadiene as a raw material. A unit for producing the butadiene was inaugurated in 1967. That which began timidly with the production of the first thermoplastic resins, became a great industrial complex capable of producing a range of basic products such as ethylene, propylene, butylene, xylene, and so forth, and primary products such as ethylene oxides, benzene, acetylene and ethane, plus intermediary products such as styrene, ammonia, nitric acid and many other articles.

Said in another way, Brazil as of 1967 began to depend on its petrochemical industry for supplies of PVC pipe, connections, records, threads, cables, shoes, artificial fibers, films, goods for the automobile industry, electrical appliances, and so forth, plus thousands of other finished products. Sailboats, automobiles, furniture, and products for civil construction complete that list of industrial possibilities, which fantastically increases the use of the main thermoplastic resins. In 1976 the country consumed 566,000 tons of those resins; four years later, consumption is almost a million tons.

Petrochemistry Paces the Development of a Country

Within two years the country will be requiring 1,548,000 tons.

One of the basic chemistry articles by itself, synthetic rubber, is playing a predominant role in the economic life of the country: Nearly 85.8 percent of the total amount of rubber used by heavy industry is domestically produced. Why synthetic rubber and not natural rubber from the Hevea Brasiliensis? "Unfortunately, the supply of natural rubber is hard to come by because domestic rubber growing depends on native rubber tree plantations lacking modern technology and frequently subject to disease and failures in production," replies a manufacturer. At this time the economic development of a country can be measured by the progress of its petrochemistry. Since the appearance of that industry in the United States in 1920, when isopropenyl and glycol were manufactured by the Standard Oil Company and Union Carbide, that North American country has maintained world leadership. However, beginning with 1970, the rapid growth of Japanese petrochemistry placed Japan immediately below the United States.

In Brazil, the beginning of operations of the Northeast Petrochemical Zone, with the majority of the enterprises in Camacari, Bahia, represented the complete replacement of petrochemical product imports in 1979.

The "Sao Paulo Zone" is the Leader of the Western World

In terms of the balance of payments, this fact means a saving of $800 million to the country. The Northeast Petrochemical Zone also allows a more harmonious development because it overcomes the traditional regional imbalances.

The Sao Paulo Petrochemical Zone, born at the beginning of the 60's, today includes nearly 40 companies, in 21 of which majority stock control is exercised by domestic stockholders and 19 are foreign-controlled. "It is a matter of the specific employment of the tripartite method, which includes PETROBRAS, domestic private capital and foreign industry," said an official of the state industry. According to him, the tripartite method allows the Sao Paulo Zone to become one of the most promising petrochemical centers of the western world.

The Third Petrochemical Zone is being born in Rio Grande do Sul. According to a decision by the Economic Development Council (CDE), the Zone should develop primarily around basic petrochemical projects and encourage participation by private enterprise in the other projects not within the area of PETROBRAS. The harmonious operation of those industrial complexes on the basis of raw materials such as alcohol, petroleum, oil shale and coal insures Brazilian participation in the second industrial revolution: the petrochemical revolution.

PRIVATE INDUSTRY RELUCTANT TO INVEST IN NEWLY FOUND COAL

CPRM Confirms New Discoveries

Rio de Janeiro GAZETA MERCANTIL in Portuguese 27 Nov 80 p 9

[Article by Sergio Danilo do Rio: "CPRM Confirms Discovery of Deposit"]

[Text] The Prospecting and Mineral Resources Company [CPRM] confirmed the discovery last week in Sapopema, in the interior of Parana, of a new and promising coal deposit. First estimates at one of the prospecting sites indicate the existence of a potential of 20 million tons, although it could be larger, since only 11 test bores have been made, it was reported by the state company sources.

CPRM Director Eliseu Visconti told this newspaper yesterday that the contract transferring the Irui I and Irui II coal mines, which were put up for auction by the company and purchased by the Parana State Electric Company (COPEL), will be signed 12 December.

The reserves of Irui I and Irui II in Rio Grande do Sul are estimated at 190 million tons and their sale value is estimated at 36 million cruzeiros. The CPRM should receive part of the payment in money and another part in shares since a mining company to exploit those coal reserves is going to be created, said Visconti.

Leao Norte

The Leao Norte I coal reserves (208 million tons), also in Rio Grande do Sul, should be transferred to the Rio Grandense de Mineracao Company (CRM) during the latter half of December also. This mine, according to Visconti, will be worked by the Rio Grande do Sul company, which should initiate the working plan in 1981. The total price of that mine was established by the auctioning commission of the CPRM at 40 million cruzeiros and the payment schedule will be eight 6-month installments.

Transfer of Seven Deposits

With the transfer of those mines in December, the auctioning of seven coal mines to private enterprise and state energy and mining companies will have been accomplished. The last mine to be offered to national industrialists in January will be the Morro dos Conventos in Santa Catarina.

Altogether, seven mineral deposits have been transferred or are in the process of negotiations: Arroio da Silva (SC); Irui I, Irui II, Leao Norte, Seival I, Hulha Negra (RS), and Morro dos Conventos (SC). They total an overall reserve of 843.3 million tons.

State Companies Dominate Bidding

Rio de Janeiro GAZETA MERCANTIL in Portuguese 29 Nov-1 Dec 80 p 9

[Article by Delmar Marques: "State Companies Dominate Bidding For Mines in Rio Grande do Sul"]

[Text] There remains only one coalmine, that of Ararangua--besides the two that are under litigation, claimed by the Metropolitan Coal Company of Crisciuma--which the CPRM needs to dispose of before being completely divested of all discovered deposits and it can begin new test drillings. With two mines purchased by the National Union of Cement Industries, two by COPEL, one by the CRM, one by Prospera Mineracao and another by the Bussato Construction Company, all coal deposits found in recent years was placed at the disposal of mining intersts.

The coal mining companies, however, are far from keeping up with the progress of prospecting. Since they have to make large investments in the consolidation of the area prospected and on mining projects, without a guarantee of consumption all plans will remain simply intentions. The president of the CRM, Flavio Brinckmann, certainly controls an enormous potential. The new mine he has just received, the Leao Norte I, has more than 217 million tons, enough to guarantee its actual rate of production for more than 100 years.

In measured reserves alone, without counting those simply estimated, the CRM already has 407 million tons in Candiota, 580 million tons in Leao, 176 million tons in Irui and 72 million tons in Santa Rita. These are measured reserves and are ready for extraction plans for going into production. Thus, all by itself the CRM is in a position to sustain all the production desired for the country in 1985--27 million tons per year--for more than 50 years.

Brinckmann explains that it will take at least three more years to measure the deposit received in Leao Norte I and to prepare a plan for the annual extraction of 2.4 million tons, an investment of around $90 million at today's prices, similar to the one being made at Leao I. The other companies, which received reserves from the CPRM, will not require any less time, he believes. He says that the mines of Irui Norte I and Irui Norte II received by COPEL represent considerable geological problems to mining, such as layers of coal surrounded by very weak strata, which will require even more time for research and engineering plans, so much so that the CRM did not even bid in those areas.

Such a slow rate, caused by technical circumstances and in a like ratio by a lack of decision in the official and private enterprise area, worries Rio Grande do Sul business leaders. Of the seven mines distributed by the CPRM, four went into the hands of state companies (CRM, Prospera, which is a subsidiary of the National Iron and Steel Company, and two went to COPEL), precisely because of the fear by businessmen in making new investments without a clear definition of the

sources of financing and potential consumers. The entire coal program is moving very slowly in the understanding of the president of the Brazilian Iron and Steel Institute (IBS), Jorge Gerdau Johannpeter. He says that he will take the problem to President Joao Figueiredo at the meeting the iron and steel companies will hold with the chief executive on 5 December. "The resolution of the energy problem is vital for the country," he said.

BRIEFS

COAL MINING IN MOZAMBIQUE--Brazil may participate in the exploitation of coal in Mozambique and import part of the volume mined. In the next 60 days a Brazilian delegation from the Ministry of Industry and Commerce will go to that country to begin negotiations for that purpose. The subject was presented yesterday in a meeting between the governor of the Bank of Mozambique, Sergio Viera, and Minister of Industry and Commerce Camilo Penna. Sergio Viera explained the programs to be carried out by the government of his country, in which Brazil could participate, to the minister. The main one of them is the program for enlarging the Cabora Bassa Hydroelectric Powerplant, which will go on to generate four million kilowatts. Moreover, the Mozambican Government intends to install an industrial complex to make use of the power produced by the hydroelectric plant, a program in which Brazil could participate, particularly in the installation of an aluminum plant and other projects in the metallurgical field. Negotiations also include cooperation in agroindustry and transportation programs. [Text] [Rio de Janeiro O GLOBO in Portuguese 3 Dec 80 p 21] 8908

GOVERNMENT DELEGATION TO MEET WITH IMF STAFF; COMMENT

Delegation to Explain Policy

Rio de Janeiro O GLOBO in Portuguese 7 Dec 80 p 44

[Text] Brasilia (O GLOBO)--Five ranking government technicians will go to the United States this week to explain the new economic policy to be practiced by the Brazilian Government beginning January to the staff of the directorate of the IMF.

The trip by the technicians is being kept under wraps in an attempt to avoid controversy, since any news of the presence of Brazilian Government representatives in Washington to justify and announce economic changes for 1981 (new policies on wage, money and credit, exemptions for part of bank interests, exemptions in the exchange rate reduction of part of subsidies and changes in rural credit) would have great repercussions.

The trip by those technicians is closely linked to the needs for foreign resources forecast for 1981, which are estimated at $21 billion. According to Central Bank figures, 11.5 percent of the Brazilian Foreign debt is due next year. Still according to the Central Bank Balance of Payments Division, the country will spend nearly $17.5 billion in 1981 to service the debt ($8 billion for amortizations and $9.5 billion for interest).

According to government technicians, forecasts are that there will be a trade balance, with expenditures for petroleum totalling $9 billion, if Brazil manages to maintain a daily consumption of 750,000 barrels per day at an average price of $33 per barrel within the framework of future PETROBRAS [Brazilian Petroleum Corporation] purchases.

The Brazilian delegation of technicians consists of Akihiro Ikeda, chief of the Ministry of Planning Economic Assembly; Mailson Ferreira da Nobrega, chief of the Finance Ministry Economic Advisory Office; Antonio Caetano Filho, special consultant of the Central Bank; Jose Augusto Arantes Savasini, superintendent of the Planning Institute, IPLAN; and Luis Paulo Rosembergo, minister of planning.

That team will also make an explanation to the staff of the IMF directorate of the measures taken, and to be taken, against inflation, for balancing the balance of payments, the maintenance and creation of mechanisms which insure or increase the level of exports, and of the results which Brazilian authorities expect from those measures.

That contact reveals a willingness by Brazil to formally schedule a meeting for an IMF loan, according to statements by the technicians of the government. The decision to send those technicians was made when Alexandre Kafka, the IMF executive director for Brazil, was in Brazil two weeks ago for meetings with Ministers of Planning Delfim Netto; of Finance Ernane Galveas, of Industry and Commerce Camilo Pena and Central Bank President Carlos Langoni. Kafko came to learn the details of the economic policy set for next year and also to bring a list of requests for information of interest to the IMF.

Brazilian Government strategy is to disclose its intentions and its expectations with respect to results. If they are accepted by the IMF, the country will be eligible to make a request for a loan. In the understanding of some authorities, the country would emerge politically strengthened domestically and abroad in the degree that its economic policy were to be approved by the IMF, without the need of having to subject itself to its impositions.

In the days preceding the departure by those five technicians for Washington, careful surveys have been made on the status of the balance of payments this year and the prospects for 1981. This work was based on figures from the Central Bank, PETROBRAS and other agencies whose activities are linked to the foreign area. Government technicians believe that the proposal to limit imports to 750,000 barrels of petroleum per day, which would mean a decline in physical consumption of around 25 percent, must be faced as a most important factor, including for the credibility of the country before the international financial community.

According to PETROBRAS estimates, the average price per barrel of petroleum should be around $33, keeping in mind exports of Brazilian gasoline and light petroleum (without that the real price of petroleum would rise to $40 per barrel).

Petroleum is the great unknown in official calculations and estimates for next year. It is a variable which depends on the behavior of the foreign market and PETROBRAS admits that supplies for next year are uncertain and their prices are alien to any logical practice. This is so true that in the explanation the Brazilian technicians will make to the staff of the IMF directorate, the item of energy will be the most critical due to the uncertainties observed in the area.

The heavy burdens being placed on the balance of payments because of the successive increases in the price of petroleum have made it difficult to control the deficit in the balance of payments. Hopes now reside on the agricultural sector, since foreign sales of manufactured goods, according to forecasts by businessmen and experts linked to international trade, reveal that next year will be one of difficulties, particularly for developing countries such as Brazil.

Drawing Rights Explained

Rio de Janeiro O GLOBO in Portuguese 8 Dec 80 p 15

[Text] Brasilia (O GLOBO)--If it were interested, as of 1 January Brazil could take loans from the IMF up to $7.5 billion. All it would have to do would be to receive support from the directors of the fund for the economic policy being practiced in the country. That position is being expressed with some frequency by technicians of the Ministry of Finance and the Central Bank.

"Those $7.5 billion, which the IMF could lend to Brazil, are the result of the increased capacity for loans of the fund itself where Brazil has special drawing rights [SDR] of $1.28 billion as of 1 January. The fund established that as of now Brazil can draw 600 percent of the SDR in 3 years and in special cases more than 600 percent in a single year.

The choice of going to the IMF as well as to learn the amount of the loan Brazil needs to resolve its balance of payment problems is a question which is beginning to be discussed by government technicians.

Contrary to the opinion of international bankers, Central Bank President Carlos Langoni believes that the capacity for making loans by those banks--the best alternative for the country--is far from being exhausted. Primarily because it is a domestic decision, Langoni believes "We are not going to make an economic policy on the basis of the opinion of international bankers."

According to Langoni, "The fundamental question for Brazil as to whether or not it can be financed in the market 'is to know' whether it is going to ask the market for more than the market can offer under reasonable conditions." If the authorities are programming an increase in the net loan of not more than 10 percent, reasons Carlos Langoni, "that figure is well below the average growth rate of the capital of international private banks, which is around 15 percent."

In keeping with this reasoning, if they did not lend to Brazil and other developinc countries, the bankers are going to have difficulties in placing available surplus funds.

Langoni believes that next year Brazil should intensively exploit new foreign sources of money supplies in the same way it did with exports this year, diversifying markets and products (ways of obtaining financing from different sources, primarily financing Brazilian imports and exports from abroad).

The Arabs also appear as potential lenders, since with the new institutions they themselves created "they possess a tremendous leverage in resources." Therefore, "The world becomes much greater than the IMF," according to Langoni.

However, the prospect of going to the IMF is being planned with another hypothesis in mind also. The economic potential it represents in the medium and long term places Brazil in a very different position than the other countries which made loans to Brazil in past years.

Even countries in a more comfortable position than Brazil in terms of indebtedness do not have the potential of future development that the great international investors need for continuing to lend.

This means that with an economy directed toward exports, an energy program which is considered advanced, mineral reserves and raw material sources of the scope Brazil has--which is not unknown to traditional investors of the IMF--Brazil already has the necessary collatoral required by international bankers, reasons the technician.

The main disadvantage of the Brazilian decision to go to the IMF, according to the Central Bank technicians, is the result of the war between Iraq and Iran, with its negative effects of an increase in petroleum prices.

Even considering the capabilities of importing countries in adopting rationalization and rationing measures in the consumption of petroleum-based fuels, a new increase in prices is going to cause an accelerated search for foreign resources of such magnitude that the market will cease to show the slackness that the Central Bank president sees at this time.

In addition to being hard to find, the $21 billion Brazil is going to need in 1981 to balance its balance of payments are going to be very expensive, advisers to Langoni predict.

No IMF Borrowing Envisioned

Brasilia CORREIO BRAZILIENSE in Portuguese 4 Dec 80 p 2

[Text] Central Bank President Carlos Geraldo Langoni yesterday discounted any possibilities that Brazil will resort to the IMF next year, making it clear that foreign banks have every right to express their opinions in favor of the use of that international agency "in the same way that the Brazilian Government has the right not to pay any attention to those opinions."

Denying rumors on the preparation of an imminent trip to the IMF, Carlos Langoni revealed that Brazil is going to attract foreign resources in 1981 in the same way it has been doing with exports: diversification of the form of foreign financing and the finding of new lenders, primarily among the Arab countries. "Many people seek to paint a picture as if only the IMF existed in the world, fortunately, however, the world is much greater than the IMF," he declared.

Pressures

On the use of the press by international bankers who have been persistently expressing themselves on the need of some sort of "endorsement" of Brazil by the IMF, the Central Bank president reminded us that we live in a free society in which everyone has the right to say what he believes "and it is even very good that they express their opinions publicly and not in secret only to the government."

He declared: "However, no one is going to make an economic policy on the basis of the opinion of international bankers," explaining that despite all the discussion on the subject, Brazil is going to wind up the year with a goal for obtaining foreign resources completely attained "and even more than attained because we are possibly going to reach $13 billion, while the forecast was for $12 billion."

As for the inability of the country to continuing to obtain the same amount of resources next year, the Central Bank president called attention to the fact that our needs for resources grow at the same rate as the availability of funds grows for foreign banks. "If we are planning an increase of the net foreign debt not

to exceed 10 percent for 1981, and if the average rate of the increase in capital of international banks is around 15 percent, there is no reason for any fear," he asserted.

Frequent rumors of having to turn to the IMF, in his opinion, derive from the open relationships the press maintains with foreign banks. "What is happening is that when the international financial community analyses our economy, the question always arises as to whether Brazil is willing to resort to the IMF. For ourselves, we have also said several times that it is an exclusively domestic decision at the government level and no new answers are appropriate," he declared.

New Channels

The new strategy already being employed by the Brazilian Government for next year is to "intensively" exploit new sources of supply of foreign resources, paying particular attention to financial relationships with the Arab countries, keeping in mind that there is a great availability of petrodollars at this time and that the IMF itself will not be able to act decisively in recycling that money.

"In obtaining funds, we are going to do what we did with exports, where we diversified products and markets. We are going to offer new "products," new ways of financing which are more attractive to the market, primarily using the enormous potential we have for obtaining financing for our imports abroad," revealed the president of the Central Bank, adding that the national financial system should be involved in that struggle at the same time that new international methods are sought for the financing of our exports.

The high point of this strategy for obtaining funds next year, guaranteeing the $13 billion which the government expects will be needed to finance the deficit in the balance of payments, will be the use of bargaining power with Arab countries. In Langoni's opinion, "The thing that makes that strategy practical is that the Arab countries now have new financial institutions where the problem of Brazil as a risk does not even appear and it is a country which does not yet figure in the portfolios of those banks."

The first loans from those Arab banks are already being negotiated, according to the Central Bank president, and Brazil has the additional advantage that petrodollars are allowing the creation of financial institutions with great potential in funds ready to be used.

In addition to the search for new sources of funds, the monetary budget for next year should also guarantee an increase in the share of the private sector in obtaining foreign funds, in Carlos Langoni's opinion. "We are not going to adopt any measure which may be an obstacle to the obtaining of foreign funds by the private sector; on the contrary, the intention is to broaden that channel more and more," he asserted, adding that in the meeting of the National Monetary Council next 17 December, it is going to approve measures which will facilitate access by companies to foreign financing.

Bankers

Also yesterday, Teophilo de Azeredo Santos, president of the National Bank Federation, declared that the decision to resort to the IMF "is more a political than a technical problem." He explained also that he has not formed an opinion on the timeliness of resorting to the funds of that international financial agency, but that a dialog of the type underway now, where it is possible to research the pros and cons of a decision of this magnitude, is always valid.

"Although there is nothing specific on the access by Brazil to FMI funds, it is worth recalling that the present economic policy adopted by the Brazilian Government is very close to that recommended by that international agency in that which has to do with the liberalization of interest rates and a reduction in the state's intervention in price controls," he said.

GOVERNMENT RISKS DEFEAT IN 1982 ELECTIONS WARNS ARCHBISHOP

Rio de Janeiro JORNAL DO BRASIL in Portuguese 4 Dec 80 p 7

[Text] Fortaleza--Cardinal Archbishop of Fortaleza Dom Aloisio Lorscheider yesterday warned the government of the need to make a reexamination of its conduct, positions and policies, without which it is possible that it will continue to lose elections in municipalities where the Rank and File Ecclesiastic Communities are active. The warning was made during a TV VERDES MARES interview.

Almost simultaneously, the Archdiocese press office was distributing a 45-line article signed by Dom Aloisio in which he said textually: "Dialog is always possible (with the government) but a "yes" by the Church to the sociopolitical economic system prevailing among us shall never be possible because the Church cannot in all conscience consider evangelical that which is structurally contrary to God's plans."

Awakening

In the television interview, Dom Aloisio repeated what he has been saying for some time, that the rank and file ecclesiastic communities are important movements which should be completely supported by the Church because they encourage the people to discuss their problems, seeking proper solutions for the community, which becomes aware of its problems.

"In the municipalities in which the Rank and File Ecclesiastic Communities are active, the government party always loses," commented the reporter.

The Church has not concerned itself with whether the government party or the opposition party wins in the elections. The Church concerns itself with the poor. It gives them preferential attention. If the government loses the election in the municipalities where the Rank and File Ecclesiastic Communities are active, the government should then review its position, its conduct and its policies, replied the cardinal of Fortaleza.

Church Versus The State

The article signed by Dom Aloisio follows:

We shall recall what Vatican II tells us in "Gaudium et Spes" so that we may then analyze what is happening among us in our country.

1. The Church cannot be confused with the political community nor is it linked to any political system. It is the sign of protection of the transcendental nature of the human being.

The political community and the Church are independent and autonomous with respect to each other. Both however, although for different purposes, are at the service of the personal and social inclinations of the same men. The Church and the state will perform these services more effectively for the good of all when they better cultivate a healthy cooperation between them, considering the circumstances of the times and places.

2. We are having differences and tensions in Brazil. Where are those differences and tensions between the government and the Church? The reply resides in the socioeconomic-political view of the Church, on one hand, and that of the government on the other.

The view of the Church, among its leaders, since Medellin (1968) and reaffirmed in Puebla (1979), is that the socioeconomic-political system adopted among us is sinful and unevangelic, requiring a profound transformation which means a structural change of the system; it means the institution of a new international order in which the equitable distribution of goods, respect for the basic rights of the human being and the free and effective political participation by all citizens are a reality.

The view of our government leaders, of its authorities, is that it is a socioeconomic-political underdeveloped society en route to development. It is the developmental or functional view of society. On the day that we all perform our own function in society well, we shall have a developed country. It is a view which may be found very generalized in developed countries. It is heard there that we have to be patient because a century ago they were where we are now. It is not possible, according to them, to skip phases. It is necessary to go through the various phases they did.

In keeping with this type of view, our underdevelopment would be a temporary thing. In the view of the Church, our underdevelopment is not an accidental phase but a phenomenon, which because of its nature is permanent because it is the result of certain economic, social and political situations and structures (Puebla 30). According to one or the other view, the preferred choice of the poor will receive one or the other functional, reformist or developmentist interpretation. In the view of the Church, it will be an interpretation of personal and structural conversion.

3. Is a dialog between the Church and State possible?

A dialog is always possible but a "yes" by the Church to the sociopolitical-economic system prevailing among us will never be possible because the Church cannot in all conscience consider evangelical that which is structurally contrary to God's plans."

DATE FOR COMMUNIST PARTY CONGRESS NOT YET ESTABLISHED

Rio de Janeiro O GLOBO in Portuguese 3 Dec 80 p 3

[Text] Sao Paulo (O GLOBO)--Secretary General of the Brazilian Communist Party Giocondo Dias declared yesterday that the Seventh Brazilian Communist Party [PCB] Congress has not yet been scheduled and that its realization "will depend on the political situation of the country." He added that he does not wish to "meddle" in the documents being prepared on the economic, political and international situation since 1967 when the last PCB congress was held.

Giocondo Dias said only that the removal of Luis Carlos Prestes as secretary general, the actions of the church and national businessmen will be particularly discussed.

"The preparation of those subjects," he said, "does not violate legal norms, although the party is still illegal. What we are trying to do is to explain what the political prospects are and what the tactical and strategic problems are that we are facing."

The communist leader added that not much time will be devoted to the status of Luis Carlos Prestes because the objective is that he discuss all the subjects with everyone and subordinate himself to the decision of the majority.

Church

Referring to the church, Giocondo Dias said that it will also be studied because it is one of the most important institutions in the development of society and not merely a Brazilian, but universal question after the holding of Vatican II.

He added that the fact that religious institutions defend the oppressed does not signify an alliance between the church and the Brazilian Communist Party.

"We are going to examine the role of the main institutions of society despite the fact that they want to make us incompatible with the church by saying that it is our ally. Our interests are the same as long as they defend the interests of the people, the rights of the human being, the expulsion of landowners and the rights of the Indians. However, it is not necessary to be a communist for that.

Constituent Assembly

The PCB secretary general believes that the government will try to accomplish a casuistic electoral reform because Senator Jarbas Passarinho "was clear and explicit about the game being played with marked cards."

PMDB SENATOR ORESTES QUERCIA ANALYZES SAO PAULO POLITICS

Rio de Janeiro MANCHETE in Portuguese 13 Dec 80 pp 126, 127

[Interview with PMDB [Brazilian Democratic Mobilization Party] Senator Orestes Quercia, Sao Paulo, by Haroldo Hollanda: "Orestes Quercia: 'The PMDB Must Propose Solutions and Not Just Find Fault'"; date and place of interview not given]

[Text] Elected senator in 1974 with about 5 million votes, Mr Orestes Quercia was one of the big surprises in the torrent of votes the opposition received at that time. From being mayor of Campinas he went to the federal Senate almost as an unknown on the national scene. But his impressive landslide was not enough to make him as active and involved a senator as he had hoped. Today he admits he lacked experience.

Currently, Orestes Quercia is challenging Franco Montoro--the favorite--for the PMDB nomination to run for governor of Sao Paulo. He is going to the convention with confidence. If chosen, he will enter the campaign confidently. He respects but is not afraid of running against Janio Quadros, despite the latter's charisma. Nor does he underestimate Governor Paulo Maluf. He will make an all-out effort in the campaign and contends that this time--unlike 1974, when all the opposition had to do was to point out the government's errors--the PMDB must offer the people specific solutions for their problems.

[Question] Are you a candidate for governor of Sao Paulo in the direct elections of 1982?

[Answer] Yes. At this point, of course, I am a candidate for the nomination. As a member of the PMDB, I will accept the decision of my party. I will be a candidate at the convention and I expect majority support at the convention to be nominated as its candidate in the 1982 gubernatorial elections.

[Question] The prevailing opinion is that the natural PMDB candidate for governor of Sao Paulo would be Senator Franco Montoro. Is it possible to defeat him at the convention?

[Answer] It is not a matter of defeating Senator Montoro. I contend the will of the PMDB majority must be respected. There will be no defeat of one or the other.

We must have the best understanding so that the victor is supported by the other competitor. It is, in fact, common to read in the press that my colleague in the Senate, Franco Montoro, will be the PMDB candidate for governor of Sao Paulo. As I see it, it is merely an opinion with which I do not agree, although I have the greatest respect for Senator Montoro. This matter of public-opinion research, of popularity, has only relative value, especially in regard to election results. Just recall, for instance, that in June 1974 a Gallup poll in Sao Paulo showed that I had 5 percent of the voter preference. The ARENA [National Renewal Alliance] candidate, Professor Carvalho Pinto, had 75 percent. The result was the reverse of those figures. I received nearly 80 percent of the votes. Only after the campaign begins is it possible to measure the chances of each candidate.

[Question] In 1974, Senator Orestes Quercia, you had about 5 million votes. Do you think that as candidate for governor in 1982 you will be able to repeat the election victory of 1974? Or is the situation today different?

[Answer] The electoral situation today is quite different from that of 1974. To begin with, just recall that at that time we had only two parties, the ARENA and the MDB [Brazilian Democratic Movement]. In 1974, the election was like a plebiscite. One voted for or against the government.

[Question] Why wasn't the opposition able to take proper advantage of the 1974 election episode?

[Answer] It was, above all, an extraordinary victory. The people voted overwhelmingly against the government. Responsible sectors of the opposition party which won the election acknowledged that it was a victory for President Geisel because he made a free election possible, and so forth. This is just one example of how we managed to downgrade the victory of 1974. What is happening today is different. The government acted shrewdly. We are aware of General Golbery's speech at the ESG [War College], confirming all the charges we had made previously that with party reform the government intended only to break up the opposition. We now have more opposition--or so-called opposition--parties. Hence, we are likely to have more than two candidates seeking the voters' preference. I don't think the PMDB can continue to expect the government will lose the election. The PMDB must win it. Everything will depend upon the positions we take during the campaign. Whether or not the 1974 phenomenon is repeated will depend upon the political skill we use in convincing the voters. It is necessary to bear in mind that public opinion is molded by circumstances.

It Is Hard to Analyze an Election in Advance

[Question] Can present circumstances favor the candidacy of former President Janio Quadros for governor of Sao Paulo?

[Answer] They can. That is why I say it is very difficult to analyze future elections so far in advance. I also contend that it is not yet time to establish candidacies for state governors. I, for example, was forced to declare myself a candidate because my colleague Franco Montoro had already declared himself. Otherwise he would have been the party's only candidate. But it is still very early. I do not consider this early, extemporaneous declaration of candidacy good for the PMDB.

We should first study the nature of the message we intend to take to the voters. We must offer the voters a feasible and valid solution, show the people that in the government we are in a position to solve their problems. The Brazilian situation is serious. We can no longer simply diagnose the problems, as we did in 1974, for example, We must offer specific solutions.

[Question] What is the Janio Quadros phenomenon in Sao Paulo?

[Answer] It is too early to tell. So far he has done well. His words have great impact on the press and television. This helps a lot, but does not mean he has already won. At the proper moment the electorate will decide, analyzing the candidates. And, clearly, I have great expectations for such an hour. Due to my lack of experience I was not a brilliant senator at the beginning of my term, which could be considered an extraordinary statement to make publicly. But I was a good administrator as mayor of Campinas.

[Question] Is there, in Sao Paulo, a possibility of an agreement with Janio Quadros for the 1982 elections?

[Answer] I have no reservation of a personal nature regarding Mr Janio Quadros. I am saying this because much is said about agreements among the opposition. I am not sure, in view of the statements made against the PTB [Brazilian Labor Party], whether the PTB will be considered a true opposition party. I am in favor of agreements with the other opposition parties, although I think they are hard to make. The other day, for instance, I was talking with Benedito Marcilio of the PT [Workers Party]. He told me that his party must make Lula its candidate for governor. It is a way of consolidating the PT. I think they are right. Any of the parties will become established only if they have candidates for governor. If it is intended to form an opposition front, that is another story. But the party that does not have a candidate for governor will greatly weaken its slate of candidates for deputy.

[Question] How do you view the upsurge of the PT in Sao Paulo? Do you think the PT (and especially Lula) is a passing political phenomenon or is it destined to remain on our political landscape?

[Answer] To tell the truth, Lula came to prominence more as a labor leader. But he has not been tested as a politician. As a result of the government's violence, he is no longer a labor leader. He now has a perfect right to be a party politician. Everything he is doing now as a political leader is based upon his experience as a labor leader. I don't know what will happen to him.

[Question] What role may be played in Sao Paulo by the PP [Popular Party], depending upon the leadership of former Mayor Olavo Setubal?

[Answer] Mr Olavo Setubal is a well-respected man; he was a good mayor of Sao Paulo. If we bear in mind that the PDS [Social Democratic Party] is dominated by Governor Paulo Maluf, clearly a man such as Setubal would go to another party. But since Setubal has not been an opponent of the regime, he remains in the in-between position of the PP. I believe he will have great influence in Sao Paulo.

[Question] The Popular Party?

[Answer] Setubal in particular.

[Question] What role will Governor Paulo Maluf play in the Sao Paulo gubernatorial election of 1982?

[Answer] One cannot underestimate Paulo Maluf because, as governor, with the administrative machine under his control, he is doing everything to reach his objectives. We could say that this has always been done. I suppose that is so, but the way he is going about it is an innovation within the revolutionary movement of 1964. He uses the administrative machine with incredible ruthlessness, without any ethics, seeking only partisan political objectives. In small towns, especially, the people are very susceptible to government pressure. And, according to reports I have received, Maluf has been concentrating his work mainly in these small towns.

[Question] Will Dom Paulo Evaristo Arns, and the Sao Paulo church in general, play an influential role in the 1982 elections?

[Answer] Yes, he will play a role. But I contend that his influence will never be channeled to benefit a political party. There are many people who think the PT will be the beneficiary of such political influence. I don't think so. From what is known of what Dom Paulo says and writes, the influence exerted by the church is unlikely to be directed in favor of a political party.

Quercia, As Do Most, Says He Is Center-Left

[Question] If there were a more flexible party reform than what has been promoted, what type of party would you be associated with?

[Answer] This answer is difficult because it is very common--everyone says the same thing. Clearly, it would be a party of the center-left. In general, persons define themselves as center-left because the center is anticommunist, a conservative posture acceptable to the Brazilian middle class. At the same time the left is more appealing to the wage-earner, the employee, the poorer classes.

[Question] Do you think the majority of the Brazilian electorate is of the center-left?

[Answer] I think so. Of course, in large metropolitan centers there is more of a tendency to the left. In smaller towns, the tendency is reversed in favor of the center, of conservatism. What the people really want is to solve their problems. The new economic measures, which included decontrol of interest rates and monetary correction, indicate that the government is not master of the situation. That is why I again return to the idea that the PMDB must do more than diagnose the crisis, but must offer positive solutions.

[Question] If the opposition elects several governors in 1982, do you believe direct presidential elections will be reestablished in 1984?

[Answer] It is possible, and this would be very good.

[Question] In your opinion, who could be the opposition candidate for president of the republic?

[Answer] There are many names. We of the opposition usually mention Ulysses Guimaraes, national president of the PMDB, a man of proven competence. But there are others.

SARNEY SAYS NATION WILL SUFFER IF PDS LOSES MAJORITY

Rio de Janeiro JORNAL DO BRASIL in Portuguese 30 Nov 80 p 3

[Interview in Brasilia with Senator Jose Sarney, national president of the PDS [Social Democratic Party]: "Sarney Warns Nation Will Suffer If PDS Loses Majority"; name of interviewer and date not given]

[Text] Brasilia--Senator Jose Sarney said that if the PDS were to lose its congressional majority "it would be bad for the PDS, but worse for the nation...because Brazil does not yet have the political institutions to survive a system in which the government has a congressional minority." The national president of the PDS empahsized that "we are still emerging from an area of turbulence."

Coming from the erstwhile UDN [National Democratic Union], former governor of Maranhao, elected senator in 1974, Jose Sarney was the last president of the defunct ARENA [National Renewal Alliance]. He believes the PDS is being converted into the instrument for supporting the government politically and stresses that existence of strong political parties "guarantees the nation will have strong and democratic institutions."

In denying that he has interrupted the dialog with the leaders of opposition parties, Senator Jose Sarney revealed that he took the initiative of approaching them because "we had a really difficult phase, in which some sectors within Congress gave the impression of charging the military area for its participation in the 1964 Revolution." He added that channels of communication with the opposition continue to be "open to consultation."

The Interview

[Question] You always said the PDS will be a party in the government. Now that it is ready to formalize this final act of organization, do you think it will reach the goal of integrating the PDS in the government?

[Answer] We cannot compare the ARENA with the PDS. The ARENA was created by decree, considered by law to be an organization that must perform the functions of a

political party. The two-party system that was imposed restricted political activity, hibernating it and reducing its operating potential.

In the case of the PDS, we are creating a party. Not with an aspiration to be a party of today, but a party for the future.

It is organized from the bottom up, thus going through the whole process from grassroots membership to choosing national leadership.

The desire is that the party will have increasing participation in decisions of the government. Clearly, this could not have happened before, because we had a party in formation that was not yet a party, without a structure capable of making decisions democratically.

We had a provisional commission of 11 members responsible exclusively for organization. Now, with the party's membership established, its organs must provide guidelines of political action that will be defined by the party platform. As it is the party of the government, the government should support it and its platform.

[Question] Would that include having cabinet positions?

[Answer] Being in the government means that everyone who is in the government supports the party, has common responsibilities and reciprocal loyalties. Thus, in a normally-functioning party system, such a dichotomy between party and government does not exist. We cannot deny that we are still in a transitional stage, we are emerging from a period of arbitrary rule, seeking a period of democratic normalcy, and the parties are just beginning. And, on our part, we have made an expression of belief in the party system. We could have put off for a year formalizing the party, but we instead organized it, creating its structures so they could function, because without parties--I have said this repeatedly--there is no salvation. There is only one way that modern democracies exist with civil rights, public freedoms, in short, the democracy that exists in the Western World--and that is by exercising the party system. There is no other system. The party has the function of representing the interests of the people, recruiting voters and presenting candidates and filtering popular aspirations, transforming them into government decisions.

[Question] Senator, in the Brazilian tradition the parties are collegial and electoral bodies entirely separated from the people. As a result of this, as well as of other factors, certain social followings called pressure groups, such as the church, the bar association, students, workers, have to some extent taken over the position that the party should occupy. Do you think the PDS is capable of retaking this position?

[Answer] I believe the guarantee that the nation will have strong and democratic institutions is directly linked to existence of strong political parties entirely different from those existing in the past. The Brazilian tradition is of weak parties. When they existed in an organized way they were limited to declaring candidates at election time and gravitating toward Congress. They were political factions--they never became parties. The political party in the modern world is as important in society as anything that is part of our life today. A political party cannot be compared at all with what it was a few years ago. The concept and the

action are different. We believe in party reform and the party we created is built on that base. Our platform was written consistently and is the best of all; it is the equal of any party platform in the democratic world. The structure we want to set up is new, belonging to a modern party, with functioning permanent organs, departments capable of generating policies, analyzing policies, having data banks, storing and retrieving information.

To exercise power we must create a party structure capable of generating power. This is the great goal of party reform. It is the major objective to be achieved. Today it may seem utopian, but even this should not prevent us from pursuing it. And as for the PDS, I can say that it is being created with this intention. And I believe the other parties will follow the same path.

As long as we do not have parties so organized, we will remain in a period of institutional instability. Due precisely to the phenomenon you just mentioned, because when parties do not exist political activity begins to be exercised by pressure groups, which is a distortion. The essence of democratic society is the action of pressure groups within their limits. In fact, the most clear and objective definition of a political party is that which says it is a pressure group that differs from other pressure groups because it does not have the objective of influencing power but of exercising power.

The pressure groups that exist in society are legitimate. The task of the democratic government is to harmonize them.

As the parties are not organized, this function has not been performed. And pressure groups have commitments to their interests and not to the general interest. Their aspirations cannot be transformed into government decisions because we would run the risk of accepting undue and heavy pressures--and that type of pressure can be a cause of rupturing society itself.

[Question] Aren't you afraid that the PDS will lose its majority in the Chamber [of Deputies] and the Senate?

[Answer] We must do everything to prevent this from happening. And I believe that it will not happen. But if it were to happen, it would be bad for the PDS, but worse for the nation, because Brazil does not yet have the political institutions--we are emerging from an area of turbulence--to live under a system in which the government has a minority in Congress. It would be a factor of instability for the nation that will not occur, nor would it be desirable for it to occur.

[Question] Senator, there is in Congress today--and you, as all other congressmen, can perceive it well--a general state of perplexity, especially among the PDS delegation, accustomed to saying "yes" or "no," without having a greater participation by the party, mainly due to the restrictions on the legislative branch, such as duration of terms, and so forth.

[Answer] From the legal point of view, the system of arbitrary rule has come to an end but, obviously, some behavioral patterns persist, which will be eliminated with the passage of time.

As political activity was limited, it is not yet being exercised with the potential that can and should be exercised. it is only a matter of time. I think we have already had extraordinary progress. Within 1 year in Brazil we had progress that other countries in the same situation have not had.

In Spain, which began this process much earlier than Brazil, they say political liberalization has become a dull party. This did not happen in Brazil. We passed the amnesty law, we managed to abolish AI-5 [Institutional Act No 5], we established the national dialog, a liberalization in terms of debate in Congress itself, in the press and in all sectors of society, which became unrestricted. We have a climate of completely democratic discussion throughout the land.

Within Congress, in the political area, due to its long period of hibernation, there was a certain atrophy in the exercise of political activity. The new generation in Congress and those remaining from the time when political activity was a predominating factor need some time to readapt to the process. I don't think there is discouragement. There is a transition phase in which we are subject to crises of euphoria or of frustration.

[Question] Senator, there is an economic crisis in the nation, there is a political crisis, and some serious problems in the social area. Do you think this will have a negative impact on the 1982 elections?

[Answer] I agree we have a serious economic crisis, which is worldwide. In Brazil we are witnessing the phenomenon of superimposition, with the political problem superimposed upon the economic one. If I were asked whether this generates institutional risks and I said it does not, I would be insincere. What we must do is evaluate the type of risk. Whether it is large or small. I would say that it is minimal, but it always exists, not only in Brazil but in every country that goes through the same process we are going through.

[Question] When the government makes mistakes it creates considerable dissatisfaction, which loses votes for the PDS. So the party will pay for this, without having participated in the government, or it will immediately demand changes in government economic and social policy. In other words, it will want to participate in the government so that if it has the name it also has the game.

[Answer] I think we are going to have a crisis of adjustment. The decision-making system in a closed regime is quite different from that in an open one, as in the latter everyone wants to take part in decisions, in order to benefit from the results. This participation has to be created. We must be prepared to cope with this phase of adjustment. It is not easy--in fact, it is difficult--but this "meeting of the waters" is one of the important points of the project of political liberalization.

[Question] You firmly believe that, from now on, the PDS will be integrated...

[Answer] I believe this is a necessity. There must be reciprocal loyalty because without participation we will always have the dichotomy, where everyone thinks the government is one thing and the party is another. The sooner this integration comes about, the better it will be for all of us. Not just for the party, not

just for the government, but for the nation, because it generates at the same time stability and solidarity, broadening the area of consensus.

[Question] Could the government take other measures, such as that of Mato Grosso do Sul, without asking the party?

[Answer] The party, I repeat, does not yet exist formally. We are in the process of organizaing and it is not yet known what methods we will use to gage internal opinion. The first thing a democratic party must do is practice internal democracy. What is the meaning of internal democracy? It means that, internally, everyone is entitled to an opinion, to help make the will of the party the expression of its majority. This can only be promoted through the party organization. The PDS will organize itself structurally. The great challenge to all us politicians is to make the various organs of the party structure function.

To the extent that they function effectively and efficiently, they will have much greater participation in government policies than today. Today we have isolated opinions of members of the party, but we do not yet have the opinion of the party. For that reason immediate organization of the parties is necessary.

[Question] The PDS convention will appoint a committee to prepare a broad program of constitutional reform and also preliminary bills for revising legislation. What will this committee do?

[Answer] We believe the process of politica. liberalization, from the legal point of view, will be complete with a broad and profound constitutional reform that can adapt the existing constitutional text to the nation's new political reality.

As a political party, we cannot avoid this debate. The opposition believes this is possible only through the constituent assembly. We believe it is possible through a constitutional revision. The main problem is not really how to do it, but what we must do.

We are grappling with the question. The party, through its organs, after being organized, must cope with this problem, analyze it and be prepared to discuss it, to influence and participate in it.

We must mobilize our party, so it can have an impact on constitutional reform, examining the points we must adapt to present circumstances. Clearly, we have a great number of contributions that we must begin to systematize.

This is the object. The issue is before us, and the party has the desire to confront it.

[Question] When will this reform take place, Senator?

[Answer] I think the planning for constitutional reform should be done next year, when we will work on the matter. It should culminate the other reforms, as it is the high point, the ultimate, the completion of the process. We still have a number of laws that we must adapt to the new political reality: party legislation, part of the Organic Law of Parties. The law we passed must be revised in some

respects, as indicated by its experience and execution. This is a common task of all the parties. This is a subject of interest not only to the PDS but to all parties.

[Question] What about voting by districts?

[Answer] We are not ready to make a decision on this subject. I believe all these matters will be discussed at length. I have had a position for more than 20 years and I submitted a bill on the subject. But, as president of the party, I cannot express myself, as it is a very controversial subject. And since the time I accepted the presidency of the party I must submit to the position of the party, which does not have a firm position on the issue.

[Question] Senator, when the PDS manifesto was made public, that document presented some ideas which at the time were considered advanced. Now the convention must approve the manifesto, the platform and the statutes. The amendments that were suggested for this document are such as to make the party's philosophy more conservative. Or will it remain as is?

[Answer] I think we shall retain the original text. This is the tendency. The vast majority of the party, expressed in the state conventions, approved the platform, the statutes and the manifesto. So I believe we will retain the text of the manifesto and of the program, which I consider excellent. But we must realize that a platform is not to be accomplished in the short run, but is rather a number of aspirations in future terms.

I consider very important, whenever our platform is challenged, that we are the only party that is committed to a platform. This is certainly a great political advance for the nation. We prepared a platform that can be read, discussed and challenged. And that challenge must be made and the more that it is, the more we must adjust the ideas contained in that platform. I consider this a positive note.

[Question] Is this position that is taken in regard to the PDS and its platform really based on that solidarity? It is not between the party and the government?

[Answer] Of course not. We are creating an ambitions party, in terms of the future. We do not want the party to be suitable merely to the period of the present government, but that it establish solid permanent bases. I believe the PDS now has the solid structure and base of a modern party.

Furthermore, as the democratic system necessarily implies assuming that other parties may come to power, we must realize that we are forming a party that is not necessarily a government party. In future terms, it must cast its lot with that of Brazilian democracy.

If we were to organize a party thinking of it only as a government party, it would indicate that we do not believe in the possibility of another party being in power, which is not to believe in democracy. This would be absurd.

[Question] The opposition says it does not believe there will be direct elections. And yet it is presenting candidates in all states. The PDS, which does believe there will be direct elections, does not have candidates. Why is this?

[Answer] We have candidates. Aspirations of candidates for state office are latent and legitimate and exist within our party. Of course, the opposition, as it does not have major governing commitments, can transform such aspirations immediately and formalize them as candidacies. But that does not mean that the identical process is not going on within our party. Furthermore, I am sure there are potential candidates among the opposition who haven't been so bold as those who have already declared their candidacy.

[Question] But no governor has a candidate to succeed him.

[Answer] It is very early. With 3 years to go until the election, it does not seem appropriate for governors to be proposing candidates to succeed them. It would cripple the political process by jeopardizing the aspirations that might arise within the party. Nor is it democratic to be identified as "the governor's candidate." One should be the party's candidate.

The choice must be made through party organs. These organs are being formed. The highest nominating body is the convention. But the problem is not to be nominated, but to be elected.

[Question] Senator, as president of the PDS, what type of proposal can you make to the convention?

[Answer] We are taking on a big responsibility in founding a national majority party which must be capable of creating cadres who can generate and manage power. This is a great responsibility. To the extent that we are able to exercise this function we shall have a place in the political history of Brazil. If we cannot cope with this difficult transition period we will be penalized for not having been able to play the role that the nation requires and expects at a time of great difficulty.

[Question] What does the PDS, as it is about to be registered definitively, expect specifically of President Figueiredo?

[Answer] The president has provided great incentive to party organization. He is the honorary president of the party and without his aid it would have been impossible for us to form a party and put it in working order in so short a time. We hope that this relationship between the party and the government becomes so close that it can generate complete solidarity of the party with the government and the government with the party. Not an imposed, formal solidarity, but a voluntary solidarity that results from common ideals and common responsibilities.

[Question] What does the PDS expect of the opposition?

[Answer] We expect what we think the opposition must also do immediately: organize their parties and take their places. Unquestionably this action will hasten or consolidate the nation's process of democratic revival. This responsibility is not ours alone. When I say history will judge us, it will not judge only the PDS. If we fail in this period of political transition, if the political class is not capable of traversing this transition period, we shall all be penalized. And, perhaps, the opposition even more than we.

[Question] Why did you break off your dialog with the opposition?

[Answer] I did not break off the dialog with the opposition. It is permanent. These channels are open to consultation. Today I have the best relationship with party leaders who are in Congress. We have broken down, to some extent, that separation as though we were enemies when, in reality, we are adversaries. There is a ground of common interest that we can and should discuss, especially the most difficult problems, the most trying hours. At the time I had those contacts, we were having a specific problem and it was a very difficult period, when some congressional groups gave the impression of charging the military area for its paticipation in the 1964 Revolution. This could have forced us into a difficult situation. In reality, we must be aware that the Revolution occurred, it is a historical fact--and we cannot defy history. It existed and, with so much work to be done in the future, we could not let Congress become limited to unjustly questioning the military action. We overcame this phase and the voices who tried to follow this path were unanimously condemned by the parties. It would be impossible for us to be in this process of political liberalization if the armed forces were not aware of and in favor of this liberalization. We must respect and support them so they can fulfill their mission and not let them be defied, instigating them to participate in a different way from that desired. This is an important point that we cannot fail to take into account. At the moment we form political parties we must acknowledge that the Brazilian armed forces do not have an autocratic tradition. They always interfere in the process motivated by their historic mission of preserving order and freedoms in case of impending danger through anarchy or attempts to establish ideological dictatorship.

The new system we seek as the basis of new parties, organized and functioning, respected and honored by public opinion, must have what modern democracies have: respected and well-trained armed forces as guardians of democratic and free institutions.

Political liberalization is feasible, inviolable and secure because it has the support and solidarity of the armed forces under the command of their supreme leader, the president of the republic.

We have no doubt about the democratic and patriotic feelings of our soldiers. And this is why, inside or outside Congress, the isolated voices that try to denigrate them should be strongly condemned by all parties.

STATEMENTS BY CLERGY, LABOR PARTY CLAIMS RELIGIOUS SUPPORT

Cardinal Salles Speaks

Rio de Janeiro O GLOBO in Portuguese 8 Dec 80 p 4

[Text] Returning yesterday morning from Rome, carrying a copy in Portuguese of the encyclical "Dives in Misericordia" presented to him by Pope John Paul II under his arm, the cardinal archbishop of Rio de Janeiro, Dom Eugenio Salles, expressed his concern at "the infiltration of ideologies contrary to Christianity in the Rank and File Ecclesiastic Communities."

Dom Eugenio explained: "There are persons who try to distort the truth of those communities." He also spoke of the current "state of sin" in Rio of the government as well as the Church.

Dom Eugenio, who made the trip to the annual meeting of the Sacred Congregation for the evangelization of the people—whose work he considered "very satisfactory" —also said that the pope "does not forget the Brazilian faithful who received him so well when he was here." He was received by auxiliary Bishop Dom Karl Josef Romer and later he granted a collective interview in the administrative meeting room of the airport.

The cardinal was enthusiastic about the "infinite beauty of the form" of the second encyclical by Pope John Paul II: "Dives in Misericordia."

He said: "Redemptor Hominis, the first encyclical, was about man in the present context. In this one, John Paul II spoke more about God in a continuation of what he said in the prior encyclical. Now more than ever, he speaks about the role on injustice and criticizes materialism."

Showing a yellow-covered booklet to the reporters, the cardinal said: "I have in my hands what is perhaps the first official copy of the encyclical published in Portuguese, the "Dives in Misericordia," a true religious masterpiece." They are words which all Catholics should read and remember."

Rank and File Communities

Dom Eugenio did not wish to comment on recent statements by Archbishop of Fortaleza Dom Aloisio Lorscheider.

"I learned by telephone that the Cardinal really said something about the Rank and File Ecclesiastic Communities but I do not know what he said because it was not possible for me to read the published text. I will comment only when properly informed."

Further on he said emphatically:

"I speak only on what refers to my diocese. And to tell the truth, the existing state of the government is one of sin here in Rio de Janeiro, as is also the case of the church I lead. I will explain: if it were not that way, we, the cardinal, bishops, priests, brothers and laypersons would be more faithful to the Gospel. And that is because they do not do what they should do. I place myself within that situation as a bishop and that is what I think. Rio de Janeiro would be better if we were all to struggle together. That is why the government should act, correcting faults, which are not up to me to point out because I would not accept its leaders saying something about my faults."

Dom Eugenio then spoke about his "greatest concern," the infiltration of ideologies contrary to Christianity, and of political factions into the Rio de Janeiro Rank and File Communities.

He said: "I have fought against that with practically all my available time, and I believe with success. The line advocated by the diocese is one of complete elimination of tensions in politics, including with the help of some associations because the slogan of the communities is "Respect for persons."

He continued: "But I have felt that various ideological groups have found an extraordinary, truly appetizing dish in them, where it is easy to find the people gathered, wisely discussing and debating their day-to-day problems. I respect politicians very much but I cannot deliver the communities to specific groups, who would manipulate them, or to persons with ideologies contrary to Christianity, such as the communists, for example."

Annual Meeting

This year's meeting of the Sacred Congregation for the Evangelization of People had the help of the Misereor Institute, a German group for helping the Third World, which provided 10 of the 30 experts. The other 20 were provided by Urbaniana University. Papers presented were collected in a symposium which had as its title "Development of Emerging Culture" with three variants: "Development and Society," "Human Advancement," and "Functions and Dysfunctions of Development." The primate of Brazil, dom Avelar Brandao Vilela, archbishop of Salvador, participated in the analysis as vice president of the General Council of the Pontifical Committee for Latin America.

Bishop Advocates Social Justice

The bishop of Santo Angelo [Rio Grande do Sul], 459 kilometers from the capital, Dom Stanislaw Kruetz, said yesterday that "the Church received as normal," the speech made days ago by the PDS [Social Democratic Party] leader in the Senate,

Jarbas Passarinho, "because he is an intelligent man and understands the situation." He continued: "It happens that the ideology of the government is not compatible with the structures and message of the pope. The Church makes it a point to place itself in the area of truth and social justice. Since Jarbas Passarinho understood that, that is, he understood the reasons for the differences, it is logical that he react."

Primate Minimizes Problems With Government

The primate of Brazil, the cardinal and archbishop of Salvador, dom Avelar Brandao Vilela, in an analysis in his Sunday talk on Church-State relations, said that "instead of diagnosing the phenomenon as normal between independent entities in a transition phase," many tried to "provoke and incite possible confrontations of an unavoidable nature."

In the opinion of dom Avelar, the incidents which occurred "gave room to the emergence of fantastic ideas, extravagant opinions and flights of fancy worthy of the best fiction novels."

The Complete Text

The latest incidents between the Brazilian Church and State led to some clashes and collisions in the religious and political sectors of the country and gave room for the emergence of fantastic ideas, extravagant opinions and flights of fancy worthy of the best fiction novels.

Instead of diagnosing the phenomenon as normal in the relationships of independent entities undergoing a climate of transition and consequently of unavoidable changes, many tried to provoke and incite possible confrontations of an unavoidable nature. It is on the basis of that universe of concepts and expectations that a disagreeable episode goes on to assume gigantic proportions and the attitudes of groups or persons are pictured as a living and final expression of all official institutions.

Thus, the singular becomes general and that which is relative acquires the category of the absolute. And there appear words in the form of challenge and the watchwords begin to circulate, depending on the desires of the manipulators of public opinion.

What is happening to the Church, the mother church of Brazil, that church which instilled in it the first hopes in that wild place of discovery?

What is happening to Brazil, which today represents millions of human beings desirious of happiness and worried about their future, but which undeniably owes the Church inestimable services in all sectors of life?

Was it the Church that changed or was it Brazil that changed its philosophy?

Both have the same interlinked destiny, although at this time they are undergoing the ostensible effects of ideas and the moral and social behavior which affects the climate of the times.

Brazil is distinguished from the regimes, which temporarily directed the course of its history, just as the Church cannot be totally confused with occasional representatives of its social action. The institutions are greater than isolated persons and events.

A question to be pondered: Should the Church hierarchy treat those who today do not participate directly in its specific movements, but who proclaim they are its children, as if they were unbelievers and completely incapable of conversion or of being helped by religion?

Are those who do not accept a certain pastoral line of the Church truly heathen?

What was the behavior of the early Church toward the heathen? What was the attitude of early Christianity toward the ill-intentioned Pharisees and Saduccees?

In Brazil, it is obvious, we have a scale which runs from 10 to zero in whether or not the guidng principles of Christian conscience exist. Does that fact give us the right to systematically reject and condemn those who are weaker in faith and less enlightened in the performance of duty?

In the sociopolitical field, does the acknowledgement that Medellin made of the state of sin existing because of the uncertain living conditions of most of the Latin American people, authorize us to apply to those responsible for a certain moment in history, the harsh accusation that they are also in a state of an unpardonable sin?

Are there no attenuating factors such as being unaware of the dangers; the inability to perceive a complete reality; the presumption that the way embarked upon will bear fruit in the long run?

All these reflections lead us to understand that the mission of the Church is not so much that of condemning as it is one of educating, opening roads to a better life, forgiving and being charitable, until it is verified that good will and good intentions exist.

Lord, guide our footsteps, enlighten our minds and strengthen our faith.

Lula Claims Community Support

Rio de Janeiro JORNAL DO BRASIL in Portuguese 4 Dec 80 p 7

[Text] Sao Paulo--After describing the new minister of education, Gen Rubim Ludwig, as a man of "good sense" because he talked with strike leaders, the president of the Workers Party [PT], Luis Inacio da Silva, said yesterday that the Church "does not support our party nor does it support any other party," but admitted that members of the Rank and File Ecclesiastic Communities "are sympathetic toward the PT."

Lula received the support of some student leaders and revealed that the PT will hold its municipal conventions on 28 July. Regional conventions will be held on 16 August and the national convention was scheduled for 6 September. Signing up for membership in the PT was the former president of the UNE [National Student Union] Rui Cesar; the former vice president of the same organization, Alon Feuerwerker; Marcos Galvao Caloi, formerly of the State Students Union [UEE] and Maria Francisca, also of the extinct directorate of the UNE.

Candidates

The PT president asserted that his party is readying candidates for 1982 at all levels and admitted the possibility of coalitions. "In the PT the workers are organizing to arrive at power," he declared. In his understanding, the sympathy that the church rank and file communities revealed for the PT "can only help the party."

He recalled that during the last metalworkers strike at the ABC [the industrial sections of Santo Andre, Sao Bernardo do Campo and Sao Caetano do Sul], the Rank and File Ecclesiastic Communities "gave support to our strike fund and helped in the distribution of food." Lula said that the ABC metalworkers continue to believe that the old union leadership (deposed during the strike) "did not vanish" after the intervention. He said that "there is a wage campaign and the workers accept the old leadership as class representatives." He criticized Minister Murilo Macedo when he declared that Minister Ludwig has "good sense," because talking with strikers who make demands is an obligation not a favor.

NATIONAL VANGUARD WORKERS HONORED BY FAR

Havana VERDE OLIVO in Spanish 23 Nov 80 p 54

[Article by Mario Rodriguez: "Homage to Vanguard Workers"]

[Text] Recently a ceremony in which our Revolutionary Armed Forces (FAR) honored the 34 most outstanding workers of 1979 in socialist emulation, selected from among the national trade union vanguards, was observed at the Central FAR House.

This group of workers, to whom the Jesus Menendez medal was awarded, were accompanied by 32 leaders of the best cane cutting brigades in the past harvest and other outstanding workers in various sugar production tasks, who were also recipients of the high award conferred by the Council of State.

During the ceremony, which was attended by many officers, soldiers, sergeants and vanguard civilian workers in the FAR in the 1979-1980 training period, Capt Lazaro Alonso Nodarse, a vanguard officer in the DAAFAR [Antiaircraft Defense and Revolutionary Air Force] gave an address. Welcoming those present, Captain Alonso spoke of the great honor accorded the participants by the presence of this group of comrades who have done such outstanding work in the fulfillment of the various tasks entrusted daily to the workers' class in all sectors of our economy. He went on to say:

"You comrades, both men and women, represent the self-sacrificing effort and creative enthusiasm of our workers' class. You continue as you have to date to give the best of your lives to the development of our revolution and our entire society."

Expressing thanks for the simple but moving honor, Comrade Clara Cabrera, National Vanguard Worker of the Villa Clara Education Union, said:

"We want to pledge to the representatives of our Revolutionary Armed Forces, who defend our skies, our seas and territory so courageously, our continued effort with the same determination and responsibility, and our intention to salute the second congress of the glorious Communist Party of Cuba with more efficiency and the fulfillment of our daily tasks."

MILITARY RECIPIENTS OF VANGUARD AWARD INTERVIEWED

Havana VERDE OLIVO in Spanish 23 Nov 1980 pp 52-53

[Article by Juan Valdes Figueroa: "The Third Important Moment in His Life"]

[Text] "What has been the most moving moment in your life?"

Guards Captain Normando Eloy Brito Quintero could not answer us immediately. He fell to thinking.

"There have been so many!" he told us. "But in any case I can mention three peak moments: when I was accepted into the party ranks, when I was named an FAR vanguard officer for the first time, and now, when I was elected a direct delegate to the second congress of our glorious Communist Party of Cuba."

On Tuesday, 26 August, Normando was participating in the ceremonies held to honor the FAR vanguard personnel, the third time he had done so. That day the meeting to elect the direct delegates to the second congress of the PCC [Communist Party of Cuba] was held at his unit in his absence. The meeting voted to include him on the slate as one of the candidates. In the 45 minutes this important selection process lasted, what is now a reality was proposed, discussed and approved: Normando Eloy is the direct delegate of his unit to the second congress of the PCC.

On Thursday, 28 August, Brito returned from the ceremonies to honor the vanguard personnel. When he opened the door to his home, his wife, who works in the same unit, whispered to him, full of emotion, "congratulations, Normando." And without giving him time to ask her why she was congratulating him, she said aloud, "you are the direct delegate to the second congress!" There was no answer. Both his eyes and hers filled with happy tears as they stood quietly, gazing at each other. This was the third peak moment in his life.

We have at hand his biography, and the following lines immediately leap to the eye:

"Joined the FAR in 1963." "Pursued studies in the Soviet Union." "Joined the UJC [Union of Young Communists] in 1967." "Joined the PCC on 12 October 1971." "Awarded the title 'Of the Guards' for outstanding work in combat and political training in 1976, the 'Granma Year 20' award in 1977, and was named FAR Vanguard Officer in 1976, 1977, and 1980."

"We believe that the direct delegate to the second congress is a most worthy representative of our military, because of his merit, his attitude toward work and study, and his excellent fulfillment of his social duties," Guards Major Antonio Garcia told us.

Together with Esperanza Perez, his wife and working comrade, Normando has established a family, in which a girl and a boy are growing up and being educated. "He is a man concerned about the education of his children and the advancement of his wife," Guards Captain Ramon Cordove told us, adding: "The CDR [Committee for the Defense of the Revolution] has awarded him the title 'Exemplary Father'!"

His wife told us: "He is a faithful adherent to the family code, and what he usually tells me is this: 'At work I am the chief, at home I am your subordinate.'"

Normando serves as an officer of the CDR, and is a "front line combatant" in that organization.

Guards Captain Jose A. Perez talked to us about Brito. "He is zealous in carrying out his work, modest and very generous." He, like the other comrades, agrees that Normando is an extraordinary man." He has mastered various specialties related to his work in addition to his own. In 1979 he succeeded in reaching the highest category: he is a master technician. They regard him as extraordinary because in addition to all of this he took third-year courses at the university in the electrical engineering specialty and passed his subjects with outstanding marks. He was capable of doing all the above without failing to fulfill the tasks of combat and political training of the personnel.

"I studied with him in the USSR. He was then a little more than 17 years old. He had the soul of a child, but the character of a man." Guards Captain Ramon Cordove told us something more about Normando's life. "After some years, we met again in this unit." He stopped and recalled: "Once I persuaded him that we should continue our advancement at the university. This was rather difficult at that time. The preliminary check of the combat firing was being made in the units. It was almost impossible to study. I could not, but Brito found the strength to study in the early morning hours. He was already in the third year of his course. His iron will as a communist is a worthy example for the comrades in the military unit to imitate."

Norman was a delegate from his unit to the party conferences in 1975, 1977 and 1980. He was secretary general of the PCC cell in his unit in 1978 and education secretary from 1974 to 1978 and in 1979.

We sought out Brito to say goodby. As always, his eyes revealed a man who acts with the modesty and simplicity of the communist. And that brief talk I had with Major Juan Mendoza, who was a delegate to the first congress of the PCC, came to mind. When he returned to the unit after the conclusion of that historic forum in 1975, Brito asked him jokingly:

"Mendoza! What do you have to do to attend a congress?"

"Work!" Mendoza answered him.

And here now, after five years, Guards Captain Normando Eloy Brito Quintero has been elected as a direct delegate to the second congress of the Communist Party of Cuba by his comrades.

PCC WORK ON COMBAT READINESS IN DAAFAR UNIT DESCRIBED

Havana GRANMA in Spanish 22 Nov 80 p 2

[Article by Enrique Sanz Fals: "Party Work in A DAAFAR Antiaircraft Artillery Unit in Support of the Task of Increasing Combat and Mobilization Readiness"]

[Text] Our glorious Revolutionary Armed Forces (FAR) have played a decisive role throughout these years in safeguarding the conquests of our people in the building of a socialist society. They have been the faithful guardians of the fatherland and have successfully carried out the missions entrusted to them by our Communist Party and by Commander in Chief Fidel Castro.

As the program platform says, "the Revolutionary Armed Forces represent the armed and certain bulwark for the defense of the fatherland against any possible aggression, direct or disguised, by the imperialists."

The combatants in our FAR have been educated by the party in the principles of Marxism-Leninism, proletarian internationalism and the love of patriotic values. They set an example of discipline, modesty, simplicity and self-sacrifice.

Our people feel justly proud of their glorious armed forces.

Throughout all these years the party has devoted priority attention to the development and perfecting of the FAR, which, as a result, have considerably strengthened the defense capacity of the country and have substantially increased the combat and mobilization readiness, as well as the political-ideological training of the combatants.

Together with these important tasks, the party has worked zealously in the FAR for the proper functioning of its base organizations, which have developed increased strength and cohesion.

Concerning this aspect, Comrade Fidel Castro, in his main report to the first congress, said that "the work of the party within the armed forces has made it possible for its organizations to achieve a high level of maturity and development, through systematic study, from their beginnings, of Marxist-Leninist theory, the strengthening of their internal life and constant and qualitative growth of their ranks.

Subsequently the first secretary of the party said that "in the development and perfecting of the Revolutionary Armed Forces, an outstanding role has been played

by the commanders, officers, political workers, and party bodies and organizations which, throughout these years, have trained the combatants in the field of modern combat technology and consistent mastery of modern military art, and they have been able to march at the head of their troops to repel the armed attacks of the enemy."

How the Party Functions in the Military Unit

In order to understand the details of the functioning of the party in a base organization of the FAR, we recently visited an DAAFAR [Antiaircraft Defense and Revolutionary Air Force] antiaircraft artillery unit. There we were told in this connection by Capt Juan Bonet Vinas, party organizer (replacing the head of the political section of the unit) that "the party functions in the FAR on the basis of the Leninist principles of organization, being governed by the program platform, the party bylaws, and its own regulations and special instructions, which are ratified by the central committee. Its structure is based on the principle of territoriality, bearing in mind the inherent characteristics of military units."

"It is necessary to stress," he went on, "that all the decisions of the higher party leadership organs are necessarily binding on the base organizations, both in civilian life and in the FAR."

"In the cell meetings," he said, "there is democratic centralism. All of the militants have the same rights and duties and therefore all of us can criticize and be criticized; all of us are required to carry out the tasks the party assigns to us."

The FAR cells also meet periodically, draft their labor plans, organize study circles, submit reports to the higher bodies and work toward growth.

"The main directions of party work in the unit," Captain Bonet said, "are oriented toward increasing combat readiness, maintaining, utilizing and safeguarding technical equipment and weaponry, consolidating the political, moral and disciplinary status of the personnel, as well as the fulfillment of the tasks of internal life."

"The party," he added, "has worked hard to insure fulfillment of the agreements of the first congress pertaining to combat preparation in the military unit. As a result of this work, we have won satisfactory marks in the tasks carried out both internally and by the higher command in the last three years."

Lt Col Hector Castellanos Naranjo, the unit commander, for his part, said that "the majority of the officer personnel are party members, and this has made itself felt in the results achieved in recent years. We have had notable achievements in the daily work of the unit, and this has been due in great part to the support and influence of the party work. There is great unity between the party and the command in our unit. We feel satisfied with the work and the fulfillment of the task."

The tasks of internal life have been carried out in the unit, we were told, consistent with the agreements of the first congress, and in similar fashion, the plans for growth have been achieved, and the militants who had not reached the eighth grade level at the time of the first congress have since done so.

"Internal life in the cells of the unit is developing normally," Captain Bonet said, adding: "Basically, the tasks are carried out properly during maneuvers and exercises by all of the militants. Whenever there are important activities, the party holds meetings and adopts resolutions and measures in support of their fulfillment. When we set out to fulfill these missions, each militant knows perfectly well what tasks are assigned to him by his cell. Then the cell meets again and analyzes the work done and drafts conclusions."

The party leader said in conclusion that "there is great unity, interrelationship, comradeship, knowledge of the problems and enthusiasm here."

"Our armed forces, as Comrade Fidel Castro said in his main report to the first congress, has been a great school for conscientious, responsible and disciplined cadres for the revolution."

Within the FAR, the main task of which is the defense of the conquests of the working people, the party constantly maintains its influence with a view to the achievement of the goals set forth for combat and mobilization readiness, operational, combat and political training, the maintenance of technical equipment and weaponry and military discipline.

Similarly, the base organizations of the party devote constant concern to strengthening the single command, which is one of the basic principles of the military structure. The communists are the basic support, the force promoting and directing all the activities of the troops toward the fulfillment of the missions assigned.

NEED FOR GUIDANCE INTO HIGHER EDUCATION NOTED

Havana GRANMA in Spanish 28 Nov 80 p 3

[Article by Georgina Jimenez: "Concern for and Direction of Young People Toward Higher Education Needed"]

It is somewhat shocking to find that on occasion our 12th grade students face the problem (so important in their lives) of selecting a profession or deciding whether or not to accept a scholarship abroad without the proper guidance at their study center, without any evidence of interest in seeking them out and helping them to make the decision.

Just recently a list of more than 100 specialties (traditionally known as university courses) which can be pursued in the USSR and the other socialist countries, and the general requirements for choosing among them, has been posted on the bulletin boards in pre-university establishments. There are centers where access to these bulletin boards is such that it is left spontaneously to chance whether or not the students will come upon them, which they may not, for sometimes the placement of this information has not been in the best places, but in remote corners.

But this is not all. The notices placed on the bulletin board are limited to just a list of the names of the specialties, and in general the young people do not know what each involves. This is inconceivable, if we take into account that in all the pre-university establishments there is at least one copy (we believe there should be more than one) containing an occupational profile of a graduate in each of these specialties, and in many educational centers the students do not know about this. We have seen this to be the case. They do not even know that such a copy exists.

This goes beyond a lack of efficiency and organization. It seems to us that insensitivity is involved. How can we remain unconcerned by matters so basic to our students? Professional guidance is the duty of the state to young people, so that they can reconcile their individual interests with the needs of the country. And the most direct tool for the state in working with the student is the director of the pre-university establishment (which is the reason he is designated president of the enrollment commission at the institution).

Therefore it is indispensible that, with a view to the next period for the allocation of higher educational opportunities on the national level, directors and teachers (mainly counselors) be well informed about the mechanism of the enrollment system and make use of all the possible means of information and publicity. How much timely

guidance can contribute to the peace of mind of a young person and his parents, and to avoiding errors or misdirections which may months later affect the work of those on other levels responsible for selection and the allocation of opportunities to thousands of young people!

In this connection, there are joint agreements between the ministry of education and the ministry of higher education for coordinated work, and since the last school year there has been a MINED [Ministry of Education] resolution (Nos 100 and 101) to this end. But the guidance must be carried out at the base in order to be effective, for independent of the understanding which may exist on other levels, it is here, at the school, where the success or lack of it in the task undertaken is first determined.

The party cells, the organizations of the UJC [Union of Young Communists] and the FEEM [Federation of Middle School Students] have an obligation to promote and channel these basic questions (and that is what they are) of interest to the student body, and this is a policy of the leadership of the revolution. But as we have said, we cannot view this coldly as a duty directed and spelled out in resolutions. There are things which must be undertaken efficiently, motivated by the conviction that they are important and necessary for our students, who depend so much on us at times like these. These things include their access to higher studies.

Feeling this to be true is one of the reasons for the existence of each educator, whose duty it is to be always involved in the interests and the future of his students.

REPORTAGE ON CUBAN STUDENTS, ACTIVITIES IN GDR

Havana JUVENTUD REBELDE in Spanish 20, 21, 24, 25, 27, 28 Nov 80

[Article by Marcos Alfonso: "Cuban Youths in the GDR"]

[20 Nov 80, p 2]

[Text] "I will tell you something else....I miss my land....No one will ever know how much I love it!"

There was nothing except occasionally some road or sign that revealed the presence of man. Only the trees and birds found shelter in this land on my island.

The names and faces of these sweaty youths who passed in front of me might never appear in the stories of any writer.

Now they have gone beyond the Atlantic to another land that welcomes them as its sons. They work hard, learning the secret to good work in another language. They are better preparing themselves for their future in the land where they were born.

On 4 May 1978, an agreement was signed between the Cuban State Committee for Labor and Social Security and the State Secretariat for Labor and Wages of the GDR. It summarized the talks and visits by intergovernmental delegations of the two countries concerning the temporary use of young Cuban workers who would work and be trained in production in the GDR.

The first ones arrived at Karl Marx Stadt Province 2 months later. Today there are 5,053 youths working in the provinces of Halle, Leipzig, Magdeburg, Dresden, Cottbus, Erfurt, Gera, Suhl, Berlin, Potsdam, Schwerin and Naubrandeburg.

The youths are trained in 64 specialties: 68 percent, mechanical; 15 percent, chemical; 8 percent, electronic; 6 percent, construction; 2 percent, textile; and 1 percent, metallurgical.

The new workers are grouped in 68 collectives in the GDR. By the end of 1980, there should be about 7,000 youths working and receiving "on-the-job" training there.

Not Just "Guten Morgen"

Unquestionably, one of the most difficult barriers for the inexperienced workers to overcome is the language barrier. It is not enough to learn to say "guten morgen"

(good morning). They need to learn the technical vocabulary of their specialty and enough vocabulary to get along in the country.

In addition to the 200 hours set aside in the agreement for learning the language (not enough, in our opinion), they continue learning by practice and effort. It is not unusual to find German teachers now who mumble a little "Cubanish" (as they jokingly call it).

The Cuban youths must be between 18 and 25 years old and have at least an eighth grade education. However, flexibility in the selection at times causes problems. A youth with less education cannot learn the language, much less the technical material that is taught.

Remember, they will remain in the GDR for 4 years. Their main duty will be to work in the enterprises to which they are assigned and, at the same time, be trained.

During the first 15 to 24 months, they receive 42 days of vacation which must be taken at one time in Cuba.

Other Side of the Coin

Like any undertaking, this is not without problems. They exist and, as the Cuban economic office in the GDR stated, they are varied. The main problems are as follows:

1) The selection at times is not as strict as it should be and, occasionally, youths without the required educational or political level arrive in the GDR. They eventually must be returned to Cuba.

2) There are discrepancies, already being worked on in the GDR, between the job descriptions that are assigned to these youths in Cuba and the German enterprises' concept of the same job.

3) There is no training period prior to departure to educate the youths about their working and living conditions for the next 4 years. This is indispensable.

It should be stated that the necessary measures to correct these problems have already been adopted and the program progresses as planned, according to the law.

Keep in mind that many of these youths do not have (or did not have) work experience. They arrive in a country like the GDR where the working class, in addition to its proletarian and fighting traditions, possesses admirable strictness and discipline. This demonstrates the need to prepare them properly before their departure.

Out of the salary which they receive (since they are considered regular workers at the factories or enterprises where they work), they are given 350 marks (the national currency of the GDR). Sixty percent is withheld and sent to Cuba to be deposited in the bank in national currency. They also receive 4 marks a day as a separation allowance.

With this money, the youths pay for housing (they generally live together in apartment buildings), food, transportation, clothing and, obviously, recreation. They

also pay the UJC [Union of Young Communists], party or union. (They are affiliated with the Free German Unions and, thus, enjoy similar rights and have the same duties as the native workers.)

Adaptation

The oldest ones (that is, the pioneers in this work) report that there are various problems to overcome in adaptation: the language, the climate (this year, for example, there is an early winter), the labor discipline, the cultural customs and, to a lesser degree, the food.

It should be recognized that the GDR is a nation with highly cultured people. They are also an example of labor and social discipline.

The group living generates problems when there is no previous experience or adequate preparation although they are not acute problems.

Then there is the use of free time.

The enterprises and the committees of the FDJ [Free German Youth] play an important role in this; they organize many activities with the UJC.

Most of the collectives already have baseball, volleyball and soccer equipment, table games and a library. Some have formed cultural groups.

There are already some Germans who, on more than one occasion, have grabbed a glove and participated in a "pick-up" game.

The most important part of this experience is that many of these youths (let us say, the majority) are important to the enterprises in which they work, most of which produce exports.

In spite of the language barrier and other organizational problems, it works.

They need only smooth the road a little and continue advancing since the inexperienced workers from my island not only work in the GDR now but they are also in Bulgaria and Czechoslovakia.

Although their names and faces do not appear in the stories of any writer, they are there, beyond the Atlantic, preparing themselves to build the future on the red earth where they were born.

[21 Nov 80, p 2]

[Text] Hector Munagorri never was a good ballplayer.

This Cuban over 6 feet tall is not a good athlete either, but it is not unusual to see him outside Alfred Kowalke in Berlin with a glove on his hand.

People shout to him: "Munagorri, catch one for your mother!"

Let us change scenes and go to the EAW [Elektro Apparate Werke] (electrical equipment enterprise) in Berlin. The opposite will be heard there.

Munagorri! That Cuban is great at work!

Even Gunter Ludwig, foster father for this group of Cuban youths being trained at the Berlin enterprise, recognizes Munagorri as an example of the Cuban younger generation.

It was almost a year ago when the inexperienced workers from the Caribbean arrived at the EAW. Since then, they have specialized in milling, lathe and press. It is a mixed group with men and women, or boys and girls--whatever you want to call them.

The majority came from Cuban agricultural regions and the first 15 days were tense, especially because of the language.

In a modest and attractive--especially warm--office of the EAW, JUVENTUD REBELDE interviewed three Cuban youths who work there: Maria Garcia, Munagorri and Ramon Santana. It also interviewed Irina Kreysh, second secretary of the FDJ in that enterprise, and Papa Gunter who has the Order of Gold, the highest award that the German state gives for service to the fatherland.

Maria at Bat!

Maria has eyes like grasshoppers that do not know where to land and a broad smile.

She has worked for 10 years but it is different in the GDR. Everything depends on one's ability to adapt, especially for the women.

She said: "There are 20 girls here and the biggest problem we have had has been illness because of the climate which causes abrupt physiological changes."

The reader should know that this is a continuous production enterprise. When you have the morning shift, you must get up at 0430 hours and catch the streetcar or subway in order to arrive at 0600 hours. Let us add that it is 2 or 3 degrees below zero. Imagine!

"Parties? Of course, like in Cuba....When we are paid, we always find "occasions" in this building. We fill our free time although we also study the language daily. It is necessary to wash, iron, cook and all those things....Although there are no married couples, people in the group have paired off."

Munagorri, the Best

Munagorri reported: "Here one must work, perform and listen to learn what they teach us. That is our mission and we must carry it out completely.

"We must not neglect discipline and learning the language. That causes the most complaints since, at times, there is someone who thinks that because he knows four words, he does not need to learn more. Then come problems with the technical terminology.

"We have recreation. I myself am bad at baseball but I play it. There are places to go: dances, museums, movies, etc. We have girlfriends....It should also be stated that our German professors and work colleagues are very concerned with our group.

"We have worked to form a musical group and the factory bought us instruments.

"We live four to a room in the building and we have a refrigerator and radio. Any maintenance problem is taken care of immediately. Our hosts, as we call them, are very conscientious."

Ramon and the UJC

Then Ramon Santana spoke:

"There are already 107 youths in the EAW, many of us without work experience.

"The work is aimed at specialized training and, especially, learning the language.

"At the very beginning, the FDJ established contact with the UJC--we have 51 members--and we have developed many joint activities (cultural, sports and recreational ones).

"The group balances work with language study because there are three 8-hour shifts daily in the enterprise."

Irina, Gunter Express Opinions

Irina: "After the first contacts with our UJC colleagues, we signed a cooperation agreement in which we set forth the work principles for the Cuban workers in our youth brigades. (There is a collective named Intercosmos.) We have worked together.

"Not only do we emphasize the economic results but we also work on the social aspect: cultural activities, sports and meetings to exchange experiences. The cooperation has been magnificent until now and is increasing.

"The FDJ has also supported the Cubans in volunteer work which they have done as a salute to the Second PCC [Communist Party of Cuba] Congress with the objective of collecting funds for that important meeting."

Gunter: "I must begin by saying that the EAW has some 10,000 workers. Its main products are electronic equipment for ships, thermoelectric equipment, industrial refrigeration, transistors and measuring equipment.

"When the youths arrived at the enterprise, they did not have any training. Today they are already important in some jobs. Many Cubans try to learn fast; Munagorri is one example. Others are a little lazy but all, to a greater or lesser degree, have advanced.

"We have regular contacts with the collective and we have joint activities. We are happy with the results."

Housing

The meeting did not end at the enterprise. After the interview, we went to Alfred Kowalke 24, the building where they live. We saw the clean and neat housing.

Some girls were cooking; others performed different domestic activities. The athletes played baseball and football. When they saw Munagorri come, they hid the gloves. However, they all came over to him and Papa Gunter to be included in the photographs for this report.

There is no question. There have been problems but there has also been progress. The road should be smoother. In spite of the distance, they are happy and that is what is important.

[24 Nov 80, p 2]

[Text] It seems easy to make traveling or portal cranes.

However, when you enter the confusing world of iron and laminates, solders and gigantic lathes, your image of the giants with steel arms that carry everything completely changes.

Eberwalde is a town some 60 kilometers from Berlin. The little town is picturesque because of its varied architecture where houses with red tile, double-sloping roofs with their ever-present dormers and chimneys predominate.

Hans Joachim Elseberg, teacher for some Cubans, told me that Jorge Callejas would learn much more quickly if it weren't for his hair.

This joke by the milling section chief about a Santiago 18-year-old who works very hard at the crane factory led to a spirited dialog.

"What do the Cubans do here?"

"They are trained as machinists, shavers and lathe and plane operators."

"The best?"

"The machinists and lathe operators. The shavers do well, too. They are already important to production."

"Disciplined?"

"Yes, they maintain very good discipline and are very clean in their work."

"Problems?"

"The language. Although it should be said that the machinists work without direct instruction after the first 6 months."

"Considering the time that they have spent in the industry, how do you evaluate their learning?"

"Very good. Their development has been very positive."

Callejas from Santiago

"What has your training here meant to you?"

"It has meant a lot. I was not a worker; I was a preuniversity student. In the year I have spent here, I have pretty well learned the specialty for which I am being trained."

"And the long hair? Is it because of the cold?"

"It is the style, you know; it is not because of the cold. Actually, I have neglected myself but I assure you that I am going to cut it soon...a little. I am young and here, you know, long hair is not all that bad."

"It is your decision, of course?"

"Of course, of course."

Andres: First Anniversary

When I saw Andres Estrada, a 24-year-old from San Luis, seated in a little car that moved back and forth, I thought that he was playing or something. (My mechanical ignorance will be the death of me.)

Andres is the operator of a horizontal lathe with many cutters. In the little car, he was adjusting the sweep of the cutters on the metal. The sheets of steel or iron that will form part of the cranes are prepared here.

Estrada can say that he is a lathe operator.

"What can you tell me about this year in the GDR?"

"I have used it well with my teacher." (Andres turned his head, looking for the German technician who has trained him; he sat smiling.)

"And what does the teacher think?"

"Andres works very well. He fulfilled his quota like the rest of the workers. He is punctual and also participates in all the tasks of the enterprise. He can already work alone with the machine. He has learned the language and can converse in German."

Inside Eberwalde

At present, 43 Cubans are working in the Eberwalde crane factory. A high percentage of the collective learns the material well and completes their work although, at the beginning, there were some cases of low education.

The factory has 3,500 workers. It manufactures assembly, portal (for ports) and freight cranes.

The cranes are exported to 24 countries on four continents although the main buyer is the Soviet Union. (The enterprise has already produced 1,700 cranes for the USSR.)

The factory produces 12 cranes a month which are shipped in parts and assembled in the purchasing countries.

This year the enterprise allocated 10,000 marks for recreational activities for the Cubans (cultural activities, sports, excursions and visits to historic sites). This fund will total 16,000 marks in 1981.

Nevertheless, according to Klaus Dieter Wichmann, first secretary of the FDJ in the factory, joint activities with the UJC should still increase. They are working in that direction.

They are now working on the integration of Cuban youths to the FDJ youth brigades in order to carry out many bilateral tasks.

In Eberwalde, in spite of the good workers, there is still work to be done.

One can ask: "Isn't it hard to spend 4 years training in a foreign country with different customs and a different way of life?"

I gave Andres Estrada a firm handshake when leaving. He looked at me smiling, shrugged his shoulders and told me:

"It is not easy. However, we come here and we will be here to fulfill the assigned goal. We cannot think of ourselves but do this as Cubans."

"And the separation from your family?"

"That passes, comrade. The thing is to work and train ourselves since Cuba needs us. We are not tricked; we clearly know the magnitude of this enterprise."

[25 Nov 80, p 2]

[Text] Leuna is an area with great worker traditions.

The old German imperialism founded its basic industries there.

One of them, the chemical complex, was founded in 1916 to produce ammonium. A year after opening, it had 7,000 workers.

Leuna was always a region of proletarian struggle. In 1927, Ernest Thaelmann inaugurated a monument commemorating 54 workers who had been shot by reactionaries.

After World War II, civilian production resumed at the complex with the aid of the Soviet Union. Previously, it was used for the war industry.

It was in Leuna-Werke where a gun was presented to Commander in Chief Fidel Castro during the visit he made to the GDR some years ago. It symbolized the beautiful fighting traditions of the working class.

Now it is one of the largest industrial complexes in the GDR. More than 400 basic products are manufactured in this factory of factories, especially caprolactam (basic raw material for synthetic fibers) and adhesives.

The oil to run the complex that now employs 30,000 workers, of whom 7,500 belong to the FDJ, comes through the Druzhba (friendship) pipeline.

The plan for this year is 45 million marks. As of October, this strong working class surpassed that figure by 13 million.

Cuban youths came to Leuna-Werke more than a year ago to work and to study.

Klaus Dieter Steinecke is the first secretary of the FDJ at the complex. He is satisfied with the good contacts with the Cubans, particularly with his Cuban counterpart, the UJC.

The joint work has included the formation of youth brigades, participation in different activities, meetings and exchanges.

Now the brigades are fighting to win the right to name each collective after a Cuban martyr.

The Cubans are trained in four specialties: electricity, instrumentation, mechanics (pumps, tubing and compressors) and evaporation.

German work teachers sponsor the Cuban youths who work there. They are satisfied with their learning although the age-old problem always crops up: the language.

A Very Cheerful Man

In spite of being an older man, engineer Gehard Zeidler is very cheerful.

He has taught a group of workers from the Greater Antilles for 15 months. He trained others years before who today are specialists in pipe installations in the Karl Marx cement factory in Cienfuegos.

He already had experience in working with workers from other countries, a so-called Latin-German symbiosis.

Jose Acosta and Alberto Mollinedo who, Gehard said, /are very good workers/ [in boldface] are one example.

During a ceremony held in the complex last 26 July, both Cubans were honored for their outstanding work.

We can apply the popular saying here: /as the teacher goes, so goes the student/ [in boldface].

Mollinedo: "We did not even think about this award since we thought many other youths deserved that distinction....It was unforgettable to receive that award in a joint ceremony in front of our Cuban and German brothers."

Acosta: "I did not have work experience. I finished the SMG [General Military Service] and came to carry out this task....Imagine my deep pride in receiving the award that was presented to me. As Mollinedo noted, other colleagues in our collective deserved it, too."

In Spite of Cold

Don't think that these youths do not participate in emulations. The cold and the early rising are not obstacles.

During the last emulation, the collective at Leuna-Werke took second place.

Everyone is involved in his contribution to the Second PCC Congress with volunteer days in the factory or in agriculture, wherever!

They also fight to maintain good discipline and personal appearance, learn the language and participate in joint activities with the FDJ.

They hold political and professional conferences where Germans or Cubans participate, depending on the situation.

They have a plan for professional training and sports and cultural activities. (In Leuna there is a folkloric dance group that has already toured most of the country.)

In spite of the fact that, at the beginning, there were various small problems, the truth is that the collective progresses well today.

At the end of the afternoon, we left the factory and went to their residence where we had coffee "a lo cubano" and we sipped vodka to warm our bones.

We saw the order and cleanliness of these Cubans in their residence, a modern building on the outskirts of Leuna.

In spite of the distance, the climate, the language and the customs, the youths have managed to overcome those problems and fulfill the roles that were given to them.

This means 4 years of hard work but in Leuna-Werke worker traditions date back almost a century and the German teachers also fight to graduate good students!

[27 Nov 80, p 2]

[Text] In Berlin it was 2 degrees below zero.

The people walked quickly through the streets to their warm homes. It was after 1700 hours and the sky was almost totally dark.

The city came alive with the neon lights on the main avenues and the lights of hotels and businesses.

In a room at the Cuban Embassy in the GDR, there was a meeting of the party committee. The topic was Second PCC Congress emulation.

We were invited to this meeting. Vicente Pineda, secretary of the party committee at the Cuban mission in the GDR, knew about the reports that JUVENTUD REBELDE had done on the youths from our country who work here. He conceived the idea that the press attend the debates on the selection of the best collective this time.

The emulation project evaluates: work and education commitments, discipline, social conduct (personal aspect and relations in general) and promotion of activities that make better use of free time by the Cuban youths in the GDR.

Also volunteer work, conference plans and other political tasks (acts of solidarity, friendship meetings, etc.) are evaluated.

Although the party is still not completely satisfied, the emulation has yielded results.

These figures for the July, August and September quarter demonstrate this:

Attendance at classrooms, 92 percent; attendance at volunteer work, 45 percent (116,015 marks were collected; the youths cannot always do volunteer work at their enterprises due to the high degree of productivity); political activities, 99.7 percent; and sports, cultural and recreational activities, all more than 50 percent attendance.

The effort of the outstanding collectives is recognized in public ceremonies where the best workers and provinces (there are Cuban youths in 14 provinces of the GDR) are rewarded.

The Debate Began

The Berlin cold was forgotten in the heat of the discussion.

Many opinions were given. There were reports that sometimes did not arrive on time due to the distance.

For example, the cell in the Rostock region made a laudable effort to take care of all the collectives that work in that territory (practically one-third of the GDR). It must be added that this task is performed using available public transportation (bus, train and, least of all, cars).

As in Cuba, volunteer work aims at forming communist awareness in the youths. In the GDR, it has also been proposed to make a contribution to help pay for the expenses of the Second PCC Congress.

However, the high efficiency of many German enterprises means they do not need volunteer work. The youths do not stop at factories. At times, agriculture in the region where they work or live needs manpower and there are the Cubans, making their contribution!

It was also agreed that disciplinary problems be included in the emulation. A policy had to be established with proper application of dialectics.

A certain collective might have had disciplinary problems but the positive reaction of its members raised the group's level of work and study. Should it be rewarded or not?

Things are not as bad as some undisciplined people who have been returned to Cuba have pretended!

When 92 percent of the youths work, study, produce and perform, things are not so bad!

Adding the fact that in many places they are crucial in the fulfillment of the production plans of the enterprises, the image changes completely.

1981: Baton Passes to the UJC

In the coming year, the UJC in the GDR will direct and check emulation for the many inexperienced workers on the other side of the Atlantic. (The ages for selection range from 18 to 25 years.)

There is the background of the Second PCC Congress emulation. It now falls to the youths to create more dynamic methods and contribute experience; that is, to inject it with that dynamic nature that the younger generation possesses.

Santiago, Guerra, Mario, Carlos, Ileana and other members of the UJC bureau are already forming ideas and shaping experiences. (The first three are professional cadres of the UJC there which, in our opinion, is insufficient for the size of the undertaking; they not only attend to workers but also to students on scholarships.)

Emulation will not slow down; on the contrary, it will increase. It is necessary to extend it to Rostock or Magdeburg or any place in the GDR where there are Cuban youths.

With the problems of anything new, this car will start, this time driven by the UJC.

It will unquestionably yield results. The experience of the year about to end demonstrates this.

As pineda told us at the end of the party meeting, the youths in the GDR are the same as those in Cuba—those who cut cane or go to Moa to do difficult tasks, those who have responsibility for important tasks for the development of the country. We cannot deceive ourselves. Although this task is new and not without problems, we will fulfill it and do it well as the occasion demands!

[28 Nov 80, p 2]

[Text] "I would put the words in your hands as if they were the land itself with its valleys."

It was a Sunday in November. The early cold continued to afflict Berlin.

Hundreds of Cubans met at the EAW auditorium. I was in this factory about a month before and I interviewed several Cubans and Germans.

Therefore, some happy faces that I saw now were already familiar to me: Munagorri (winner of the individual emulation); Papa Gunter who saw me and ran to give me a hug; and Nicasio, the patient collective chief whom I knew in his native Perico, Matanzas. There were greetings and handshakes.

The heating in the building was not working well that day. It forced more than one of us to go find our coats to heat our numb bodies.

Little by little, the atmosphere warmed up in the applause for the most distinguished: Serrano Vaillant, Tomas Garay, Huga Pacheco and Hector Munagorri. They epitomized the motto in white letters on a red cloth: the best homage is daily fulfillment of duty.

The pioneers, seed from which new generations will emerge, made their voices heard at the assembly.

The banner was presented to the best province, Berlin, where more than 400 youths now work.

The principal tasks done by the collectives in the capital during the July-September quarter included: training, labor discipline, productivity, participation in activities (political, sports and cultural) and volunteer work.

Machinists, assembly mechanics, metalworkers, maintenance mechanics and skilled workers in the production of rubber derivatives and in electronics are being trained in Berlin.

The Germans feel the Cuban youths have a promising future because of their work, interest in training, discipline and the development of joint activities for the use of free time.

Those in Berlin did not have "a special secret" to win the emulation; not at all!

They simply held meetings with all the political and mass factors in the different collectives of the province. They held spontaneous meetings and developed many tasks with the UJC.

Each meeting, each contact, served as a framework to critically analyze problems and deficiencies and to adopt plans to counteract any negative situation. The results could not have been better. After 3 months of hard work, they won the prize.

There were several speakers and many emotional embraces. The effort of the best was rewarded.

Memories: A Parenthesis

While the ceremony was taking place and I observed the happy faces of the youths in the Berlin EAW auditorium, recent memories came to mind.

The day before, I had participated in a meeting in Brandeburg with Santiago Morales, UJC representative in the GDR, and Ileana Martin-Carrera, member of its bureau.

It was a regular contact of the local committee in an enterprise where several aspects would be analyzed: emulation, discipline and internal life. Things were not so happy there.

There were organizational problems related to the placement of youths to be sent to the GDR and other internal and personal problems. Everything was not as it should have been.

The meeting lasted several hours and served to present the problems and begin to solve them as much as possible.

The contrast between this meeting and the ceremony Sunday at the Berlin enterprise was noticeable.

It helped us evaluate the magnitude of the difficult task of the UJC cadres in the GDR and to learn more about the problems.

Nevertheless, the collectives in Berlin went through similar situations.

The political work was reinforced, it was discussed in depth with the people and positive results began to appear.

We do not have any doubt that the same thing will happen in Brandeburg. The youths will learn to respond energetically and firmly in spite of the problems. The task entrusted to them will progress.

The cold on this Sunday in November continued to penetrate. The faint sun that bathed the streets was not enough to warm the body.

Tomorrow afternoon I would be flying back to Havana. In the airplane I began to shape these ideas for the report. The names of the distinguished youths and the UJC cadres in charge of organizing and encouraging the political-ideological work with the thousands of Cubans in the GDR came to mind.

I thought that the names of the distinguished would be repeated throughout the GDR and the problems of Brandeburg would be solved. Sooner rather than later, the task would be carried out in its full magnitude.

The most significant thing is that it already yields results. Vaillant, Garay, Munagorri and the others are on the job, winning honor for the fatherland. Their example will be multiplied by thousands because they are the prolog to this history.

MAJANO LEAVES EL SALVADOR ON UNDISCLOSED MISSION,, INTERVIEWED

Rio de Janeiro JORNAL DO BRASIL in Portuguese 29 Nov 80 p 15

[Published excerpts of interview with Col Adolfo Majano, member of the Salvadoran Junta, by Silio Boccanera; date and place not given]

[Excerpts] San Salvador—Amid indications of change in the makeup of the criticized Salvadoran Government, Col Adolfo Majano, the main target in the government of the forces of the right, left the country very quietly on Thursday, a fact which became known here yesterday.

Spokesmen of the civilian-military government junta did not explain yesterday to which country the colonel went nor why he left El Salvador at such a critical moment, critical because of the murder of the five key opposition members. Foreign diplomats who requested explanations on the trip were told that Majano will return "in two days."

Portions of the Interview

[Question] What main difficulties do you see at this time for your government plan?

[Answer] The 15 October movement (the military movement which seized power at that time last year) sought a political understanding among the various forces in the country, at the same time that it proposed economic reforms. That harmed some interests, which immediately reacted and placed obstacles in the path of our plan. That was the right. As far as the left is concerned, armed groups also showed their opposition to our plan and they fight to create obstacles.

[Question] Why do the groups of the right point you out as the main obstacle?

[Answer] My idea is that a reform be accomplished in this country, that the old imbalance in society be corrected; that the solution seek to reach the real causes of the problem, eliminating poverty. It is necessary to provide the deprived people with a decent existence. And that is not a pretext for attacking the left but rather an attempt to raise the standard of living of the people. Conservative groups have always managed to manipulate previous attempts at reform in this country and now you will find that they will do the same. However, I would rather leave the government than abandon my ideas of reform.

[Question] What impact did the election of Ronald Reagan as president of the United States have on El Salvador?

[Answer] It had immediate repercussions, primarily among the conservative sectors to which I referred. They believed they saw in that election a hope of recovering power. However, personally, I have the impression that these people are mistaken. There are two important aspects: First, the nature and the feelings of the American people will cause them to support us morally and the president-elect will have to respect that; second, the process in this country is not the result of our personal initiatives but of the hopes of our people. Whoever tries to block the path to the satisfaction of those hopes will be pitting himself against a very great power, the power of the people. Those who would try to reverse this process would be making a mistake.

[Question] Does a conspiracy to block reforms exist?

[Answer] It is difficult to determine the existence of a conspiracy, which can manifest itself in various ways. In previous months there was a period of marking time but recently the effort by the right to recover power has increased. It resorts to attacks, lies and other activities to discredit the government and some of its members. That began again this month.

[Question] Could it be the results of the U.S. elections?

[Answer] Possibly. I do not want to establish a direct link but it is possible that the right had been waiting hopefully for the results of the elections. However, there is a rebirth of conspiratorial activities. There are more attacks.

[Question] Do you believe there is a chance the conspiracy will be successful?

[Answer] I cannot grant them the possibility of success. They may eliminate or drive away some members of government, including myself, but they will not be able to reverse or halt reforms.

[Question] But as far as the most immediate objective of removing you from government, you do not consider it so difficult?

[Answer] We are going to try to prevent it, but it is conceivable.

[Question] Could the present makeup of the Junta survive, let us say, two months?

[Answer] It is difficult to set dates. The situation developed day by day. Time is valuable. It is necessary to seek a political solution. An effort at a peaceful solution must be made.

[Question] What do you think of the proposal by the Church to arrange a meeting between the government and the opposition in the Revolutionary Democratic Front [FDR]? (Note: The interview took place before the murder of the five FDR key members).

[Answer] The 15 October Movement presupposed a political pluralism. That is understood to mean talking with all sectors of the country. I have an enormous respect for the voice of the Church, a very important factor in seeking justice in our society. It has much credibility. I do not discount any type of political and social faction. All of them can be talked to.

[Question] Many say that a rightist coup in this country would consist simply of removing you from power. What do you think?

[Answer] My position here is only one of work to satisfy the needs of the people. I would not be able to say if a rightist coup would mean only removing me (from government). I can say for sure that the right increased its firepower to shoot me out of the government.

[Question] Do you feel any pressure?

[Answer] Your question is very direct and I shall give you a direct answer: Yes, I do.

[Question] Do you feel isolated in the Junta?

[Answer] I cannot deny that my positions in the Junta today have less support than at first. That can mean a loss of influence, of decision-making power. However, I tried to remain loyal to my convictions.

[Question] What strength do the conspirators have?

[Answer] They have enough strength to destabilize the country in general and also to remove some of the members of the Junta.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

ENERGY COMMISSION CHIEF DISCUSSES OIL, ENERGY OPTIONS

Santiago LA TERCERA DE LA HORA in Spanish 30 Nov 80 p 5

[Article by Gabriel Gonzalez Segovia]

[Text] Antofagasta--There are definite possibilities that there is oil offshore from Valparaiso to the southern region of our country.

This announcement was made by Lt Gen Herman Brady Roche (retired), head of the National Energy Commission, during his closing speech at the Interregional Development Days held in this city and attended by experts from many different sectors of national life related to the topic.

The series of talks was organized by the Office of Vice Rector of Communications of the University of the North and sponsored by the Council of Rectors of Chilean univerities, ODEPLAN [National Planning Office], and the regional intendancies of regions I and II.

The closing session was held in one of the halls of the Automobile Club. Attending, along with Minister Brady, were Jorge Alberto Alarcon Johnson, rector of the University of the North, Hector Insulza, inspector general of Carabineros, Washington A. Aris Torrealba, vice rector of communications and extension, Sabino Poblete Alay, rector of the Antofagasta campus, members of the academic community and the public, who filled the hall.

For the first time since the creation of the National Energy Commission, a report was given on what has been done, plans for the present and future projects.

In great detail, Lt Gen Herman Brady drew up a balance sheet of studies done of energy resources which our country has, beginning in 1970.

He said that due to the seriousness of world energy problems and the gloomy outlook ahead, our country must reduce its foreign dependency and carry out projects aimed at partially relieving the effects of this crisis, which appears to be very serious.

Private Sector

He revealed that "it will be necessary to emphasize the development of hydroelectric resources" and specified that in 1995, approximately $5 billion will be needed for the construction and operation of hydroelectric complexes.

The head of the National Energy Commission said that because of the high cost of investments in this area, it will be necessary to have the participation of the private sector, which could take responsibility for projects and the operation of small power plants, using the flow of rivers or dams.

He announced that a study is ready to bring regions I and II into the system of electric interconnections, which should result in lower costs to users.

El Tatio

During his talk, Minister Brady also mentioned geothermic sources of energy. The main deposits include El Tatio, 280 kilometers inland from Antofagasta and Puchuldiza, in region I.

He said that the original estimates concerning the size of the sources were in error. An Italian firm was hired to conduct research and determined that in the case of El Tatio, the capacity is only 15 megawatts instead of 150, as is often stated.

The president of the republic is being urged to approve a call for bids for the operation of El Tatio, Minister Brady said.

He observed that this is justified because of the high cost involved in prospecting. By way of example, drilling an exploratory well costs at least $1 million.

Minister Brady announced that the president of the republic, Gen Augusto Pincohet, has provided for sectorization of the ocean floor from Valparaiso south.

This measure was taken in view of evidence that this vast offshore region contains signs of the existence of hydrocarbons or oil, to be more specific.

Some projects will be carried out by the National Oil Enterprise while others will be the subject of bidding.

"The chief of state has resolved that prospecting for oil should be intensified," the high government official said.

MINES MINISTER ANNOUNCES OFFSHORE OIL SEARCH, COPPER

Santiago EL MERCURIO in Spanish 24 Nov 80 p C-3

[Text] In early February, the National Petroleum Enterprise, ENAP, will begin drilling 12 oil wells along the country's central coastline, in the area between San Antonio and the mouth of the Biobio River, in Concepcion.

This announcement was made yesterday by the minister of mines, RAdm Carlos Quinones Lopez, in his opening address before the 50th Congress of the Mining Engineers Institute, held in the capital's Municipal Theater.

The minister said that the contract has already been signed with the American firm Diamond M, which will use a semi-submersible platform for underwater drilling.

According to preliminary studies, it is possible that oil may be discovered but even more likely that natural gas will be found.

In his address, Minister Quinones reviewed the situation of the country's main mining activities, including copper, molybdenum, coal, iron, gold, potassium nitrate, sodium sulfate, iodine and oil. He said that the latter "is undoubtedly the most important mining sector after copper."

According to the minister, total oil production in 1979 (including both offshore and inland wells) amounted to 20.3 percent of the country's total consumption. Thanks to the production of new deposits, it is hoped that national production this year will represent 35.6 percent of all consumption, rising to 43.3 percent in 1981.

Copper

Speaking before Quinones, the chairman of the organizing committee, Hans Goepfert, stated that the congress will receive the aid of specialists from the United States, Canada, Great Britain, Brazil and Bolivia and that over 50 projects will be carried out by Chilean professionals.

The president of the Mining Engineers Institute, Andres Zauschquevich, said that Chile has a geological structure pointing toward "veritable determinism" with regard to our mining economy's future dependency on copper.

"A recent study made in the country of the future potential of some 18 mining elements led to the conclusion that around the year 2000, copper and molybdenum will still represent 81 percent of the total."

He also emphasized that during the coming decade, new copper deposits will go into production, meaning that in every region of Chile, from the first to the sixth, in addition to the metropolitan area, "there will be at least one large-scale copper mining operation with its own infrastructure and personnel."

Foreign Investment

In his speech, Minister Quinones emphasized that by 31 August of this year, the Foreign Investment Committee had authorized investments totaling $3.7 billion for mining projects. Of these, $373 million worth (10 percent) have been made.

Concerning national investment, he emphasized the recent private investment of $70 million in the Lo Aguirre copper complex, the allocation of $350 million for investments in CODELCO [Copper Corporation] in 1981 and $5 million annually for ENAMI [National Mining Enterprise].

Mining Patents

Finally, the minister mentioned government participation in new deposits, repeating that "the government will not invest in the development of new deposits in order to operate them in its own behalf and at its own risk."

In the case of joint ventures with private capital, the government will limit its contribution to the value of the deposit, without allocating capital resources for its operation, he said.

Regarding the policy of collecting high mining patents in order to stimulate the working of such holdings, the minister said that during the first year that the measure was applied, 1978, private parties returned 1,321,000 hectares, a figure representing 39.9 percent of the total area backed. "This decline continued in 1979, when the percentage figure was 30.6," he said.

These mining holdings are now freely available and anyone interested in working them may obtain a concession for their production.

Congress

The congress that was officially opened yesterday will continue throughout the week at the Central Headquarters of the University of Chile and in the Diego Portales Building. Works to be presented include those on offshore mining, reducing energy consumption in mining, taxation, a financial analysis of the profitability of mines, technological improvements in refining processes, and others.

BRIEFS

COAL RESERVES REPORTED--Antofagasta--According to the chairman of the National Energy Commission, Lt Gen Herman Brady Roche (retired), there are 5 billion tons of coal in Chile in Arauco and the 12th Region. Speaking about this energy resource at the closing session of the interregional development days, Brady said: "Coal has been somewhat neglected with respect to exploration, mining and even consumption." He added that in 1960, 27 percent was consumed, while the figure for last year was only 12 percent. This drop in consumption was justified by the extremely high cost of coal mining. Reviewing coal resources, Brady said that in Magallanes, or more specifically, in Pecket, there are at least 80 million tons of the mineral. That mine is now up for bids. In addition, he admitted that as early as 1984, commercial mining will begin at Pecket on the Brunswich Peninsula. Prospecting studies were made by the French firm SOFREMINE. Five tons of coal were even taken to France for laboratory studies. Concerning the possible use of solar energy resources, Brady totally rejected the idea: "I can say this emphatically: In Chile, we are not concerned with seeking other national energy sources. The National Energy Commission has no such projects, nor does it have funds to carry out any similar projects." However, Brady did say that research will be promoted using funds allocated to the universities. The duplication of efforts must be avoided. "I shall speak about this issue with the rectors of the universities." [Text] [Santiago LA TERCERA DE LA HORA in Spanish 30 Nov 80 p 5] 11,464

DOMESTIC FUEL SITUATION IN COUNTRY ANALYZED

Havana GRANMA in Spanish 14 Nov 80 p 4

[Article by Joaquin Oramas: "Domestic Fuels: What Is Their Situation?"]

[Text] Improving the supply of domestic fuels in our country is a major concern for thousands of workers involved in the production, distribution and consumption of such products.

The fight to overcome difficulties, some of which stem from production facilities and transport equipment and others from inadequate storage capacities of wholesale and retail suppliers, is now guided by a policy governing all present and future steps associated with the production, storage, distribution, supply and use of kerosene, liquefied gas and manufactured gas. These are the main types of domestic fuel used in Cuba.

Studies are now being made in order to channel development in the coming years. Such studies stipulate improvements in the quality and utilization of kerosene, increased production of liquefied gas by the Nico Lopez Refinery in Havana City and the Hermanos Diaz Refinery in Santiago de Cuba, increased production of manufactured gas ("street" gas) by the Mario Fortuny and Evelio Rodriguez Curbelo plants in Havana City, and the establishment of the infrastructure for the assimilation of domestic fuel produced as the result of these improvements. During the period from 1986 to 1990, the Cienfuegos Oil Refinery will go into operation. Improvements will also be made in the motorized vehicle pool for the transport of domestic fuel and storage capacities will be increased.

The latter include not only wholesale storage facilities, but in addition, those of establishments where users purchase fuel. Studies also propose gradually switching — as possibilities permit — to use of the double cylinder for liquefied gas consumers and the manufacture of more efficient kerosene stoves. This would be accompanied by the creation of adequate conditions at stove repair shops and a sufficient supply of spare parts for the maintenance of both kerosene and liquefied and natural gas stoves.

Execution of such a project would make it possible to provide a supply of kerosene during the 1981-1985 period and increase the number of domestic consumers of liquefied gas by 20 percent and of manufactured gas by 30 percent.

This overall program means the completion of projects planned in recent years in order to overcome or at least alleviate difficulties in this service and in connection with which the different workers collectives involved fulfilled goals resulting in higher levels of production and the maintenance of facilities in the best possible conditions.

But this has not been enough because difficulties persist in the production and distribution of liquefied gas, the supply of kerosene and alcohol and in the capital, consumers frequently have problems obtaining gasoline for their motor vehicles. It is therefore necessary to continue work on the definition of a vigorous policy aimed at solving the problems mentioned.

It is also necessary for consumers to be aware of problems existing with respect to domestic fuel, what the actual situation is and how far the search for solutions can go. This will lead to a better understanding of problems.

Growth in Production and Structure of Consumption

In the current structure of supplies which meet the needs for the different domestic fuels, one can observe that of these, kerosene is the most easily available for the people and everything would indicate that the trend will continue in the coming years.

Kerosene is used (brilliant light) by nearly three-fourths of the country's families, while nearly 20 percent use gaseous fuels and the rest cook with electricity, boal, wood or alcohol.

Although with some differences in proportions, this was the order of consumers according to products in 1958. In other words, most people used kerosene, followed by those who cooked with liquefied gas, manufactured gas and electricity. There were more families that used coal or wood and alcohol stoves.

From the time of the triumph of the revolution to date, there have been noteworthy increases in the consumption of domestic fuel and the number of consumers, a logical situation due to the increase in the population and the impact of the benefits which the revolutionary process has brought Cuban families directly and more generally, to the country's social and economic life.

Production of liquefied gas has more than quadrupled, kerosene production has nearly tripled and the increase in production of manufactured gas is 80 percent.

There are also noteworthy increases in the number of consumers of kerosene and gaseous fuels. The figure has doubled for manufactured gas alone. Furthermore, the number of consumers who cook with less efficient fuels -- that is, coal, wood and alcohol -- has dropped substantially.

As the standard of living of our people improves, the demand for domestic fuels grows. At the present time, the need for liquefied and manufactured gas is much greater than the capacity of the plants, despite work done at the plants to increase production. Most increases have gone to satisfy the needs of domestic consumers.

If a poll were conducted among Cuba's families, it would be nearly certain that nearly all of them would express their preference for gaseous fuels. But there is

one fact that we cannot forget: Our country is not in a position to immediately absorb the explosion of liquefied gas or gasoline consumption which meeting the need would imply. This would mean the investment of tens of millions of dollars in new plants, distribution systems, vehicles, and so on.

However, this does not mean that work is not being done along these lines. In addition to the reconstruction and expansion of existing oil refineries, plans for the period from 1981 to 1985 include startup of construction work on an oil refinery in Cienfuegos to increase our fuel refining capacity, including liquefied gas as one of those fuels. But this large investment will basically mean an improvement in the situation because the country's development is accompanied by greater demand for domestic fuels.

The investments will be accompanied by organizational and technological measures making it possible to make better use of facilities in operation and result in better operation of distribution systems. In this way, production will be increased and better-quality products will be produced, eliminating certain problems now noted by domestic users.

In the case of liquefied gas, for example, work is being done to guarantee a stable supply to current consumers and to provide increased new services throughout the 5-year period, especially in the later years.

With respect to kerosene, the production of a better quality stove and an improvement in the product itself will practically eliminate the disagreeable odor given off by the fuel when burned.

Problems With Kerosene and Alcohol

One of the biggest problems relating to the supply of kerosene and alcohol has to do with distribution. Fortunately, there is enough kerosene to meet the demand of all the country's families which use it.

Although national production of kerosene is still insufficient to meet the demand, imports from the USSR make enough of the product available. It should also be pointed out that the quality of the fuel has improved as a result of investments in plants.

Special thought is being devoted to the problem of distribution and the storage capacities of retail centers where it is sold. There are proposals for the establishment of tanks and an increase in the number of transport vehicles, which would make it possible to improve the supply to the people.

At the same time, the steel industry is working to improve the quality of kerosene stoves with new models. In the months to come, it will complete the setting up of a kerosene stove plant at INPUD [National Industries for Domestic Products and Utensils] in Santa Clara.

It should be recalled that at the Estrella Roja plant in Havana City, Pike stoves have been being manufactured for years. Work is being done to create new models that would overcome some of the deficiencies in these articles. In addition, kerosene stoves have been imported in recent years. Stoves for liquefied gas are also

being imported. Stoves for liquefied and manufactured gas manufactured by INPUD are stable and of acceptable quality.

From 1965 to 1979, according to information from the Ministry of Domestic Trade, 692,000 kerosene stoves with oven were distributed to the people and approximately 1.45 million with two ovens were supplied. There were four different models. For this year, nearly 150,000 are available, a still insufficient figure.

Studies are being made to set up workshops and improve those already existing. An adequate stock of spare parts must be ensured for the repair and maintenance of kerosene stoves and those using liquefied and manufactured gas.

Difficulties transporting and storing alcohol are similar to those with kerosene, with at the wholesale and retail level. The solutions proposed are also like those proposed for kerosene.

Kerosene is produced at the oil refineries in Havana City, Cabaiguan and Santiago de Cuba, whence it is shipped throughout the country. Alcohol, mainly used to preheat kerosene stoves, is produced at distilleries of the sugar industry, which do not have adequate wholesale storage capacities. This causes difficulties in supplying the population since the distilleries only work part of the year.

Independently of the fact that alcohol is obtained from syrups which constitute a source of foreign exchange, national production guarantees the required levels of consumption.

In order to adopt measures relieving the problems faced with the distribution of kerosene and alcohol, a study has been done in all municipalities in order to decide upon the future installation of storage facilities at centers of consumption. This would ensure better distribution of the products in question.

Liquefied Gas

In a country fighting to overcome underdevelopment, the potential consumption of liquefied gas increases because it is a very clear and convenient type of domestic fuel, only out-performed by electricity. The latter is practically discarded as a domestic fuel for many years because the country must earmark it for other uses of prime importance for our development.

Returning to liquefied gas (LNG, as it is technically known), it is obvious that the technicians, specialists, engineers and other workers who operate production plants have done important work making it possible to raise levels of production and yet, despite these results, there is a gap between the demand for LNG and the production capacity, in addition to storage problems.

From 1959 to date, investments have been made at the Nico Lopez and Hermanos Diaz refineries for domestic fuel production. Their purpose has been to overcome limitations so as to make maximum use of the installed capacities of basic equipment and improve the quality of products.

At the Nico Lopez Refinery, the new gas turbocompressor was installed and equipment was replaced so as to install a greater capacity and permit the use of more active

catalysts for the production of gases. At the Hermanos Diaz Refinery, changes were made in the crude oil and gas towers and equipment with greater capacity was installed.

Future plans include certain modifications in the catalytic cracking unit (technological process in which liquefied gas is produced) in order to increase production of the Nico Lopez plant. At the same time, storage capacities will be increased at the refineries in Havana City, Santiago de Cuba and different provinces so as to create the necessary cover for cases in which the industrial centers in question shut down operations for maintenance or when mishaps affecting production occur.

This increase in storage capacities will also eliminate the disagreeable situation that occurs when, because of a lack of tanks to store liquefied gas, the Nico Lopez plant has to burn the fuel because the production of gasoline, of which LNG is a co-product, cannot be halted.

Tanks to store liquefied gas have been installed at the port of Pastelillo, in Nuevitas, Matanzas, Pinar del Rio, on the Isle of Youth, and at other locations. These are the beginning of a system aimed at providing the necessary storage level.

A study has also been made for the installation of double cylinders for users, which actually becomes a reserve. Although progress would be slower here, it is necessary to step up production of the bottles or cylinders in the country. In addition, it would be necessary to improve maintenance and other liquefied gas facilities.

In 1975, the policy of installing double cylinders for consumers was reinitiated in certain areas and the results were that nearly 20 percent now enjoy this advantage. In Cienfuegos, Camaguey, Ciego de Avila provinces and the special Isle of Youth municipality, they were distributed to all users.

Old Gas Problem

The problem of manufactured or "street" gas, a service offered only in Havana City, is as old as the Melones plant, now known as Evelio Rodriguez Curbelo, one of the two plants supplying the fuel to the capital.

The other, located in Puentes Grandes, is Mario Fortuny, which began operations about 10 years ago with more modern technology.

The Melones plant, with equipment installed a number of years ago, produces the so-called carbonated water gas based on a technology using coke fuel. The plant does not have all the necessary equipment for purification, as a result of which the gas has impurities that accumulate in the distribution networks, in condensate siphons and on occasion, even in the facilities of users.

In the 1960's and 1970's, investments were made in the Evelio Rodriguez Curbelo plant making it possible to improve production. However, impurities still exist, which will be rectified with the installation of purifiers, as planned for the 1981-1985 period.

For its part, the Mario Fortuny plant has a more modern technology based on steam reformation of the gas in the presence of a catalyst, as a result of which the gas obtained does not have the problems of its Melones counterpart.

There is another factor affecting the manufactured gasoline service in Havana City, namely, the obstruction in the system which distributes the fuel and the existence of pipes in poor condition. The manufactured gas distribution system extends throughout various municipalities in Havana City and the total length is 653 kilometers. Stated more graphically, if these iron pipes were laid in a strait line, they would run past the city of Camaguey, starting from the country's capital. Providing optimum maintenance for such a large underground system is difficult and very costly.

There are plans to improve the service by stabilizing pressure in the Havana system, which extends throughout several municipalities in the capital. Consequently, by providing gas with adequate pressure, which reduces consumption, it will be possible to maintain the service in areas where major difficulties have been experienced, especially in Diez de Octubre and Cerro.

Along with the elimination of impurities in gas and the stabilization of pressure through the installation of new equipment, there are plans to make investments to increase the production capacity of the two plants and to provide more resources for the maintenance and construction of distribution systems. All this would permit an increase in the number of domestic users once investments in the plants and in the systems have been made during the 1981-1985 period. Pipes in the Havana system that are in poor condition will be replaced and greater attention will be given to problems of users.

The length of this report makes it impossible to go into detail about the efficient work of those who operate the two plants which produce manufactured gas and workers who handle their maintenance and the distribution systems, but it is only fitting to recognize them because their systematic and self-sacrificing work has prevented the difficulties mentioned from being major, especially with regard to attention to the Melones plant, whose technology is antiquated, and to the systems, some of whose pipes have with time become partially obstructed with tar, carbon and other impurities.

With their spirit of abnegation, the workers in charge of production, distribution and other areas relating to the different types of domestic fuel continue to do their utmost to improve this important service.

ALEMANN COMMENTS ON HIGH COST OF NATIONAL DEFENSE, OTHER ISSUES

Buenos Aires LA PRENSA in Spanish 20 Nov 80 p 8

[Text] The nation's finance secretary, Mr Juan Alemann, stated yesterday that "Argentina is not at an excessive public spending level" and attributed high national defense costs to the high prices of modern war materiel, such as fighter planes that cost $20 million each or missile-carrying frigates that cost $500 million. He asserted that Argentina has an exploding social security system, because whereas the active population is increasing at an annual rate of 1.7 percent, the nonworking population is increasing at 5 percent a year. He furnished in-depth information on the federal budget and public investment in a speech of about 80 minutes at the General San Martin Theater that dealt with the topic: "The Size and Efficiency of the State."

Make-Believe Attitude

He began by saying that "people have a somewhat make-believe and immature attitude about the state, which is always being blamed for everything. Even though it might be to blame at times, I do not think that it is as often as people charge. Moreover, because people are unfamiliar with what the state is, they also do not have a clear notion as to whether it can do what they are asking."

After clarifying that the category of public spending includes the central government, the centralized and decentralized agencies, the provinces and municipalities and the state-owned enterprises, as well as its contributions to social benefits, its expenditures and subsidies, he began his address, from which the following excerpts are taken:

Gaging Public Spending

"Public spending is often said to account for 40 percent of the gross domestic product; there has even been talk of 45 percent, and on occasion it has been put at 50 percent of the GDP, which is all wrong, because this latter figure would apply in a country with a collectivist economy, Yugoslavia perhaps, but not Argentina."

Thirty-Two Percent of GDP

"We have done calculations using methods in keeping with national accounts and we got a figure of slightly more than 32 percent of the GDP, which is not excessive in international comparisons. European countries and the United States are higher, going as high as 40 percent." He clarified that this 32 percent includes state agencies, social security and the value added of enterprises. "Thus, Argentina is not at an excessive public spending level. What we do have is a public sector efficiency level that is lower than in those other countries, and this is the really important point. If the public sector were acceptably efficient, it would less irritating to the public than it is now. Basically, people get irritated because the telephone system does not work as it does in Europe or because the state in general does not function as it does in those countries, and then they confuse the efficiency issue with the level of expenditures."

The Deficit

"A public sector deficit is not equivalent to a company bankruptcy. The public sector's total expenditures are broken down into current and investment outlays. It covers part of these outlays with its current funds and part with debt, and this debt, with the Central Bank or third parties, is called a deficit.

"Our deficit has also reached an internationally acceptable level. In 1975, it was more than 15 percent, which brought us close to a breakdown in the nation's economy, because maintaining that level would have meant the start of hyperinflation and the total breakdown of the monetary system and, therefore, of the economic system.

"Over the last few years our deficits have been at four or five percent of the GDP, which are relatively good levels internationally today. There are few countries with lower ones. Even countries with stable currencies, like Germany, have gotten to an eight percent deficit. Our problem is that we have a poorly developed capital market, whereas those countries can easily cover their outlays with current borrowing because they have well-developed and extensive savings; in other words, the people place their money in savings accounts to cover the deficit."

Investment Financing

"I want to stress that the investments of the public sector as a whole this year amount to around nine percent of the GDP. The deficit, in contrast, is slightly more than four percent of the GDP, which means that we are financing more than half of our public investment with current funds and a smaller proportion with borrowing. Many private firms resort more to borrowing to finance their investments."

Personnel Expenditures

"We have cut the number of government personnel by a bit more than 200,000, out of a total of 1.8 million, which is not an exact figure because we do not know about the municipalities, which employ a good many people. But parallel to this, the real wages of government workers were sharply boosted. Personnel expenditures represented 16.5 percent of the GDP in 1975, dropping to 10.2 percent in 1976 and to 9.5 percent in 1977, because real wages were kept low and there was a quantitative decrease. But then, in 1978, we began to pursue a policy of shoring up wages, which took the percentage to 11.6 in 1978 and 12.4 in 1979, while this year we will be at around 13 percent of the GDP. The average for the 12 years before 1973 was 12 percent. The increase in real wages has been necessary because the public sector has to play by the same rules as the private sector; otherwise, all of the good people leave, and the public sector drops in quality, thus losing any chance to be efficient. We think that there are still too many government workers and that cuts have to be made, but it is getting increasingly difficult.

"For example, the theoretical capacity of our hospitals is not being utilized because insufficient care is being given to the people who stay in the hospitals the longest. Thus, because we want to save on personnel, we wind up building new hospitals, which is much more expensive than using the ones we have better."

Tax Bureau

"The Tax Bureau is another case in which the shortage of personnel is irrational. We had 8,000 people, and according to studies of what it is like in countries like France and Germany, we would have to have 40,000 agents. We would then be able to collect taxes as in those countries. We have had to settle for fewer and we have proposed an increase to 15,000 employees. Each agent easily earns his wages on a workday. On other days he yields higher tax receipts for the state."

Public Investment

"Argentina's public investment traditionally stood between six and eight percent of the the GDP, generally closer to six than to eight. For 3 years, 1976, 1977 and 1978, we were at 11.5 percent public investment, and for the last 2 years we have been at 9 percent. In round numbers, we are investing 50 percent more than in previous periods. In 1976 we found ourselves with many contracts and commitments taken on by the government that we had to comply with. That was a correct decision, because thanks to it, to having kept the government's word, we are currently contracting under optimum conditions and getting the world's best public works companies to take part in our competitive biddings and to quote really low prices. Furthermore, however, there are deeper, structural reasons, like the energy problem. The emphasis we have placed on hydroelectric and atomic energy requires very sizable investment. This costs us a lot of money. For this reason alone we feel that it is impossible to think about going back to investment levels of previous years.

"Secondly, we have made the political decision to put our communications system, or telephones in other words, in order. You cannot talk about a modern country with a telephone system that does not work."

Housing and Maintenance

"Thirdly, we have boosted investment in low-cost housing, through FONAVI [National Housing Fund], which is also figured in as public spending. We hear criticism that it is not enough, but be that as it may, it is still much higher than in any other time in Argentina's history.

"Moreover, we have a different sort of public investment problem: we found a country that was falling apart badly because of insufficient maintenance. We have had to build schools and hospitals and we will have to do a lot more. We have problems in the Sanitation Department: the pipes in the city of Buenos Aires are in an alarming state of decay."

Defense Spending

"Defense spending is relatively high throughout the modern world. This is a result of the latent danger of war all over the world. We cannot conceive of a modern country without sufficient defense capability. Taking public spending as a whole, the Federal Government, plus its agencies, plus the provinces and municipalities, but excluding enterprises, defense spending accounts for 9.3 percent of the total, while education accounts for 16 percent.

"The serious structural problem is the high cost of modern weaponry, which is becoming increasingly sophisticated. Each fighter plane costs more than $20 million. If we are thinking about missile-carrying vessels, we are talking about more than $500 million. In order to have a defense system that is more or less in keeping with today's world, Argentina has to spend a great deal of money and be very careful about how it does so, which is not always the case."

Limiting Government Spending

"Limiting government spending depends first of all on a high-level political decision. The issue must be addressed by the nation's president or in the present case, the Military Junta. Thus, a very broad understanding of the entire issue is needed, as well as a very good analysis, to make these high-level decisions. We have made enormous progress in this regard. We have a very well-developed method of assessing the budget in constant terms and as a percentage of the GDP. This enables us to know what we are talking about, to evaluate the various magnitudes and to provide the highest level of government with information so that it can make rational decisions. We also make our investments very efficiently, with emphasis on priorities, profitability, an overview in programming and a timetable for execution."

Decentralization

"Decentralization has led to much greater efficiency. We can see it in the schools that have been transferred and in the Sanitation Department, where we have the case of a province in which it was showing high losses and in less than a year it began showing a profit, simply because the governor took charge since the federal administrator was far away in Buenos Aires and had only a vague idea of what was going on there."

Sale of Properties and Enterprises

"Until 1976, the government sold off practically no properties. The administration of Government Properties, a branch of the Finance Secretariat, just began doing so this year and has so far sold off some 1,000 properties, some small and others relatively large. Oddly enough, by the way, the properties are selling at a very high price, whereas the state-owned enterprises have to be sold at a very low price, dirt-cheap at times, which gives an idea of the country's idiosyncrasies."

Contracting Projects and Services

"Contracting out a public project is a way of making it private. What the government used to do is handed over to a private firm, which does the job and charges for it. More than two-thirds of road maintenance work is done under contract. The Municipality of Buenos Aires is making trash collection a private service and is also returning street-lighting to private hands. A study was conducted on lamp expenditures, the conclusion of which was that the city ought to be lit up like daylight but was instead poorly illuminated. An investigation discovered that personnel would remove the used bulb and put it somewhere else. They would receive the new bulbs and resell them, and thus the city was always poorly lit. This service is now being contracted out to the private sector."

Education

"It is advantageous for the government to subsidize private education. Each student in a private school costs the state one-seventh of what a student costs in a public school. If we cut subsidies, the result is that private education becomes more expensive and exclusive, and we have to cope with more students in public schools."

Making Supervisory Work Private

"An agronomist signing a forestry plan acts practically as a state inspector, because he is directly responsible. In the event that he fails to comply, he could be suspended from the professional registry for up to 5 years. We want to apply this same system to professionals who sign insurance company balance sheets. The signature of a professional must mean something."

Zero-Based Budgeting

"Zero-based budgeting initially requires very intensive consulting and therefore must be started up with small sectors and later extended. We plan to encompass the entire government under a program of no fewer than 5 years."

Pensions

"Pensions are an important public spending item that I want to take up in conclusion. Argentina has an exploding social security system. Our population is growing at 1.75 percent a year, while the nonworking population is increasing at around 5 percent a year. Under the previous government it even increased by 10 percent 1 year. In other words, the proportion of nonworking to working people is increasing all the time. Moreover, we are further broadening the very expensive special arrangements under which people can retire earlier with higher benefits. If this problem is not eventually attacked at its core, it will sooner or later lead to an explosive situation, and this is one of the items on the public spending agenda."

Effort and Perseverance

After some other remarks he said in conclusion: "The course has been charted, and we must persevere in it. We cannot perform miracles. Anyone who promises to cut public spending by 30 percent with some little plan is lying, does not know what he is talking about, is daydreaming or is simply trying to astonish those who do not understand the issue. In this area, I repeat, a great deal of effort and perseverance is needed to achieve small results every day."

Today's Lectures

The deliberations of the First Conference on Industrial Modernization will continue today. Three lectures will be delivered in the morning.

The vice president of the Central Bank, Mr Alejandro Reynal, will speak on "Interest Rates and Credit Risk."

The secretary of communications, Brig Gen Eduardo O. Corrado, will lecture on "Communications as an Industrial Need."

Finally, "Industry and Infrastructure Planning" will be the topic addressed by the secretary of planning of the presidency, Brigadier Jose Miret.

MARTINEZ DE HOZ CRITICIZES DETRACTORS OF ECONOMIC POLICIES

Buenos Aires LA OPINION in Spanish 20 Nov 80 p 11

[Text] Economy Minister Jose Martinez de Hoz yesterday described the liquidation of the Sidesa Bank as one of the positive developments of his tenure. He said that it came about because the bank's directors were guilty of "inappropriate" and "irresponsible" management that "had to be punished in that way."

Martinez de Hoz discussed this issue in a telephone interview in which he also complained about the "obvious desire to distort the facts, since we can see a very well organized and orchestrated campaign in this respect through various opinion media."

The minister also commented on the statements by the president of Fiat of Italy, Giovanni Agnelli, to the effect that the Argentine affiliate is immersed in a "recessionary crisis" that will lead to a "shutdown of production so that it can devote itself to marketing activities." He contended that the Fiat president, who recently said exactly the opposite in Buenos Aires, has to clarify his remarks, which "not only confuse public opinion but do harm as well."

Speaking on radio El Mundo's "Senoras y Senores" program, Martinez de Hoz contended that the liquidation of the Sidesa Bank "obviously represents the application of the law to a bank that has exceeded the allowed limits in its operations and that has gotten into a situation, through inappropriate and one might even say, irresponsible management, in which it had to be punished in that way.

"We have already said," he added, "that as far as the money market is concerned, we have granted freedom that must be exercised responsibly, and the Central Bank has to be in a position to assure normal operations in this important sector."

Martinez de Hoz then maintained that these things are "portrayed as negative when, in fact, they are not. They are positive because in any adjustment process the good things sift through and the bad things stay behind, and right now we are putting the economy through a sieve; there are very positive things too."

Among these positive developments the minister cited the "record imports of machinery and equipment over the first 6 months of the year," stressing in this regard that these imports accounted for 26 percent of all Argentine purchases overseas, compared to just 15 percent in 1975.

Martinez de Hoz also cited the statistics that showed that the automotive industry "has kept up its pace of activities over the first 9 months of the year, because a record was achieved during the period even though this was the first year in which imports have been brought in" in appreciable amounts.

He then referred to Agnelli's remarks and recalled that the Fiat president had mentioned that there was a recession in the automotive sector in Argentina. The minister then asked: "What recessionary crisis can he be talking about in the Argentine automotive industry when we have just broken the all-time record for automotive output and sales in Argentina?"

After noting that Agnelli's remarks appeared in "a newspaper supplement" along with the story that other multinational automotive companies would also halt production in the country, Martinez de Hoz asked: "How can they be talking about decisions to halt production by the other multinationals when it is public knowledge that Ford, Renault and Volkswagen are pursuing investment programs and we are nearing $1 billion in investment in the sector for the application of modern technology, which would not have come about without the reform of the automotive industry regulations?"

Martinez de Hoz also asked: "How can we believe that Agnelli would say that his company (Fiat) is going to engage in marketing, when two high-level Fiat and Peugeot officials have asked to meet with me next week to tell me that the two companies have merged to continue producing motor vehicles in Argentina, with major investments?"

The minister voiced the view that "either some opinion media are systematically distorting the facts or a company's people are talking one language in Italy and another when they come to Argentina. It would be a good idea to clear this up, if only because the Argentine Government would like to know with whom it is talking and what language the people who are pursuing economic activities in the country are talking.

"In one way or another," he added, "statements like these not only confuse public opinion but do harm and must be clarified as well.

"We must realize," the minister continued, "that episodes such as these occur in an economic adjustment process that entails the transformation of the structures themselves; on the one hand, we have very positive news and, on the other, developments that could be construed in a negative or positive context depending on the standpoint from which they are viewed.

"In this regard," he continued, "I think that we can see that several sectors are distorting the facts."

In this connection, the nation's economy minister observed that "we can see a very well organized and orchestrated campaign in this respect through various opinion media, which are portraying everything in a way that does not square with the facts.

"In other words," Jose Alfredo Martinez de Hoz pointed out further on, "when you dig up the real facts on this it is one thing, and when you see how they are presented, it is a different thing."

Lastly, the economy minister said in the radio interview that "all discussions to clarify and elucidate are valid."

But "what I think is not so constructive is when there are clear-cut political intentions and the facts are distorted to try and influence what people might say about future developments in Argentina."

In speaking out against this "campaign," Martinez de Hoz said that the intention of the sectors furthering it is "to bring back situations that we consider surmounted once and for all."

As we will recall, last week the head of the Turin automotive firm said that "we have decided on a drastic overhaul of our industrial presence in Argentina, and as of 1981 we will be carrying on only marketing activities."

Elsewhere in his statement, which was reported by an international news agency, Agnelli contended that "similar decisions have been made by the main multinationals doing business in that country (Argentina)." The Italian business leader's remarks were made during a Fiat stockholders meeting.

A look at the Italian manufacturer's share in Argentina's automotive sector shows that it has lost ground to the rest of the companies on the market. In 1975 Fiat was number one among the automotive firms; in 1979 it was in third place, behind Ford and Renault.

TRADE BALANCE, RESERVES FIGURES SHOW INCREASED DEFICIT

Buenos Aires CLARIN in Spanish 16 Nov 80 pp 4-5

[Text] The foreign trade balance for the first 8 months of the year closed an estimated $1.024 billion in the red, according to the calculations of the National Statistics and Census Institute and the Central Bank. Information from interior customshouses and air transport operations has yet to be compiled.

These figures confirm the trend noted since the last third of 1979 and run counter to official forecasts (at least in line with recent comments by members of the economic cabinet) that that would be the deficit for the whole of 1980. The explanations voiced at various seminars and to foreign newsmen point to the dropoff in farm supplies prompted by weather conditions, which cut national output by between 6.2 and 6.5 million tons, as the cause of the deficit. They also attach importance to the steep rise in imports, which the aforementioned sectors describe as a generally healthy process to curb inflation, assigning it "a role of some significance" in the nation's new trade context.

The authorities have advanced another argument to downplay the rise in imports. In talks with foreign correspondents, they have alleged that more than 75 percent of the funds have been earmarked for the purchase of capital and intermediate goods (around 30 and 47 percent, respectively), while describing as unfounded the observation that expenditures for consumer goods are excessive, since they have accounted for only 11.5 percent of total imports.

Worrisome Signs

Above and beyond any value judgments concerning these figures, however, the fact of the matter is that a storm front is on the horizon for the external sector.

The various available assessments indicate that the country's external sector has seemingly been marked by the following developments:

--Foreign trade: From January to August of 1980, the provisional figure for imports was $6.109 billion, while exports stood at $5.085 billion. Overseas purchases of fuel accounted for 11.5 percent of total imports, according to information supplied by the Energy Secretariat. Oil imports rose by 22.1 percent in volume and 58.8 percent in value.

Key:

1. Trade balance (January-August 1980)
2. Billions of dollars
3. Trade deficit
4. Imports
5. Exports
6. Source: CLARIN, based on data from the National Statistics and Census Institute and the Central Bank of the Argentine Republic

--International reserves: At the close of the first week of November they reportedly stood at some $7.85 billion. At the end of last September they amounted to $9.7 billion.

--Foreign debt: without figuring in interest, it is estimated at between $23 and $25 billion.

--Capital outflows: Gross outflows for the January-September 1980 period have reportedly amounted to some $3.8 billion.

--Tourism and interest: Over the first 9 months of the year there has been an estimated net outflow of around $2 billion.

If we figure in just these statistics and if the trend in the balance of payments cannot be reversed, we are hard-pressed to agree with the World Bank's forecasts that the overall external sector deficit for this year would hit only $2.5 billion.

STUDY DETAILS SLOW GROWTH IN AGRICULTURAL SECTOR

Santiago EL MERCURIO in Spanish 2 Dec 80 pp 1, C-6

[Text] The growth rate of the agriculture sector amounted to only 1.7 percent a year between 1978 and the present, according to a study done by Catholic University. The figure falls well below that of the rest of the economy for the same period.

Despite the situation of recent years, average growth in the national agriculture sector amounted to 5.8 percent a year between 1974 and 1978, which is more than twice the percentage recorded for the 1961-1970 period (2.2 percent).

This average was heavily influenced by the high rates registered in 1974 and 1977, 16 and 15 percent, respectively.

Reasons for Stagnation

Why this apparent stagnation in the development of the Chilean agriculture sector after an initial period of growth, and after the implementation of the nation's new economic policy?

The magazine PANORAMA ECONOMICO DE LA AGRICULTURA, published by the Department of Agrarian Economics of the School of Agronomy of the Pontifical Catholic University of Chile, discusses the principal elements of this situation in its November issue this year, and states that the causes are varied, and many of them are inevitably controversial.

Size of Enterprises, Structure of Land Ownership

According to those who are studying the present situation of our national agriculture, an important factor which to a great extent predetermines the sector's reaction to the current economic policy, is the structure of agricultural land ownership.

In 1964, when agrarian reform had not yet begun in our country, businesses with more than 500 hectares (a total of about 6,500) controlled more than 70 percent of agricultural land in this country.

In 1979 enterprises owning more than 500 hectares, although increased in number to 7,761, controlled only 55 percent of the nation's agricultural potential. That is, medium and large holdings, supposedly the most receptive to changes in economic incentives, control only about half of the nation's agricultural land. Two limitations

can be discerned from this situation: one, that small companies do not have the resources to make an about-face from a traditional agriculture to more intensive cultivation in crops such as fruits, exportable vegetables, and beef and dairy cattle, etc.; and two, that the typical size of medium and large holdings seems to be insufficient to take advantage of the economies of scale inherent in the traditional, extensive methods of cultivation.

Relative Importance of Subsectors

Here is the percentage distribution of the value of agricultural production in the different categories, whose development conditions the overall development of the sector:

Categories	76-77	77-78	78-79
Crops	69.0	61.6	63.9
Traditional crops	37.9	26.1	27.4
Vegetables	20.2	22.5	22.4
Fruits	7.1	9.0	8.4
Vineyards	3.8	4.0	5.7
Livestock	31.0	38.4	36.1
Cattle:			
Beef	13.2	16.5	14.8
Dairy	7.6	9.0	8.5
Sheep:			
Meat	1.1	1.5	1.4
Wool	1.2	1.4	1.7
Pigs	2.1	3.1	2.9
Poultry:			
Meat	2.5	3.4	3.8
Eggs	3.3	3.5	3.0

Source: Agriculture Planning Office (ODEPA), Agricultural Reports

According to these figures, even though large amounts of resources have been reassigned to the sector, the traditional categories still account for by far the bulk of national production.

Livestock (meat, milk, eggs and wool) accounts for approximately 40 percent of national production; traditional crops, 25 percent; vegetables, mostly on the domestic market, 20 percent; and fruits and vineyards, 15 percent. Thus, livestock and traditional crop operations have the greatest impact on the development of the sector.

Summary and Conclusions

In the above-mentioned study by the School of Agronomy of Catholic University, the following conclusions about the national agriculture situation are presented:

--The rapid growth of the sector up to 1977 has diminished for the third consecutive year; the average growth rate of the last 3 years is only 1.7 percent;

--Despite the increasing liberalization of the economy in general and agriculture in particular, the sector still depends on the domestic market for 80 percent of its sales;

--Agricultural land ownership is excessively subdivided as a result of agrarian reform;

--Traditional crops and livestock holdings continue to play a key role in the sector's growth rate;

--The profitability of these crops and holdings has generally slackened as a result of a combination of factors such as the trends in international prices, the exchange policy, real increases in energy and labor costs, low competitiveness in the inputs and products markets, and the growing tax burden resulting from higher assessments of agricultural land.

The summary also points out that the profitability of the livestock sector has been helped by the surge in beef prices, a situation which has become more closely related to the current cost of capital. It also says that the profitability of the fruit subsector (which has a great potential for expansion) will continue to be attractive given present price and tax conditions.

Aside from emphasizing the possibility of nationally produced vegetables gaining access to export markets, the conclusions stress the importance of these products for reactivating and then developing the national agriculture sector. This sector must have access to credit with terms and costs compatible with its profits. Its main attractiveness stems from its potential as a source of foreign exchange.

As a complement to the above, the conclusions advocate long-term government regulation of agricultural taxation, and stress the role the state should play in the development of certain technology and technical-economic information.

BUDGET EXPENDITURES FOR 1981 OUTLINED

Santiago EL MERCURIO in Spanish 2 Dec 80 pp 1, C-6

[Text] The 1981 budget for the public sector, approved on 28 November by the Government Junta, allots 533.291 billion pesos for expenditures in national currency, and $2.49 billion to cover expenditures in foreign currency. Expressed in dollar amounts, both figures total $16.164 billion (about $1,539 per capita per year, the equivalent of 60,000 pesos). In order to calculate the budget, the price of copper was estimated at US $0.90 per pound.

This was announced yesterday by the National Budget Director, Juan Carlos Mendez. He released the main provisions of the 1981 National Budget Act, which will be published in the Official Gazette this week.

The public sector mentioned in the act includes the treasury, decentralized institutions (municipalities), the social services sector and public enterprises.

Excluded are state enterprises that are privately regulated, such as National Electric Power, Inc. (ENDESA), the Pacific Steel Company (CAP), the Chilean Electric Company, Ltd. (CHILECTRA), the Chilean Workers Federation (CTCH), the National Sugar Industry (IANSA), the subsidiary corporations of the Production Development Corporation (CORFO), and large sectorial enterprises such as the Copper Corporation (CODELCO) and the State Bank.

"The above," said Mendez, "reflects the economic authorities' decision to place the majority of state enterprises in an autonomous budgetary situation, subject to market forces. In the next few days it will probably be necessary to announce the policies that will govern these enterprises in 1981, especially with regard to what they charge for their services."

Surplus, More Public Spending

The budget director also revealed the following information:

In 1979 and 1980 the national budget has yielded increasing surpluses.

The budget act for next year has accented the exclusion of important state-owned enterprises as a source of income and expenditures. In this manner, there will be greater rationalization and destatization of public activity, and a savings in the national budget. The act identifies public enterprises as the largest sector, and the one which presents the most obstacles to national growth.

In the other sectors included in the national budget, it is felt that a good deal of rationalization has been achieved: the treasury itself does not require more resources; it is under control. The decentralized institutions such as the Agricultural Commerce Enterprise (ECA) have cut down their activities; others, such as the Public Debt Compensation Fund, have ceased to exist. In this sector, only the municipalities (because of their new functions) will require greater expenditures. Finally, the social services sector will require increased spending by the state due to recent reforms, but only for a limited time.

By excluding the large enterprises from the national budget, the government hopes to bolster spending in those areas where the subsidiary principle is fully applicable: new municipal services, the National Minors Service, educational subsidies, social services reform, family allotments, etc.

Social Spending

As of March 1981 the payment of family allotments will be the exclusive domain of the treasury. It is estimated that these payments will amount to 12.5 billion pesos. This measure is designed to phase out over a period of 7 years a tax on wages and salaries amounting to up to 33 percent. From now on, these payments will be financed by general revenues.

Having eliminated this tax, in 1981 the government will devote more than 52 percent of total spending to social expenditures (justice, education, health, etc.). This year that figure was 50.5 percent.

Some items scheduled for increased social spending are:

--Aid to minors in irregular situations will increase by 120 percent over 1980.

--Subsidies to private schools will increase by 90 percent over last year.

--Municipalities which run schools will receive 6.1 billion pesos.

Investment in Roads

The Ministry of Public Works budget will be equal to that of 1980, but it will be allowed to use $150 million in external credit for the purpose of improving the highway network. It is estimated that $183 million will be invested in highways, which means a 68 percent growth over the 1980 figure.

Wage and Pension Adjustments

The act envisions just one adjustment in 1981 for public services subject to the Single Remuneration Scale, which will come into effect next August. The adjustment will equal the change in the CPI between October 1980 and July 1981. In the event of a change of more than 16 percent in the CPI before 1 August, the adjustment will be moved up by a month.

Pensioners and public assistance recipients will receive an adjustment pursuant to Decree Laws 2448, 2547 and 3500. This means that if the CPI variations between October and 30 May are 15 percent or less, an adjustment will be made on 1 June 1981. If the change amounts to more than 15 percent before 1 June 1981, the adjustment will be moved up by a month.

EDITORIAL COUNTERS BISHOPS' CALL FOR RETURN OF EXILES

Santiago EL MERCURIO in Spanish 30 Nov 80 p A-3

[Editorial: "Episcopacy and Exile"]

[Text] The Episcopal Conference of Chile, after the Eucharistic Congress, released a document which deals with different episcopal matters. It contains some suggestions which the conference feels would promote the reconciliation of the Chilean people; one of those suggestions is the return of the exiles.

The paragraph in the document referring to that issue does not go into detail, although it specifies some groups that should receive priority. This is not the first time that the episcopal sector has made such a proposal, aside from the testimonials about contacts some bishops had in Europe with groups of exiles in the recent past. Now we are returning to a problem which has been the subject of a constant political campaign by the Marxist left and other cooperating sectors.

We must distinguish between the humanitarian, juridical and political aspects of the exile issue. Of course a certain number of families are in the unhappy situation of being split up as a result of one or more of their members having gone abroad seeking asylum, or pursuant to a judicial order of banishment, or of their own free will. However, in any organized society there are some benefits and rights which take precedence over others. The common good comes before individual needs. It is important for families to be reunited, but when this can harm public order and the security of our citizens, we must conclude that the latter needs are more important than the simple desires of a family.

The government has been cautious in readmitting exiles to national territory. It has looked carefully at their activities prior to and subsequent to the 1973 change of government. Not a few people have already been authorized to return to Chile, although not everyone who wants to return may do so. The Ministry of the Interior applies clear legal regulations to these cases; it is looking out for the peace of mind of the vast majority of the population. Some people think we should forget about the past actions of many exiles, while the leaders of Popular Unity exhort them to return to the country in order to overthrow the government by force.

In addition to the humanitarian or sentimental approach to the exile issue, we must consider the political aspect. Those who lost power 7 years ago want to win it back. Statements by communist and socialist leaders to this effect abound. But the formulation of broad strategies with improvised democratic features is preceded by terrorist activities by exiles who have managed to come back into Chile secretly. The same crimes have reportedly been committed by others with serious criminal records who have even submitted applications at foreign consulates to be admitted here.

Among those who "are not resigned to living outside their homeland" are also those who are inspired by hatred and revenge, the antithesis of the reconciliation sought by the Episcopal Conference. Nor is it proper to revise "sentences or decisions made during moments of crisis," because in addition to the fact that this would counter a judicial fait accompli, an amnesty law has already allowed many exiles to return. The government authorities should continue to act prudently on this matter. The applications of those who deserve to return should be accepted, and the return of those who make no secret of their opposition to national peace and unity should be delayed.

BRIEFS

NAVY WARSHIPS--Over a period of 10 years the Chilean shipping industry will have to renovate the majority of the National Navy's units, which are gradually becoming unserviceable. This means that our country will become self-sufficient in warships, because the infrastructure and technology for doing so already exist. This announcement was made at a press conference in this city by the commander of the cruiser "O'Higgins," Capt Franklin Gonzalez Rodriguez. The officer is chief of the Squadron Task Force which is now in Corral. It is made up of the cruiser "O'Higgins" and destroyers "Williams" and "Cochrane." The officer pointed out that "the renovation does not necessarily include all of our units. There is a plan covering approximately 10 years in which the economic and institutional forces will renovate the units that become obsolete. But this does not mean all the units; it will be done in a partial and gradual manner. The purpose of this study and of the naval renovation policy, which is almost completed, is to modernize our equipment, to make our functions more efficient. Asked what are the limitations of our industry in this regard, he replied that "there are some factors, such as the armament systems and some engine parts, for example. The groundwork is being laid," he added, "to build the infrastructure here that will be able to meet the demand. This will be done at Naval Docks and Yards (ASMAR), or perhaps at private shipyards that are interested in the project. We have the capacity here. The technical capacity exists; that is generally accepted. What we need is to implement the material measures necessary to put the plan into effect." [Text] [Santiago EL MERCURIO in Spanish 24 Nov 80 p C-11] 8926

COPPER PROCESSING TECHNOLOGY--The rector of the University of Concepcion, Guillermo Clericus Etchegoyen, at a ceremony to take place Tuesday in Concepcion, will deliver to the Copper Corporation the automation project devised by the university for the Chuquicamata division. The project, called "Automation of Section 3 Wet Grinding of Concentration Superintendency," was formulated between 1978 and 1980 by a group of specialists in different engineering disciplines, dedicated to the task of providing technical assistance to the productive sector. The group is under the Vice-Rectory of Research of the University of Concepcion. The implementation of the new system will mean an increase of between 7 and 11 percent in the production of red copper. According to information given by the university, the system is part of the third phase in a series of four aimed at the automation of the entire grinding plant of the division's concentration plant. The two first phases consisted of a basic study of research and development of the system, and the corresponding technical-economic feasibility study. The automation project involves modern control systems that are being widely adopted in the industry in the processing of minerals. The general acceptance of these systems is the result of a series of technical and economic factors. However, this is the first time a digital computer will be used in

Chile to automatically control the operation of a complex industrial process. To date, this system has been used only by companies in industrial countries, where remarkable results have been obtained. All these considerations prompted the Chuquicamata division to study the feasibility of incorporating the new technology in the wet grinding of copper ore, and eventually, in a second phase, automating the entire plant. The benefit of the system lies in the fact that in large-capacity concentration plants any increase in recovery or mineral treatment capacity means increases, however small, in economic revenues as well as better utilization of energy by the equipment and the different inputs. [Text] [Santiago EL MERCURIO in Spanish 23 Nov 80 p C-7] 8926

FOREIGN INTEREST IN COPPER DEPOSIT--Several international mining firms have expressed their interest in participating in bidding soon to be opened by the Chilean Government for the development of the Andacollo deposit, reported Mining Minister Carlos Quinones yesterday. In a brief conversation with journalists, the secretary of state said that he has already received messages from different enterprises interested in the mineral deposit. Since 1977, a corporation consisting of the Chilean Government, through the National Mining Enterprise (ENAMI), and the Canadian firm Noranda Mines, have been undertaking explorations and technical-economic studies in the area, and have concluded that the deposit could be developed profitably. "Because Noranda is unable to finance the development, the Chilean Government has decided to call off negotiations and continue freely with the project," explained Minister Quinones. In response to a question about the reason for deciding to call off talks with Noranda instead of looking together for new financial sources, the minister stated that "the Chilean Government has the right to decide what best meets the country's interests." Finally, the minister indicated that the amount which the Chilean Government must reimburse to Noranda as compensation for the expenses that company incurred in prospecting and exploring, is being reviewed. For that reason, no specific figures can be given. In addition, Noranda executives in Chile stressed that the end of negotiations concerning Andacollo does not mean that company will pull out of the country altogether. "We have other, smaller projects in other areas. We will continue to explore new polymetallic mineral deposits," they stated. The largest project Noranda now has in Chile is a deposit of gold and other metals in an area near Andacollo, in the Fourth Region. To date it has invested $1 million in the exploration phase. It also plans to begin exploratory boring in the southern zone and in another area of the northern region, but the specific sites were not revealed for "strategic reasons," it was explained. [Text] [Santiago EL MERCURIO in Spanish 22 Nov 80 p C-1] 8926

TERRORISTS' RETURN PROHIBITED--The Supreme Court upheld the measure prohibiting the return to Chile of Elsa Erika Arbulu Aguilera and her husband, Guillermo Sotomayor Santander. The couple was accused by authorities of being "activists promoting doctrines that advocate the destruction or violent change of the country's social order and system of government." They were identified as "unconditional elements of the former Popular Unity." Elsa Arbulu and Guillermo Sotomayor submitted applications to return to Chile in Belgium, where they now live. According to information supplied to the high court, the couple participated in terrorist acts in the past. A report submitted to the Supreme Court states that Elsa Erika Arbulu and her husband Guillermo Sotomayor, both 29, were arrested in Valparaiso in May 1974. They were accused of engaging in clandestine activities in the so-called Revolutionary Armed Forces and of being involved in planting bombs in different parts of Valparaiso, Vina and Quilpue. These events allegedly took place in early May 1974. They were convicted of the violation of the State Internal Security Law and the Arms and Explosives Control Law.

Elsa Arbulu received 15 years in jail for these crimes, and 60 days in prison for being an accessory to the crime of falsification, Article 194 of the Penal Code. Guillermo Sotomayor was sentenced to 15 years in jail. The couple took advantage of the provisions of Decree Law 504 in March 1977, and was granted a commutation of the remainder of their sentences by means of banishment. Later they left the country. When the amnesty decree law was signed (number 2191), Elsa Arbulu and Guillermo Sotomayor went to the Chilean Consulate in Antwerp, Belgium, and requested permission to return to the country. The petition was denied because they were considered a security risk. Through a lawyer, the couple appealed for relief in Chilean courts. Their appeal was denied by the Court of Appeals, and the decision was recently upheld by the Supreme Court. [Text] [Santiago EL MERCURIO in Spanish 29 Nov 80 p C-6] 8926

PROBLEMS WITH INDUSTRIAL EMULATION RESULTS NOTED

Havana JUVENTUD REBELDE in Spanish 25 Nov 80 p 1

[Article by Pedro Rodriguez Gutierrez]

[Text] Before the third review of special emulation in industrial work recedes too far behind us, we would like to state the following concern, which is not only ours but that of the delegates:

Although there were many fewer this time, various enterprises, brigades and projects in the country still persist in not reporting the results of their work to the National Construction Union. They have not detracted from the success of the brotherly competition, but they are disgracing and demeaning those who hold responsible positions in them.

Why have the civil construction brigades in Las Tunas and Moa not reported? As well as those doing installation work in Villa Clara, Las Tunas and Moa? And those in earth-moving in Havana, Villa Clara and Moa? And the 10th of October thermal power group in Camaguey?

And those at the cold-storage plants in Pinar del Rio, Marianao and East Havana? And those working on the steelworking projects in Villa Clara and Moa? And those at the toilet paper factory in Matanzas? And at the Camaguey meat-processing combine? And at the bagasse-board factory in Ciego de Avila?

As one can see, important industrial work groups are withholding themselves from socialist emulation by not telling what they are doing and how they are doing it. Among those attending the reviews there are those who propose that measures be taken against them and be factors in the next evaluations. For the time being, it was agreed to send them a letter from the union and from the ministry concerning the matter.

It is of great concern, for example, that we are not hearing from the many young people of Moa, one of the regions with the most vigorous industrial growth. There is no word of the work and strenuous effort put forth by so many construction workers.

The extent, difficulties and conditions of their work probably are much more demanding than other subjects of emulation. However, they remain silent.

It is possible, we think, that the financial results for the nickel plant were not good; but why hide them? Perhaps things are not going well in the mechanical combine; will concealing that improve them?

If everything is going better than it was, it is not a good idea to make a secret of men's labors.

Sweat has run from construction workers. Can you imagine the heroic labor performed in Moa? Well, they did not send the National Construction Union the names and biographical data for their most outstanding workers during the third quarter of the year, as they are supposed to. They have kept them anonymous, unfortunately and contrarily.

Of course, the union's emulation office has to make demands; and the workers, with the young people leading the way in this emulative process, must call for an accounting.

Naturally, they have not diminished the joy of beautiful Maria Cristina Carbonell or of other nationally noted workers and brigades, whom we will continue to talk about in our next column, following this critical aside.

PREREQUISITES FOR HIGHER EDUCATION

Havana GRANMA in Spanish 18 Nov 80 p 2

[Encapsulated interview with Raisa Harambouru, secretary of the Havana Entrance Committee, by J. D.]

[Text] The prerequisites for pre-university graduates wishing to enter the higher education level for the 1981-82 school year have been announced by Raisa Harambouru, secretary of the Havana Entrance Committee.

The following questions and answers are a summary of reporters' exchange with Harambouru.

[Question] How many academic majors are being offered to the students?

[Answer] The program providing scholarships abroad offers over 100 majors, as does the program involving our domestic higher education centers. There are some majors that are offered to students both in Cuba and abroad.

[Question] Why, then, do they say there are 10 choices?

[Answer] There are two basic processes. The first is for those having a grade average exceeding 92 points. They are offered the complete range of majors, and the student chooses 10 in accordance with his desires.

The second process is for those with fewer than 92 points. It is also for those who made no choice in the first process. In this one, there is a smaller range of majors; but 10 choices are available.

[Question] What average should a student have to request a scholarship abroad?

[Answer] 85 points.

[Question] How is this average determined?

[Answer] It is the arithmetical average of grades obtained in the 10th and 11th grades.

[Question] Are there other requirements?

[Answer] A good socio-political record and not having repeated a grade. They can request a maximum of three majors.

[Question] Can they apply for a scholarship abroad and also to study at a center of higher education?

[Answer] They can apply for only one them, for they're mutually exclusive.

[Question] Which centers of higher education have additional requirements?

[Answer] The majors offered are studied in this country and not abroad. They are offered, requested and granted at the same stage as the foreign scholarships. For example, the military education centers, the National Fishing Institute, the Higher Institute of Art. Concerning prerequisites, they are the same as those for scholarships abroad.

[Question] What is the effect of entry into these programs on desires to enter the national program?

[Answer] Students entering one of these programs naturally no longer have a reason to request entry into another one.

[Question] How are scholarships awarded for study abroad and at the centers of higher education?

[Answer] A list is drawn up for the province, and the scholarships are awarded in accordance with the students' grade averages, political records and, if the particular major calls for it, their aptitudes, as happens in the case of the Higher Institute of Art.

[Question] If a student fails to find a place in one of these programs after having sought one, where does he stand?

[Answer] He will request entry into the national program, suffering no restriction because of his previous attempt.

[Question] Who has the right to take part in the first process for entry into higher education?

[Answer] Any student who has a grade average of 92 or higher for the 10th and 11th grades and the first semester of the 12th grade.

[Question] Is it essential that students make 10 choices?

[Answer] Taking all the choices offered in the first process is to the students' advantage, for they have a better chance of getting something they want.

If the student lists few alternatives, it's possible that he won't be placed in a major he requested, and then he has to go through the second process to request one that is open.

[Question] What about students with a grade average below 92?

[Answer] They will take part in the second process with those who failed to find a major in the first one.

[Question] Are the same majors offered to all the pre-university schools?

[Answer] The national program for majors is the same for all the schools in the city and province of Havana.

[Question] However, they say that there are majors that are granted only to certain pre-university schools.

[Answer] The granting of scholarships is determined by grade average and by socio-political conduct. If a school obtains most of the places in a particular major, it's because its students are higher on the scale than students in other schools.

[Question] Who can request majors in education?

[Answer] The students belonging to the education detachment, if they have a grade average of 80 or higher.

[Question] Are all courses taken in secondary school considered?

[Answer] Yes; and we should make it clear that astronomy will be included in the determination of the grade average.

BRIEFS

SIERRA LEONE'S APC OFFICER--Yesterday morning, E. T. Kamara, assistant secretary general of Sierra Leone's All-People's Congress (APC) party, left our country after visiting it at the invitation of our Communist Party's Central Committee. While in our country, the Sierra Leone leader held official talks with Jesus Montane, member of the party Central Committee and chief of its General Department of Foreign Relations. They exchanged views regarding the work done by the two parties and concerning cooperation between the Communist Party and the APC as well as between Sierra Leone and Cuba. Kamara was seen off by Montane and Aramis Fuente [as published] section chief in the General Department of Foreign Relations, Alimany Yamba Komeh, Sierra Leone ambassador to our country, and other party and government officials. [Text] [Havana GRANMA in Spanish 18 Nov 80 p 3] 9085

SPANISH PARLIAMENTARIANS AT ICAP--Rene Rodriguez, president of the Cuban Institute for Friendship With Peoples, greeted the delegation of members of the Spanish Parliament. Led by Jose Luis Nizdero Aparicio, chairman of the Spanish legislature's committee on emigration, the group also included deputies Jose Vazquez Souz, Nona Ines Vilarino, Antonio Palomares Vinueza and Martin Rodriguez Contreras. The meeting, which dealt with the Spanish colony living in our country, took place in a cordial, friendly atmosphere. The delegation is being accompanied while here by Mr Manuel Ortiz, the Spanish ambassador to Cuba. [Text] [Havana GRANMA in Spanish 24 Nov 80 p 3] 9085

NEW ADMINISTRATION PUBLISHES POLICIES, CABINET MEMBERS

New Government Policies

Kingston SUNDAY GLEANER in English 2 Nov 80, Election Feature p III

[Text] The new government by its historical background, by the manifesto of the Jamaica Labour Party, and by pronouncements since election may be described as being committed to a system of free enterprise in a market system of economics, but with the government maintaining control in areas such as public utilities, playing a regulating role in the public and consumer interest and a dynamic role in initiatives towards solving the countries immediate economic problems of shortage of finance, inadequate production and high unemployment.

In terms of solving the country's immediate foreign exchange gap, estimated at approximately U.S.$1800 million over the next three years (US$600-million per annum), the party manifesto stated that it is satisfied that it can command the necessary foreign exchange resources to close the gap on terms and conditions beneficial to Jamaica as follows:

- *Additional earnings from non-traditional exports
- *Refinancing/rescheduling of debt
- *Oil support facilities
- *Structural adjustment and balance of payments loans
- * Export development loans
- *Project loans (balance-of-payments portion)
- *Donor countries

Measures to close the local resource gaps in government expenditure will include rigid implementation of cash budgets for Ministries and enterprises to eliminate waste.
In general terms, eight objectives and to be given priority viz.

- *Restoration of employment and economic growth
- *Restoration and expansion of public services
- *Development of the youth and child
- *Development of the rural environment
- * Restoration of security, stability, human rights and confidence in the future of the Nation
- *Development of cultural heritage
- *Balanced foreign policy

The new government will promote export development as a primary thrust of the economy. It will welcome joint venture enterprises between foreign and local entrepreneurs and also plans to establish a Capital Development Bank which will attract investment from major public and private banks locally and overseas for large-scale investments.

Overall, the strategy will be to use the motivational force of incentives combined with a moderate political stance. Thus, while most programmes in the area of trade (particularly exports) and investment should continue and where appropriate be accelerated and expanded, the most evident differences are likely to be in the enhanced climate of entrepreneurial confidence and, hopefully, the achievement of greater practical results.

Fifteen Member Cabinet

Kingston SUNDAY GLEANER in English 2 Nov 80 Election Feature p III

[Text] A 15-MEMBER CABINET appointed by the Prime Minister, the Hon. Edward Seaga, was sworn in at King's House by the Governor-General, the Most. Hon. Florizel Glasspole.

In the new cabinet, Mr. Seaga said he had sought to keep together the "small band" which had operated in Parliament as the Opposition prior to the October 30 general election.

Members of the Cabinet are Mr. Seaga, Prime Minister, Minister of Finance and Planning and Mining and Energy; the the Rt. Hon. Hugh Lawson Shearer Deputy Prime Minister and Minister of Foreign Affairs and Foreign Trade; Mr. Douglas Vaz Minister of Industry and Commerce; Dr. Percival Broderick, Minister of Agriculture; Dr. Mavis Gilmore Minister of Education; Dr. Kenneth Baugh, Minister of Health; Senator Bruce Golding, Minister of Construction; Mr. Winston Spaulding, Attorney General and Minister of National Security and Justice; Mr. Errol Anderson, Minister of Youth and Community Development; Mr. Pearnel Charles, Minister of Local Government, Mr. J.A. G. Smith, Minister of Labour and the Public Service, Mr. Alva Ross, Minister of Public Utilities and Transport; Mr. Neville Lewis, Minister of Social Security; Mr. Eric Anthony Abrahams, Minister of Tourism; Dr. Ronald Irvine, Minister without Portfolio.

Four Ministers of State (who are not members of the Cabinet) were also sworn in. They are: Miss Enid Bennett, who will be attached to the Ministry of Local Government; Dr. Neville Gallimore, who will be attached to the Ministry of Foreign Affairs; Mr. Leonard Kirby, who will be assigned to the Ministry of Social Security; and Mr. E.K. Powell who will be attached to the Ministry of Public Utilities.

Dr. Irvine and Mr. Golding, Chairman and General Secretary respectively of the governing Jamaica Labour Party, will resume membership of the Senate. All other members of the Cabinet and the Ministers of State were victorious as candidates for the House of Representatives in the General Election.

The new Cabinet Ministers first took the Oath of Allegiance, then the Oath of Office, after which they were handed the Instruments of Authority.

In an address after the swearing in ceremony had been completed, Mr. Glasspole wished them success and said that he prayed that their hard work, sweat and toil would be rewarded and that they would see the results of their labour steadily rising before the eyes of the nations.

"If you succeed in this great task that lies ahead of you, our country will be everlastingly grateful and history will call you blessed," the Governor General said.

THE NEW CABINET after being sworn in. In front row (from left) are: Dr. Ronald Irvine, Mr. Pearnel Charles, Dr. Percy Broderick, Prime Minister Edward Seaga, the Rt. Hon. Hugh Shearer, Dr. Mavis Gilmour and Mr. Anthony Abrahams. Middle row (from left): Mr. Neville Lewis, Mr. Winston Spaulding, Mr. Douglas Vaz, Mr. Alva Ross and Dr. Kenneth Baugh. Back row (from left): Mr. J. A. G. Smith, Mr. Errol Anderson and Mr. Bruce Golding.

FOREIGN CAPITAL WELCOMED, INVESTMENT OPPORTUNITIES OUTLINED

Bermuda ROYAL GAZETTE 4 Dec 80 Special Supplement pp 6, 15

[Article from Special Supplement entitled: "Jamaica Exports"]

[Text] WITH ITS STRATEGIC geographical location at the hub of the Caribbean, Jamaica is ideally suited for investment by overseas capital, particularly for ventures aimed at export markets of the United States, Central and South America, as well as in the countries of the European Economic Community.

Foreign investment, mainly from the United States of America but in lesser degree from the United Kingdom and Canada, has made a significant contribution to Jamaica's industrial and economic development since the mid-1950's and the Governments of the day continue to welcome foreign investment into the country.

This welcome has been expressed and reiterated on more than one occasion in various forums.

POLICY

An official policy statement on foreign investment sets out the present measures and guide-lines relating to private foreign investment and highlights the importance which is attached to export-oriented ventures. The main features of this policy are:

- Non-resident investors are allowed to bring machinery and equipment into Jamaica as a share of equity.
- Management skills may be provided by the overseas partner in special circumstances.
- Export-oriented investments may be 100% foreign owned and can be located in the Kingston Free Zone which adjoins the island's major local shipping and trans-shipment port.
- Joint ventures with local interests, whether in the public or private sectors, are encouraged.

• Foreign capital, which is duly registered with the Bank of Jamaica, may be repatriated.

• Approval for repatriation of dividends arising from duly-registered foreign investment will be granted upon application to the Bank of Jamaica.

Registration of foreign investment may be made by application to the Bank of Jamica with relevant details and will normally be approved provided it is in a category available for non-resident investment (see "Areas of Investment" below) and provided the non-resident investor pays for his investment with foreign exchange.

Non-resident investors are required to incorporate local subsidiaries instead of branch offices.

Application may be also be made through contact with Jamaica High Commissions and Embassies.

TAXATION

Company Profits Tax is payable by bodies corporate except insofar as waivers or holidays are granted as indicated below. Normal rates range from 25% to 35% according to the nature of the business and share-structure, agricultural companies being the lowest and private companies being higher.

There is also an additional COMPANY PROFITS TAX of 15% on all income except dividends received from Jamaican companies liable to profit tax. These dividends are subject to income tax at 37½%.

Approved non-resident investments can remit profits and dividends as long as audited accounts are presented along with certification of the payment of WITHHOLDING TAX. Withholding Tax amounts to 37½% in the case of dividends (except for reliefs granted).

Interest to non-residents, royalties and annuities are also payable, provided Withholding Tax of 12½%, has been certified as duly paid. Payments for industrial or commercial advice, management or technical services and hire of plant and equipment attract rates ranging from 12½% to 25%.

Income tax is payable on a graduated scale from 30% on the first $7,000 of chargeable income up to a minimum of 57.5% on chargeable income in excess of $14,000 as from January 1980.

There are various tax-credits available (equivalent to deduction for personal allowances) for wife, children, insurance, medical expenses and so on.

INCENTIVES

A wide range of incentives is available to approved enterprises. These include.

• Full exemption from income tax, customs and consumption duty on equipment and machinery.

• Exemption of raw materials from customs duty.

In the case of companies producing for local and other markets, the above exemptions are available for periods of five, seven or nine years, depending on the level of the local value-added in the operations.

In the case of companies producing wholly for extra-regional markets, exemptions are available for periods of ten years.

Exemption is also available from income tax on dividends distributed during the tax holiday.

In addition, an enterprise which has either never been approved for these benefits or which has come to the end of any tax holiday, may be granted partial exemption from liability to pay income tax on profits earned in relation to its export performance.

The level of relief is based on a percentage of expor profits to total profits and provides for income tax relief up to a maximum of 50% of tax chargeable in relation to the quantum of export profits.

This relief is available for ten years in the first instance and is renewable for further periods.

AREAS OF INVESTMENT

Investment is especially welcome for export in areas such as garment-manufacturing, food-processing, textiles, leather and footwear products, metal fabrication and various other light industries. Further information on this is available from the Jamaica Industrial Development Corporation, an official agency of Government.

The Government provides a wide range of technical services to assist the non-resident investor. Training and technical assistance in certain areas are some of the services provided by the J.I.D.C.

Other Government agencies which serve in these areas include the Jamaica Development Bank, which assists with capital; the Jamaica National Export Corporation, which assists in overseas sales.

Jamaica already enjoys a fair amount of investment in the fields of bauxite-mining and alumina processing, the hotel industry, banking, insurance and in some of the manufacturing areas mentioned previously.

The Kingston Free Zone to which reference has been made, is an export-oriented industrial and commercial complex which offers investors an opportunity to operate a manufacturing plant, warehouse, assembly or packaging facility and re-distribution centre.

Operators within the Free Zone are beneficiaries under the Export Industry Encouragement Act (which incorporates the investment benefits listed above). In addition, they are exempt from import and export licensing and work permit fees.

INVESTMENT CLIMATE

There is a revival of interest and activity in the island's garment industry, with garment-manufacturers in the United States taking a renewed look at the island as a base for offshore operations for re-export to the mainland.

Arrangements have been made for the expansion of existing bauxite-alumina plant in Jamaica and there is a prospect of another alumina plant being built in the island, adding to those already being operated by local affiliates of Alcan, Alcoa, Kaiser and Reynolds, the North American giants of the aluminium industry.

The recent decision by the American state agency, the Overseas Private Investment Corporation, to restore its insurance coverage of U.S. investment in the island, should give new stimulus to the inflow of U.S. capital into the country.

LABOUR FORCE

Jamaica has a large English-speaking labour force which is highly-adaptable to skill-training; and labour rates are attractive. There are in place all the facilities for doing business: banking and finance, shipping and air services, legal and consultancy services, public utilities and infra-structure.

Altogether, investing in Jamaica can be a mutually rewarding exercise, with its additional advantages of operating in an environment in which the interests of all parties are respected and assured.

PUBLICATIONS

Publications which the potential foreign investor might find useful to read include —

"Foreign Investment — A Statement of Policy", published for the Ministry of Industry & Commerce by the Agency for Public Information, 58a Half-Way Tree Road, Kingston 10, Jamaica.

"Foreign Investment in Jamaica", published by the Ministry of Foreign Affairs, Marcus Garvey Building, Knutsford Boulevard, Kingston 10, Jamaica.

"Kingston Free Zone Handbook", available from the Kingston Free Zone, 27 Shannon Avenue, Kingston 11, Jamaica.

Jamaica High Commissions, Embassies and Consulates will assist in obtaining these publications.

IAPA ATTACKED BY COUNCIL OF STATE, DEFENDED BY 'LA PRENSA'

Accusations Against JGRN Condemned

Managua LA PRENSA in Spanish 29 Oct 80 p 2

[Text] We have received the following pronouncement by the Council of State against the IAPA:

Considering

I. That the Nicaraguan people have through a long struggle achieved their freedom and won the right to issue their own laws and decrees.

II. That the Sandinist Popular Revolution guarantees freedom of the press and safeguards a democratic, popular and anti-imperialist information policy.

III. That the IAPA is conducting a systematic campaign of attacks against the Sandinist Popular Revolution and its victories.

IV. That the IAPA's interpellation of the National Reconstruction Government's and Council of State's communications policy is an open intrusion based solely and exclusively on the views of one peron, lawyer Pedro Joaquin Chamorro Barrios.

V. That the IAPA defends the freedom of enterprises but not the freedom of expression.

Resolves

I. To condemn and reject energetically the interventionist and meddling intents of the IAPA.

II. To declare to be without basis the accusations disseminated to the world by the IAPA against the National Reconstruction Government.

III. To recommend to the IAPA that when it speaks of Nicaragua it do so on the basis of objective reports on our reality, such as will enable it to form its own opinion and to thus not be the spokesman for the partisan opinion of one person or of one specific organ of the mass media.

Directorate of the Council of State,

Commander of the Revolution Carlos Nunez Tellez, President of the Council of State
Comrade Luis Sanchez, Secretary
Guerrilla Commander Hugo Torres Jimenez, Secretary
Comrade Carlos Garcia C., Secretary

Chamorro Answers JGRN Pronouncement

Managua LA PRENSA in Spanish 29 Oct 80 p 2

[Commentary by Pedro Chamorro: "Reply to Council of State"]

[Text] I have read a pronouncement against the IAPA [Inter-American Press Association] issued by yourselves, labeling this institution as "interventionist" and alluding to me personally in that your pronouncement states that IAPA's interpellation is based on a report in LA PRENSA which I wrote.

To clarify things somewhat I shall comment on certain aspects of your fervid pronouncement of condemnation, trusting that appropriate corrective steps will be taken to ensure that the next report to the IAPA will be favorable to our revolutionary process.

You refer to the fact that "the Nicaraguan people have won the right to issue their own laws and decrees."

Question: Were the "Nicaraguan people" consulted as to limiting their right to be freely informed as has been done in many restrictive areas covered under Decrees 511 and 512? And if they were not consulted...under what authority did you take away their right to be freely informed, in open violation of the Basic Statute of the State, which guarantees the "unrestricted freedom of the press"?

You refer to the fact that "the IAPA is conducting a systematic campaign against the Sandinist Popular Revolution and its victories." It appears to me that this ascribes to great a capability to the IAPA an organization consisting of over 1,000 members from all parts of the continent who, at most, see each other once a year for a period of 4 days. Besides: When has the IAPA, as an organization, ever leveled the least attack against the Revolution? The only thing it has done is ask for the elimination of the decrees that restrict the freedom of the press. In your opinions, Honorable Councillors, are these decrees "the victories of the Sandinist Popular Revolution"? If they are: Could we then say that in Nicaragua "victories by decree" are being achieved?

You say "the IAPA's interpellation is based exclusively on my personal opinion." In this, sirs, you are flatly mistaken. The interpellation rests on three official documents: the Basic Statute of the State that guarantees a supposed freedom of the press, two decrees that restrict it and that were read word for word in the IAPA, and a pronouncement by the JGRN [National Reconstruction Government Junta].

There are here only two alternatives for there to be congruency "of word and deed," as the saying goes: either the decrees must be rescinded, though it seems they have already been catalogued as "a victory of the people," or the Basic Statute must be modified to guarantee a "restricted" freedom of the press in place of an "unrestricted" one. I submit to yourselves this draft wording: "Guaranteed is a 'restricted' freedom of the press within the limits established by Decrees 511 and 512 and by the JGRN pronouncement, which embodies the extensive term 'etc'."

And to further clarify "my personal views," I ask you: Was I perhaps the unfortunate inventor of Decrees 511 and 512? Is it or is it not a fact that these decrees restrict freedom of expression in many areas that are important to journalism and compel journalists to adopt a system of self-censorship, submitting their reports to "consultation" under pain of violating the laws that limit freedom of the press?

If this is not true... Why then were we explicitly forbidden to report on the events of Bluefields?

How ridiculous it is to read in your pronouncement: "To declare to be without basis the accusations disseminated to the world by the IAPA against the National Reconstruction Government."

In the first place, the accusations are in your own minds, because there are none in the IAPA's official resolutions. The only thing the IAPA did was to request the derogation of Decrees 511 and 512 in view of the contradiction with the Basic Statute of Guarantees. And it has done this because it is an organization that concerns itself with the freedom of the press throughout the continent and in every sense of the term. It is compelled to do this on principle, independently of the kind of government that rules in each country.

Finally, the Council of State's document recommends to the IAPA that "when it speaks of Nicaragua it do so on the basis of objective reports on our reality, such as will enable it to form its own opinion and to thus not be the spokesman for the partisan opinion of one person or of one specific organ of the mass media."

This calls for only two comments: You could suggest to the daily BARRICADA that it join the IAPA so as to convey to it the "objective version of our reality"; or, to avoid the appearance of an official voice and seem more like "an independent newspaper," it could be EL NUEVO DIARIO. How about it?

Lastly: What other more objective report on our reality can be furnished to the IAPA than our Basic Statute of Rights and Guarantees and Decrees 511 and 512?

ROLE OF FINANCE SECTOR IN NATIONAL ECONOMY DEFINED

Managua BARRICADA in Spanish 24 Nov 80 p 3

[Text] Because we regard it as of the greatest interest to our readers, especially all of the state workers and those in the financial area, we urge a discussion of this important speech by Commander of the Revolution and Minister of Planning Henry Ruiz. This address was delivered by Commander Ruiz last Sunday, 16 November, to the technicians and workers at the Nicaraguan Financial Corporation (CORFIN) at the conclusion of a seminar.

To these dead, our dead, we swear that we will triumph. How can this slogan be related to the current tasks of the revolution, and how can we make it felt in the same way it was felt by the combatants in the war trenches, in the way that it beat in the hearts of these fighters? Also, how can we make it beat in the hearts of these employees of the CORFIN, how can we make them feel again the emotion in their breasts in remembering the brothers who fell throughout our struggle? How can we insure that the workers and employees of the CORFIN will feel as intensely as we did in those early days? In no way have we left the trenches, just as battle and the war continue. It is only that the tasks have changed, and do not exclude the possibility of aggression, the possibility of a counterrevolution which can take us back again to armed combat.

But this time, rather than speaking of this possibility of defending the power won thanks to the blood of the workers, we want to talk of the tasks of reconstruction. We want to avoid the possibility of destruction and stress rather the task of national reconstruction. The recent events, encouraged from abroad, in an attempt to push our country toward force again, to interrupt the effort of the revolutionary government and our people to rebuild the fatherland, wounded and destroyed by war, are well known.

What then is the role which falls to us, not from the point of view of revolutionary guidance now, but from the point of view of the state workers? What is the role which falls to us from the point of view of national planning and the role which falls to the CORFIN workers? Can we continue to conceive of ourselves as an elite within the great mass of workers, to continue to regard or view ourselves as we appear to bourgeoisie, as stiff-necked people? Can we continue to imagine that we are the wheedling working tool for dominating those who really make the effort, through their sweat, to produce the goods for our country?

The Front Lines of Labor

What then is the role of our central state workers, what is the role of you as workers at CORFIN? Can we continue to maintain the isolation, the class differences, because of the fact of having specialized training in the financial system, or must we resume the vigor of the revolution, the vitality of the workers, and take our place with them in the trenches at the combat front, attacking the first tasks of the revolution? Because of the historic sense our people have, we are perfectly aware that our role too is to occupy the labor trenches at the front. We have been holding continuous seminars and these seminars do not have the propaganda purpose of promulgating the image of the revolution, or winning points so as to say that the revolution is advancing. Instead their purpose is to incorporate all of the productive forces in the country, all of the forces which support the development of the country in the process of the revolution. The differentiation still existing between the technicians and the workers, the separation there is between the managers and the workers in the productive area, are known. The battle between the banking and financial mechanisms and the new demands posed by the national economy is known. We have created the people's ownership area (APP), and as has been explained, this is the product of the assets confiscated from the Somoza family and its acolytes, as well as the lackeys who functioned behind the scenes in the regime. But the revolutionary leadership was faced with a choice at the beginning, concerning the former Somoza assets: to leave them free, to turn them over to the private sector, or to establish an ownership sector which would allow recovery of the national economy.

Consolidation of Assets

To those who have asked us if the people's ownership area is badly managed, if we should not return these assets to private owners--to the gentlemen interested in this question, interested in obtaining a response in connection with their anticipation of hesitation in the revolutionary leadership, we must give a categorical answer. The people's ownership sector must be consolidated, must be strengthened, must be developed and expanded. But not because there are current administrative difficulties, not because we have problems in management or leadership (logical, moreover, in a period of 15 months), and it is not because there are one or two inefficient administrators that the revolution should return these assets to the private sector. It is not a problem of efficiency for its own sake, nor a problem of productivity for the sake of productivity. It is a question of efficiency and productivity with regard to our people, with regard to the working masses, and it is in this respect that the priority of consolidating the people's ownership sector appears on the agenda.

Guiding Axis of the Economy

We may have difficulties, but we are obligated to consolidate the people's ownership sector. This is the basic problem in planning--having a mixed economy but one with a planning center.

We could put it in another way. It is the problem of a multistructural economy, but not because there are different structures--private structures and social structures--which have their own logic and their own difficulties and problems--this is no reason for the revolution to have to foresee the loss of the social

sector. This complex multiple sector of mixed areas including the private and the social requires that we plan in two senses: programming, planning as such, and another type of an indicative nature. But we must also take into account the fact that one of them is subordinate to the other, and that the people's ownership sector is the guiding axis of the national economy. It cannot be otherwise. There can be no free play between the two spheres of ownership, no free play between state ownership and private ownership, no free path or liberal attitude toward the property of the people and private property. Both must be planned in accordance with different methods, but both must be planned on the basis of the interests of our people.

There was a revolution here, and our people showed their will to triumph and to alter their fate. And this legacy must not be forgotten, however scientific we want to make this allocation, and I must use this term in order to deprecate, to some extent, those who want by means of theory to show us that we should leave the path free here for arbitrary interaction between private ownership and state ownership.

Economic Planning and the Will of Man

However, these phenomena, the phenomena which occur within the private sector, just like those which occur within the state sector, are objective phenomena. They are not phenomena born exclusively of the will of men, but phenomena which develop in accordance with their own laws. Then, one must ask, where does the possibility for the revolutionary state to plan lie? Any planning which attempts to join together the resources, forces and dynamics of society in terms of a political goal must seek to establish what these levers are, and one of the basic levers of planning currently is made up of the financial system, banking and credit. Thus, if you will allow me, I can make a link with the slogan: "To these, our dead, we swear that we will triumph." We say that the financial system is one of the main levers of planning, levers for the planning of a multistructural economy, and this means that the workers at the CORFIN, in the National Financial System, play a role in this first slogan. It is not solely a problem of conception, for we may have a correct concept of the economy and a correct concept of planning, but the exercise of leadership depends on the will of men, and it is this which we wish to stress with the workers of the CORFIN. Currently you occupy one of the main trenches of the revolution. You constitute one of the main outer lines of battle, and this requires that you be keenly aware of your role. It obligates you to contemplate the past and the present properly and to foresee the future of the revolution. It makes it necessary for you to think about the course of the revolution and to show your will to our people.

It is still possible at the present level of the struggle, the present level of the class struggle, for misunderstandings between the proletariat and the technicians to occur. It is possible for negative conduct to develop among the state workers themselves, due to certain misunderstandings, certain attitudes, which must be overcome to the extent that we believe that we are the servants of the people, and that the most capable must share their knowledge. We must understand the stage through which we are passing, because it is you who are on the front lines of the battle who handle financial and bank credit, since the banking mechanisms have such vital importance in planning. One the one hand you allocate credit, on the other you follow it through.

Present Dynamics of the Financial System

What has the problem been in these first 15 months of the revolution? What has the problem within the National Financial System been? We have had a high volume of financing and little control, for financial outlays have been voluminous but repayments have not shown the dynamics we expected. There has been some effort to hinder the banking mechanisms, and some desire to manage bank credit liberally, and this has had its repercussions within the national economy. For just as other comrades have said during these seminar programs, we obtain the financial resources from our exports, foreign credit, and the savings of our people, and this gives us a financial mass which we cannot utilize liberally or foolishly, at the whim of any economic desire. There must be financial planning for this mass, because if we deal rashly with foreign financing, we fall into the trap of indebtedness, and if we are careless with domestic financing, we encounter the risks of inflation. Thus the foreign financial resources and domestic financial resources must be reconciled with the economic programs of the country.

How to capitalize the state ownership sector, then: how to insure that the social ownership sector develops, becomes productive and efficient? The revolutionaries say that when the slaves are made free, they want to be absolutely free. They say that being freed of their shackles produces euphoria in the slaves, and it is also understandable that our workers, enslaved for centuries, want to be absolutely free. It is also understandable that the limited experience in the administration of a state forces us to do a number of things which although the will is laudable, are not the most desirable at this moment for the national economy. Often there are no programs, due to lack of planning, so a request is made for foreign financing, the CORFIN is urged to provide that financing. Inventories are purchased and machinery produced, and all of this is done without any financing plan.

Single Economic Leadership

It is all done out of good will. No one is acting in bad faith, for the enterprise managers, the administrators, the directors in the productive sector--all want to do their best for the revolution, but the problem is to know how to reconcile all of these orientations. On the one hand the COIP wants to do something, the CORCOP wants to do something else, and again the INRA [National Institute for Agrarian Reform] has another plan. Transportation for its part wants to do one thing, construction for its part something else, and again the INE wants a third project. They all want to proceed in their own spheres of activity and they want to do so in a profoundly dynamic revolutionary process. It is not a question of ill will, for there are interinstitutional intersections and overlapping which multiply not only the financial budget but the current expenditures of the state. When the CORFIN falls short, the finance ministry helps; when it falls short, the central bank provides assistance. There is a financial budget axis which runs through the national economy, but neither the budget-financial area nor the productive sector nor the market and services sector can act independent of the others. Thus the concept of unity in planning is a doctrinary principle in this economy. There must be a single direction for the economy, there must be unity in planning, and just as there is central unity there is therefore a central office. It is here, then, that the role of the financial system comes in.

In the past the financial system had different credit principles from those it currently has. In the past if credit involved a financial risk for the bank, the loan was not granted. Now credit has another meaning, serving the purpose of developing the economic programs of the revolution. And developing the economic programs of the revolution means, therefore, benefiting our people. But having changed the philosophy of credit is one thing, and leaving the bank control mechanisms free is another. In the APP, which is the area we should have under firmest control, for example, there is financial confusion. But it is the confusion of the early months, and for the bourgeoisie to say that we are incapable of directing the economy is one thing, and the fact that we are aware of the course of the economy is another. The waste which often occurs is one thing, and the plunder which occurred in the past is another. These are two different factors. We are concerned about what will happen in this country, for we are administering and we want to be independent, we want to consolidate the sovereignty of this people. And for us to be told that there is financial confusion as well as administrative problems and low productivity, and that therefore they should again become the masters of these means of production is another. The men of the past want to go back along a different path, and the revolutionary state will not allow this.

One of the great levers available to the national economy, one of the great strengths it has, is the financial system. And once again, brother workers in the financial system, I ask you to contemplate your role as workers. You will be less "stiff necked," but historically, as men, you will be more fulfilled, more Nicaraguan, more sovereign masters of your fate. It is an historic cost: first of all, there is the problem of selling one's birthright for a mess of pottage, and secondly the matter of assuming risks in order to be really free, truly men. In this regard you have your own word, your own will.

The Role of the Bank in Planning

How then does the bank play its role in the state sector? It does so in that it can have financial planning adapted to the productive plan, and the production volumes have costs and profits, and if we know exactly what the cost structure is and what the profit margin is, we can truly plan financially. Through the APP this is a direct lever, financial planning is carried out and planning financially is possible.

One of the problems this year has been the allocation of credit. We have allocated credit with rapid recovery funds for long-term investments, but we will be correcting this. Possibly in the coming year, with the financial structure we have and taking this whole problem into account, it will be necessary to create an accumulations fund. We must manage long-term credit, we must manage short-term credit and its recovery. In other words, the revolution is not asleep, the revolution is aware of the problems and trying to find an answer to them. But not in the sense of those who predict that we will collapse, that the economic apocalypse will come. These are the predictions of a displaced class, this is the impotence of defeat.

Dreams of Those Out of Power

But we know that there are problems, and in this connection we are not asleep. And if the counterrevolution does not sleep, we could say that the revolution never has. Thus these problems, this broad and sizable complex of problems, will be better resolved to the extent that the state workers, the workers in the financial system, contribute to this process.

This will be true to the extent that they do not become a hindrance, but rather strengthen the positive development of the problems. This is the role of the workers in the financial system, this is the force they must put to work, for their task is no longer simple calculation, accounting or the projection of payments balances. Now it is necessary to think, to foresee, to approach the future and assess reality, and this work does not fall exclusively to the central leadership of the revolution.

This depends on the labor of the workers, the effort of the workers, the will of the workers, and it is within this framework that you have your proper place. We have said that the financial lever in the people's ownership sector is direct, but in the private sector it is indirect.

People's Interests Have Priority

It is indirect because on the basis of planning, the revolution can say what must be produced in our country. Here then there is no place for the desire to establish some industry because it is in fashion beyond our frontiers. Here there are production priorities, and there are priorities because our people are the priority for our revolution, and there are priorities because there are workers who still do not earn even a wage allowing reproduction. There are peasants who because of the level of economic development are on the frontiers of development. There are peasants who plant by hand and who have only half or two-thirds enough for their annual support, and they go out and offer their labor force freely for sale. And these peasants are Nicaraguans and they had hope. Many of them fought in the mountains with us, many of them are the martyrs of the revolution, many of them are not remembered like Carlos, but they had the same will to win, and this means priorities within the national economy. We cannot come forth with excellent programs, however beautiful they seem, if they lie outside the current order of priorities for the revolution. In capitalism there are investments even for pornography. There are investments and even forms of accumulation based on theft and plunder. There are accumulations in some countries in South America which are acquired through traffic in cocaine and marihuana. It would be profitable for us to enter into negotiations of this sort, and it might be attractive to deal on the black market, and it could be very profitable to manage the houses of prostitution which still exist in our country. In the European countries there is financing even for the production of birth control products, and probably someone would tell us that an investment of this sort would be profitable for us. But the priorities of our people are different. The priorities of this people are to eat, to clothe themselves and to be able to get an education. Social costs have increased, and therefore state investments have increased. This is the basis of the priorities, and it is for this reason that the private sector must understand this problem properly. When we shut down Central American imports, the cry went up that it would not be impossible to import here even deodorant and talcum powder any more. Other wild things were said, but they forgot that a part of these industries were shut down again at the time. They did not see the firm will of the revolution to revive them and provide them with a domestic market, the desire of the revolutionary process to find markets for the goods and products they turned out. No, they saw that communism was developing here, that the frontier was being closed, that there was Stalinist planning. An effort was made to challenge the good will of the revolution.

National Unity--A Real Need

We have said that the shoe industry is being reactivated, that we are interested in reviving and developing the textile industry, the chemical industry, those which produce the supplies necessary for agriculture. But there are those who are waiting to see if we will purchase or not, waiting to see if we will confiscate or not, and they forget that financial credit is needed. We have expanded financial credit and we have not done so only for political reasons, but for economic reasons as well, and these are the two elements which describe the development of society. There are economic needs but there are also political needs. There is a need for national unity, and this national unity has a real context, an objective goal. This objective goal is in the economy, in the social production relations, in two sectors which cannot develop social production relations different one from the other. It is here that the skill of the Nicaraguan revolution lies, in establishing the situation resulting from these two production relations in that development, in the private sector on the one hand and in the state or social sector on the other. We cannot have privileged workers on the one hand and slaves on the other. We must have a Nicaraguan and patriotic working mass which is the master of its own fate. Then production relations, the social production relations, must also be homogeneous. This is the basic contradiction, this is the basic thing to be resolved, and the National Financial System is a lever for this response. Thus, fulfilling a duty to the private sector and fulfilling a duty to the state sector, there are some, it is said, who are privileged workers in the revolution, but this privilege is that of the vanguard, a privilege earned by sacrifice, self-denial and determination.

The Pledge of the Financial Technicians

It is not enough to realize the power you have in your hands, the power which makes you a lever in the national economy. It is not enough to be important to the economy, to be aware of this, for one must also realize it is necessary to do the best for the good of all people. There is a technical process for doing so, but there is a political process of understanding. It is frequently said, and not without reason, that the workers in the financial system are highly skilled, and in truth they are. However, they are Nicaraguans, and so too are the neglected peasants in this country. The prostitutes who still sell themselves for scraps of bread to survive are also Nicaraguans, and so too are those we are incorporating into our rehabilitation programs, the children whom we have not even been able to see because they are in the most distant corners of the plateau. You then are highly competent, and you are located on a high level in the economy. And you are Nicaraguans and we are speaking of changing social structures, while many times we forget that change has to reach in depth and to all levels. Thus your importance is established, but you must see your importance within the revolution. It is not a problem of seminars, therefore, but understanding in detail the complex problems of the financial system and of the economy. It is also a problem of how to incorporate oneself as a force, as a positive vector, in the response to these problems. In other words, it is a problem of the entire awareness of Nicaraguans, of you our brothers, workers in the National Financial System.

POLITICIZATION OF CHRISTMAS CELEBRATIONS SCORED

Managua LA PRENSA in Spanish 29 Nov 80 p 2

[Commentary by the Center of Religious Studies: "The Sandinist Christmas Season"]

[Text] After reading of the Sandinist Government's plans for celebrating the Christmas season this year, we have the following comments to make concerning them:

1. In the first place, it is up to the various churches to organize the celebrations of religious feasts, especially since the current government has declared itself a lay government and has proclaimed the separation of church and state. When the state invades the church's sphere in something so essential as celebrating the birth of Our Lord Jesus Christ, we cannot but examine this development on an in-depth, critical basis in the attempt to discover what motivations a lay state might have in so doing.

2. From a political standpoint, we think that this state celebration violates Article 5 of the Official Communique of the FSLN [Sandinist National Liberation Front] National Directorate on religion, which says in part: "We feel that such respect should be expressed not only by guaranteeing the conditions in which these traditions can be freely observed but also by /not utilizing them for petty political or commercial purposes/ [in boldface]. If in the future any Sandinist strays from this principle, we are giving notice right now that he does not represent the FSLN in so doing.

It also violates Principle 9 of the same communique, which reads: To the revolutionary state religion is a personal matter that is of concern to individuals, churches and private associations that organize for religious purposes. Like every modern state, the Revolutionary State is a lay state and cannot adopt any religion because it is the representative of the entire people, both believers and nonbelievers.

We think that the two above quotes clearly restrain the Revolutionary State from participating in Christmas celebrations, because in so doing it would be using them for petty political purposes (in violation of No 5) and adopting the Christian religion (in violation of No 9), because it would be preparing to celebrate the feast of the birth of the Christian God with activities that would last several days and involve thousands of persons, as the FSLN would not just be attending Mass but instead devoting much of its December activity to celebrating the Christmas season.

3. The article about the plan to celebrate the Christmas season says that it is "apolitical" and "nonpartisan." The pages of one of the newspapers mention the following organizations as part of the committee, however: Social Welfare, which coordinates the activities of Health, Education and Culture; mass organizations such as the ATC [Agricultural Workers Association], CST [Sandinist Workers Federation], CDS [Sandinist Defense Committees], AMNLAE, UPN [Union of Nicaraguan Journalists], Sandinist Youth and the Association of Sandinist Children. Another paper mentions the same organizations and adds: "Also signing up were the Gardening Club and the Federation of Girl Guides, and the Christian Rank-And-File Communities, Evangelical Churches and Christian groups are also expected to take part.

We can gather from these items in the FSLN's official mouthpiece and in another paper that is a semigovernment spokesman that the celebration will be political because it has been the political organizations of a single party that have organized and that sit on the committees and that will undertake the celebrations.

4. Our attention is drawn to the paragraph in the communique declaring the following to be the purposes of the Christmas celebrations: "The salvaging and promotion of native cultural and religious values." We feel that Christianity is not native to any land, because it is exogenous, it came from outside. It is God who became man and came to redeem us; he came from beyond the earth to become flesh on this earth to save it. Furthermore, Christianity is exogenous to Nicaragua because it came to these lands through missionaries and was kept alive in Nicaragua through a union with other churches of the world, especially the Church of Rome's Catholicism, whose head, the pope, is also the head of our church. These supernatural and universal values of Christianity should never be lost sight of.

5. The advertising sought for the celebration of the Christmas season cannot but disturb us deeply, because instead of celebrating the birth of Christ, who was a real person who lived almost 2,000 years ago and who is still alive among us (because he rose from the dead, and those of us who believe in him experience and sense his strong presence), it celebrates the birth of the new man. Here we must ask: Who is the new man? The answer comes from the meaning that the expression has in Nicaragua's present-day climate: It is the birth of the new Sandinist who is not yet born, and we do not know whether he ever will be. Thus, the real, flesh-and-blood person of Christ, the beloved, deeply felt person of Christ, the flesh-and-blood person who has a history and is alive is being replaced by something abstract, vague, nonexistent.

6. The article does not talk about midnight Mass or the participation of our bishops or our priests or about other liturgical celebrations or about anything having to do with the organization of our church.

We would ask the organizers of the celebrations whether they consulted with our bishops on the structure of the plan, the texts of the advertising, the activities, etc. We should recall that the bishops are the sole authority of our church because they are the successors of the apostles and, therefore, the link between Christ and us.

7. Positive points in the program are the revival of the Christmas carols, which we hope maintain their religious flavor and are not imbued with political overtones; the Christmas plays, which we also hope observe their tradition and are not turned into popular political stage plays; the promotion of Nicaraguan toys and items, which although they do not decommercialize Christmas, at least make it less expensive and save us foreign exchange; the securing of further donations for adult education by appealing to our sister nations and the Christmas spirit that prevails throughout the Christian world; bringing the entire population into the Christmas celebrations, including prison inmates, hospital patients, etc, and finally, giving a present in the name of Christ to each Nicaraguan child in poor neighborhoods, in the dry gullies, in the most remote spots, so that through a small gift we can all rejoice that day in the greatest of all gifts: the coming of Christ into the world.

CTN DEFENDS ITSELF AGAINST 'BARRICADA' ACCUSATIONS

Managua LA PRENSA in Spanish 30 Nov 80 p 6

[Text] The CTN [Federation of Nicaraguan Workers] hereby wishes to explain to our people and, in particular, to the working class the ongoing attacks by the nationalized and government-supporting mass media against our historic CTN. In a show of power these media are trying to confuse the workers and create a false image of our organization in the Nicaraguan people's eyes. In its Monday, 24 November issue, the paper BARRICADA printed news items about the CTN that were not in keeping with the facts, items that we are, therefore, now clarifying.

The CTN's absence from the 15 and 16 Novemebr assembly promoted by the CST [Sandinist Workers Federation] was decided on by the Boards of Directors of the unions affiliated with it, because the leaders of the CST turned a deaf ear to the proposals made by the members of the CTN Executive Committee at the meeting called by the CTN itself and held at the headquarters of the CGTI [General Confederation of Independent Workers] with the various union federations; the following proposals were made there:

a) That the assembly be rescheduled for 13 and 14 December, inasmuch as the invitation had been received just 5 days before the event;

b) That an Organizing Committee be appointed for the assembly, consisting of two members of each federation;

c) That the lands confiscated from Somozists be distributed to the peasant farmers and that the INRA [National Institute for Agrarian Reform] be turned into a technical advisory body;

d) That the event be broadcast direct on radio and television, because we felt that the assembly was of great significance for the workers in general.

At no time did the CST leaders accept the suggestions and proposals of our leaders, and hence we felt that no understanding could be reached among the representatives of the various union federations.

As to some statements in the same paper blaming the CTN for causing the shutdown in activities at the San Antonio Sugar Mill, we make this clarification:

The CTN wants to make it quite clear to the Nicaraguan people that it has had nothing to do with the strike at the San Antonio Sugar Mill, inasmuch as the union at that work center is affiliated with the CTN, which in light of the country's economic crisis has instructed member unions to boost production and productivity.

This clarification of the strike at the San Antonio Sugar Mill shows that the government supporters are responsible for the stoppage because they have been unable to guide and enlighten the workers properly and in view of their inability are resorting to deceit through the mass media that are available to them.

With regard to the divisive attitude that BARRICADA talks about, we would clarify that since 6 September 1962, when the MOSAN [Autonomous Union Movement of Nicaragua] was born, and since 6 September 1972, when MOSAN became the CTN, the movement has been and still is without divisions. It is not the CTN that is trying to divide the workers. Nor was it the CTN that divided the Socialist Party and the CGTI in 1970. Nor is it responsible for the split today between the Communist Party and the CAUS [Federation of Union Action and Unity]. It was not the CTN that divided the CGTI in 1977 at Workers House. It was not the CTN that created the three-pronged split of the FSLN [Sandinist National Liberation Front]. It was not the CTN that created the CST as if by magic to cause another split among the workers. Those who have endeavored wo subjugate our people and who are today talking about unity are the ones who have divided the workers.

Since its emergence the CTN has constantly sought unity and cultivated the magnificent idea of unity with other worker organizations to better working class conditions. It has been demonstrated that this united approach has been decisive in the workers' struggle; today, however, we feel that there can be no unity unless those who talk about unity change their attitude, there can be no unity as long as leaders are imprisoned and persecuted and union documents seized, there can be no unity as long as attempts are made to control the unions by force, mainly by the force of arms.

Since its founding the CTN has fought and will continue fighting for the autonomy and independence of the labor movement. This is our stand because we have pursued our activities within the historic context of the class struggle, which is a fact in our society.

Furthermore, we feel that all political parties, regardless of their appearance or name, in one way or another serve the national oligarchies and the imperialist powers that are battling each other for world hegemony. They endeavor to make tools of the workers and set them at odds with each other as befits their group interests (the case of CAUS and FO), which precludes true unity among the workers.

Because of its eminently classist and revolutionary makeup, the CTN views with encouragement and hope the process that began in our country with the fall of the previous regime.

We think that radical, profound changes are needed that wind up placing power in the hands of the people, that place the mass media in the hands of their workers and that lead to the construction of a pluralist, participatory democracy and a society in which human beings can completely realize themselves. As Christians, we workers support the revolution and want it to give power to the people. We are thus together with the revolution, shoulder to shoulder.

The CTN reaffirms its faith and confidence in and its total commitment to the workers of the city and countryside who are struggling against injustice, exploitation, oppression and violence. We are therefore committed to the poor and the exploited and to man's struggle for his right to achieve total self-realization. Hence, we can say without doubts that we will build a communitarian socialism.. We thus appeal to all workers of the city and countryside to join efforts and forces, because we are convinced that only the power of organized workers can make our ideals come true, that only the people can save the people.

Managua, 26 November 1980
The Executive Committee of the CTN
Enrique Velarde Ortiz, Executive Secretary

ORREGO'S ELECTION VICTORY ANALYZED

Lima LA PRENSA in Spanish 24 Nov 80 p 1

[Article by Enrique Chirinos Soto]

[Text] The Popular Action party confirmed its status as a majority party on a national scale in the municipal elections held yesterday.

However, it suffered from a decline in votes which, in the specific case of the province of Lima, was more than balanced out by the surprising turn in the fortunes of the Popular Christian Party. In this province, the most populous in the country, the two parties with government responsibility--the AP and the PPC--won about 60 percent of the votes, representing an increase over the total won by both in the general elections last 18 May.

Thus Eduardo Orrego is the new mayor of Lima. PPC candidate Ricard Amiel seems to have placed second, if indeed very closely challenged by Alfonso Barrantes Lingan, the candidate of the united left. In any case, the APRA candidate, Justo Enrique Debarbieri, ended up with only 17 percent of the votes.

The contrast with the APRA results in Lima means a decline of five or six percent in comparison to the votes won by Armando Villanueva. But the Party of the People easily retained its stronghold in Trujillo. It won overwhelmingly in Chimbote, won by a close margin in Chiclayo, where it lost by a slim margin in May, and after many years, triumphed again in Iquitos, the capital of the province of Maynas. It also won in Cajamarca and Huanuco.

The united left increased its votes over the scattered success it had in May, but it did not equal the achievement in the June 1978 elections for the constituent assembly. The UI won, among others, the mayoral posts in Arequipa, Puno, Moquegua, Huaraz, Huancavelica and Pucallpa. The situation in Arequipa is particularly serious for the Popular Action. It inclined toward Belaunde in May, but five months later had ceased to do so. In almost all the other provincial capitals--on which, we should say, neither we nor the APRA nor the Unity of the Left counted--the mayors elected fly the populist colors.

It seems that outside of Lima, the Popular Christian Party had almost no success. The regular vote was won only in the province of Ica. Throughout the country and in absolute numbers, first place was won without a doubt by the Popular Action. Some results, particularly from the distant districts, are not yet in, so that it cannot be said whether second place went to the Aprista Party or the Unity of the Left.

The political analysts are already saying that, with the results which seem generally indicated, the Popular Action is reduced to its true dimensions. For the truth is that on 18 May, Belaunde received a voting supplement provided precisely by the extreme left, as is shown by a comparison between the votes for the presidential slates and those for the senatorial slates. In May, the anti-Aprist repercussions were in favor of Belaunde, but there was no reason for this to be true on this occasion for the simple reason that nobody anticipated a triumph for the party founded by Haya de la Torre.

As to the contrast seen for the APRA in Lima, it must be attributed to the image of schism which some of its main leaders have projected, and the weak candidacy of Debarbieri, which served neither to hold the Aprista vote nor to attract independent votes, although this has nothing to do with the academic brilliance, human qualities or unchallenged civic merits of the Aprista candidate, who appeared on television to express his congratulations to Orrego and to promise to collaborate with him in governing the capital of the republic.

Obviously, everyone has reasons for joy and reasons for sorrow. The Popular Action rejoices at the triumph in Lima and the greater part of the country, but it lost Arequipa. The Aprista Party experienced a serious reversal in Lima, but it could say that the solid north is giving indications of beginning to reconsolidate. The Popular Christian Party made a good showing in Lima, but practically none in the rest of the country. The extreme left improved its support, but it is far from strong in the greater part of the country. If the votes for the parties which profess fidelity to representative democracy--Popular Action, Aprista Party and Popular Christian Party--are added together, they continue to account for the overwhelming majority of the country.

In Lima, the Popular Action won not only in the so-called residential districts such as Miraflores and San Isidro, but also in the quarters with a lower economic and social level, such as Comas, San Juan de Miraflores, Villa Maria del Triunfo, and also typical middle-class districts such as Brena, Jesus Maria, Lince, Magdalena, Pueblo Libre, and San Miguel, not to mention the Callao Constitutional Province, where the Popular Action placed first with a broad margin over the APRA, with the extreme left just showing on the indicator.

There will be time to round up the figures and make a more profound study of Sunday's election. Meanwhile, it can be said that beyond any political calculation, the entire Peruvian people have given proof of equanimity and civic feeling, and have shown that they known perfectly well how to elect their municipal authorities, and that their preferences are not monolithic as is the case in totalitarian countries, but variable and versatile as is the case in democratic countries.

ORREGO TO ESTABLISH DIALOG WITH OTHER PARTIES

Lima CRONICA in Spanish 25 Nov 80 p 4

[Text] "My first act as mayor will be to talk with the representatives of the other political groups to establish a program of minimal agreement. We do not interpret this victory for the Popular Action in triumphal fashion, but as an indication of our increased responsibility to establish political coordinates with the other political groups to the benefit of the people," architect Eduardo Orrego stated yesterday.

It was during the press conference he held yesterday afternoon in the Popular Action headquarters in Paseo Colon that he released the unofficial figures revealing the overwhelming triumph of his party in the municipal elections on the national level.

In fact, according to these figures, 16 mayors of department capitals are members of the Popular Action, as well as more than 90 mayors out of the 152 provincial capitals.

"We have an absolute majority of the mayors in the departmental and provincial capitals. And we came out second in nine departmental capitals. We have obtained figures from more than 92 out of the 153 provincial capitals, and in the course of this week we will have full information," he stated with satisfaction.

In Lima, on the other hand, the Popular Action (AP) is reported to have won the mayors' races in 23 districts, with 4 for the UI [Unity of the Left], 7 for the independents and 1 for the PAP [Aprista Party of Peru].

In terms of percentages, the results in Lima were something like the following: 36 to 37 percent for the AP, 27 to 28 percent for the UI, 21 to 23 percent for the PPC [Popular Christian Party], and 12 to 15 percent for the PAP.

"There is no percentage report on the national level, but a majority vote in Peru in favor of the AP is evident. The national triumph of the AP confirms the confidence of the Peruvian people in this political organization and in the government headed by architect Fernando Belaunde Terry," the mayor-elect of Lima said.

Orrego admitted that the AP may have had some failures in some district elections because of a poor choice of candidates. "In Ancon, an independent candidate who was a former AP mayor won with a 40 percent vote," he commented.

He said that there were two factors in this election: the political factor and the communal factor, and that the ideal for good municipal government is a bond between the two.

Orrego announced that next year he will try to balance the municipal budget, currently showing a serious deficit, by optimizing tax collection, and he announced that there is a plan for the relocation of the ambulatory peddlers in La Colmena, Belen and Jiron de la Union, which will be supplemented of policy of people's restaurants.

He also demanded the approval of a new, organic municipalities law, since it is "evident that the old legislation is unsuited to the current times."

'SHINING PATH' SUBVERSIVE PLAN DESTROYED BY PIP

Lima LA PRENSA in Spanish 26 Nov 80 p 5

[Text] PIP [Peruvian Investigative Police] detectives have thwarted a plan of action conceived for subversive purposes in the capital and the provinces, arresting 15 activists in the so-called "Shining Path" organization in the district of San Martin de Porres and in the locality of Huaral.

Subversive political propaganda, maps and a plan of attack for armed robbery of banks and credit institutions were seized, along with booklets with annotations on terrorist actions scheduled for perpetration soon in Lima and in the interior of the country.

All of the terrorists arrested belong to the ultraleftist (communist) organization mentioned, the central police office in Lima revealed.

At secret premises located at 313 Jr. Huancavelica in San Martin de Porres, the detectives arrested the following suspects:

Moises Simon Limache Huayascachi (alias Yogui), Oscar Enrique Valdivieso, Anibal Eulogio Mendoza, Diaz Obdulio, Adrian Gago Bustamante, Walter Enrique Gago Bustamante, Arsenio Galvez Sanchez, Abel Augurio Barcoparado, Frida Leon Rivera Donayre, Rosita Quintana Limaco Huayancachi, and Wilder Jesus Mosquera Zaval.

Later, in Huaral, the PIP also arrested, on charges of acts of terrorism against private and public property and damage to the state, secondary school teacher Rafael Cesar Tarazona Varillas, known as "Pepe" or "Fito," the gang leader. He is an active leader of the PCP--SL [Peruvian Communist Party--Shining Path]. He was also responsible for recruiting new activists, providing them with ideological indoctrination, and teaching them how to handle weapons and Molotov cocktails and the strategems for acts of terrorism to be committed in the capital and the provinces, the police said.

Encinas Espinoze (alias Lino), Nemesio Polivio, Santos Espinoza, Juan Casimiro Flores Diaz, and Maria Jose Vargas Pacheco (alias Lalo) were also arrested in Huaral.

ULTRALEFT INVOLVED IN TERRORIST ACTS

Lima CORREO in Spanish 23 Nov 80 p 4

[Text] Three attacks upon public and private property have caused the citizens of Lima worry and unease just prior to the municipal elections.

The most serious terrorist attacks were those involving the fire in the offices of the municipality of El Agustino and the dynamiting of the Popular Action headquarters in the same district, causing damage to the iron gate, window glass and frames.

The other attacks took place in Rimac, San Martin de Porres, Jesus Maria, Pueblo Libre, San Juan de Miraflores, and the very heart of Lima.

In the attack which occurred in the fourth block of Trujillo Street (Rimac) the police found pamphlets attributed to the Workers and Peasants Armed Struggle Movement urging the people not to vote today.

The police at the Fifth Commissariat reported arresting university student Raul Garcia Guzman, 18, and a waiter at a well-known downtown hotel, identified as Sabino Vasquez Huayec, 37. Two Molotov cocktails they planned to throw in the neighborhood of the University Park were confiscated from them.

The men arrested said that some strangers had given them a thousand soles each to transport the packages which contained the bombs.

Also, at about 0200 hours, some unidentified suspects were surprised by the crew of a patrol car in the area of Tacna Avenue and Emancipacion while they were attempting to soak a newspaper kiosk with gasoline.

The patrol car team fired into the air and the arsonists took flight in an automobile. The exchange of fire caused panic among the neighborhood residents.

El Agustino

The attack in the municipality of El Agustino occurred at 0300 hours. Unidentified individuals threw a container of gasoline onto the roof of the municipal offices and tossed Molotov cocktails through the windows.

The fire spread rapidly to the offices of the works and collections department, which was destroyed by the fire. Deputy Mayor Juan Yataco Almeida estimated that the damage came to more than 2 million soles.

Municipal guard Savedro Mamani, 39, told police that his first warning of the incident was when the lights in the sector went out suddenly, and then the unknown individuals appeared and tossed the Molotov cocktails and the gasoline container at the premises. Mamani ran off in search of police and to call the fire department.

When the Victoria No 8 and Francia No 2 fire companies arrived, they found the fire smoldering and then a loud explosion occurred. Then police were called to the fourth block of Riva Aguero Avenue, where the Popular Action headquarters are located.

Three bundles of dynamite had exploded in these premises.

Ramon Rivera Sanchez, 53, owner of the premises, said that the sizable explosion completely destroyed the door and the windowpanes. When he went out into the street he saw some strangers fleeing in an automobile.

The civil guards and the state security division are pursuing the pertinent investigations to identify and capture those responsible for the various attacks which have occurred recently.

SENATOR ON APRA'S FUTURE, TERRORISM

Lima EXPRESO in Spanish 26 Nov 80 p 2

[Text] "No leftist sector of Marxist origin will ever agree to an alliance with the APRA [American Revolutionary Popular Alliance]. It will agree to talks, but a public agreement, categorically and definitively never," Dr Luis Alberto Sanchez said in a talk with an editor of this paper.

Speaking of the anticommunism of the APRA, he said that they chose this alternative because the communists always brandished an anti-APRA flag, even before that organization was founded.

He recalled that when the Communist Party was founded, a letter from the USSR Central Committee was read stating that the greatest enemy of communism was the APRA and that it must be wiped out.

In commenting on the thesis of the "responsible left" put forth by Armando Villanueva during his electoral campaign last May, Sanchez said that "Villanueva was not mistaken, he simply failed to understand the response which would come from this leftist sector, which would be identical to that prevailing during the constituent assembly."

Convention or Congress

Later on Dr Luis Alberto Sanchez specified that there is an urgent need to convoke a congress or a convention, but without the participation of members of either of the two factions in the organization commission.

"This convention should be held before 22 February in order to put an end to the disagreements. Later it would be undesirable," he stressed.

"To make this event more democratic we must update the voting roles and establish a single vote for each APRA member instead of voting by groups. The result of this last experiment was that a professional organization had more votes than a province with many more APRA members," he said.

1985 Elections

Sanchez said, moreover, that he does not hope to be a candidate in 1985. "I am satisfied with the present clear thinking, which suffices for me."

He then went on to say that in the next five years new personalities with enough charisma to win the election may emerge. Concerning Villanueva, Townsend and the possibility that Priale might seek such candidacy, Sanchez had absolutely nothing to say.

Armed Civilians

He said subsequently that many civilians had purchased weapons under the military government. "I have heard about a Ministry of Interior report, before Morales Bermudez took office, to the effect that civilians had purchased 40,000 weapons," he asserted.

"I do not know how true all this is, but if this is the case it is obvious that there is a will like that which existed in Chile in 1972 and 1973 and that which developed in Colombia."

He then said that the terrorists in the country would first seek to create chaos in order to justify a dictatorship "which might favor communism, like that of Velasco Alvardo, and at the expense of the country itself."

He termed the groups creating terror with a mixture of anarchism and Marxism as such factions.

Danger of Terrorism

Sanchez warned that it is danger to minimize the importance of terrorism, because at one time when they were termed cattle thieves and nothing more, De la Puente Uceda and many others died and Captain Patino was dismembered.

"Terrorism is not only murder but also terrorizing and governing the people through terror," the APRA leader said in conclusion.

MINISTER ACKNOWLEDGES LEFTIST GAINS, SEEKS COOPERATION

Lima LA PRENSA in Spanish 25 Nov 80 p 3

[Text] Dr Jose Maria de la Jara y Ureta, minister of interior, after noting that his party, the Popular Action (AP) won the municipal elections in 14 departmental capitals and 80 provincial seats, appealed yesterday to the Unity of the Left (UI), and mainly to its leader, Dr Alfonso Barrantes Lingan, to act "sensibly" following the change in its fortunes in these elections.

"It is my hope that the prudence and judgment Dr Barrantes Lingan has revealed will lead him to adopt a sensible attitude and to lend collaboration in supporting and maintaining democracy," the minister said yesterday, after his high-level accord with President Belaunde.

In answer to reporters' questions, the minister of interior became somewhat expansive in commenting on the turn in the fortunes of the UI in these elections in which, he said, it won in six departments.

"I believe that the left wing today has its gaze fixed on the future municipal elections or the 1985 general elections. Therefore it must seek to gain power through representative democracy and not through violence," he said.

"Thus," he went on to say, "I do not see the UI committing violent acts now. It would be absurd to place bombs in municipal council premises now that they are their own (Arequipa, for example) or in those it will occupy. I do not believe in such a position and I am almost sure (about the future attitude of the UI) that it will be very different, because democracy has strengthened."

De la Jara did not regard the fact that the electoral percentages for the government party dropped in relation to the electoral vote last 18 May as a sign of defeat for the Popular Action or of any blurring of the government's image.

He explained that the fact that the popular percentages in these elections were below the 45 percent won by the president last May "does not represent evidence of a decline or defeat."

De la Jara said that Mr Orrego, future mayor of Lima, is "a brilliant architect and professional but obviously he is not Belaunde. However, he (Orrego) either matched or exceeded the 36 percent (required to win the presidency of the republic). Thus the success won by Mr Orrego is an absolute one."

In general terms, according to the minister, good sense and democracy prevailed in these elections, to the point that, to give an example, according to de la Jara, "in Ayacucho, where the organization known as Shining Path has its headquarters, the Popular Action won.

"This means, then, that Ayacucho has rejected violence as a form of political action," de la Jara said.

He said further that the AP won in Ayacucho, Abancay, Cuzco, Ica, Huancayo, Puerto Maldonado, Cerro de Pasco, Piura, Moyobamba, Tacna, Tumbes, Lima, Callao and Chachapoyas. The UI won in Huaraz, Arequipa, Huancavelica, Moquegua, Puno and Pucallpa, while the APRA [American Revolutionary Popular Alliance] won in Cajamarca, Huanuco, Trujillo, Chiclayo and Iquitos, to mention only the departmental capitals in terms of the three parties.

In commenting that despite the triumph in the departmental capitals or the 80 provincial seats, the Popular Action won very different percentages this time from those obtained in the last general elections, the minister said:

"You would think that miracles occur every day. These are extraordinary events. Normally one would win 35, 36 or 37 percent. This is a triumph. The fact is that we were enraptured and we lived in the style of the triumph of 18 May."

Asked to what he as a minister attributed the turnabout in the fortunes of the left wing in these elections, he responded:

"This is a product of a series of circumstances. First, they united, and secondly they had as a leader and principal chief a man of such equanimity, calm and realism as Dr Barrantes Lingan. His statements have revealed this. Obviously he had evaluated the situation of the left wing itself, its implications and its inherent limitations," de la Jara said.

About the APRA, which suffered such a decline in these elections, the minister said that he does not believe personally that this party will cease to be of importance in the Peruvian political theater.

MOST MONTEVIDEO RESIDENTS SEEN FAVORING CONSTITUTIONAL GUIDELINES

Montevideo EL PAIS in Spanish 25 Oct 80 p 9

[Article: "67 Percent of Montevideo Residents Favor Guidelines - Gallup Poll Finds 46 Percent Favor Bicameralism"]

> [Text] The constitutional guidelines that have governed the drafting of the new Magna Carta text have been received "favorably" by 67 percent of the residents of Montevideo, according to a Gallup poll made available late yesterday. About 4 percent responded "unfavorably" and 29 percent expressed no opinion. Other significant results indicate that about 40 percent--still referring to the capital city's residents--consider a new text necessary, whereas about 36 percent consider the previous text should not be changed. We publish below the characteristics of the sampling, followed by its results.

Characteristics

The Gallup organization conducted its sampling between 26 September and 6 October, throughout the Montevideo departmental area. Of those polled, 53 percent were females and 47 percent were males. Some 20 percent of those polled were between the ages of 15 and 24, some 38 percent between 25 and 49, and about 42 percent were over 50 years of age. About 15 percent of those polled were in the upper economic bracket, some 61 percent in the middle income bracket, and about 24 percent were in the low income bracket. About 2 percent had no schooling of any kind, 53 percent had schooling, and 45 percent had higher education. 26 percent of those polled were single, 66 percent were married and 8 percent were widowed or divorced. About 69 percent were Catholic, about 2 percent were Protestant, 3 percent were Jewish or of other religious denominations, and about 26 percent belonged to no religious denomination.

About 72 percent of those polled were registered and had voted in some previous election, about 16 percent were registered but had never voted, and about 12 percent were not registered.

These were the figures released by Gallup Uruguay S.A.

October Sampling Compared With August Results

Primary Results

[Question] In your judgement, does the country need a new Constitution? Or, could we continue with the one we now have?

	All	
	Oct percent	Aug percent
We need a new Constitution	40	42
We do not need one. The present one is good	36	43
No opinion	24	15

[Question] For what reason does it appear to you that a new Constitution is necessary?

	Oct percent	Aug percent
Previous Constitution was not effective, a change is needed	10	11
To change the forms of government, with different bases	9	17
To end politicking, slogan rule	1	2
For progress, advancement of the country, improvement of the economy	17	14
Others	2	1

[Question] With regard to the Constitution that is being prepared, I am going to read you some of its points, and you will tell me if you agree with them or you disagree:

	Agree		Disagree	
	Oct percent	Aug percent	Oct percent	Aug percent
Sovereignty has its root in the Nation and is exercised through secret and compulsory ballot	94	96	6	4
There will be freedom of worship of all religions. There will also be freedom of education	98	98	2	2
The family is recognized to be the basis of the entire societal system	98	99	2	1

	All			
	Agree		Disagree	
	Oct percent	Aug percent	Oct percent	Aug percent
All those who govern must show morality, sobriety and austerity, and may be prosecuted for not complying with ethical, moral or civic norms	99	96	1	4

	All			
	Agree		Disagree	
	Oct percent	Aug percent	Oct percent	112 percent
A Council of National Security shall be created, made up of civilian authorities and commanders in chief, to safeguard our national objectives from internal and external interferences	85	80	15	20
The party that wins the election will have the right to govern with a legislative majority. The losing party will constitute the minority on a proportional basis	93	96	7	4
If during a term of government, owing to disagreement among its members, the president loses the majority, elections will be held	93	92	7	8
A Constitutional Court shall be created that will act in case of conflict within the upper-echelon bodies of the government	90	81	10	19
In case the upper-echelon authorities fail to comply with the Constitution	88	86	12	14
In cases of political infractions of law and trials	88	84	12	16
In case of annulment of elections by the Electoral Court	85	79	15	21
This body shall have powers equivalent to those of a court and may hand down sentences in cases of conviction. Its members will not be entitled to hold political positions	83	75	17	25
The right to strike shall be regulated, with prior and obligatory forms of arbitration and conciliation	79	79	21	21
Public employees shall not have the right to strike	64	53	36	47

[Question] With reference to the new Constitution, many things have not yet been resolved. It has not been decided whether there shall be one or two Chambers. Which do you consider more adequate: that there be one Chamber or two Chambers?

	All	
	Oct percent	Aug percent
One Chamber	33	28
Two Chambers	46	60
No opinion	21	12

[Question] Whether there be one or two Chambers, the idea is that the number of deputies be the minimum possible. And that the Legislative Branch be rapid and agile. Are you in agreement? Or, do you prefer a system that is less agile, but more cautious and careful?

	All Oct percent	All Aug percent
Agile	47	49
Less agile, but more cautious	36	43
No opinion	17	8

[Question] Should the term of government be 5 years (as it is now)? Or 6 years as in other countries?

	All Oct percent	All Aug percent
5 years	75	84
6 years	14	11
No opinion	11	5

[Question] Should the new Constitution recognize all political parties? Or should it exclude certain parties?

	All Oct percent	All Aug percent
Recognize all parties	38	48
Exclude certain parties	46	42
No opinion	16	10

[Question] Should voting in elections be compulsory? Or should it be voluntary?

	All Oct percent	All Aug percent
Compulsory	57	50
Voluntary	37	47
No opinion	6	3

[Question] Although it is too early yet to judge, since the final text is still not known, considering however the above guidelines as well as what you have heard elsewhere and what you actually know, what is youu impression of the Constitution that is under preparation? A good impression? Or a bad impression?

	All Oct percent	All Aug percent
Good impression	67	61
Bad impression	4	11
No opinion	29	28

RAPELA OPTIMISTIC REGARDING 'YES' VOTE IN UPCOMING PLEBISCITE

Montevideo EL PAIS in Spanish 26 Oct 80 p 14

[Interview with Gen Julio Cesar Rapela: "Rapela: Retired Military Can Occupy Any Position, Including Presidency," at Santa Lucia, Canelones, on 25 October 1980]

[Text] This year, we will decide whether there will be one or more candidates in the 1981 elections. We are not going to permit the return of anarchy and discord. It is my opinion that blank votes will not be counted. Upon approval of the new Constitution, the law governing the activities of political parties will be structured; the statute is considered a "high priority" by the COMASPO [Armed Forces Political Commission]. I am optimistic; I believe the citizenry is going to vote "yes." I consider that retired military personnel are entitled to occupy any position, including the presidency.--These are some of the concepts expressed to EL PAIS by Gen Julio Cesar Rapela at the inauguration of the Frigorifico Moreno y Canto S.A. plant in the suburbs of Santa Lucia, Canelones.

Following is the dialog that around noon yesterday was held with the 11th Army Division Commander, exclusively by EL PAIS, the only written press organ present for the occasion.

Constituent Assembly

[Question] General Rapela, is our country entering a decisive week as regards its institutional process?

[Answer] Yes. I consider it a very important week, because it is the week in which the text of the Constitution is to be approved, which, in my opinion, represents for us a historic advance.

[Question] Will one more session be sufficient?

[Answer] No. I feel it will take more than one session, since there are some issues on which we have not yet defined our positions. We need to exchange views and dialog together to reach a definitive solution.

[Question] But will the philosophy underlying the guidelines change...?

[Answer] No, no. The guidelines, as regards their most important, their basic aspects, are being maintained. There have been a few modifications, a few changes, but we consider them reasonable.

[Question] Might there be another meeting prior to tomorrow's Constituent Assembly?

[Answer] We are going to hold a meeting to discuss some other matters on the agenda which however are not directly connected with problem of the Constitution. At this point, we have already exchanged views with the advisers, with the ministers, with President Mendez, so that the Armed Forces now have the opinions of all sectors properly involved in the issue.

[Question] Gen Rapela, at present, one minister and the heads of several state-owned autonomous enterprises and decentralized services are military personnel. Is it your understanding that this philosophy will continue in the future?

[Answer] This will depend on the future government. It will be its responsibility to decide who will occupy such positions. Current examples abound, and it is my view that we military are as qualified to perform the functions we have carried out until now as is any civilian.

The Plebiscite

[Question] What will a "yes" mean in the forthcoming plebiscite?

[Answer] It will mean the entitlement of the political parties, the start of a new phase of our representative democratic system, which will have its culmination beginning in 1986; so that, since we have that system, I feel the citizenry will back it and support it.

[Question] And a "no"?

[Answer] It will mean that we will not have the immediate advent of political party activity. Obviously, everything that has been built into the Constitution will suffer a setback, the timetable will have to be suspended until the future steps to be taken are determined. I would like to clarify certain statements that have been made to the effect that in such a case we would return to anarchy and discord. No, the Armed Forces will not tolerate such a return. The best way for our country to move forward is to have a system in which those persons who represent the people can function. Should this not occur, should the Constitution not be approved, the present government will continue in office and a new timetable will be drawn up.

[Question] With the plebiscite a month away, is the possibility of a "no" causing concern?

[Answer] The problem of a negative vote causes me no concern at this moment. I am optimistic. I may be mistaken, but I believe the citizenry will vote "yes." It is a problem that does not disturb me.

[Question] In the recent Chilean plebiscite, blank votes were counted as affirmative. Will the same be done here?

[Answer] I believe that in our case, in the national plebiscite, blank votes will simply not be taken into account. But I cannot tell you as yet whether a determination will be made in this regard.

[Question] Immediately following the Constituent Assembly, will the COMASPO draw up the statute of political parties?

[Answer] That is one of the things that has "high priority." Therefore, as soon as the Constitution has been approved, the basic law on political party activity will be drawn up,

[Question] Various party sectors have made it known publicly that their position is to vote "yes." What do you think of this?

[Answer] I think their position is well taken, that they have understood this joint civilian and military government, and that their desire is to be able to function in the country's political and governmental life. To the extent they back us and support us, they are welcome.

Candidates

[Question] When will it be decided whether there will be one or more candidates in the 1981 elections?

[Answer] That decision is going to take place before you think it will. I believe that point will be decided this year. I repeat that a timetable exists that was drawn up by the Armed Forces on 9 August 1977, which had set up a transition period, from 1982 until 1987, during which there was to be one candidate, to be agreed upon among the political parties that would be presenting and debating candidacies. This has not yet been changed and therefore continues in effect. There will be a pronouncement, however, that will be issued shortly.

[Question] At this point in the process, is it known whether that compromise candidate will be a civilian, an active or a retired military person?

[Answer] That will be decided by the political parties. They will have their candidates and the Armed Forces will have to say whether they are viable or not. It is our view that whether there be one candidate or more than one, the candidates will have to be proposed by the political parties.

[Question] Internationally, how has this acceleration of the Uruguayan process been received?

[Answer] I think that internationally there are those who are for it, and there are those who are against it and prefer that it not continue so that they can continue distorting Uruguay's image and exacerbating its problems.

[Question] Could you tell us at this time whether the membership of the Political Control Tribunal will number as many civilians as retired military?

[Answer] Yes. For the same reason that, as I have said, the military are occupying positions today, I consider them qualified to fulfill any position of responsibility.

[Question] The presidency as well, General?

[Answer] The presidency has already been occupied by several military persons. Our history is rich in this sense, and our first president was a military man whom we all admire and venerate: Gen Fructuoso Rivera. Thus, I see no reason why a military person cannot be president of the Republic.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

NATIONWIDE ENERGY SHORTAGE DESCRIBED

Bogota EL TIEMPO in Spanish 27 Nov 80 Sec B p 2

[Text] Compared with other capitals, Bogota is less affected by the rationing of electric power. Cities such as Popayan, Neiva, Pasto and Ibague are experiencing cuts of from 6 to 15 hours a day.

A special report prepared by EL TIEMPO's group of correspondents reveals an alarming situation insofar as energy is concerned. Of 23 capitals, only Cartagena and Santa Marta seem to have a nearly normal situation, while the others have rationing for at least 3 hours a day.

The cause of the problem is the water shortage, caused mainly by the ruthless felling of woods, and the lack of rainfall.

By December all public lighting will be eliminated. In Neiva, there is concern over the lighting during the national games, while in Cali and Manizales the authorities are trying to set up a rationing program that will not affect the traditional New Year's celebrations. In Pasto, the rationing has reached the point where several sections are without light for as many as 15 hours a day.

The authorities have begun a national-scale campaign to have all citizens turn off the lights when they are not using them, and not to turn on household electrical appliances that are not absolutely necessary.

If the situation continues, by January there will not only be extensive rationing of electric power, but also of water.

Meanwhile, the National Economic and Social Policy Council (CONPES) has undertaken a study of the country's energy situation relating to the energy sector, and the coordination and execution of new generating systems.

The minister of mines and energy, Humberto Avila Mora, noted that the government has continued the study of the electrical sector to adopt whatever measures are necessary.

In commenting on the rate policy for the electrical sector, he said: "The readjustments in rates are taking place normally throughout the country; what is being studied is whether or not the rates are profitable."

He remarked that the government is interested in solving the problems that have cropped up and have necessitated the rationing of power and the running of campaigns for saving electricity to prevent misuse of that resource.

President Julio Cesar Turbay Ayala said that the present energy rationing "is due more to a financial crisis than to an energy crisis."

Before the end of 1982, $3.5 billion worthof projects to generate electricity will have gone into operation, and they will have raised the installed capacity to over 6.3 million kilowatts.

Following is the report prepared by our staff of correspondents:

Pasto

Pasto, 25--Countless negative factors have caused the continued, permanent rationing of electric power.

The heads of hospitals, clinics and health centers are complaining that the stoppage is being made without consultation, and lasts over 15 hours a day.

Several districts in this capital have power available only from 2100 hours until 0530 hours in the morning.

Before the rationing went into effect, it was claimed to be the result of the long summer. Now no other explanation has been given, despite the fact that the rainfall is plentiful and almost constant.

One of the main industries hurt by the rationing is Narino Liquor, the production of which is virtually at a standstill.

Popayan

Popayan, 25--Electric Power Plants of Cauca (CEDELCA) announced that the electric power service during December in Cauca will be provided in accordance with a program that will not upset Christmas activities.

The rationing in this department will be reduced after 1 December. At present, Cauca and its capital are having rationing from 0600 to 2100 hours, twice a week, for each section affected.

The blackouts have increased the wave of insecurity in Popayan.

Pereira

Pereira, 25--The traditional Christmas lighting in the departments of Caldas, Quindio and Risaralda will not be possible this year, owing to the rationing and the national energy crisis, according to an announcement from the manager of the Caldas Hydroelectric Powerplant (CHEC), Humberto Arango Escobar.

The manager of the autonomous entity in Pereira, Javier Ignacio Ramirez Munera, made an appeal to the citizens, commerce and industry to refrain from holding Christmas functions that entail a drain on the electrical systems.

The professional commented: "Every light bulb that is lit will only worsen the troubled situation that exists."

Cali

Cali, 25--The rationing in Valle del Cauca increased from 3 to 6 hours.

The schedules are varied, because there is an attempt to avoid problems for the industrial sectors. The blackout from 1700 to 2000 hours in eastern districts has caused tieups and increased insecurity.

The rationing will also affect the Christmas holiday activities next month in Cali. It was predicted that next year it will also be necessary to ration energy, and possibly the water service.

Neiva

Neiva--Several sections of this capital have had to spend up to 10 hours a day without power.

Fredy Amaya, deputy technical manager of the Electric Power Company,announced that it is expected that the service will be normalized during the national games.

The present rationing begins at 0600 hours in the morning and lasts until noon, and resumes at 1500 hours, lasting until 2000 hours at night.

Medellin, 25--The Medellin public enterprises disclosed that, starting this Monday, the 62 residential circuits into which this capital is divided will have power rationing from 2 to 3 hours a day.

The cuts in electric power (which initially will not involve industry and commerce) will be made primarily in the afternoon.

A spokesman for the autonomy entity said: "The tendency is toward rationing after 1 December."

The official expressed the view that Medellin will be one of the cities to suffer least from the measure.

Santa Marta, 25--The technical director of the Magdalena Electrification entity, Alberto Galeano, stated that, for the time being, no rationing is scheduled in Santa Marta, and the continuity of the service is contingent on the operation of the Barranquilla thermoelectric plant. He noted that the generating capacity of the Manzanares substation has been cut, and hence the supply is limited. This restriction will preclude the installation of multicolored lights on the streets in December, and only decorative lighting will be allowed. The mayor will be requested to ban the installation of colored light bulbs, to prevent extra consumption.

Barranquilla

Barranquilla, 25--A few days ago, the city's labor unions sent a public letter to the manager of the Atlantico Electrification entity to notify him of the tragedy that is being experienced as a result of the constant blackouts; and the manager replied to them that, "there are no blackouts in Barranquilla."

Nevertheless, the nearly 2 million inhabitants of the city know that the lights go out every day at least three times.

Most of the blackouts are due to the fact that the conductor lines are deteriorated.

According to some industrial sectors, the continuous blackouts have caused millions in losses this year, and some factories are at the point of closing.

Valledupar

Valledupar, 25--The manager of the Cesar Electrification Company, Capt Miguel Salgado Hadatt, said that in both this capital and other municipalities of the department an energy rationing plan is under way, as a result of strong winds which lash the region and cause short circuits.

Villavicencio

Villavicencio--There is complete darkness in this town 2 hours daily, between 1800 and 2000 hours at night, owing to the rationing.

Criminals have increased their activities during those hours, and considerable losses in local businesses are anticipated in December.

Governor Hector Chacon Reyes was left "stymied," unable to put into effect a public lighting program that had been scheduled to start within a few days.

Sogamoso

Sogamoso, 25--Electric power rationing has been accepted patiently by the residents of Sogamoso, despite the "unruly" changes made in the schedule set by the Boyaca Electrification entity for its implementation.

The power service in this town is stopped 5 hours a day, 3 in the morning and 2 at night. The schedule set for this is between 0900 hours in the morning and noon throughout the town, and from 1800 to 1900 hours in the evening for the eastern section only, and between 2000 and 2100 hours at night for the western section.

Ibague

Ibague, 25--Governor Gregorio Rudas has issued decrees by candlelight, and both the Tolima assembly and the Ibague Town Council have passed legislation, but not without first expressing their dissatisfaction with the energy rationing which has serious features in this department.

The manager of Electrolima, German Hoyos Jaramillo, said that the water level at the Prado hydroelectric powerplant (the main source of power supply) has declined, rather than increasing.

Tunja

Tunja--Power is rationed in this town and the department of Boyaca 3 hours a day. The specifically industrial areas, such as Paz del Rio, Belencito and Metalurgicas, as well as the Boyaca cement plant, have not been included in the energy savings plan. Orlando Flechas Corredor, manager of the Boyaca Electrification entity, announced that, during December, there will be rationing for only an hour and a half, owing to the business requirements for Christmas gift sales.

Cartagena

Cartagena, 25--Whereas in the interior section of the country blackouts are starting to be popular, Cartagena and Bolivar, which have suffered them regularly, are experiencing a considerable improvement.

The Bolivar Electrification entity has managed to overcome the failures, but it cannot guarantee maximum efficiency in the walled downtown section of Cartagena, because of the poor condition of the distribution systems.

Girardot

Girardot, 25--The energy in this town is rationed 6 hours a day. During the morning, there are 3 hours of rationing in half of the urban perimeter, and, during the afternoon, there is another 3 hours of rationing for the other half.

This same schedule applies to the following settlements: Flandes, Ricaurte, Agua de Dios, Nilo, Jerusalen, Narino, Guataqui, La Vega and Tocaima.

In December, the rationing will increase here from 30 to 38 percent.

Manizales

Manizales--Starting on Monday, 24 November, the energy rationing in this capital was increased. There is currently rationing in sections of the town on schedules that fluctuate between 3 and 4 hours.

No rationing is planned for Saturdays and Sundays.

Sincelejo

Sincelejo, 25--There is no definite schedule for the blackouts and energy rationing in the department.

Sources associated with the Sucre Electrification entity noted that power may have to be rationed during the night, but thus far there is no definite schedule.

During the past few days, there have been blackouts and energy rationing in Sincelejo and the entire department.

Monteria

Monteria, 25--The electric power rationing in the department of Cordoba and in much of southern Bolivar is continuing.

A technician from the factory which built the turbine with problems arrived from Switzerland, and guaranteed that it would start operating at the beginning of December.

Technicians from General Electric are working on the installation of a 20,000 kilowatt turbine, which will be ready by mid-January.

Bucaramanga

Bucaramanga, 25--For several weeks, the Santander Electrification entity has been conducting a strict energy rationing program.

The program is in effect 12 hours a day, starting at 0600 hours in the morning, and it applies to all districts of the city without discrimination, during 2-hour intervals in each sector.

It also applies to the municipalities of Floridablanca, Piedecuesta, Los Curos, La Mesa de los Santos, Giron, Lebrija, Rionegro, San Alberto, San Gil and Barrancabermeja.

Despite the fact that the rationing lasts all day, in many instances the blackout continues until 2100 hours at night.

Armenia

Armenia, 25--Yesterday, a considerable increase in energy rationing was noticed in this capital.

The rationing in Armenia is applied by sections, in 2 and 3 hour intervals.

In the rationing intervals, the public enterprises have attempted to protect certain sectors for security reasons, as well as small areas engaged in industrial activity.

UNDISCOVERED OIL RESOURCES SAID TO EXIST

Bogota EL SIGLO in Spanish 23 Nov 80 p 11

[Article researched by Cecilia Rodriguez Maya: "Colombia Does Have Hidden Oil"]

[Text] Long before the oil crisis that is affecting the entire world embarked on its more acute period, there was talk in Colombia about the existence of hidden wells, some of which would be exploited through underground pipes in neighboring countries and others to be turned over to North American companies for their future benefit.

That legend was passed on and discussed by people for many years; yet now, when the price of crude has risen unchecked and the shortage is causing wars that threaten to spread in the world, those hidden wells are not appearing, and Colombia is starting to suffer the effects of the crisis.

Another disturbing doubt that is circulating in the "murky" atmosphere surrounding oil exploration in the country is the question as to why, when Ecuador and Venezuela have sufficient reserves in their soil, Colombia, located between the two, has not been able to discover the same amounts.

A meeting of leading geologists and scientists of the world held in Bogota to study the quaternary period in Colombia published studies on the morphological features of the national soil, confirming the existence of oil in most sections of the country.

The Resources in the Moving Earth

The oil being extracted in the world today began its transformation period during the cretaceous era, that is 140 million years ago, and during the more recent tertiary era, that is 70 million years ago.

To locate it, there must be specific subsoil conditions which may be explained simply as: a stratum generating a reservoir, or storage site where it is located, and a watertight layer on top which will not allow it to escape.

As everyone knows, oil is a product of the decomposition of organic matter that has been deposited with the earth's movements in environments without oxygen in the subsoil.

Colombia, which offers particular facilities for studies of soil and the changes undergone by the earth during the different eras of formation, according to the scientists, has the necessary features in 14 areas.

ECOPETROL [Colombian Petroleum Enterprise] has started exploration in only two of them, without success to date; because, as has been learned in the world of petroleum, it takes an average of 20 drillings to find the mineral in one area.

Where Is the Hidden Oil?

The potential oil-bearing sections of the country are located in the Cundiboyaca plateau, the Catatumbo Basin, the Cesar Basin, the Magdalena Medio, the Cauca Valley, the Patia Basin, the Atrata Basin, the San Juan Valley Basin, Tumaco, part of Sinu, the Orinoquia area and the Putumayo Basin.

ECOPETROL is exploring in the Magdalena Medio Valley, the Catatumbo area and Sabana de Bogota, and has planned other wells in the Patia Basin.

The geological studies for oil exploration are the first step in a long series of very expensive operations in which ECOPETROL has not taken sufficient interest, and the lack of budget has been given as an explanation for this. The national enterprise has only 20 geologists.

The preliminary phase of studies to determine the morphological structure of the subsoil is carried out through air photographs and other remote sensors, such as Landsat and radar images, to make a geological cartographic survey whereby the type of rocks and strata is determined.

A Revolutionary Theory

The oil is deposited in a horizontal position on a kind of fold in the earth, known as an anticlinal fold, which originated during the formation of the first mountain ranges.

There are many theories about these processes, which are still continuing, one explaining the formation of mountains, earthquakes, and the distribution of minerals and energy all over the earth, thus allowing for more scientific and accurate exploration.

This is the tectonic plate theory, which claims that our planet is made up of plates that are constantly floating and moving, in a process of creation, destruction, arrival and departure, giving rise to the present distribution of continents.

The stratum on the surface is the lithosphere which, in turn, is divided into another series of oceanic and continental plates, floating above another more dense one located underneath, and known as the asthenosphere which, although it is not liquid, contains portions of molten rock, is flexible and acts as a lubricant.

Beneath lies the "mantle" stratum, comprised of hot rock covering the "core," or the hottest part of the earth.

The "mantle" transmits the movement caused by the heat to the other plates, and often separations occur on the upper stratum, through which the asthenosphere emerges, producing mountains, volcanoes and earthquakes.

Generally, that emergence of the interior strata to the exterior occurs at the connecting points of the different lithosphere plates. The clash between an oceanic and a continental plate also caused the egress of materials from the bottom. These sites have been called "hot points," and it is there that the break or separation of continents occurs, and the appearance of new oceans.

Northern Colombia and Central America make up what has been termed the Caribbean plate, located over a strategic "hot point."

The emergence of material from the interior strata and the movement of the plates produce sediment on the sites that are submerged, and they are marked by their quality for forming petroleum. However, they are very difficult to exploit because of their depth.

This is how the mineral and energy resources are distributed.

Finding Oil

Deposits of iron, lead, copper, manganese, nickel and zinc have been found on the sites where, according to the latest geological theory, the plates collide, since those metals are formed by processes in which there is heat.

Therefore, the existence of oil is also predicted, because it is those movements caused by collisions of the plates that give rise to the oxygen-lacking atmosphere that is necessary for the preservation and processing of organic matter.

Once the crude is formed, it leaves its original rock to seek a storage place in sufficiently compacted rocks.

The records of the temperature in a sector under analysis are very important to the contributions that the plate theory can make for exploration of the resource.

Oceanic plates are especially propitious for the formation of oil, owing to the lack of oxygen. According to the studies that have been made, from the cretaceous era until the present, the Middle East has suffered a desiccation of the water that was covering it, and had produced chains of mollusks which remained buried with a breaking apart of plates. The different changes and movements opened new spaces, producing the current deposits which have caused greed in the world and the armed struggle being waged at present, with signs of turning into a world war.

The research being done at present by the largest oil companies in the northern United States and North Africa has been located in areas that were affected in particular during that geological period.

Colombia shows signs of great changes during the tertiary era, and it is the object of sciencific interest on the part of many countries.

NEW FINANCING PLANNED FOR ECOPETROL

Bogota EL ESPECTADOR in Spanish 12 Nov 80 Sec A pp 1, 9

[Text] According to an announcement made yesterday by the president of the Colombian Petroleum Enterprise (ECOPETROL), Jose Fernando Isaza Delgado, this year the entity will receive a "financial injection" of approximately $10 billion, through two foreign loan transactions that will enable it to schedule the investment plan for 1981.

A first foreign loan of $100 million was arranged directly by ECOPETROL with a consortium of foreign banks, headed by the Manufacturers Bank. This loan is being approved by the Council of Ministers and its signing is anticipated early in December.

A second loan will be concluded by the national government, also for the sum of $100 million, and is part of the foreign debt quota authorized for the executive branch by the National Congress. These funds will be a contribution of capital from the government to the Colombian state petroleum enterprise which will to a large extent clear up the deficit facing that entity.

The president of ECOPETROL told EL ESPECTADOR that, with these funds, the company will pay some of the foreign debts that it owes, and will finance the investment program for next year, which is currently being studied by the entity's board of directors.

In 1980, ECOPETROL will execute an investment budget of $9 billion; and it is estimated that next year the figure made available will be higher, because of the government's decision to give an impetus to the plans for exploration and development in the petroleum sector.

This year, exploration and development work has been done in 42 wells located in different sections of the country by ECOPETROL and through association contracts with the foreign companies operating in Colombia. Next year, it is estimated that the number of wells in each of the two phases will amount to 50.

The exploration work that is under way in the national territory is progressing rapidly, but there is not yet any exact information on the wells recently started. Isaza Delgado said that, in the Arauca-2, the drilling phase is at a depth of 18,000 feet. On this site it is planned to drill over 22,000 feet, which will be the greatest depth reached in Colombia.

In the case of the exploration work being done in Sabana de Bogota, specifically, near the municipality of Tenjo, the president of ECOPETROL revealed that a depth of over 2,500 feet has already been reached.

The government is confident about the positive results accrued from the various exploration and drilling projects, whereby the country may, in the not too distant future, be able to increase its rate of internal production of crude, and as a result reduce oil imports and their impact on the balance of payments.

It is estimated that the total cost of imports of oil, gasoline and ACPM this year will be about $300 million.

Refinery

The president of ECOPETROL, Jose Fernando Isaza, explained that the plan for the construction of the Eastern Plains Refinery has been deferred indefinitely, owing to cost situations. The official added that the respective bidding that had been opened was declared to be called off.

However, the program has not been scrapped, and it will be executed once the financial conditions and the production volume of crude allow for its implementation.

Delgado Isaza explained that the light crude produced in the Eastern Plains will be taken to the Barrancabermeja Refinery for processing. A total of 18,000 barrels per day of this crude will be pumped, a figure that will make it possible to attain a substantial increase in the production of byproducts, especially gasoline, and to use a larger percentage of the refinery's capacity.

This is the second time that the Colombian government has postponed the implementation of a plan of this kind. The other one was the Tumaco Refinery, in Narino, which was announced during the administration of President Misael Pastrana Borrero.

BRIEFS

AVEX IN DOMINICAN REPUBLIC--The president of the Venezuelan Export Association (AVEX), Regulo Campo Martinez, traveled to the Dominican Republic and Puerto Rico in order to lay the groundwork for the establishment of two "commercial offices" in those countries, because both nations "represent important markets for the prospects of trade among our countries." An AVEX release announces that in January the two offices will be opened. They will not be simply information offices; "they are aimed at developing activities related to economic studies in the area, the preparation of supply and demand lists, initiatives to improve the flow of goods, reports on the balance of trade, the compilation of statistics on foreign trade with regard to volume and monetary terms, and the determination of possibilities for joint investments." Regulo Campos recalled that these initiatives are in keeping with the intention to export 5 billion bolivars in products in 1981. [Text] [Caracas EL DIARIO DE CARACAS in Spanish 3 Dec 80 p 12] 8926

SPECULATIONS ON VIOLA'S MINISTERIAL APPOINTMENTS CONTINUE

Buenos Aires LA NACION in Spanish 23 Nov 80 pp 8-9

[Article in the column "Political Week": "On Candidates and Candidacies"]

[Text] Liendo at Interior

The chief of the joint Armed Forces staff and former minister of labor, Gen Horacio T. Liendo, looks certain to be interior minister under Lieutenant General Viola, sources closest to the president-designate concede. Liendo will retain his status as an active major general.

Political circles regard this as a logical appointment. Over these years there has been evidence that General Liendo identifies with the former commander of the army, and they give the impression of having common traits in the exercise of public functions.

Liendo would thus be succeeding Gen Albano Harguindeguy, whose term will be ending after 5 difficult years as interior minister, which he has coped with without creating personal animosities at the hub of Argentine politics. In addition, not a few politicians are willing to wager that although he might not do so on 30 March, in other words, the day after leaving the Interior Ministry, Harguindeguy will certainly at some time in the near future become openly and earnestly involved in national politics. This conjecture is based on his having shown a stronger calling for politics than people would have thought when he took over the ministry in carrying out a military mission.

There are conservative and liberal sectors, such as the Conservative Democratic Party of the Capital or the Christian Democratic Union, that would be pleased about the chance to form a coalition with the interior minister. General Harguindeguy is reportedly going to retire from the military at the end of the year.

Miret Confirmed

It is taken for granted, in principle, that all of the ministries will change hands on 29 March, when Lieutenant General Viola takes up residence at the Casa Rosada. There are strong indications, however, that not all of the resignations submitted by the cabinet secretaries will be accepted. For the moment, Brigadier Jose Miret, who has headed up the Planning Secretariat since it lost its status as a ministry, is regarded as one of the officials that General Viola has decided to keep in his government.

The good relations between Brigadier Miret and the next president predate his designation as president, but their ties have strengthened for reasons that are easy to infer: a) inasmuch as the area of responsibility for direct input in the setting of political priorities for drawing up the budget has passed from the Finance Secretariat to the Planning Secretariat, Miret has become the natural liaison between this government and the next with regard to the 1981 budget; b) Miret has been acting as the virtual host in the building (the one occupied by the Planning Secretariat) in which the public offices have been installed for Lieutenant General Viola and his main collaborators until he takes over as president in March.

Labor

Reliable sources have commented that if the decision is finally made that the Labor Ministry will be headed by a superior officer of the Air Force, the position will be filled by Brigadier Julio Cesar Porcile. He would thus be returning to the ministry in which he served under General Liendo.

Brigadier Porcile chairs the Legislative Advisory Commission, from which he has a virtually complete overview of the main affairs of state at this time.

One of the major difficulties in further guesswork about the cabinet that General Viola will preside over is that the final word has not yet been voiced on amending the law of ministerial areas of responsibility.

Viola said on TV from Rosario on Thursday that even if he knew the names of his future ministers, he would not be able to disclose them right now, because out of "gentlemanliness" he first had to inform the Military Junta. This was a clever way of suggesting that the president appoints the ministers, while at the same time apparently parrying the question.

But whether due to the Military Junta or the Legislative Advisory Commission (CAL), the fact is that the president's opinion will not suffice to amend the ministries law. The opinion of the three branches of the Armed Forces will also carry some weight in this regard.

In any case, it should be mentioned that there is the growing impression that Lieutenant General Viola has come out in favor of changes in the responsibilities, jurisdiction and number of the ministries. The crux of the changes supposedly involves breaking up the present Economy Ministry into three sections.

Dr Martinez de Hoz and his team are making a last-ditch effort to make their view understood that spreading around the responsibilities currently concentrated in the Economy Ministry would be "a serious mistake."

The opposite view, outlined by Viola to friends and collaborators, is that a new law would further facilitate cabinet cohesiveness and the exercise of presidential decisionmaking power. Furthermore, circles close to Viola are saying, such a reform would be in line with the future president's working methods and his strong feelings about not having a ministry that is a "first among equals."

Viola and the Navy

Even though there has been a great deal of talk that the Social Welfare Ministry would be revamped along with the Economy Ministry, there are reasons to believe that the former is lagging behind the latter. Viola will no doubt want to resolve matters in this sphere without hurting anyone's feelings in the navy, one of whose men will be in charge of at least the main section of this jurisdiction, according to all estimates.

The interesting thing is that the only name that has been taken seriously as a candidate for social welfare minister is Rear Adm Carlos Alberto Lacoste.

Lacoste had been mentioned as one of the ministerial candidates before Fraga was appointed as Vice Adm Bardi's replacement at Social Welfare. At present he holds the post of director of naval electronics, but he has been widely known since he demonstrated exceptional organizational abilities in preparing and staging the World Soccer Championship in 1978.

It would not seem to be such a bad idea for a military regime that is still the object of serious political hostilities overseas to have a minister who is often in the journalistic limelight in Europe and other places in which soccer is like a grass roots religion. Lacoste is vice president of the International Federation of Association Football and a member of the federation's organizing committee for the 1982 world championship, to be held in Spain.

Lacoste is considered to have one of the most energetic personalities among active navy officers today. He has enough years of service for a decision to be made in coming weeks whether he will be promoted to vice admiral this year or not.

Question of Affinities

When the military government took charge of organizing the 1978 world championship, he was given an important, though not the main role in the undertaking, but in practice he wound up being the underlying pivot of a spectacle whose staging was hailed as a model of efficiency. What this spectacle cost the Treasury is another matter. This event, the sports triumph that electrified the country, left the harshest opponents of the tremendous economic efforts undertaken, Juan Alemann, Alvaro Alsogaray, without too much of a following.

If Lacoste were, in fact, to become part of the national cabinet headed by Viola, it would be interesting to observe how these two military officers, with their seemingly so different personalities, get along in everyday work, the one being remarkably enterprising and extroverted, the other cautious and phlegmatic. Like former Labor Minister Rubens San Sebastian, both are conspicuous and rabid River Plate fans, which, a Boca booster would say, just proves that no one is perfect.

Four sources close to the president-elect were asked separately this weekend about the possibility of Lacoste becoming a minister in March. Their replies were somewhat different, though they all agreed that in no way was it a

foregone conclusion. With language appropriate to one of the facets of the vice president of the International Federation of Association Football, the least reticent source, which, therefore, ventured to give his candidacy more of a chance, said that "if it's not a goal, it at least hits the goalpost."

From Rosario

Lieutenant General Viola unquestionably made a good choice, to avoid risks, when he agreed to make his first public appearance as president-to-be on privately owned Channel 3 of Rosario. All of the details of the appearance were properly taken care of, including his makeup.

Whoever failed to see, shortly into the interview, that he was witnessing a spectacle prepared for the consumption of as broad a cross section of the citizenry as possible, probably understood little of what was happening on the screen. On account of his military posts over at least the last 10 years, the ruling class--politicians, businessmen, trade union leaders--already knew Lieutenant General Viola quite well.

The salt needed for the meal of political novices contained some brief remarks about populism and elitism. The rest consisted mainly of showing a military man in whom many Argentines could see themselves: father, grandfather, in short, the common man, without grandiloquent words, with simple manners, with a cigaret and a glass of water. Whoever paid close attention to Viola's movements probably noticed the ease with which he took his place in front of the mock "estaño" that was erected as part of a well-thought-out stage setting. The word "estaño" has an implicit meaning in domestic politics, not exactly intelligence or culture but closer to experience, tantamount, among us, to "being street wise."

In this connection, the program provided a fair measure of what suited Viola, no more and no less. That is why the changes in scene settings were a success, including, in television language, several "inserts" in which excerpts from a memorable game of soccer constituted an almost subliminal way of telling the public at large about the feelings of the next president.

We could not exactly say that this was television journalism, because plain journalism, with its strict rules, grants fewer advantages that the ones on the program from Rosario. But we also feel that no attempt was made to make people believe otherwise, and therefore, the program was honest.

Association of Ideas

The only people who could feel cheated were the ones who arbitrarily determined what they could expect and sat down in front of their TV sets to hear Lieutenant General Viola talk about what he feels a proper tariff policy is nowadays or about what we can expect in exchange policy next year. The program was conceived for a different type of audience, one much less interested in details, and in this regard it achieved its objective.

Viola had praise for Pellegrini, Roca and Lisandro de la Torre. The name of Pellegrini is too much associated with the idea of a national industry to overlook the allegory implicit in his mention. Roca suggests the occupying of spaces and territorial integration. With regard to the fact that at the dinner on Thursday night in Rosario after the interview recording Dr Alberto Natale was seated to Lieutenant General Viola's right, this could lead to mistaken conclusions as to why the president-elect spoke about the founder of the Progressive Democratic Party (PDP). As we know, Natale is secretary general of the PDP in Santa Fe.

Dr Rene Balestra, the most important leader of democratic socialism in Santa Fe, was placed at Viola's left at the dinner. If we follow the same criterion, then the president-elect forgot to mention Juan B. Justo, and he forgot yet another well-known figure in 20th century Argentine politics since seated in front of him at dinner was Mr Enrique Osella Munoz, a Peronist leader.

Obviously, then, the names mentioned by Viola during the program on Channel 13 had to do with less specific considerations. Pellegrini, Roca and de la Torre suggest, in fact, an association of broader ideas, tantamount to speaking of order, progress and freedom.

In Parana

Lastly, the future president closed his activities this week with a speech at the luncheon the day before yesterday in Parana on the occasion of the congress sponsored by the Confederation of Rural Littoral Associations.

As on so many other occasions, he had stressed on Thursday that there would be continuity between his government and President Videla's, but he had also cautioned once again that the current economic policy is subject to the modifications and corrections that circumstances dictate.

In Parana he specified that such changes do not necessarily have to be substantive to get domestic production moving again. If we tie in this clarification with the spot that the speaker chose to deliver his first message as president, we would say that the MID [Integration and Development Movement] people should not be congratulating themselves. His message was delivered, in fact, in one of the traditionally most liberal jurisdictions of businessmen farmers.

In addition, Mr Jorge Aguado, identifying with the rural coastline confederation members, was also present at the luncheon in Parana. As president of Argentine Rural Confederations, Aguado is clashing with the farming circles in the MID, although he has strong critical reservations about some aspects of the current economic leadership.

As we know, the MID circles are trying hard to get the Argentine Rural Confederations to back the National Business Convocation, one of whose sponsors is the Argentine Agrarian Federation.

The Counsels of Polonius

For some time now, foreign exchange losses have been hovering around $30 to $40 million a day. These losses unquestionably do not stem solely from the expectations prompted in connection with what is going to happen after March with the dollar; they also are due to the natural characteristics of our balance of payments in second halves and, if you will, to certain harvest difficulties this year.

Be that as it may, the exchange issue and the impact that uncertainty regarding developments in it is having on interest rates and, hence, on the outlook for economic and financial activity, paint a picture that this week's public statements by the next president have certainly in no way modified. In this regard, Viola is still observing the counsels of Shakespeare's Polonius: "Give every man your ear and few men your voice."

In the meantime, that continues to be the key in what we could describe as the current transition until March and in response to which we can expect certain government steps over the next 2 weeks. Such new developments have been suggested by the president in Mendoza and heralded by the economy minister on Thursday in Rosario and by the president of the National Development Bank in a speech delivered here on Wednesday.

Basically, steps are supposedly to be taken to refinance business debts on medium- and long-term bases, to the extent possible, as explained in detail in our "Al Margen de la Semana" commentary. After all, there are sectors that want action rather than words.

MASSERA: CURRENT STAGE IN PROCESS FILLED WITH FEARS

Buenos Aires CLARIN in Spanish 22 Nov 80 p 6

[Text] The former commander in chief of the navy, retired Adm Emilio Eduardo Massera, spoke yesterday about fear, describing it as "a presence that seems to have taken hold among Argentines" and noting its inroads in the country's political, social, economic and cultural life.

Massera asserted in this regard that "the fear that we did not have of war, we have of peace, because we are moving into it with excessive wariness, full of useless precautions."

Massera delivered a speech at the headquarters of the Association of Business Employees of Bahia Blanca, a city in which an in-depth interview with the former navy commander also appeared yesterday in the local paper LA NUEVA PROVINCIA.

In his address Massera pointed out that "in Argentina today civilians are fueling small fears against the military, even though together they won the war, and the military harbors small fears of civilian public opinion."

He also underscored that "businessmen are afraid of going broke or that an overblown state will suffocate them" and that "the workers are afraid that their social gains will be undone."

Massera asserted along the same lines that "artists are afraid of censorship; censorship is afraid of ideas, and some print media are afraid of the truth."

"Those on the left," he went on to say, "are afraid that everything will get mixed up and progressives and terrorists will be put in the same category; those on the right are so afraid of the leftists that they wind up advocating a police state as in nations with Marxist regimes."

The Economic Leadership

Pursuing this tack, Massera then asserted that "the leaders of our economy are afraid of being displaced, and almost everyone is afraid that the new administration is not going to displace the economic leadership."

He then indicated that "the haughtiness exhibited by those who scorn the opinions, feelings and realities of the country seems to have been permanently taken up as an essential attitude, an attitude that carries them to the extreme of disclosing grudgingly, if not refusing to disclose, information on government activities, an attitude that strikes at the most elementary republican sentiment.

"The everyday results of this attitude," he added, "are affronts to the broadest and most diverse sectors of the country. Politicians are attacked and accused of being out-of-date and unrepresentative, and even of being subversive and corrupt, a generalization that is as unfair as it is erroneous. Businessmen who disagree with the results of an economic policy that is not just pragmatic but makeshift and pursued against the grain of Argentine realities, are opposed when they react to it."

Referring to the next government, Massera pointed out later that "its first main step must aim at getting us to lose our fear of democracy," asserting that "the new president has the full support of the citizenry to correct mistakes and deviations and to do the things that the country is calling for."

Interview

In the LA NUEVA PROVINCIA interview, Massera asserted with regard to Rockefeller's recent visit that he selected Argentina for Chase's annual meeting to back Martinez de Hoz and because his own interests required it.

Massera also reaffirmed his support for agrarian leader Humberto Volando, noting that "when I was commander in chief, I gave a speech at the Confederation of Buenos Aires and the Pampa Rural Associations in which I confirmed my defense of the right to dissent."

CORDOBA GOVERNOR REPLIES TO MASSERA'S CRITICISMS

Buenos Aires LA NACION in Spanish 25 Nov 80 p 6

[Text] Cordoba--The governor of the province, retired Gen Adolfo Sigwald, has contested assertions by retired Adm Emilio Massera and radical leader Ricardo Balbin regarding Argentines' fears. In speaking before a neighborhood rally in the town of Berrotaran, he urged the people to continue working "without fear, the fear that has been talked about so much recently and that I do not understand.

"The people afraid? I would ask: Afraid of what? There are men and women here, youngsters and children playing. What are we afraid of? We aren't afraid of anything. Why should we Argentines be afraid?"

Continuity, Not Perpetuity

On another issue, he countered charges of a potential status quo outcome for the process. "When those of us in the National Reorganization Process talk about continuity," he explained, "we are not talking about perpetuity. We have said very clearly that the ultimate objective of the process is democracy with full-fledged constitutional institutions.

"So then, it is far from the minds of the men of the process to remain indefinitely or forever. We are undergoing the National Reorganization Process to achieve the objectives set by the Armed Forces in 1976, and when the conditions are present, the institutions of the constitution will be in full operation, whereby citizens can express their will through their votes, through the ballot box. But before we get there, we want them to be prepared civicly to vote responsibly, to put their power of reasoning and intelligence, not just their heart, in their vote."

DISCREPANCIES WITH SOCIALIST INTERNATIONAL NOTED

Buenos Aires CLARIN in Spanish 20 Nov 80 p 8

[Article by special correspondent Antonio Morere]

[Text] The Socialist International sees a conflict-ridden picture in the political faction that supports it in Argentina, at a time when the new Social Democratic strategy is to intensify its presence and impact in Latin America.

The Socialist International's obvious intention of intensifying its presence and impact in Latin America, in accordance with the Social Democratic group's new strategy, could have concrete manifestations in Argentina in a few months.

This hinges, however, on three basic factors, among others: it must reverse the weakness of its local representatives; it must not generate unyielding resistance in official circles, which could thwart its plans, and its concern with other world problems must not detract from its concern for Argentine affairs.

No New Moves

In terms of local impact, the world congress that has just met in Madrid made no new moves regarding the current situation. The Popular Socialist Party, headed by Victor Garcia Costa, is still the only Argentine group that is a full member of the Socialist International.

Separately, delegates from the Socialist Confederation, headed by Ruben Visconti, and from the Unified Socialist Party, led by Simon Alberto Lazara, were invited to attend the congress as "observers," and they did.

This was also the status accorded Diego May Zuviria, from the Intransigent Party. The group's leader, Oscar Allende, clarified yesterday here that May Zuviria was the only representative authorized by Intransigent National Committee and that his party did not accept an invitation from the secretary general of the Socialist International, Bernt Carlsson, to join as a full member.

His clarification implicitly disavows Maydee Birgin and Eduardo Andriotti Romanin, both of whom reside overseas and who collaborated with May Zuviria in Madrid.

With regard to radicalism, the congress was attended by Luis Caceres, the president of Radical Youth and a regular member of IUSY, the Socialist International's youth group.

It is not too clear how the Socialist International will be able to refurbish its local division, which has a number of particularly factious elements, and to turn it into a homogeneous force with a certain amount of political clout.

In any case, in his speech closing the congress, Spain's Felipe Gonzalez made remarks that definitely evinced common cause with the Argentine groups, independent of their vote-getting capabilities, he clarified expressly.

View on the Process

A delegation from the Socialist International will be visiting Argentina once Viola takes office as president.

The mission will have a dual purpose, having to do with the political liberalization expected and with the potential overhaul of local personnel.

Social Democrats entertain certain expectations regarding the future stage of the Argentine process, although their current stand is one of open opposition to the Argentine Government, as evidenced in the paragraph devoted to our country in the final declaration of the Madrid congress.

The paragraph reads: "We offer our solidarity to the democratic forces that are struggling against repression in Argentina. We reaffirm, from the bottom of our hearts, our solidarity with the 'May Square mothers' and we demand that the Argentine Government account for the missing persons, missing children in particular."

TURBAY, OTHERS COMMENT ON U.S. ELECTION

Bogota EL TIEMPO in Spanish 6 Nov 80 Sec A pp 1, 6

[Text] Yesterday, President Julio Cesar Turbay denied that the Latin American continent would head toward a "rightwing position" as a result of the election of the Republican, Ronald Reagan, to the presidency of the United States.

Turbay Ayala commented: "I do not believe that the effect of the North American election will be reflected in a rightwing position on the continent," noting that the circumstances which prevailed in the United States were different from the political issues which are decisionmaking factors elsewhere.

For example, he remarked that the United States felt that its image as a great power had been somewhat dimmed, and hence the people who voted for Reagan "were trying to restore that country's victorious image."

Former President Alfonso Lopez Michelsen, for his part, agreed with Turbay Ayala in the conviction that the increased inflation and unemployment had an effect on President Jimmy Carter's defeat.

Lopez Michelsen said that the Democratic Party, like all liberal parties, is without a dogma, which made it easy for the Republicans to take advantage of that tired attitude of the Americans to accrue good election results.

Yesterday, Turbay Ayala and Lopez Michelsen granted interviews to newsmen from the Caracol and RCN radio networks, expressing their views on the future of Latin America confronted with the Reagan government.

Also, in Bogota, the former Conservative president, Misael Pastrana Borrero, said that several lessons may be learned from the results of the American elections.

For example, he claimed that it was proven that the results of opinion polls do not always reflect the true electoral sentiments, and he predicted a possible different handling of the matter of the hostages in Iran.

As for the chairman of the Alvarist National Conservative Directorate, Miguel Escobar Mendez, he thought that the results were predictable, because the opinion polls had shown a desire for a change and a new course of action.

He said that the Americans showed clear-cut signs of disenchantment with President Carter's policy, noting that the Reagan victory could serve to foster a change of direction in Colombia.

Meanwhile, the chairman of the National Liberal Directorate, Victor Mosquera Chaux, remarked that his party hopes that Reagan will fulfill and uphold the commitments made by the United States to Latin America.

Turbay Comments

Turbay Ayala stated: "I want to tell you that we received the news with the surprise that you can imagine. We were not, and I don't think international opinion was, psychologically prepared for a victory the size of the one that Mr Reagan has just won."

He added: "I think that it obviously surprised the Americans themselves, and possibly the winning candidate himself, who was not expecting his victory to be of the proportions that were reached."

Turbay Ayala then remarked: "Obviously, everywhere on the globe, inflation, unemployment, the energy crisis, and social factors are affecting the determination of the destiny of nations; and, of course, they played a major role in the American determination.

"But there is another factor which, in my opinion, had a far greater influence, namely, the status of national pride. Many Americans thought that the image of a great power which had never been beaten nor humiliated was slightly dimmed; and I think that it was with a certain desire to restore the victorious image of the United States that many people turned toward the candidate Reagan."

Turbay Ayala subsequently noted: "We view Reagan's victory with hopeful surprise; there has not been a very important policy toward Latin America on the part of any president, except the late President Kennedy. So, to us, from the standpoint of a great policy's having been abandoned with the defeat of Mr Carter, this is not a matter that we could take for granted.

"On the contrary, we think that the great policy for Latin America has yet to be made, and if Mr Reagan wants to make it, he would have extensive opportunities to win the sympathy of these countries, which still view him with a great deal of curiosity, not knowing the final position regarding the fate of inter-American cooperation. As for me, I view him with the most hopeful sympathy, in the hope that what has been said and never done with regard to cooperation may now show good signs."

Turbay said: "I don't think that politics is a mere phenomenon of contagion. The parties are not like styles, and just because a party is in style in one country, this would be transferred to other countries. Insofar as politics is concerned, there are very special reasons and circumstances closely associated with the nation in which they occur. I don't think that Mr Reagan's victory, or Mrs Thatcher's victory in England, or Mr Seaga's victory in Jamaica necessarily must be reflected in all the conservative candidates in the world which, on that basis, should prepare now to assume power. It seems to me that what is necessitated is that the liberal parties and the democratic leftist parties realize that there are serious possibilities of their power being contested, and this requires that they act more conscientiously with their responsibilities, especially in the case of Colombia, where the majority of the party which brought me to the presidency of the republic has traditionally been prestigious. If that party does not split, does not become divided

and does not decide to commit suicide, I don't think that Mr Reagan's victory will have any connection with the destiny of Colombia."

Lopez Michelsen

For his part, former President Alfonso Lopez Michelsen described the American electoral event as historic.

Lopez Michelsen remarked: "Historic, in the sense that not only was the fate of the Republican Party and the Democratic Party decided, but, as many commentators have mentioned, an era in the history of the United States has ended."

He added: "An era during which there was domination by a coalition formed during the administration of President Roosevelt, comprised of the labor unions, the Catholics, the racial minorities and the southern states, which had formed a majority for the Democratic Party. That majority disintegrated in Tuesday's elections when, even among the labor unions, the Reagan forces succeeded in making highly significant inroads. Hence, it may be said that this has the scope not only of an election, but of an historic date, and a milestone in the development of the United States as a nation."

Lopez Michelsen recalled that the fate of the government parties was unlucky during times of inflation. "Rightwing governments fall just as leftwing governments do. The fact is that the United tates Government was liberal, and inflation has brought down the Democratic Party."

However, Lopez Michelsen observed: "After 2 or 3 years, I would like to find out whether the Democrats return as has already happened in the case of India, for example. So long as the problem of the high cost of living is not solved, the government will be held responsible for the high cost of living, regardless of its affiliation; because the public protest will make itself heard in the form of a vote against the government."

He declared: "The feat of keeping a party in the government has been seen in very few countries during the past 4 or 6 years."

Escobar Mendez

The chairman of the Alvarist Conservative Directorate, Miguel Escobar Mendez, said that the results in the United States were predictable, because the Americans wanted a change in view of the disenchantment that the Carter administration caused among them.

Escobar Mendez said: "I think that this means an obvious change in the United States' policy, and I hope that this change will prove favorable for Latin America, and also that public opinion in Colombia will imitate the example, and decide to promote a change in the country."

Pastrana's Opinion

Former President Misael Pastrana made the following comment to EL TIEMPO concerning the election results in the United States:

"Several lessons may be learned from the elections in the United States; first of all, that the polls do not, as claimed, reflect the true sentiments of the electorate. None of the polls, which presumably were taken with a high degree of technical expertise in the country to the north, gave Reagan the lead that he obtained. Either the polls were mistaken in the manner in which they were carried out, or there was a last-minute circumstance, which might well have been the contradictory handling of the final release of the hostages in Iran, that changed the attitude of the electorate.

"On the other hand, the high rate of abstention is still a phenomenon in the present democracies, even those with the greatest political significance, such as the United States, where there is no difficulty in the voter's having access to the polls.

"The American election also indicates that there is no such thing as unchangeable political loyalties on the part of the voter in the world of today; on the contrary, that electorate is obviously prompted by attitudes, programs, options and even individuals in the context of changing alternatives.

"In this context, it is noteworthy that the working electorate, which is traditionally democratic, was considerably displaced in yesterday's elections.

"As a final observation, I would say that the democracies clearly need a set of alternatives for the decisions relating to power, particularly for the chief executive of the state. Hence it would be fitting, on the basis of experience, to reconsider the feasibility of a political agreement in Colombia on certain conditions, that would allow the parties to appear before the electorate as clearly different options, with a lofty spirit of harmony."

Valencia Lopez

Finally, the chairman of the Ospino-Pastranist Conservative Directorate, Ignacio Valencia Lopez, claimed that the Reagan victory has strengthened the democracies of America.

Valencia Lopez remarked: "The American people's solid support for Reagan puts him in an invulnerable position, and the balance in world politics will surely again become the point of accord for maintaining peace."

Alvaro Gomez

Senator Alvaro Gomez stated:

"The Reagan victory has several meanings: an international one, representing an acquisition of awareness by the American people of their mission in the world. I think that the results are due to the dissatisfaction caused by the decline of United States leadership in the democratic world. Politically, there is no doubt that the great Anglo-Saxon democracy has assumed a conservative path. This is the most outstanding evidence of the political style that prevails in the democracies."

Gomez said: "Insofar as Latin America is concerned, we should not judge the event with the narrow view that the Americans in one party are better because they say nicer things about our hemisphere than the others. By the very fact that it occurred, Reagan's victory has prevented the Caribbean and Central America from being lost for democracy."

FINAL TEXT OF AMNESTY DECREE PUBLISHED

Bogota EL TIEMPO in Spanish 26 Nov 80 p 6-A

[Text] The following is the final text of the draft amnesty decree approved yesterday by the First Commission of the Chamber of Representatives:

Article 1. Amnesty is granted to all Colombians who were the authors of or participants in events constituting rebellion, sedition or mutiny, and crimes connected therewith committed before the present law went into effect.

Amnesty does not cover the cases in which the crimes of rebellion, sedition or mutiny involved kidnapping, extortion, homicide committed outside of combat, arson, the poisoning of water sources or reservoirs, and in general any act of barbarism or savagery.

Article 2. The benefits to which the preceding article refers will be granted within the four (4) months following the approval of this law to those who took up arms. When that period has ended, provided the conditions set forth in Article 11 exist, applications for amnesty from those arrested or sentenced for rebellion, sedition or mutiny and related crimes will be considered, except under the circumstances described in paragraph 2 of article 1.

Article 3. Any person desiring to benefit from the amnesty should present himself to any political, judicial, military, diplomatic or consular authority within the four (4) months after this law becomes effective, surrendering the weapons, ammunition and explosives in his possession, with a specific and personal statement that he will cease participation in the punishable acts to which the preceding norm refers.

Article 4. Those who present themselves to apply for amnesty may not be deprived of their freedom nor subjected to harassment of their persons or property because of the crimes with which this law deals during the procedure provided to rule on the case. An official engaging in such acts will be charged with the crime of arbitrary arrest or abuse of authority as the case may be, will lose his post and will be subject to a fine varying from 10 to 20 thousand pesos in present currency.

Article 5. An official to whom an individual presents himself to apply for amnesty will draft a document which must contain at least the following information:

1. Given and family names of the applicant and nicknames, if any, place of residence and record of the identity papers presented.

2. Description of his role in the actions to which this law refers, dates of proceedings in progress against him, if he knows of any, and a statement of his desire to rejoin civilian life.

3. List of the weapons, ammunition and explosives surrendered.

The document will be signed by the participants and will bear the fingerprint of the applicant, who will indicate the address he has chosen as his residence. The applicant will receive a document attesting to his appearance and the initiation of the amnesty proceeding.

Article 6. Within the five (5) days after the signing of the document, it will be sent to the pertinent governor, intendant or commissioner.

Article 7. Within the ten days after this law goes into effect, the officials who are hearing trials brought for the crimes to which article 1 refers must send to the governors, intendants or commissioners a list of the persons involved in these court procedures.

On the basis of the reports received from the officials to which the preceding paragraph refers, the governor, intendant or commissioner will, within ten (10) days of receipt of the information, send the proper documentation to the pertinent authorities.

If on the basis of the reports received it is concluded that there is no basis for trial, the files will be sent to the high court of the proper judicial district.

Article 8. If there is a basis for trial, once the documentation has been received, the judge hearing the case will rule clearly on the amnesty application within the following fifteen (15) days.

Article 9. If there is no basis for trial, the high court of the pertinent judicial district will rule on the amnesty application.

Once the documentation has been received, the high court, through the criminal ruling chamber, will rule clearly on amnesty. The trial judge will have three (3) days to present a proposal and the chamber will have two (2) days to rule.

The ruling will become executory on being handed down.

Article 10. Amnesty applications presented to diplomatic or consular officials will be conveyed to the ministry of foreign affairs. That ministry will transmit them to the ministry of government, which will establish whether or not there are grounds for trial. If there are, the application will be sent to the official hearing the case. If there is no basis for trial, the application will be sent to the high court of the Bogota judicial district.

Article 11. The benefits of amnesty will be extended to Colombians who have been deprived of their freedom, tried or sentenced for the crimes of rebellion, sedition or mutiny and crimes related thereto, with the exception of the crimes listed in paragraph 2 of article 1 of this law.

Once the period of time to which article 2 refers has elapsed, presuming the proper development for the reestablishment of peace thanks to this law, the government will decree the launching of the procedure to grant amnesty to those arrested, tried and sentenced, who must make application within the following two (2) months.

Article 12. Amnesty applications to which the preceding article refers will be ruled upon by the judge hearing the case within ten (10) days of their presentation.

The document rejecting an application for amnesty will be subject to appeal, which can be filed by the individual charged, his representative, or a representative of the public prosecution. If no appeal is filed, the ruling will be reviewed.

Article 13. No application for amnesty will interrupt the continuation of trials in progress.

Article 14. A copy of the ruling on each amnesty application will be delivered to the applicant in person.

Article 15. Each ruling granting amnesty will be filed under adjudicated cases.

Article 16. Without prejudice to the criminal suits which may be filed, officials who fail to implement the terms set forth in this law will be liable for misconduct.

Article 17. This law will be effective as of the date of its approval.

Signed by your commission: Jose Ramirez Castano, Jaime Pinzon Lopez, Zamir Silva Amin, Eduardo Rosas Benavidas, Jairo Ortega Ramirez.

EMBASSY ATTACKERS ALLEGEDLY BACK IN COUNTRY

Bogota EL TIEMPO in Spanish 27 Nov 80 Sec A p 6

[Text]A year since the initiation of the verbal court martial of the members of M-19 [19 April Movement] and 9 months after the seizure of the Dominican Republic's Embassy, the authorities published the background information on the heads of the organization and of the Marcos Zambrano squad, and requested the cooperation of Colombians in capturing them.

At the same time, it was learned that the physician, Carlos Toledo Plata, is ill, and therefore the movement's leadership has been assumed by former medical student Jaime Bateman Cayon. The intelligence service accepted the story of the M-19 leader who claimed that "Commander No 1" and his comrades returned to Cuba several days ago.

All those who occupied the Dominican Embassy, where 16 foreign diplomats were held as hostages, have been tried as defendants in absentia in the trial which began on 25 November of last year, and which is currently in the phase of preparing interrogations.

The authorities revealed the biographies of the members of the M-19 Higher Command for the first time, and made recent photographs available, so that the citizenry might cooperate in the search for them.

Bateman Cayon was born in Santa Marta on 23 April 1940, and is known as "Pablo Garcia" or "El Flaco". The son of Carlos and Clementina, he is married to Peggy Ann Klelland Amado, and studied medicine at the National University until the sixth semester. He is 1.86 meters tall, and has a dark complexion, hazel-colored hair and a mole on his face. His citizen's identity card is No 2,945,835, of Bogota; and he has no military passbook, judicial record or passport.

Toledo Plata was born in Zapatoca, Santander, on 13 December 1932, and is known as "Francisco," "Pacho" or "Jacinto." The son of Angel Miguel and Virginia, he is married to Celina Mercedes Maza, of Argentine origin, and is a graduate in pediatric medicine. He is 1.68 meters tall, and has a medium-dark complexion and graying hair; and he wears glasses. His identity card is No 5,558,169, of Bucaramanga, and he has military passbook No 326502, of District 23, second class. He does not have a passport. In the organization, he is head of the Oriente regional entity.

Ivan Marino Ospina was born in Roldanillo, Valle, on 16 April 1940, and is known as "Alvaro" or "Felipe Gonzalez." The son of Jorge Tulio and Ana Felix, he is married

to Fanny Gomez, who was recently arrested in Medellin. He holds a bachelor's degree in the humanities and is employed as a merchant. He is 1.71 meters tall, and has hazel-colored hair, a dark complexion and dark eyes. His citizen's identity card is No 17,004,828, of Bogota, and his judicial record is No 614825. He has no military passbook, and he is chief of the Boyaca regional entity. He also coordinates special operations, and is an expert on explosives. Last June, he escaped from the La Picota jail, where he was tried in a court martial.

Jose Elmer Marin Marin, a companion of the former individual in his escape, was born in Rioblanco, Tolima, on 5 September 1948. Known as "Mario" or "Roberto," he is married to Gladys Lopez Jimenez, and is the son of Mario and Roberta. He has a bachelor's degree. His height is 1.70 meters, and he has a dark complexion and hazel-colored hair. He holds identity card No 13,809,229, of Bucaramanga. He does not have a military passbook or a judicial passport. He is head of the Tolima and Valle regional entity, and with the foregoing individuals is a member of the organization's high command.

It was also disclosed that Grace Leovenherz Vera was recently arrested in this capital. Born in Bogota on 30 October 1951, she held the rank of senior officer in M-19. She is single, graduated with a degree in anthropology, and is 1.66 meters tall, with a fair complexion. She was tried in the court martial that is under way against over 150 members of M-19. The authorities said that they are seeking the young woman Maria de los Angeles Toledo Maza, daughter of the congressman, and Esther Moron de Arteaga, leaders of the movement.

Background on Those Who Occupied the Embassy

On 27 February, an M-19 commando group violently seized the Dominican Embassy while a cocktail party was being held to mark another anniversary of that country. Nearly 50 persons were taken hostage, and later several of them were released, remaining inside the embassy until the end of the drama. There were 16 ambassadors from various nations of the world. The intelligence service subsequently managed to establish the identity of the subversives, and yesterday supplied that information to the press, so as thereby to capture them.

Rosemberg Pabon Pabon, known as "Pacho," and identified as the "No 1" commander, was born on 11 June 1948, in Cali. His parents were Arcesio, now deceased, and Leyda. He has citizen's identity card No 14,949,873, of Cali, and is a graduate in the field of social sciences. He is married to Lucelly Ramirez, who graduated with a degree in education.

He joined M-19 in 1976, at the suggestion of Arjaid Artunduaga Rodriguez, known as "Ivan," who is a senior officer in the organization.

In May 1977, he led the construction of the "People's Jail" in the Nuevo Tequendama district of Cali. Until 4 September 1978, he was employed in the senior high school in Jumbo, Valle, and was replaced by his wife, who resigned on 31 January 1979. In February of that year, he traveled with his wife to Tambo, Cauca, and turned up again at the time of the attack on the embassy.

Wilder Cesar Silva Barreto, known as "Macaquito" or "Gervasio," is of Uruguayan origin, and has been identified as the "No 3 commander." He was a member of the Tupamaro National Liberation Movement in his country, and entered Colombia in March 1978. He had previously been in Cuba, where he received guerrilla training. In 1979, he joined M-19 under the name of Victor E. Salazar.

Jorge Ivan Rojas Sanchez, alias "Genaro," is known as the "No 5 commander." He has citizen's identity card No 10,056,739, of Pereira, and was born on 16 July 1950 in the capital of Risaralda. His parents are Luis and Rosalba, and he is a mechanic by trade. He is 1.72 meters tall, dark and has black eyes.

He was a member of the National Liberation Army, and joined M-19 in 1975, as a first officer. On 26 July 1976 he was apprehended by the police on the premises of the National University, while painting slogans referring to the organization. He had in his possession a car with license plates AH-6549, which had been stolen a few days earlier. He was released with a writ of habeas corpus. By virtue of official memorandum 166, dated 17 August 1976, he was wanted by the 56th court of criminal proceedings for the illegal carrying of arms. On 1 October 1976, through official memorandum 01, he was wanted by the 14th superior court in connection with several investigations.

He took part in the construction of the "People's Jail" in the Lucerna district of Bogota, in which the head of the CTC [Confederation of Workers of Colombia], Jose Raquel Mercado; the former Conservative minister, Hugo Ferreira Neira; and the former Colombian ambassador to France, Miguel de German Ribon, were held captive.

Miguel Angel Mojica Rincon ("Alfredo"), known as the "No 7 commander," was born on 25 March 1958, in Bogota, and has citizen's identity card No 19,434,582, of Bogota. He is single, the son of Adolfo and Evelia, and is 1.70 meters tall, with a dark complexion. He is a former employee of Chrysler Colmotores. He attended secondary school and uses the name Ernesto Martinez Pulido. He has no criminal record.

Pompilo Aragon Zamora, known as "Pilo," is single, and an engineering student at the University of Valle. He was born on 9 June 1954, and has citizen's identity card No 14,443,606, of Cali. He joined M-19 in 1978, with the rank of second officer, and is a comrade of Clemencia Sandoval Garcia, who is currently being tried in the verbal court martial of the members of that movement.

Clelia Maria Garcia Henao, born on 29 May 1948, in Caicedonia, Valle, is known as "Mariela." With citizen's identity card No 24,476,562, of Armenia, she is fair, and 1.47 meters tall. She joined M-19 in 1977, as a second officer, and was a member of the commando group which kidnapped the then Nicaraguan ambassador to Colombia, William Barquero Montiel, on 10 May 1978.

Gladys Diaz Ospino de Amortegui, known as "Carmenza," has citizen's identity card No 41,435,241, of Bogota, Born on 24 November 1948, in Mompos, Bolivar, she is married to Guillermo Arturo Amortegui Ramirez, who is currently under arrest. She is a physician by profession, and until February 1979 was working at the health station in Morales, Cauca.

In the latter part of 1977, she joined M-19, and in 1978 founded a guerrilla school in Paletara, Cauca, which was attended by Jose Antonio Navarro Wolff, Pablo Soltan Tatay Benish, known as "Liberado," and Maria Graciela Bolanos de Tatay, known as "Elvira." The school was headed by Ivan Marino Ospino, or Felipe Gonzalez, a fugitive from La Picota.

Carmenza Cardona Londono, who was known as "Norma" or "Stella," was born on 15 July 1952, in Cartago, Valle. She has citizen's identity card No 31,261,421, of Cali. She is 1.50 meters tall, and has a dark complexion, broad, heavy eyebrows, thick lips and a well developed bust. She took university courses. Her parents are Rafael Antonio and Ascenet. While employed as a teacher, she became affiliated with M-19 through Antonio Jose Navarro Wolff, and in December 1978 cooperated with him in the establishment of the guerrilla school in Paletara, Cauca. In late January 1979, she accompanied Navarro to Coconuco, Cauca, in order to meet with Marco Anibal Avirama for the purpose of locating some weapons that they had concealed in storage since the last guerrilla school. She was the "No 9 commander," and was the one assigned to negotiate with the government's emissaries, in the yellow station wagon.

Maria Clemencia Sandoval Garcia, known as "Martha," and a companion of Pompilio Aragon Zamora ("Pilo"), was born on 19 August 1956 in Bogota. She has citizen's identity card No 31,466,277, of Yumbo, Valle. The daugher of Virgilo and Cecilia, she is a graduate in civil engineering. A second officer in the organization, she led the seizure of the newspaper EL CALENO, on 17 April 1979.

Gloria Amanda Rincon Lopez, who was wounded in the occupation of the embassy, is known as "Andrea." She was born on 8 October 1957, in Florencia, Caqueta, and has citizen's identity card No 40,755,969, of that town. The daughter of Luis Alejandro and Maria Jesus, she is a student and a legal secretary. Single, she is 1.64 meters tall, and has a dark complexion. In 1978, she joined M-19 as "No 2 officer," and in January 1979, with the Monje Benavides brothers who are now in exile, she led the mobile commando group of the organization in Florencia. In February 1979, she operated with Gustavo Arias Londono ("Gerardo") in Caqueta and Huila. She was the "No 13 commander" at the Dominican Embassy.

The four remaining guerrillas were identified as follows: "No 15 commander," Roberto Prada Lopez; "No 17 commander," Rene Polanco Betancourt; Napoleon de la Fuente, a native of Antioquia; and Jorge Eliecer Cepeda Duque.

The authorities presume that they all entered the country over the Venezuelan border, and several of them intended to participate, on 19 September of this year, in the abortive "Eighth Summit Meeting of M-19," which was to have been held at the Potosi bathing resort in Tocaima, Cundinamarca.

Before leaving the country with their hostages, the members of the Marcos Zambrano Commando Group received passports in the following names: Omar Cardona Torres, Genaro Molina Ceballos, Pedro Gutierrez Ruiz, Alfredo Martinez Laspriella, Roberto Prado Lopez, Rene Polanco Betancourt, Jorge Eliecer Cepeda Duque, Napoleon de la Fuente, Natalia Mendoza Arias, the negotiator, Emilia Ramirez Gomez, Renata de la Concepcion Galindo, Estella Mambuscay Rendon, Maria Salcedo Pacora and Victoria Osorio Navas.

EXPORTERS CALL FOR INCREASED PESO DEVALUATION

Bogota EL TIEMPO in Spanish 23 Nov 80 Sec C p 5

[Text] The National Exporters Association (ANALDEX) has requested that the government increase the rate of devaluation, "because we have actually revalued our currency."

Alfonso Rojas Llorente, chairman of ANALDEX, said that the price of the dollar should be more than 65 pesos and not slightly over 50 pesos, which is the official exchange rate.

Rojas remarked that the devaluation has been slow, and that a more accelerated rate must be maintained, as a means of increasing the share of Colombian products on the international market.

The chairman of ANALDEX submitted the following statement:

Devaluation is a subject which evokes conflicting reactions in Colombia, with some holding the view that the government is accelerating it in a reckless manner which, they claim, has been reflected in a weakening of the economy because of the lack of a sound currency.

However, there are incontrovertible events, such as the fact that internal production costs have risen far more rapidly than the peso's devaluation; and so, while the index of devaluation during the past 10 years increased from 100 to 200, the inflation rate for the same period rose from 100 to 800. This means that the competitive status of native production in comparison with the foreign supply has been drastically curtailed, with a negative effect on the exporting process. Not only that, for on the internal market as well, every day one observes an increase in this lack of competitive status in comparison with the imported product, and it has become increasingly more attractive to import.

In previous years, the devaluation process was restrained, perhaps to prevent the likely inflationary impact, which experience has proven to be considerably less than was thought; and therefore, the dollar should now be priced about 65 pesos. This necessitates maintaining a more accelerated rate of devaluation because we have actually revalued our currency. It is not a matter of devaluating at a more accelerated pace out of a mere desire to do so, but rather because we must counter the systematic revaluation of the peso.

Rapid devaluation may possibly entail drawbacks, owing to a potential inflationary effect, of which we are not unaware, although to a lesser extent, as we said, than people think. And if there is no correction in this situation whereby there is a greater difference each day between the internal rates of inflation and devaluation, the exchange outlook is very gloomy, despite the abundant reserves; because we must not forget that their growth is due in large measure to the income in hard currency derived from illegal export operations, mainly involving drugs, while our legal trade balance has been systematically in a state of deficit recently.

If one adds to this the fact that coffee prices have been greatly reduced, while the need for imports has increased, and the demand for hard currency with which to pay for fuel has risen sharply, if no definitive measures are adopted for the devaluation process, hastening it, we may soon find ourselves facing an exchange situation that will curb and hamper the country's overall development, leading us to a crisis of incalculable seriousness, which will hurt all of us, not only the exporters.

CONGRESSMAN REPORTS TO CHAMBER ON FICTITIOUS EXPORTS

Bogota EL TIEMPO in Spanish 27 Nov 80 p 12-A

[Article by Ramiro Castellanos: "Fictitious Exports Totaling 46 Million U.S. Dollars Denounced in Chamber"]

[Text] Colombia effected fictitious exports totaling $46 million--approximately 2.1 billion Colombian pesos--in one year, parliamentarian Hugo Serrano Gomez of Santander charged.

The congressman spoke out yesterday during a debate in the Eighth Commission of the Chamber of Representatives attended by the director of the INCOMEX [Colombian Foreign Trade Institute], Edgar Moncayo; the director of the PROEXPO [Export Promotion Fund], Manuel Jose Cardenas; a representative of the controller general of the republic and another representative of the Issuing Bank.

Serrano Gomez said that a study of import forms revealed that in many cases the consular tax had not been properly paid, and he said that friction had developed between controller's office officials and those of the INCOMEX, because the latter would not allow the fiscal checks for which the law provides.

He noted that in a check of 40 sample tax payment forms, carried out in cooperation with controller's office employees, 22 were found to be in error, lacking seals or having been issued to individuals and enterprises with tax debts to the national treasury administration. The 22 importers owed the state 246 million pesos.

He stated that the firms to which paid-up tax statements were delivered included Nissan Distributors, which owed more than 14 million in taxes; Central Colombian Auto-Agriculture, which owed 2 million; Colombian Polyethylene, which owed 20 million; and Icasa, which owed 9 million.

He said that some importers had expressed to him a concern, because people do not want to be involved, about the fact that INCOMEX middlemen were collecting five pesos on every dollar of import value.

Serrano Gomez appeared on a summons from parliamentarian Alegria Fonseca, who said that in the case of the false paid tax statements the responsibility should not be borne by the INCOMEX, but that the tax director instead should be held responsible.

Parliamentarian Antonio Ramirez said for his part that the INCOMEX was wasting money on travel expenses. He cited the case of an official who was sent to Cali on an expense account which totaled 187,800 pesos.

Serrano Gomez said that in connection with the fictitious exports, the national government had to pay the "exporters" 24 million pesos.

He mentioned as a curiosity the fact that supposedly a volume of carrots was exported which exceeded the total domestic production. He read a part of a report from the special customs investigation section, in which the authorities maintained that fictitious exports were effected with documents used for normal exports, but that without a doubt there had to be complicity on the part of the officials handling the licenses.

INCOMEX Director's Version

Edgar Moncayo, the director of the INCOMEX, said that that body handles 160,000 import licenses a year and that each application passes through the hands of 40 employees.

He said that if there are shortcomings it is because there are no control mechanisms.

"How can the INCOMEX know if a paid tax statement issued as valid is false?" he asked. He went on to note that it is not possible to research the legality of each of these documents because this would be a never-ending task.

He said that there is no centralized system in the tax administration to establish if an importer is in debt to the state or not.

"The director of that body himself has said that such control is impossible," he noted.

As to penalties for false certificates, he asserted that the INCOMEX has no authority to implement such measures.

He said that in the future, with the computer which has recently been purchased, it will be possible to know which of the 3,000 exporters and 5,000 importers are in some difficulty with INCOMEX, so that their transactions will be rejected.

As to controller's office checks, he commented that "INCOMEX has offered no resistance to an audit, but what happened is that no one has been sure how far the supervisory authority of the controller's office goes in the handling of import and export licenses, or where the exclusive functions of their organizations begin."

He promised that the charges made by Serrano Gomez will be investigated and those responsible penalized.

He suggested the establishment of a committee with representatives of the two institutions--the INCOMEX and the controller's office--to study the functions of each body in order to avoid friction.

Referring to the fictitious exports, he said that a number of bodies participated in the process and that in the final analysis it is the duty of the customs authorities to establish whether the goods listed in fact leave the country.

He added that it is not INCOMEX but the Bank of the Republic which is responsible for issuing tax bond certificates to exporters, and it is not easy to establish crime when several bodies are involved in the process.

He said that the INCOMEX has established controls which make export more difficult in order to prevent fraud; they insure that this problem is minimal at present. Finally, he announced that because of these controls, which are utilized by all of the state bodies, the various regional directors in the country have reported that exports are being discouraged.

The final speaker was Libardo Arriaga, representing the controller, Anibal Martinez Zuleta, who said that the irregularities found in the INCOMEX in connection with the paid tax statements are being investigated by a special commission, and that those responsible will be turned over to the ordinary courts.

NEW SENIOR MILITARY ASSIGNMENTS LISTED

Thirteen Generals, Two Admirals

Bogota EL TIEMPO in Spanish 22 Nov 80 pp 1-A, 6-A

[Text] The armed forces will have a new three-star general, two major generals, ten brigadier generals and two rear admirals as of this coming 3 December, the Ministry of National Defense announced yesterday.

The insignia will be awarded to the military personnel during the closing study session at the General Jose Maria Cordoba Cadet School, with President Julio Cesar Turbay Ayala present.

Maj Gen Gustavo Matamoros D'Costa, presently second in command and chief of the army general staff, will be promoted to the rank of three-star general.

Brig Gens Rafael Obdulio Forero Moreno, commander of the Military Institute's Brigade, and Jose Maria Arbelaez Caballero, intendant general of the army, will be promoted to the rank of major general.

Army Cols Alvaro Lopez Vargas, Ernesto Lopez Ramirez, Antonio Jose Gonzalez Prado, Jaime Hernandez Lopez, Jose Alirio Alvarado Hernandez and Pedro Nel Molano Vanegas will be promoted to the rank of brigadier general.

Colonel Hernandez Lopez is the son of retired Major General Rafael Hernandez Pardo, who served as minister of national defense during the government of Dr Alberto Lleras Camargo.

Air Force Cols Alberto Guzman Molina and Alfonso Amaya Maldonado will be promoted to the rank of brigadier general, as will police colonels Jorge Arturo Pineda Osorio, presently serving as director of the General Santander Cadet School, and Luis Eduardo Castillo Amaya, commander of the Bogota police department.

Capts Miguel Rangel Santos and Manuel Fernando Avendano Galvis will be the new rear admirals.

The presentation of insignia to the brigadier generals in the police force will take place on the same date, 3 December, at the General Santander Cadet School.

High Command Changes Noted

Bogota EL TIEMPO in Spanish 30 Nov 80 p 8-A

[Text] Natural and routine changes will be made within the armed forces in the coming days as a result of the promotion of a number of officers to the rank of general.

Maj Gen Gustavo Matamoros D'Costa, who will be presented next Wednesday with the insignia of a three-star general, will be assigned to head the combined general staff of the military forces.

General Matamoros will be replaced as second in command of the army by Maj Gen Bernardo Lema Henao, who is currently serving as inspector general for that armed branch.

Brig Gen Jose Maria Arbelaez Caballero, who will be presented with a major general's insignia, and who has been serving as intendant general of the army, will be appointed director of the Higher War School, which post is now occupied by Maj Gen Jose Maria Rivas Forero. He will be assigned to Washington as the Colombian delegate to the Inter-American Defense Council.

Next Monday, moreover, transfers in the brigade command posts and the leadership of the Military Cadet School, as well as other high army posts, will be announced.

Next Wednesday, at the military school, six officers will be promoted to the rank of brigadier general and each will be assigned command of a brigade.

General Matamoros

Mayor general José María Arbeláez Caballero

Brig. Gral. Jaime Hernández López

Brig. Gral. Alberto Guzmán Molina

Brig. Gral. Jorge Arturo Pineda Osorio

Brig. Gral. Antonio José González Prado

Brig. Gral. Luis Eduardo Castillo Amaya

Brig. Gral. Alvaro López Vargas

Mayor general Rafael Obdulio Forero Moreno

Brig. Gral. Alfonso Amaya Maldonado

General Gustavo Matamoros

Contralmirante Manuel Fernando Avendaño

CONSTRUCTION OF PRIVATE PORTS AUTHORIZED

Bogota EL TIEMPO in Spanish 24 Nov 80 p 16-F

[Text] The creation of private maritime ports will be authorized by the National Economic and Social Policy Council (CONPES), Decree No 3137 promulgated by the national government provides.

Private terminals will not be built in geographic areas or zones of influence where there are state port facilities equipped for trade.

The text of the decree reads as follows:

In connection with the issuance of norms on the granting of permits in the port sector,

The president of the Republic of Colombia, exercising his constitutional and legal authority, and

In view of the following facts:

That the timely use of beaches, coastal zones and other nationally owned sites for projects by private persons for their exploitation and benefit is allowed under the terms of the provisions of articles 679 and 682 of the Civil Code, requiring the special permission of the competent authorities;

That Extraordinary Decree No 2349 of 1971 established a legal system of permits to regulate the authorization and development of timely use of beaches and coastal zones for projects such as wharfs, breakwaters, jetties and other similar structures, assigning the authority in this connection to the General Maritime and Ports Office of the Ministry of National Defense;

That article 167 of the Fiscal Code defines the categories of national ports and provides that those authorized are those through which both import and export activities, or either of these, can be effected;

That Extraordinary Decree No 1174 of 1980, article 3, paragraph 6, established the authority of the government to declare port projects of a private nature as authorized ports and conferred on the Colombian Ports Enterprise the authority to regulate their operations;

That Extraordinary Decree No 627 of 1974 established the National Economic and Social Policy Council as an advisory body to the government and provided that the department of planning will participate in the assessment of domestic or foreign private investment projects requiring the intervention of the national government;

That there are important zones in the country which need port facilities for their full development and integration in national economic progress; and

That the national government has the duty to establish a port policy in accordance with the standards established by law, as well as to plan for the mechanisms for its full implementation:

Decrees: Chapter I. Privately Operated Port Facilities

Article 1. Definition. For the purposes of this decree, privately operated ports means complexes of port installations built and managed by private persons for their own use and that of third parties, after obtaining permission from the state, which themselves offer all technical and administrative facilities for the docking and anchoring of vessels of medium and deep draught and for the loading, unloading and storage of goods.

Article 2. State Functions. Privately operated ports must be provided with facilities enabling the authorities of the republic to exercise the tasks of supervision, inspection, regulation and control for which the legislation in effect calls.

Article 3. Prohibition. The establishment of privately operated ports may not be authorized when in the judgment of the National Economic and Social Policy Council this would be undesirable because of their proximity to geographic zones or spheres of influence in which there are state port installations equipped for trade.

Article 4. Desirability. Before submitting an application for the construction of the installations as such, in accordance with the provisions of Decree No 2349 of 1971, the party interested in developing a privately operated port must obtain a favorable ruling from the National Economic and Social Policy Council to the effect that the port proposal is desirable and advisable for the progress and development of the region and the general economy of the country, and is not in conflict with sectorial or regional plans or the National Plan for Economic and Social Development.

The pertinent application should be submitted through the National Planning Department and must be accompanied by the following documents:

a. Those establishing the status and legal representation of the applicant, if a juridical person is involved, as well as his economic and technical capacity and the financing means he has for the development of the project;

b. Location, boundary and area of the terrain which would be taken up by the construction and adjacent service zone;

c. Justification for the project, taking the economic activity of the region, the estimated freight volume and its relationship with the economy of the country into account;

d. General description of the project, specifying the technical details such as to make it possible to establish its volume and characteristics; and

e. Approximate budget for the project.

Single Paragraph: Applications and documentation will contain the details and specifications set forth by the National Planning Department.

Article 5. Content of the CONPES Ruling. In addition to ruling on desirability, the opinion of the National Economic and Social Policy Council will establish the sum which the applicant must pay to the national treasury annually by way of compensation for the use of public assets.

Chapter II. Construction Permit

Article 6. Application. Once the favorable ruling of the National Economic and Social Policy Council has been obtained, the applicant will submit his request for a permit to the General Maritime and Ports Office through the pertinent harbor master's office, accompanied by the documents to which article 91 of Decree No 2349 of 1971 refers.

Article 7. Processing. The General Maritime and Ports Office will process the application in accordance with the provisions of articles 92 to 96 of Decree No 2349 of 1971.

Article 8. Ruling on the Application. Once all of the procedures and studies of the documents contained in the file have been completed, the General Maritime and Ports Office will grant a permit, if the application appears economically and technically advisable, and if no viable objections have been filed.

Article 9. Granting of the Permit. The resolution granting permission will contain the following clauses.

a. Location and boundaries of the zone covered by the permit, and the maximal usable area;

b. Category of construction authorized, purposes and uses allowed for the same and the period within which the work must be carried out;

c. Duration of the permit in terms of years;

d. Warning to the effect that all of the norms in this decree and the laws in effect are included in the conditions of the permit;

e. Volume of the penalty which can be demanded of the holder of the permit in the event of nonfulfillment of obligations;

f. Extent of the guarantees which the permit holder must provide to guarantee fulfillment of his obligations and the pollution risk with which article 5 of Extraordinary Decree 1875 of 1979 deals; and

g. Extent of the compensation to which article 5 of this decree refers.

Article 10. Rights and Recourse. The decisions of the General Maritime and Ports Director must be justified. They will be communicated and will be subject to government recourse in the forms prescribed by Extraordinary Decree No 2733 of 1959.

Article 11. Letter of Commitment. Within the ten (10) days following the issuance of the resolution granting permission, the permit holder must authorize the public statement to which article 97 of Decree No 2349 of 1971 refers, in accordance with its requirements, which will be officially recorded along with a true copy of the ruling involved, with confirmation of personal notification.

Article 12. Guarantees. The holder of the permit must within the ten (10) days following granting of the permit arrange the guarantees required in the pertinent resolution. This may be a personal bond or one provided by an insurance company or a banking institution legally established in Colombia. The General Maritime and Ports Office must approve these guarantees, once established.

Article 13. Allocation of the Zone. Once the permit holder presents a recorded copy of the document to which article 11 above refers, the harbor master or the representative of the General Maritime and Ports Office, as the case may be, will proceed with the physical allocation of the zone involved by means of a procedure which will be recorded in a document.

Chapter III. Norms Governing Use of the Permit

Article 14. Supervision of Construction. The General Maritime and Ports Director or his representative, the harbor master or the experts designated by any of the above will carry out the supervision necessary to insure that the construction adheres to the conditions established in the resolution granting permission and the provisions of the General Maritime and Ports Office.

To this end, the General Maritime and Ports Office may request the technical assistance of the Colombian Ports Enterprise, at the expense of the applicants.

Article 15. Statement of Authorization. Once the construction has been completed and conformity with the plans and specifications approved has been checked by the General Maritime and Ports Office, the national government will declare the port authorized to engage in trade.

Article 16. Technical Supervision. The functioning of privately operated port services will be subject to the regulations promulgated by the Colombian Ports Enterprise, in accordance with the provisions of article 3 of Extraordinary Decree No 1174 of 1980.

In this connection, it will be the responsibility of the COLPUERTOS [Colombian Ports Enterprise], by means of a justified resolution, to approve the regulations governing operation, with the permit holders being required to submit the following documents:

a. Copy of the complete port installation project;

b. List of the human and equipment resources available to the port;

c. Copy of the resolution issued by the General Maritime and Ports Office granting permission for the construction of the private port;

d. Copy of the public record with which article 11 of this decree deals;

e. Copy of the national government document declaring the port authorized to engage in trade; and

f. Copy of the draft of the private port operations regulations.

Single Paragraph: The expenditures required for the supervision of the functioning of the privately operated port will be borne by the permit holder.

Article 17. Port Authority. At all times and under all circumstances, the port authority will be the responsibility of the respective harbor master in whose jurisdiction the respective structures have been built.

Article 18. Rates. The establishment of rates for the services of the privately operated port will be subject to the control of the national government.

It will be the duty of the Ministry of Public Works and Transportation to approve the rate regulations, as well as their amount or volume.

Article 19. Official Availability. The buildings, structures and installations to which this decree refers will be permanently available free of charge for military, health, public service and national security uses as established by the national government in accordance with the norms governing these matters.

For commercial use, the government will be subject to the same conditions established for private parties.

Article 20. Expiration. The permits to which this decree refers will expire under the conditions for which article 98 of Decree No 2349 of 1971 provides. The facts establishing expiration to which this article refers will be reported by the harbor master involved to the General Maritime and Ports Office, which will issue the pertinent resolution.

This resolution will also order payment in accordance with the penalty clause included in the permit, and compulsory collection, if necessary.

Article 21. Duration of Permits. The permits with which this decree deals may be granted for an initial period of up to to twenty (20) years, to be extended for periods of ten (10) years more, if the permit holder so requests one (1) year in advance, and the National Economic and Social Policy Council and the General Maritime and Ports Office deems this desirable.

In any case, the total duration of a permit may not exceed fifty (50) years.

Article 22. Assignment. The permit holder may assign it without the express authorization of the authority which granted it.

Article 23. Established Rights. The granting of a permit does not affect the rights enjoyed by the nation or private parties over their respective terrains, nor does it in any case limit the right of the nation to erect constructions at any site it deems desirable, outside the boundaries granted the permit holder.

Article 24. Review. Once the permit has lapsed or run out, construction, buildings and investments by the private persons to whom this decree refers will become the property of the nation.

Article 25. Special Exception. The coastal zones of the archipelago of San Andres and Providencia are excepted from the provisions of this decree.

Article 26. Effective Date. This decree will become effective as of the date of its issuance.

It is ordered that this decree be published and implemented.

Issued in Bogota, Special District, on 20 November 1980 and signed by Minister of Economic Development Andres Restrepo Londono, Minister of Public Works and Transportation Enrique Vargas Ramirez, and National Planning Department head Eduardo Wiesner Duran.

TECHNICAL COOPERATION PACT SIGNED WITH YUGOSLAVIA

Bogota EL TIEMPO in Spanish 10 Nov 80 Sec F p 7

[Text] Yesterday, the governments of Colombia and Yugoslavia signed two agreements for scientific-technological and technical cooperation, which will make it possible to conduct the studies for the installation of plants to process the Colombian copper deposits and to apply technology to the processing of dairy products and the cultivation of garden produce.

The two documents were signed by Foreign Affairs Minister Diego Uribe Vargas, representing the Colombian Government, and Radoje Kontic, a member of the Federal Executive Council, representing the Yugoslav Government. They will be in effect for 2 years, and may be extended.

The parties pledge to exchange technology and to train technicians.

Excerpts From the Agreements:

Within the framework of their authority, the parties will make it possible to develop scientific-technological cooperation between their pertinent organizations on the following terms:

a. To study the various options that will allow for the design and installation of a complete semi-industrial pilot plant for producing and processing the copper and nonferrous ores existing in Colombia.

b. To make a study of the hydro-pyro and electrometallurgical processes that would be most feasible for supplementing the existing pilot concentration plans in Colombia.

c. To make the preliminary selection of technological processes and options for refining copper and other nonferrous ores.

d. To promote direct information on Yugoslavia's experience in technological development attained by that country in the area of processing and using metallic copper and the products of its exploitation.

Milk and Garden Produce

Within the framework of their authority, the two parties will facilitate the development of direct scientific and technical cooperation between the pertinent organizations

in both countries, particularly in the following manner:

a. To prepare a study on the application of technology in the area of milk processing and garden produce production, geared to the conditions for rural development of the Duitama area in the department of Boyaca, and the subtropical zone of Colombia.

b. Joint cooperation that will make it possible to adapt technology to the rural areas of the Andean region, in which there are small and medium-sized agricultural and livestock establishments that could be improved with the assistance represented by technological adjustment.

c. To conduct joint research relating to the processing of milk, its utilization and the marketing of the byproducts.

d. To make a study of the phytosanitary conditions in the Duitama area, in order to design control systems that will make it possible to obtain answers to the health problems associated with growing potatoes and other vegetables.

BRIEFS

PRO-SANTOFIMIO PAPER FOLDS--According to an announcement from the correspondent in Ibague, Oscar Gutierrez, the pro-Santofimio evening paper COMBATE (formerly known as LAS NOTICIAS) began a forced vacation owing to financial losses in its operation. Also, because it was impossible to reach a successful agreement at a meeting that the stockholders held with other individuals interested in contributing to the newspaper's continuation, its manager, Dr Antonio Cifuentes Navarro, decided that the staff and the employees would go on leave starting on that date, while another option was arranged. Today, the largest stockholder, Dr Ramiro Lozano Neira, who is currently secretary of health in Tolima, was attempting to seek new associates in order to prevent the definitive closing of the only daily paper in Ibague, which has been operating for 3 consecutive years, and which was headed recently by the journalist and poet, Lola de Acosta. RELATIONS WITH U. S., HAITI, VENEZUELA, MEXICO ASSESSED

Santo Domingo EL NACIONAL in Spanish 9 Dec 80 p 8

[Editorial: "Restrictions on Our Sovereignty"]

[Text] "Interdependency" is the inevitable normal form in which nations are linked together, on a worldwide scale, in the legal, economic and political order.

It is obvious that these bonds of mutual rapprochement also imply an inevitable decrease in national sovereignty. It is a constant law that a portion of autonomy is given up, in order to be able to enjoy the bit of sovereignty given up by the other states, large and small.

Public international law is the guarantor -- a guarantor lacking power to penalize prevaricators -- that the rules of the game will be kept in this order of relations from nation to nation.

Respect for the universally received rules should prevent, if possible, the comparison -- a comparison that refuses to die, that perpetuates itself -- in which it is pointed out that "the shark feeds on sardines," from being made.

It must be pointed out that public international law does not always agree with international policy. International policy superimposes itself on public international law, with the unquestionable vigor with which force imposes itself on reason.

What does that international policy, especially the international policy of the large to dominate over the small, use extremely frequently? In normal times, economic might. In wartime, military might.

It is now a cliche, a commonplace constantly on the lips of leftists and rightists, of revolutionaries and conservatives, that we -- the Dominican Republic -- belong to the "dependent" countries.

But this evaluation, which is correct, is accompanied by another commonplace, which is less correct and which consists in accepting as absolute truth that our sole dependency is the dependecy subjecting us to the United States. This is false.

No country in Latin America is as manacled, as tied up by so many bonds of dependency as the one called Dominican Republic.

Of course, we depend first of all on the North in the field of politics and economics. But we also depend on Haiti, which blackmails us by leaving us with no harvest, which is the same as leaving us without sugar, by not sending us field workers if we do not smile at the adipose lifetime president and if we do not overlook violations of human rights on the western part of our island.

Our sole dependency is not now on the Americans. From the Americans on down, we have others. Venezuela and Mexico hold us like a footstool with their damned oil.

The agreements based on hydrocarbons that they decide to arrange are certainly not fraternally inspired. They are not an "I give so that you may give" found in Roman Law. Those agreements belong to the type of "take it or leave it" and to "I give you what I want in exchange for your giving me what I want."

In a certain sense, American assistance is more generous than the assistance of the so-called sister countries. The operational fund that the Americans have in the IDB has been lending to us on a 40-year term with a grace period of 10 years and 3 percent interest, while when Venezuela lent us 60 million it was at 8 percent, at a 4-year term and a 2-year grace period.

On reaching this point, the honest, mandatory question is how we can slacken off the bonds that tie us, bonds that lessen our sovereignty and restrict it without reason.

Let us venture to reply. Dependency with Haiti is already under consideration. Ways are being devised -- by means of automation or by sweetening the bitter cutting of sugarcane for the Dominicans -- so that Haitians will stay in Haiti.

With Venezuela, Mexico and other countries, by rapidly increasing our export products and by exporting new products that will give us negotiating power.

Today's cases show that it is the only course open to us. Mexico needs refined sugar that we have not been able to offer it. Venezuela is constantly needing consumer goods like kidney beans, sugar, chickens.

Stated more simply: just as production and productivity will save us from the anguish of domestic hunger, they will redeem us from intolerable foreign pressure.

ECONOMIC RIGHTS, PEREZ ESQUIVEL NOBEL PRIZE NOTED

Santo Domingo EL NACIONAL in Spanish 14 Dec 80 p 8

[Editorial: "The New Human Rights"]

[Text] Every age, as if in keeping with its nature, with its special temperament and circumstances, reserves for itself a word, a slogan in which it engraves the summarized expression of what it aspires to achieve, of what it dreams and idealizes of attaining.

That "sign of the times" was, in the clear days of the Middle Ages, the establishment of "Christendom," unity of all under one same creed, harmonious solidarity of the priesthood with the imperial power; economy, also united because of the corporative system, although under the domination of the feudal system of lords and serfs.

Starting with the Renaissance -- contemporary with the discovery of America -- the struggle began for the purpose of changing the ideal to be pursued by the peoples of the world: against the divine right of kings [and for] the human rights of man.

The bourgeoisie, the producers and merchants swarming in their lucrative businesses at the foot of the castles, is what bore on its shoulders these objectives of political changes, of changes in which sovereignty will pass to the people who will transmit it to a mandatary who thus receives authority not by way of inheritance, but rather of concession of the general will.

The French Revolution consummated the victory against absolutism. The worker district of Saint Antoine, in Paris, accompanied later, in Versailles, by the market vendors in the capital of France, triumphed over the royal soldiers. The rights of man came out of there, from Versailles, to be proclaimed in the Louvre Palace.

But this is the declaration of the bourgeois man: property is still sacred and the right to property is unlimited. It is the "jus utendi et abutendi" [right to use and utilize] of ancient Roman law.

Regardless of what may be said, the French Revolution was a political revolution more than a revolution in which social leveling and economic democracy were achieved.

That social and economic revolution is the "sign of the times," of the age in which we are living. It is our struggle. Property is not sacred. It is not untouchable. When it is excessive and exclusive, a social mortgage to the benefit of those disinherited by fortune weighs down on it.

The right to life comes before the right to property. No one has the right to let another person die of hunger, if he can prevent it, because eveything that he has in excess belongs to that other person.

This new conception of human rights has had to be incorporated on the list of persons' political rights proclaimed in the eighteenth century in the capital of France.

In our times, likewise, it has been necessary to emphasize the human rights of collectivities, of peoples and of human groupings along with individual rights.

Are not the rights of underdeveloped peoples violated by the highly industrialized nations that plunder us, that sell to us dearly and buy from us cheaply?

Are not the human rights of poor societies violated by the peoples who control oil and who take our bread out of our mouths to make us pay with our very limited foreign exchange for the dishes that the opulent nations have broken?

This is the reasoning that leads us to applaud the forceful, well-grounded speech just delivered in Oslo by the Argentine winner of the 1980 Nobel Peace Prize, Adolfo Perez Esquivel.

The Argentine defender of human rights accused the powerful nations of being responsible for the injustices prevailing in the community of poor peoples.

Those nations are the United States and the Soviet Union. They are violating collective human rights by forcing the working class, all over the world, to struggle for their trade union political rights.

Adolfo Perez Esquivel concluded by stating that the great powers are making the greatest crime of our times -- the armament race -- possible by imposing the rules of the game.

EL NACIONAL presents here its most cordial congratulations to the brand new Nobel Peace Prize winner for having emphatically stressed the way in which the great powers are unscrupulously violating the new human rights, the rights of the peoples who are vegetating and barely existing under the yoke of underdevelopment.

CALVANI SPEAKS AT CHRISTIAN DEMOCRATIC INTERNATIONAL

Caracas EL DIARIO DE CARACAS in Spanish 28 Nov 80 p 4

[Text] Former Foreign Minister Aristides Calvani expressed his optimism about the political situation in Central and South America, "despite harsh and difficult symptoms." Calvani made these remarks in his speech at the Christian Democratic International Seminar which is taking place in Caracas.

Among other things, Calvani's optimism is based on the fact that he sees "that the forces of democracy are becoming aware that it is necessary to have reasons not only to live but also to die, and therefore, to fight to the death in defense of human rights and freedom in a real and effective democracy."

He stressed the important changes in the region, the installment of democratic systems in Peru and Ecuador, and the fact that "other countries with military regimes are now trying to 'normalize' their situation, recognizing that it is not normal and that they are responsible for such a situation that is often a sham and a farse."

He used the term farse to describe the plebiscite which will take place in Uruguay next 30 November, calling that country's government "harsh and violent." However, he insisted that the event proves that "the military forces of that country recognize that their situation is abnormal, and although they are resorting to a farse, they are saying clearly that they are not in the right, nor is justice or reason on their side."

With regard to the situation in Central America, he observed that there are two basic orientations. "There was a revolution that led to the downfall of the Somoza dynasty, but it threatens to become a Marxist-Leninist totalitarian dynasty. Recent events, and murders in the streets on the pretext of political problems, are showing that increasingly intransigent and implacable orientation."

The other orientation is in El Salvador, according to Calvani. There, he says, "The revolution represents a monumental effort to come to grips with two struggles: the struggle of the regressive forces and the Marxist-Leninists with irregular armies that are trying to set up a totalitarian regime."

Also speaking at the session was the president of the Christian Democratic Federation of Argentina, Francisco Eduardo Serra, who condemned the Uruguayan plebiscite, although he indicated that it was difficult to make judgments about the internal situation of other countries.

"The plebiscite is objectionable, principally because the issue is no less than the approval of a new constitution. A constitution cannot be drawn up by a partisan entity, even though that entity is the de facto government of the country."

DISIP CHIEF WARNS OF NEW METHOD OF SUBVERSION

Caracas EL DIARIO DE CARACAS in Spanish 20 Nov 80 p 3

[Text] The director of the Directorate of Intelligence and Prevention Services (DISIP), Remberto Uzcategui Bruzual, took what he thought was the most timely opportunity to make a serious accusation. He was in the auditorium of the Valencia Chamber of Commerce, addressing a large group of leaders of the private sector of Carabobo, Aragua and Cojedes. The accusation: There is a new form of subversion which is based in that region and which is operating in the unions, student groups and marginal areas.

Uzcategui Bruzual added that this irregular activity has been controlled, in principle. But he clearly warned that the perpetrators and leaders will not be satisfied with mere strategies and actions. At that point he recalled recent events in the cities of Valencia and Maracay which were covered by the national press.

He stated, moreover, that this subversion is different from that of the sixties and seventies in this country, "when groups of individuals organized to commit crimes by means of armed systems and operations for the purpose of engaging in combat with the military forces, following the lines of and at least imitating the Cuban revolution."

The police official feels that the new form of subversion "does not aim to produce bloody confrontations with public forces, but it does encourage the disturbance of the peace by inciting riots, taking over churches and schools, and exploiting the discontent of the people that has resulted from unmet aspirations for basic public services. In sum, they are infiltrating the unions and using the people of the barrios." He argued that this is "one way of promoting chaos and anarchy in our society, and therefore creating the environment necessary for dangerous actions which we should condemn and prevent."

At the Chamber of Commerce meeting government officials and members of the National Armed Forces also were present.

EDITORIAL CALLS ON POLITICAL PARTIES TO UNITE

Caracas EL DIARIO DE CARACAS in Spanish 21 Nov 80 p 6

/Editorial: "The New Subversion"/

[Text] Democratic Action has always considered itself the party of the people, but now it is acknowledging with deep consternation the "hullabaloo" and uproar which characterize its internal electoral process.

National leaders of the White Party openly speak of the "worst crisis since the Sierra Nevada, the breakdown of morals and party discipline which is bringing the party to the brink of collapse. . ."

To a certain extent, the government party can derive some pleasure from the situation because, according to Social Christian Party (COPEI) spokesmen, what Democratic Action (AD) is now suffering internally was stimulated on a national level during the past 15 months with strikes, work stoppages, obstructions and manipulations in all areas of public activity.

COPEI's satisfaction will probably be fleeting, however, because such a fool's paradise would not do when the two large parties are rowing in the same institutional boat. That is why authorized spokesmen for the Christian Democrats have--until now--kept silent about the AD crisis. Democratic Action and COPEI do not need any more internal problems, when those of the nation--of an economic, social or cultural nature--demand that the two political groups finally begin rowing in the same direction.

The Herrera-Caldera meeting is a good sign in the government party. Furthermore, it is a good example for the AD leadership to follow. The latter is still abroad, solving the problems of Social Democracy in the rest of the world, while uncertainty spreads at home.

The director of the Directorate of Intelligence and Prevention Services (DISIP), Remberto Uzcategui, asserted that in Venezuela there are now "new tactics of subversion" which, instead of promoting armed confrontations, try to destabilize the nation's institutions. The high official did not go into detail, perhaps implying that his audience knew what he was referring to in his speech to the businessmen of the city of Valencia, which is now in turmoil. Now the prevailing political parties must reflect on the implications of these statements and begin to put the national house in order. For that purpose, it is essential that first they put their own affairs in order. Only in this way can the political parties ask the citizenry for the mandate that recognizes them as the appropriate tools for the exercise of political power.

BRIEFS

TOYOTA PLANT IN CUMANA--The Toyota jeep factory should be finished by September 1981, according to the director of transportation materials of the Development Ministry, Roberto Madero. He discussed the promising situation of the automotive industry for next year. These prospects will be characterized by, among other things, the reactivation of the construction industry and the expansion of the installed capacity of the passenger microbus companies. The latter vehicles will replace the uncomfortable pickup trucks that are now in use all over the country. At present the Toyota Company is building a new plant with a production capacity of 100 vehicles per day. The plant is located in Cumana, in a 120,000 square meter area in the industrial zone. The same automobile complex will manufacture 2,000 winches a year, and investments are calculated at 800 million bolivars. With this plant, Venezuela is taking one more step in the direction of complying with the Andean Pact's Sectorial Program for the Development of the Automobile Industry. That program assigned the country the manufacture of engines in Category C, four-wheel drive jeeps. According to the definitions of Decision 120, jeeps are four-wheel drive vehicles with a gross vehicle weight of less than 2,500 kilos with a gasoline engine, or less than 2,700 kilos with a diesel engine. Presumably, the Toyota engines will be gasoline engines, but the existing technological alternatives are still being studied. [Text] [Caracas EL DIARIO DE CARACAS in Spanish 3 Dec 80 p 12] 8926

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PRESS COVERAGE OF OIL-RELATED ACTIVITIES

Cals Divulges Energy Budget

Rio de Janeiro JORNAL DO BRASIL in Portuguese 6 Dec 80 p 14

[Text] Mines and Energy Minister Cesar Cals said yesterday he was prohibiting PETROBRAS [Brazilian Petroleum Corporation] from continuing to disclose monthly data on consumption, importation and production of petroleum because "the public doesn't have to know about this. All they have to know is that supplies are adequate." According to the cabinet minister, there have been many disparities in the figures furnished "because each person computed them in his own way and the differences were upsetting the public"; hence, his decision.

Cesar Cals also declared that petroleum imports would not cost more than $9 billion in 1981, with an average purchase of 750,000 barrels a day, "which will represent a saving of $2.5 billion." When reporters insisted upon knowing how it would be possible to pay an average of only $33 a barrel next year, the minister replied that "the magic is in the vest pocket." And he added: "When 1981 is over, you can come to me if petroleum imports cost more than $9 billion."

Investments

The forecast of Mr Cesar Cals for 1981 is that in January domestic petroleum production will reach 230,000 barrels a day; that of alcohol, the equivalent of 50,000 barrels; and that of coal, 20,000. By December, he said, those figures will become 280,000 barrels a day for petroleum, 80,000 for alcohol and 36,000 for coal. Regarding consumption he said "we will try to keep it at 1,100,000 barrels a day."

According to the request sent by the energy ministry to SEPLAN [Planning Secretariat], the PETROBRAS investment budget for petroleum exploration and development in 1981 will be 170 billion cruzeiros. That of the Rio Doce Valley Company will be 120 billion cruzeiros and that of NUCLEBRAS [Brazilian Nuclear Corporations], 50 billion cruzeiros. The mines and energy minister confirmed that his ministry's overall budget (investments plus operating expenses) for next year will be less than this year's, in nominal terms. But he asserted that the reduction is all in operating expenses, "since we are going to save $2.5 billion in petroleum purchases."

Regarding investments in the electric-power sector, Cesar Cals said that construction of Itaipu and its transmission line, Tucurui, nuclear power plants and the North-Northeast grid will not be cut back, as they have priority. The others will have a real increase of 5 percent.

Coal

The minister denied that there has been a shortage of funds this year for the coal program. He said that no funds were released for mining because no projects were approved, "due to problems of title registration for the mines in the National Department of Mineral Production." He said funds were released for marketing, so that "the 240,000 tons sold in January increased to 360,000 tons in November." In regard to gasification, he cited the projects for which protocols of intent have been signed--two in Santa Catarina and one by PETROBRAS in Sao Jeronimo, Rio Grande do Sul--and that of the Rio de Janeiro State Gas Company, whose protocol should be signed this month. The gasification project for COMGAS, of Sao Paulo, is being studied.

Petroleum and Foreign Debt

Rio de Janeiro O GLOBO in Portuguese 6 Dec 80 p 21

[Article by Shigeaki Ueki, president of PETROBRAS: "Petroleum and Foreign Debt"]

[Text] The abrupt and arbitrary increase in petroleum prices beginning late in 1973, from $3 to $11 a barrel, caused a profound change in the world economy, aggravating further the international economic and financial disequilibrium that had been becoming apparent since the end of the 1960 decade.

As a result, energy assumed a preponderant role in national development strategies, with special emphasis on nations in a stage of economic development and dependent upon petroleum imports due to the high growth rate of energy consumption, an identifying characteristic of their stage of development.

Adjustment of such economies to the new international situation became quite difficult, as, besides the impact from increased petroleum prices, they also suffered the effects of the recession and the policy of balance-of-payments equilibrium pursued by the industrialized countries--protectionism and passing on increased petroleum prices through the prices for their export goods.

In Brazil, due to its being a developing nation, energy consumption is difficult to restrict, bearing in mind the need for expanding its economy in keeping with its growing labor force and the national objective of reducing the distance that separates us from more advanced countries.

Thus, faced with the new conditions of the international economy, the nation found itself forced to readjust strategies and plans. In the 1974-77 period, policies for expanding and diversifying exports, import substitution and reduction of dependency on foreign energy sources, together with a certain stabilization of the real price of petroleum, contributed decisively toward Brazil's recovering equilibrium in its trade balance in 1977.

The investments required to maintain a minimum growth rate now required a greater share of foreign savings to supplement domestic capital formation.

It was thus possible for the nation to develop at an average annual rate of 7 percent (in PIB [gross domestic product]), although aided by the size of foreign

resources, which in turn were made possible by the nation's vitality and its credibility in international financial markets. As a result, the net foreign debt increased from $6.2 billion in 1973 to $24.8 billion in 1977.

It should be mentioned that during this same period, although the value of exports doubled, the net foreign debt/export ratio rose from 1 to 2.

Just when the world seemed to be returning to the previous state of eqilibrium, with almost complete disappearance of surpluses in the current account of OPEC member countries, the situation again worsened in 1979. Another hike in petroleum prices, from $12 to $32 a barrel in 1980 in a little more than 1 year, caused significant deficits in the current account of petroleum-importing countries, requiring a higher level of foreign debt, partly to meet commitments made previously, at a higher cost because of increased interest rates, which reached unprecedented heights.

It is noted that the absolute increase in the price of oil was almost $20 a barrel, without the corresponding fanfare, if compared to the $8 increase during the much-discussed petroleum crisis of 1973.

It is important to point out that the new situation cannot be stated merely in terms of foreign trade or a policy of energy substitution, which requires a reasonable period of time to be carried out. In the short and intermediate term the question is directly linked to recycling international financial resources and our capacity to attract them.

Within such a context, understanding the nature of the Brazilian foreign debt requires use of concepts other than the traditional ones to learn its real content. One of the most obvious ways would be to evaluate foreign obligations in terms of the very unit that has been creating the new international economic order: petroleum.

In 1970 the net debt was about $4.1 billion and corresponded to 2.7 billion barrels of oil at the import prices then prevailing. Our present debt, $50 billion, corresponds to 1.563 billion barrels of petroleum, implying a decrease of more than 40 percent.

Another form of analysis shows that Brazilian reserves of recoverable oil and gas at the end of 1970 (1 billion barrels) represented about 1/3 of the net debt at the time, whereas in June 1980 these reserves (1.582 billion barrels) surpassed the existing debt, calculating always in terms of barrels of petroleum.

Although, in themselves, the National Economic Patrimony and its annual flow--the world's eighth largest gross domestic product--put us in a favorable position, the current situation suggests a comparison in terms of what could be agreed upon as the most recent international monetary standard--petroleum--a comparison that, as we saw, also gives a favorable result in regard to our possibilities for continued access to the world financial system.

9. Ratio of Hydrocarbon Reserves/Net Debt (percentage)

Petroleum Production Up

Rio de Janeiro JORNAL DO BRASIL in Portuguese 13 Dec 80 p 17

[Text] Brazilian petroleum production increased 11 percent in the last 11 months compared to the same period last year--although onshore production fell 1.5 percent during the period--resulting in average daily production of 188,000 barrels.

Despite the accident to the processing tower of the Garoupa Provisional System in September, reducing daily production by 39,000 barrels, the Campos platform increased its production from 13,185 barrels a day to 18,416 barrels a day.

Production Trend

Onshore, Bahia was the state where production was reduced the most, falling from 27,350,215 barrels in the January-through-November period last year to 25,250,882 barrels in the corresponding period this year.

Offsetting that, petroleum production from Espirito Santo onshore basins increased 150 percent, from 629,946 barrels during January to November 1979 to 1,580,737 barrels this year. Meanwhile, in Rio Grande do Norte and Sergipe onshore production decreased in November as compared to October.

On the continental shelf, production increased 36.4 percent, comparing January through November last year with this year. The producing state with the largest increase was Rio de Janeiro, with 95 percent, followed by Rio Grande do Norte, with 36 percent. However, Sergipe, Bahia and Ceara had reduced production on the continental shelf.

Options for Managing Reserves

Rio de Janeiro GAZETA MERCANTIL in Portuguese 10 Dec 80 p 8

[Article by Mateus Kocowicz: "Options for Managing Reserves"]

[Text] Had the Brazilian government adopted the policy of preserving its petroleum reserves when petroleum was costing a little more than $1 a barrel on the international market, the nation would have had reserves of 2.9 billion barrels by the time prices began to skyrocket. Reserves of that magnitude would permit a daily production of 800,000 barrels. But, of the total of 2.9 billion barrels, 1,3 billion barrels have already been produced, so that Brazilian reserves of petroleum and gas were 1.58 billion barrels on 30 June, representing an increase of 1.8 percent over the position of December 1979, after discounting production of 189,600 barrels a day during that period.

The increase of reserves, which is the difference between recoverable petroleum identified by new discoveries during a given period and production during the same period, after clearly decreasing between 1960 and 1975, began to rise again after that.

In 1960 reserves totaled 563 million barrels. Five years later they were 791 million barrels, which represented an increase of 7.04 percent a year, compounded. At the end of the next 5 years the volume of recoverable oil and gas totaled 1.025 billion barrels, which represented an annual growth rate of 5.31 percent. Then through the end of 1975 reserves fell at the rate of 1.58 percent a year, to 946 million barrels. During the last 4 and 1/2 years the exploratory effort had the result of raising reserves to 1.582 billion barrels, which represented an annual growth rate of 12.11 percent, or 5.88 percent each 6 months, compounded. Hence, the results shown during the 6-month period ending in June 1980 were far less than the average for the period, marked especially by the substantial discoveries in the Campos Basin.

The results obtained by Esso off the southern coast of Bahia had already been expected by several PETROBRAS geologists who have some experience in the area. The state enterprise has drilled three wells near Esso's 1-BAS-62, which at first showed signs of oil and then produced fresh water. One of them, 1-BAS-19, located 6 kilometers to the north, recovered water; 1-BAS-13, which is 8 kilometers to the south, was dry; and 1-BAS-36, 18 kilometers to the south, had a noncommercial reserve of gas.

Tests at the Barreirinhas well in Maranhao continue to arouse optimism among technicians.

Import, Consumption Projections

Rio de Janeiro JORNAL DO BRASIL in Portuguese 10 Dec 80 p 21

[Text] Brasilia--The decision by Mines and Energy Minister Cesar Cals to set the average volume of petroleum imports in 1981 at 750,000 barrels a day is causing difficulties for PETROBRAS, which has, as of now, contracted for 841,000 barrels a day, aside from the volume it is no longer receiving from Iraq.

In October PETROBRAS was counting on a contracted volume of 850,000 barrels a day for 1981 but, with the loss of 400,000 barrels a day from Iraq, it was felt that only 450,000 barrels a day were guaranteed for next year. So the company signed alternative contracts that added another 216,000 barrels a day, valid for 90 days and beginning to expire at the beginning of January. With the renewal of Iraqi shipments in the Mediterranean amounting to 65,000 barrels a day, the shortfall became even less.

Although having agreed formally with the goal of average imports of 750,000 barrels a day in 1981, through its president, Shigeaki Ueki, PETROBRAS, in the person of its commercial director, Carlos Sant'Ana, is still reluctant to accept that figure and has tried to convince the mines and energy minister to that effect. Mr Cesar Cals, meanwhile, asserts he has already convinced President Joao Figueiredo, Planning Minister Delfim Netto and Finance Minister Ernane Galveas that the goal is feasible without risk to domestic supply and is standing his ground in relation to PETROBRAS.

Faced with the breach-of-contract problem presented by PETROBRAS, the mines and energy minister argues that the import reduction can be made in the 216,000 barrels a day of 90-day contracts that will begin to expire in January. He believes that when the time comes to renew those contracts PETROBRAS can make a selection and eliminate 91,000 of the 216,000 barrels a day. PETROBRAS contracts for 1981 are now composed of the following: 450,000 barrels a day from traditional suppliers, less Iraq and Iran; 60,000 from Venezuela; 50,000 from Mexico; 65,000 from Iraq; 216,000 from alternative contracts intended to cover part of what is no longer being received from Iraq since the war began. The total comes to 841,000 barrels a day. Of the total, however, 216,000 will expire in January and the minister hopes that only 125,000 of these will be renewed, thus arriving at 750,000 during 1981. The situation could change, however, depending upon developments in the Iran-Iraq war.

The Accounts

The Mines and Energy Ministry acknowledges that importing an average of 750,000 barrels a day during 1981 will lead to a reduction in inventory to levels that its experts do not consider dangerous. Brazil will begin the year with 85 million barrels of usable (excluding ballast) petroleum on hand, enough for 100 days of consumption. As the average consumption of imported oil will be 800,000 barrels a day, the reduction of inventories will be 50,000 barrels a day, which adds up to 18 million barrels during the year, which will end with usable supplies of 67 million barrels, enough for 89 days at the average consumption of December 1981.

Ministry analysts say the PETROBRAS forecasts are not realistic because the state enterprise "is still living 3 years in the past, when consumption was increasing 6 to 7 percent a year," and to prove this they show the forecast made by PETROBRAS at the end of 1979 for petroleum consumption in 1980. PETROBRAS felt that average consumption would be 1,198,000 barrels a day; the ministry's energy model forecast 1,093,000 barrels; and consumption was 1,090,000, a reduction of 1.5 percent compared to 1979. For 1981, Minister Cesar Cals predicts a reduction of 2 percent in consumption compared to 1980, which would be an average of 1,060,000 barrels a day.

To arrive at the 750,000 barrels a day, the ministry analysts make the following accounting: consumption of liquid fuels will be 1,170,000 barrels a day, compared

to 1,126,000 barrels in 1979 and 1,135,000 barrels in 1980. This 1,170,000 barrels a day will consist of: 18,000 barrels of coal and 22,000 barrels of charcoal (which will replace liquid fuels); 80,000 barrels a day of alcohol; 250,000 barrels a day of domestic petroleum and 750,000 barrels a day of imported petroleum; and 50,000 barrels taken from inventory.

Brazil's Sedimentary Basins

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 7 Dec 80 p 63

[Text] Rio de Janeiro--The bulk of Brazil's sedimentary area, representing 85 percent of its extent, is occupied by basins that have been shown to be poor in petroleum resources. They are the basins of Amazonas, Parnaiba and Parana, with a little over 2 million square kilometers and whose particular geological problems make use of geophysical investigation methods impossible. But "they could provide encouraging results in the future, if we recall that in various parts of the world success came only after intense exploratory effort."

These remarks about Brazil's petroleum prospects are contained in a study made by the PETROBRAS Department of Exploration showing the unequal distribution of petroleum resources in the world and in our country. The geologists who helped prepare the study contend that, even with the negative characteristics shown by the Parana and Amazonas basins, the discoveries of gas in Jurua in Upper Amazonas may represent the beginning of overcoming the problems found there.

In the study, entitled "The Geography of Petroleum," the PETROBRAS Exploration Department describes the major characteristics of the eight types of sedimentary basins in the country and their correlation with similar structures in other regions of the world. Those of the first type are "traditionally unprolific in terms of petroleum," providing less than 1 percent of world reserves. In Brazil, the Amazonas, Parnaiba and Parana paleozoic basins belong to this class. Those of the second type account for 25 percent of hydrocarbon reserves and of these 65 percent by volume correspond to gas. Their most notable manifestations are in the North Sea, part of Siberia, Texas and Oklahoma, part of the Andes and Australia. The Acre cretaceous basin belongs to this category. "On the Brazilian side, however, it does not have suitable geological association to contain petroleum," the PETROBRAS study says.

The basins of the third type contain 10 percent of the world's hydrocarbon reserves, with outstanding production areas in the Soviet Union, the North Sea, North Africa and Argentina. In Brazil, the Tucano Reconcavo basin is the only one entirely of this type and so far it is the most prolific in terms of generation and accumulation of petroleum.

The basins of the fourth type are those characterized by movements of compression and are those with the world's highest rate of production, accounting for about half of all world petroleum reserves. Their typical occurrence is in the Persian Gulf area of the Middle East. They also show substantial reserves in Venezuela (Lake Maracaibo), Mexico and Oceania. They are not present, however, on the Brazilian continental margin. Basins of the fifth type occupy the shores of the Atlantic and Indian oceans, the east coast of North and South America, the west coast of Africa and part of Australia. They comprise less than 1 percent of world reserves, producing in Australia and the southern part of West Africa.

Basins of the sixth and seventh types are "moderately prolific, containing large reserves on the coast of California, Oceania, Peru, eastern Venezuela and the Caspian Sea, with about 10 percent of total world reserves." These basins do not occur in Brazil. The large deltas correspond to basins of the eighth type and occur in any type of margin where large volumes of sediment are deposited. They comprise about 4 percent of world reserves and the most [illegible word] are those of the Mississippi, the Orinoco and the Niger. According to the PETROBRAS Exploration Department, "the mouth of the Amazon would contain partially a basin of this type, but the results thus far have not been encouraging."

Of the Brazilian sedimentary basins, only that of Acre belongs to the type-two class which is characterized worldwide by high petroleum potential, although it does not have that advantage here, as the PETROBRAS study points out. In the Brazilian part of the basin the necessary geological conditions for occurrence of hydrocarbons do not prevail. This is because in a single sedimentary basin the critical factors are not associated throughout its area and also because, even among basins of this type, the occurrence of petroleum is not uniform.

In regard to the Amazonas, Parnaiba and Parana basins, which represent 85 percent of the nation's sedimentary area, "the extensive and thick layers of intrusive rock and the diffusions of basic igneous rock cause enormous difficulties in mapping the subsurface and choosing the best place for drilling," the study points out. A beginning to the solution of the seismic problem, however, is admitted by PETROBRAS since discovery of gas reserves in the Jurua region in Upper Amazonas, with use of the latest technological improvements available.

The coastal basins have been intensively explored and about 1,100 wells have been drilled in them, with the characteristic that the major discoveries occurred soon after the initial phase of the exploratory process.

[See map on next page.]

PETROBRAS Plans Are 'Flexible'

Rio de Janeiro O GLOBO in Portuguese 15 Dec 80 p 16

[Text] The 5-year plan PETROBRAS will carry out beginning next year with the purpose of reaching a production of 500,000 barrels a day in 1985 cannot be considered a rigid document. Its major characteristic will be the flexibility its technicians will employ throughout the period. The goal is 500,000 barrels but, in the opinion of specialists that amount can be attained only through an effort never before made in Brazil in the search for petroleum.

In the talk he gave at the Naval War College last Thursday, Shigeaki Ueki, president of PETROBRAS, again said that the 500,000 barrels a day in 1985 represents a possibility, although he is sure the nation will easily be able to produce 390,000 barrels a day. This exchange of ideas, which often even causes perplexity in upper echelons of the administration is inherent in defining planning or any plan. As a matter of fact, in 1985 the nation may be producing 390,000 barrels or much more than 500,000 barrels daily. Everything depends upon the amount of deposits discovered or to be discovered and on the new technologies that will certainly emerge in coming years.

Distribution of Petroleum in the Basins of the Brazilian and African Continental Margins

Key:

1. Volume in billions of barrels (produced or to be produced)
2. Brazil: Total Volume 2.4
3. West Africa: Total volume (excluding Nigeria) 3.63
4. Mouth of the Amazon
5. Ceara and Rio Grande do Norte
6. Bahia, Sergipe and Alagoas
7. Espirito Santo
8. Campos Basin
9. Niger Delta
10. Gabon
11. South American and African continents fitted according to Bullard et al (1965)
12. Data on Africa from OIL AND GAS JOURNAL December 1979
    Data on Brazil from PETROBRAS Report on Reserves, 31 August 1980

Optimism and Realism

The 5-year plan is so flexible that, as one PETROBRAS official said with a touch of humor, it could become a 6-year plan or a 10-year plan. On the other hand, it could turn out to be a 3-year plan. Within this line of reasoning, drilling 807 offshore wells and 975 onshore simply suggests the extent of the state enterprise's effort. Much more than this may be done; many surprises will occur. In all the world's long-range plans, especially in regard to finding petroleum, discoveries have been made that the most experienced experts would not have expected. The most recent were the gigantic fields discovered in Mexico (Campeche) and in the Soviet Union (Siberia).

In the Brazilian case, according to the geologists, the die is now cast. And everything is beginning with a certain optimism. PETROBRAS personnel who previously were quite reserved about Brazilian possibilities see the problem in a new light due to research and exceptional development of technical knowledge.

One of Brazil's leading authorities on the subject, geologist Carlos Walter Marinho Campos, no longer views the possibilities of paleozoic basins, which historically produce the least oil, so pessimestically. More than half (about 3 million square kilometers) of Brazil's onshore sedimentary basins are paleozoic.

Amazon Region

During the time the National Petroleum Council (CNP) has been responsible for drilling, almost 200 wells have been drilled in the Amazon region's paleozoic basin (about 1.2 million square kilometers). Discovery of the subcommercial Nova Olinda "immature petroleum" may have been the link leading to continued PETROBRAS prospecting in the gigantic sedimentary area. Although there was commercial failure, due to the small quantity of petroleum produced by Nova Olinda, there was, on the other hand, technical success.

The famous camouflage (distortion) of seismic interpretations due to previously unknown factors is beginning to be deciphered. The geologist and the geophysicist were never so united as they are now to unravel the mystery that surrounds the geology of the Amazon region. Mapping of the subsoil has become less precarious. Computerization sheds light on other mysteries. And suddenly, when more realistic geological maps could be made, the Jurua gas deposits in Upper Amazonas were discovered. Following a similar pattern, other discoveries of gas are being made in the same region. The international companies with risk contracts (Shell, Esso, Elf-Aquitaine) are now in Middle Amazonas following almost identical steps. Hence, it is possible to find petroleum in the Amazon region, unless the large international companies there are eager to throw their money away.

On the continental shelf hopes are higher. Geologists from all over the world continue to believe the mouth of the Amazon has petroleum, while the whole Brazilian coast from Para to Rio de Janeiro forms what many are now calling a necklace of petroleum.

Statements by Ueki, Cals

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 12 Dec 80 p 27

[Text] Rio de Janeiro--PETROBRAS President Shigeaki Ueki, in a speech at the Naval War College yesterday, said the results of petroleum exploration in Brazil are quite satisfactory despite its peculiarities and complex geological conditions. Even so, he emphasized, "during the last decade reserves of about 90 million barrels were discovered annually, equivalent to a medium-sized oil field every year." To be self-sufficient in petroleum, Brazil must reach a level of production attained so far by only 16 countries, of which only 6 are not OPEC members (the United States, USSR, the United Kingdom, Canada, Mexico and China), he said.

He said investments in exploration and production--growing since creation of the state enterprise--should reach 70 billion cruzeiros this year, or 70 percent of all PETROBRAS investments. This amount of funds reflects the main objective of the PETROBRAS investment program for the 1981-85 period, which is to contribute vigorously to reducing the nation's energy dependence.

The exploration and production program for the next 5 years provides for drilling 807 wells on the continental shelf and 975 onshore, involving about 3 million meters offshore and 2 million meters onshore.

To develop production, 2,166 wells must be completed: 1,836 onshore and 330 offshore. Among such activities he emphasized development of the deposits discovered in the Campos Basin, where work is being accelerated and which should enter production gradually by the end of 1983.

Ueki asserted that current Brazilian oil production of about 200,000 barrels daily is equivalent to about $2.5 billion annually. PETROBRAS activities will result in a gradual increase of production, which will be 390,000 barrels in 1985. "That production," he said, "evaluated at $32 per barrel, will save $4.5 billion in foreign exchange per year."

According to the PETROBRAS president, on the assumption that production of 500,000 barrels a day is reached in 1985, with a contribution from new discoveries to be made in the period, the foreign-exchange savings will be about $6 billion annually. The latest projection of the national energy balance indicates that the share of hydrocarbons in the next 5 years, although still quite significant, will be reduced from 37.2 percent in 1981 to 24.4 percent in 1985. "That prospect," he declared, "shows that Brazil is one of the few countries with reliable possibilities of reducing the share of petroleum in the demand for energy, while continuing its economic development."

In regard to refining, he said the main PETROBRAS objective is to adapt refining facilities in a way that permits gradual and systematic reduction of the amount of petroleum imported. Among investments provided for this sector, he stressed plans to build new units at the Alberto Pasqualini and Paulinia refineries, as well as improvements to reduce consumption of fuel oil.

Consumption Not to Increase

Curitiba--"There are still ways to reduce wasted fuel by 5 percent," said Mines and Energy Minister Cesar Cals yesterday in Curitiba, in promising that national consumption of petroleum in 1981 will be about the same as this year, in the neighborhood of 1.1 million barrels a day, despite expectation that the gross domestic product will increase 5 percent.

The energy minister said it will be necessary to continue the current policy of realistic prices seeking substitution of petroleum as well as other measures for avoiding waste. "With higher prices and the programs being carried out, we will be able to save 5 percent," he asserted. At the same time he assures reduction of imports to 700,000 barrels a day by next December. In January, with return of the Garoupa well to production, the minister believes imports could fall from 830,000 to 800,000 barrels a day. This is how the minister explains the prediction for an average of 750,000 imported barrels a day during the coming year.

Yesterday Cesar Cals visited the Sao Mateus do Sul prototype plant for processing shale 120 kilometers from Curitiba and announced that installing the industrial-scale plant has become a priority project for the Mines and Energy Ministry, within "a broad program for scarce resources."

The plant's construction is authorized and by 1985 it should be producing the equivalent of 25,000 barrels of petroleum extracted from shale. According to the energy minister, the project for the plant will be analyzed to examine some aspects, such as construction or importation of the needed equipment and deciding what parts of construction can be cut without delaying the schedule. But he asserted the first stage of construction would be finished by 1985, as the project's economic feasibility has been established. The cost of the equivalent of a barrel of petroleum extracted from shale is now $28, "less than that of imported petroleum and without any risk."

The energy minister also revealed that next year will be devoted to developing projects in the wood sector, vegetable oils and accelerating the National Biodigester Program. In the field of electrical energy, he confirmed transformation of the 1995 Plan into the 2000 Plan, as the Mines and Energy Ministry decided that a number of programs included in the plan will be more clearly delineated during the 1990 decade. He confirmed, however, that construction of the Lower Ilha Grande hydroelectric plant on the Parana River is underway and that "the government is already buying the equipment."

Speaking further about imports, Minister Cesar Cals asserted that "PETROBRAS must buy only enough petroleum to meet consumption and avoid any speculation." He thinks stocks should be maintained at this year's levels, despite there having been a drastic reduction in imports with the war between Iran and Iraq which forced a reduction of 400,000 barrels a day. By means of a number of short-term contracts in view of the war, PETROBRAS was able to restore from 200,000 to 230,000 barrels a day of the cut; and the minister asserted that when the contracts are renewed next year there will certainly be a reduction of imports as early as January, due to production from the Garoupa well.

OIL CONSUMPTION DOWN, PRODUCTION UP; DRILLING STATUS

National Consumption Drops

Rio de Janeiro GACETA MERCANTIL in Portuguese 13 Nov 80 p 9

[Text] Brasilia--Thanks mainly to the 40,000 barrels of alcohol used as fuel, Brazilian oil consumption for the first 10 months of this year was 0.9 percent lower than during the same period in 1979. According to the figures revealed yesterday by the Ministry of Mines and Energy (MME), the domestic consumption of gasoline dropped 13.2 percent; that of fuel oil, 5.1 percent; and that of asphalts, 13.8 percent. The national consumption of liquefied petroleum gas (LPG) increased 11.8 percent; of diesel, 8.9 percent; and naphtha and petrochemical gasoil, 14 percent.

According to the MME, 52,799,100 cubic meters of various derivatives were used as of October of this year. As of October 1979, 53,275,000 cubic meters had been used. On that basis, the table revealed by the MME is not very clear. There are 6.29 barrels in a cubic meter. So this year's consumption was 332,106,330 barrels and that of the first 10 months of 1979 was 335,099,750.

Whoever made the calculations in the MME to arrive at the daily consumption perhaps did not take into account the fact that 1980 was a leap-year. As of 31 October, there were 305 days, not 304. Therefore, the MME may have derived a reduction of 0.9 percent from that daily average when in reality the decrease of consumption is actually more than 1.2 percent, because it dropped from 1,102,300 to 1,088,900 barrels daily. In addition, the note does not refer to the alcohol replacing gasoline, leaving the impression that consumption fell less than it did.

The note said also that the decrease of domestic apparent consumption of oil derivatives was 0.2 percent compared to the same period last year. Of the total consumed, regular gasoline underwent a cost reduction of 2.8 percent of total consumption, and blue gasoline, 94.3 percent. The greatest increase in consumption was that of diesel oil, which increased 2.4 percent of the total, and LPG, 11.8 percent.

LPG

Eugenio Dante Gallo, the office chief of the National Petroleum Council (CNP) in Sao Paulo told journalist Paulo Ludmer that the increased domestic consumption

of LPG is due in large part to the low temperatures that have occurred in the south and southeastern regions of the country in the months of September and October, normally warmer in those areas in the spring.

Domestic Production Up

Rio de Janeiro GAZETA MERCANTIL in Portuguese 13 Nov 80 p 9

[Text] Brazilian production of oil and liquefied natural (LNG) gas for the first 10 months of the year amounted to 57.4 million barrels, an increase of 12.27 percent compared to the same period last year. The daily average was 188,200 barrels, compared to 167,800 barrels last year, according to the Brazilian Petroleum Corporation (PETROBRAS).

Production from the Brazilian continental shelf showed an increase of 42.22 percent (a daily average of 76,500 barrels). The offshore fields of Rio de Janeiro showed a significant increase of 114.1 percent despite the temporary interruption of production of the Garoupa provisional system, 9.3 million barrels being produced compared to 4.3 million during the period January-October 1979.

Despite the increase that occurred in the land basin of the state of Espirito Santo, 112 percent, the production on land showed a decline of 1.89 percent; that is, about 113,800 barrels per day were extracted from the land basins between January and October 1979, while the daily average for the same period in 1980 was 111,700 barrels.

National Production of Oil and LNG
(in thousands of barrels)

Wells Being Drilled

Rio de Janeiro GAZETA MERCANTIL 12 Nov 80 p 6

[By Mateus Kacowicz from Rio]

[Text] There are 62 wells being drilled in Brazil in the search for oil. Of that number, 29 are offshore and 33 on land. The great majority of those wells is being drilled by PETROBRAS rigs or contracted by that firm. Of the 75 drilling rigs in use in Brazil, only 6 are charged to companies operating under risk-clause contracts, being divided equally between land (charged to the IPT/CESP consortium) and offshore.

There are 8 exploratory wells being drilled on land and 22 offshore, 3 of the latter under risk-clause contracts. The great difference between the number of exploratory wells on land and offshore is due to the longer familiarity with the land deposits and the greater emphasis at the present time in developing them. One well is being evaluated on land while five are being evaluated offshore, most of them in the Campos Basin. Although the experts prefer to maintain a reserved attitude about the prospects of the tests, they are excited about wells 1-RJS-117 and 1 RJS-139 (table below).

It is observed also that of the drilling rigs involved in risk contracts, only 6 are operating; 3 belonging to Paulipetro, on land, and the others offshore. The Amadeu Amaral well (Sao Paulo) of the IPT/CESP drilling rig, which stopped for tests between 1,803 and 1,906 meters last Friday, has resumed operation, now in the Irati formation.

OIL IMPORTS TO BE DOWN IN 1981; FUEL ALCOHOL PRICE RISE

Rio de Janeiro JORNAL DO BRASIL in Portuguese 25 Nov 80 p 19

[Text] Brasilia--The ceiling for Brazilian oil imports may be set at 850,000 barrels per day, 50,000 barrels per day less than anticipated, beginning in January 1981. A proposal to that effect will be made to the National Energy Commission (CNE) by Minister of Mines and Energy Cesar Cals at the meeting of the basic group of the commission set for 3 December.

The Brazilian Petroleum Corporation (PETROBRAS) reported in Rio that PETROBRAS financial director Paulo Vieira Belotti will sign in New York today a loan for $275 million granted by a syndicate of banks headed by the Wells Fargo Bank. According to that corporation, interest will be below the Eurodollar. The loan is to finance the purchase of oil.

PETROBRAS reported also that the loan signed today is the sixth of that type of financing, called Banker's Acceptance. The first loan was made in 1975 in the amount of $250 million, which has already been completely released by the firm. The largest loan of that type was made in February of this year in the amount of $600 million.

Studies

The minister has just received a document from PETROBRAS containing new forecasts for national oil production in which the firm guarantees a production of 280,000 barrels per day by the end of 1981. The document also states that domestic production will again reach 200,000 barrels per day by the end of this year and that a production 500,000 barrels per day will be reached and may even be exceeded by 1985.

In guaranteeing the new domestic production levels, PETROBRAS took as a basis the behavior of its activities and of national production in the last 12 years and concluded that if the behavior is exactly the same in the next 5 years, there is no doubt that national production will reach 500,000 barrels per day in 1985, a target proposed by Minister Cesar Cals which was even considered impossible by PETROBRAS itself a few months ago. The important thing is that the firm is guaranteeing that production even under the improbable possibility that there are no new discoveries during that period.

On the basis of PETROBRAS' studies, the minister of mines and energy has ordered other studies from its support staff to see if the import levels set 2 months ago by the CNE at 800,000 barrels per day for 1981 could be reduced further. The studies showed that if imports are set at 750,000 barrels per day, considering the domestic production level guaranteed by PETROBRAS, the increased production of alcohol, and the objectives expected as a result of the measures for the conservation, substitution and reduction of consumption of oil derivatives, there will not be any danger of a shortage in domestic supply.

Price of Gasoline

During tomorrow's session with President Figueiredo, Planning Minister Delfim will again ask him for authorization to put into effect the new prices of oil and hydrated alcohol derivatives. Gasoline will go to 51 per liter, an increase of 13.3 percent.

In the event that the president of the republic authorizes it, the announcement will be made tomorrow evening and it will go into effect at 0000 hours on Friday. Putting the new price rate into effect on Friday was a request of the National Oil Council (CNP) itself, which will take advantage of the occasion to conduct a survey of the supply levels of resale stations during the weekend.

The last time he asked President Figueiredo to authorize a price increase for some fuels, on the 12th of this month, Minister Delfim Neto was asked to bring the matter up again "in about 10 days," the increase being held in abeyance although the CNP directive has been ready since that date.

Tomorrow, 2 weeks after the first request for authorization, the minister will bring the matter up again with the president, and in case there is any reluctance, he intends to convince President Figueiredo that we are no longer in a position to delay the readjustment. The resale margin of the stations will also be readjusted together with the new price increase, from 2.25 to 3.20 cruzeiros per liter.

Alcohol

The price of a liter of fuel alcohol will increase between 10 and 15 percent within the next 2 weeks, the secretary general of the Ministry of Industry and Commerce, Marcos Jose Marques, announced yesterday. In the first case, the price of a liter of alcohol will increase from the current 24.70 to 27.17 cruzeiros; if the increase is 15 percent, the price per liter of alcohol will go to 28.45 cruzeiros.

He explained that the new increase is not related to the development of inflation but is the result of a difference existing in the cost of distribution and resale of the product. That fact forced the government to subsidize the sale of alcohol to the consumer, paying 1 cruzeiro per liter in the Center-South and 1.50 cruzeiros in the Northeast.

He said also that the situation became aggravated with the extension of the National Alcohol Program (Proalcohol) to the state of Santa Catarina and Rio Grande do Sul. He could not say if the new prices of alcohol will be revealed at the same time as the readjustments in the price of gasoline.

However, he stated, the prices of alcohol will have to be readjusted on the basis of the development of inflation rates in order to encourage the producer to plant more and more cane. The price of alcohol today is equivalent to 53 percent of the price charged per liter of gasoline but the difference "cannot be too great because it will end up encouraging waste," he concluded.

Micro-Distilleries

The National Alcohol Executive Commission (CENAL) thus far has not received any plan for a micro-distillery that is technically and economically feasible, according to the chairman of the commission, who is the secretary general of the Ministry of Industry and Commerce, Marcos Jose Marques.

He denied that there is any reservation within CENAL regarding micro-distilleries (maximum production capacity of up to 5,000 liters of alcohol per day) but he made it clear that the government will not give financing support to a plan that is not technically and economically viable.

A CNE resolution gave CENAL the responsibility for implementing the micro-distillery program and so far two have been established: one in Araras, through the National Sugar Program (Planalcucar), and another under the coordination of the Industrial Technology Secretariat (STI) in Lorena, both in Sao Paulo.

The concrete fact is that the micro-distilleries are producing alcohol at 40 cruzeiros per liter, making them unfeasible for large-scale production. The mini-distilleries (maximum production of up to 50,000 liters per day), however, have shown concrete results and economic feasibility.

The mini-distilleries are being installed through Proalcool financing and wil produce alcohol from cassava, a maximum of 10,000 tons, or from sugarcane, 20,000 tons per day.

Cals Pledges Alcohol Supply for Nation's Cars

Porto Alegro--Minister of Mines and Energy Cesar Cals pledged in an interview that there will be no shortage of fuel alcohol to take care of the greater demand of the country's automobiles because, if necessary, the present percentage of mixture with gasoline can be reduced from 20 to 17 percent, making it possible to take care of the supply needs of the 600,000 alcohol-fuel vehicles to be produced by the automobile industry.

Commenting on the report that Iraq would reestablish its oil supplies, Cesar Cals pointed out that that would occur not by shipments through the Persian Gulf terminal but through a pipeline with a capacity reduced to 800,000 barrels per day; as a result Brazil expects to obtain a maximum of between 60,000 and 65,000 barrels a day.

Later, opening the anthracite coal meeting sponsored by the National Economic Development Bank (BNDE), which will draw about 200 participants, including experts from official agencies and businessmen in Plaza Sao Rafael, through tomorrow, Minister Cesar Cals said that the country must devote itself during the next 20 years until the turn of the century to mastering coal and nuclear technology, alternative sources to the generation of hydroelectric energy, the potential of which he predicts will be exhausted by the year 2000.

He announced to the plenary session of the anthracite coal meeting that he had already signed an agreement in his office for the construction of a 300 MW thermoelectric plant to be installed in the Santa Catarina municipality of Tubarao. He stressed that it is the first of 10 thermoelectric plants to be installed at the rate of two every 2 years, half of them with equipment supplied by East European countries and the other half by Western countries.

PETROBRAS TO EXPLORE AMAZON GAS DEPOSIT

Rio de Janeiro O GLOBO in Portuguese 10 Nov 80 p 16

[Text] Carauari (on the banks of the Jurua River)--For the first time since oil exploration began in the Amazon region in 1950, a discovery shows prospects of being economically viable. Last Thursday, the Jaraqui well, located 40 milometers from the banks of the Jurua River, that was being drilled since April of this year was put into the production test mode.

When the valve was opened, the pressure caused a sound similar to and of the same intensity as a Boeing taking off. The gas from the escape pipe was ignited for controlled combustion. The flame rose about 30 meters high.

There was an atmosphere of intense euphoria and expectation among the team of 48 technicians who worked on the well. There was constant radio communication with the Department for the Exploration of Northern Brazil (DENOR). And in fact the results of the tests begun last Thursday are surprising. The reserve in this area of the Jurua River is being estimated at 3 billion cubic meters.

Signs of Gas

In the Jaraqui well, the drilling revealed signs of gas at four intervals; the first two have already been tested and showed a flow of 185,000 and 300,000 cubic meters, respectively. The third, the tests of which began on Thursday and which will continue for 10 days, showed a flow of 300,000 cubic meters and the fourth, which will begin to be tested as soon as the work on the second is concluded, should also produce 300,000 cubic meters. The production of the well, therefore, could exceed 1 million cubic meters per day.

DENOR superintendent Raymundo Ruy Bahia, who follows the results of the evaluation tests in Jurua daily from Belem, revealed that the Brazilian Petroleum Corporation (PETROBRAS) is already studying the exploitation of the gas. The economic feasibility studies are proceeding but, in principle, it will be transported by pipeline about 40 kilometers long to the small city of Carauari on the banks of the Jurua River.

There, a natural gasoline plant will be built or a plant for transformation of the gas into methanol will be installed. From Carauari, any of these products will be transported in small tankers down the Jurua and Amazon rivers to Manaus, where it will be distributed for consumption in the region.

The production of 1 million cubic meters from the Jaraqui well, practically already confirmed, represents 6,300 barrels of oil daily. But in the Jurua two gas-producing wells have already been discovered that will produce 500,000 cubic meters each, which means a total production of 2 million cubic meters for the area, raising the oil equivalence to 12,600 barrels daily. In regional terms, this is a substantial production. Suffice it to recall that the Manaus refinery, which takes care of the region, processes 10,000 barrels daily.

Barbecue

Roberto Pereira da Silva, in charge of all the work of the team in Jaraqui, who is familiarly called "Big Robert" by everyone and has the calm and quiet attitude of someone accustomed to drilling work for 20 years, does not contain himself when asked to comment on the test work on the well:

"I am a person who works with enthusiasm, and with each discovery I like to mark it with the personnel who worked at the site. Here in Jurua, I am going to prepare a barbecue when the tests are completed."

Big Robert is considered the best man to keep up with the drilling work by PETROBRAS, capable of handling any problem that arises efficiently and rapidly. He is also a "pe-quente" [literally: "hot-foot"]: he was present at the discovery of the Dom Joao and Queimada fields in Maranhao. He started in PETROBRAS without any academic training and received his training in the company's technical courses.

RIO GRANDE DO SUL INCORPORATED INTO PROALCOOL PROGRAM

Sao Paulo VISAO in Portuguese 24 Nov 80 pp 94, 96

[Text] Until a short while ago, the people of Rio Grande do Sul were in a unique situation: they could not avail themselves of the 50 percent reduction in the payment of the Single Road Tax (TRU) for cars that run on alcohol because Rio Grande do Sul was the only state in the country that was not included in the Proalcool program. But now they can buy alcohol-fueled vehicles and, more importantly, supply them with fuel.

The first of a series of 89 pumps that will go into operation throughout the state by the end of the year, according to the decision of the National Oil Council, were inaugurated on Tuesday the 11th. Before that, the only alcohol supply stations were operating in Porto Alegre, for captive consumers: the owners of taxis of a cooperative formed exclusively for that purpose by the Rio Grande Telecommunications Company, the National Highway Department and Panambra, the major distributor of Volkswagens in the Rio Grande do Sul capital.

The first step toward the inclusion of Rio Grande do Sul in the Proalcool program was the construction of a pilot distillery attached to the Gaucho Sugar Corporation (Agasa) a small sugar plant in the municipality of Osorio. Agasa has a strange history: it was created in the sixties for the purpose of breaking another blockade, the production of sugar. Because since the thirties, sugar production has been reserved for the states of the Northeast and Sao Paulo. The logic of the process was to favor the northeastern region but, according to the people in Rio Grande do Sul, the state intervention ended up favoring the big Sao Paulo growers.

Proof Positive--Studies by the Secretariat of Industry and Commerce showed that Rio Grande do Sul has the capacity to produce 1.2 billion liters of alcohol without displacing any agricultural crop; much more than the 800 million needed to fulfill Proalcool's 1985 target, namely, to replace the increased consumption of the country's automobiles with alcohol. To do that, the state has 140,735 hectares in the Upper Uruguay region and 145,582 hectares on the coast, encompassing all together 50 municipalities. There are also 71 other municipalities in an area considered "tolerable."

The state government decided to install the Agasa pilot distillery to act as a sort of proof positive for the Rio Grande do Sul businessmen. Because, although the state already has a guaranteed demand--all of the dealers have alcohol-fueled cars for sale--with a system of land distribution for the cultivation of cane, the businessmen appears to be quite reluctant to invest in alcohol even though 80 percent of the funds are provided by Proalcool.

The secretary of industry and commerce, Antonio Carlos Berta, attributes the attitude of the businessmen to the fact that they have not been traditionally involved in cane-growing activity. Unfamiliarity leads them to imagine that they need to acquire large areas of land to plant cane and that is not necessary. The function of the businessmen is to install and operate the plants, exclusively.

Cane production remains in charge of the farmers in the regions delimited by agricultural zoning, carried out long before the chairman of the National Energy Commission, Aureliano Chaves, had made that demand. Berta pointed out: "The direct investment of the businessmen even contradicts the social aspect of the program, which is to increase the supply of employment for the farmers."

Particular solutions: In addition to the Agasa pilot distillery, the state government is preparing the installation of five to six micro-distilleries to prove the feasibility of that type of undertaking in large rural properties of isolated localities. That program was suspended at the national level after the Brazilian Agricultural and Livestock Company (EMBRAPA) proved its economical unfeasibility. However, in Rio Grande do Sul, the experts of the Secretariat of Industry and Commerce believe that the particular characteristics of local properties would make the projects economical because they would work in conjunction with agricultural-livestock projects.

Berta asserts that after the construction of the Osorio plant, the interest of businessmen will increase, so much so that one of them, Jose Felix Garcia, is already considering a project for a plant with a capacity of 120,000 liters per day in the municipality of Canoas. Three other projects are in the feasibility study phase being carried out by experts of the secretariat.

CZECHOSLOVAKIA TO COOPERATE IN THERMOELECTRIC PLANT CONSTRUCTION

Brasilia CORREIO BRAZILIENSE in Portuguese 25 Nov 80 p 6

[Text] The Brazilian Minister of Mines and Energy Cesar Cals and Czechoslovak Minister of Foreign Trade Andrej Barcak yesterday signed a protocol of intent in the office of the former with a view to cooperation between the two countries in the construction of "coal-fueled thermoelectric plants," with a power of 300 MW, in cooperation with national industry. According to a document released to the press, the Brazilian Government decided that in 1981 it will begin "that phase of thermal utilization of coal from the southern region through the operation of a 300 MW unit in Jorge Lacerda in Santa Catarina under the aegis of the Southern Electric Power Plants (ELECTROSUL)."

Although there is no official information about the matter, Mines and Energy Ministry sources revealed that the price of each plant to be built will be around $300 million. Five are to be built, one every 2 years, all in the southern region, with the Czechs providing 40 percent of the technology in all cases. In exchange, the Czechs will purchase 18 million tons of iron ore over a period of 10 years, distributed as follows: between 1981 and 1985, 8 million, and thenceforth until 1990, 10 million, according to a protocol concluded between the Vale do Rio Doce Company and Kerametal.

Cement

According to the same sources, the establishment of "some cement factories" in Brazil at a cost of $50 million in association with the Joao Santos group, with the Czechs coming in with 40 percent of the investments, is still under study. The matter is being decided at the Economic Development Council (CDE) level although there are no problems on the Czech side.

The protocol of intent, signed yesterday between ELETROSUL and the group comprised of the Skoda (Czech), Amn Ansaldo (Italian) and Deutsche Babcock (German) companies with the endorsement of the Brazilian Electric Power Company (ELECTROBRAS) is the result of the negotiations held by Minister Cesar Cals in Prague during an official visit made last September. The Brazilian minister pointed out the interest of our government in intensifying its technical and commercial relations with the countries of Eastern Europe, particularly Czechoslovakia. According to him it is necessary to "intensify exports to those countries but also to encourage imports because only in that way can the reciprocal interests of our countries lead to concrete and long-term relations."

Minister Andrej Barcak pointed out that both Brazil and Czechoslovakia "are in a completely new stage in their diplomatic-commercial relations." Taking into account the industries established in the country, the visiting minister explained, Czechoslovakia "is firmly convinced that that cooperation will not fail to produce positive results."

CESP TO COLLECT SOLAR ENERGY DATA ON SAO PAULO

Brasilia CORREIO BRAZILIENSE in Portuguese 22 Nov 80 p 6

[Text] Sao Paulo--By the beginning of 1981, the Sao Paulo Power Company (CESP) is going to establish a system for the collection of data for the purpose of obtaining solar measurement survey of Sao Paulo.

Since research activities in the area of the utilization of solar energy have been intensified in the last 10 years, it can be anticipated that that unconventional source of energy will have an important role by the turn of the century.

In that survey, CESP will utilize the network of hydrometeorological stations operated by agreement with the Department of Waters and Electric Energy (DAEE), and its operational infrastructure already developed throughout the interior of the state. It will only be necessary to install one and in some cases two solar measuring devices in the stations of that system selected for that purpose.

According to preestablished technical criteria, 16 points spread out over the whole state of Sao Paulo were selected for the collection of data. Of those points, 10 will have a pyranometer to measure overall radiation and the other six will be equipped with another pyranometer to also measure diffused radiation, in addition to the existing heliograph.

Other meteorological parameters that may indirectly influence future solar installations, such as wind direction and velocity, relative units and temperature, are already measured at those stations.

Installation of the solar measuring equipment will take place in two stages. In the first, nine stations that are already suited to receive the equipment will be put into operation. In the second, the others will be installed as the stations are put into condition.

BRIEFS

ITAPARICA PLANT SPEED-UP--Paulo Afonso, Bahia--In the presence of President Joao Figueiredo during the ceremonies inaugurating the Paulo Afonso IV hydroelectric plant, Minister of Mines and Energy Cesar Cals announced the government decision beginning in 1981 to speed-up work on the Itaparica hydroelectric plant in Pernambuco and to contract for the Xingo and Pao de Acucar hydroelectric projects on the Sao Francisco River. The bed for the Itaparica project, which is 30 kilometers from Paulo Afonso IV, is now almost ready but the timetable was delayed due to lack of appropriations. The Sao Francisco Hydroelectric Company (CHESF) will allocate 13 billion cruzeiros in 1981 for the construction of Itaparica, according to the budget presented to the Brazilian Electric Power Company (ELETROBRAS), which is still being submitted for the approval of the Planning Ministry. ANTIOQUIA HYDROELECTRIC POTENTIAL DISCUSSED

Bogota EL TIEMPO in Spanish 25 Nov 80 p 6-B

[Text] Medellin--The very geographic structure of the department of Antioquia and the volume of river flow in the region have rendered this department particularly suitable for the generation of electrical energy through the use of water power. This situation is reflected in the major developments carried out in this sector by Medellin Public Enterprises, which today have a generating capacity of about a million kilowatts, while plans call for doubling this figure by 1983.

The electrical network of the Medellin Public Enterprises supplies the capital and the greater part of the municipalities in Antioquia, as well as other major regions in the country, with the electrical energy they need.

The electric system of the public enterprises was interlinked in 1972 with the major systems in the country, belonging to the Bogota Electric Enterprises, the Cauca Valley Regional Corporation and the Caldas Hydroelectric Plant. To this end the Electrical Interconnection Company (ISA) was established, for the purpose of building and operating the interlinking electrical networks and the development of new generating plants to supply the volume the system will require in the future.

The board of directors of the body has launched preliminary studies to establish the potential for hydroelectric development along the Nechi, Porcen, Penderisco, San Bartolome and Samana Norte rivers.

Studies have also been commissioned for the expansion of the Guadalupe and Troneras systems and the generating potential at the La Ayura plant.

Simultaneously, the public enterprises have ordered preliminary studies on the installation of a coal-based thermoelectric power plant.

In addition, possibilities of using other alternative energy sources such as natural gas, solar energy and nuclear energy are being studied.

Within the jurisdiction of this department, there is a hydroelectric potential which can be developed economically of 6,327 megawatts, in addition to the 693 which were in operation as of the time the analysis was begun, and the 9,830 megawatts established by the ISA study on the Cauca River, plus the potential of 1,550 megawatts on the Guatape River in San Carlos, 170 from Jaguas and 240 megawatts from Playas.

New Developments

One of the most ambitious projects involves the diversion of the Nechi, Pajarito and Dolores rivers into the basin of the Guadalupe River, in the northern part of this department.

Plans call for increasing the average usable flow there to the Guadalupe and Troneras plants by about 8 cubic meters per second, the equivalent of 25 percent of the present flow.

The total cost of this project comes to 436 million pesos, which will be guaranteed by Bank of America loans.

Another medium-term project pertains to the new Guadalupe plant, which will have a generating capacity of 140 megawatts as compared to the 15 it currently has.

The project calls for the building of several structures, the addition of a second generating unit with its new penstock and intake installations. The cost of this project is 66.9 million pesos.

Plans also call for the expansion of the Troneras powerplant with a view to utilizing the greater flow of the Guadalupe River, thanks to the diversion of the Nechi, Pajarito and Dolores rivers. The investment in this project will come to 245 million pesos.

Other studies to establish the hydroelectric potential of this department carried out by the Medellin Public Enterprises pertain to the Nechi River, which has a hydrographic basin of 14,500 sq km.

According to the preliminary studies, projects with a potential ranging between 1,220 and 1,360 megawatts can be developed on the Nechi River.

The Valdivia project calls for a power plant with an installed capacity of 700 megawatts, which will discharge water, after it has been used, to the plant on the Cuca River.

Surveys have also been made at two river mouths, on the Porce River, Guadalupe 4, Riogrande 2, Tenche, Porce 2, 3 and 4, Riachon, the San Bartolome River, La Guaira, La Palmera, the Panderisco River, La Encarnacion, Cerrazon, the Samana Norte River, Tafetanes, Cocorna, Santo Domingo and Calderas, which may provide a hydroelectric potential in excess of 11,707 megawatts.

The Guatape River

The program for the integrated development of the Nare, Guatape and Samana rivers includes, in addition to the Santa Rita Dam and the Guatape power plant, the building of the San Carlos power plant, currently under construction, to have a total of 1,550 megawatts from its two stages; the diversion of the tributary channel of the Nare River by means of the San Lorenzo Dam and utilization of the flow at the Jaguas power plant; and also the building of the Jaguas Dam, where the reservoir will make possible not only regulation of the flow but also the building of the Playas power plant.

Finally, also on the Nare River, there is the possibility of building a hydroelectric powerplant at the Inmarco site, although no study has been made.

The San Carlos project will be built in two stages. The first will make use of the flow of the Guatape rivers, increased by the diversion from the Nare River, at the Guatape powerplant, with a 620 megawatt installation.

In the second stage, the water volume diverted to the Jaguas powerplant, with an additional capacity of 930 megawatts, will be utilized.

The Jaguas project is located on the Nare River, some 30 km downstream from the Santa Rita Dam, and will use the water flow taken from this section of the river.

A Francis-type turbine of 120 megawatts will be used in the underground powerhouse.

The third project included in the hydroelectric development program on the Samana River is the Jaguas project. It is located on the Guatape River, at a point between the head of the Jaguas project and the Puchina Dam of the San Carlos project. The dam will be of the compacted fill type, 66 meters high, creating a reservoir with a usable capacity of 115 million cubic meters.

SECONDARY RECOVERY OF CASABE WELLS PLANNED

Bogota EL TIEMPO in Spanish 26 Nov 80 p 20-C

[Article by Raul Chacon: "Casabe Oil Deposits Being Recovered"]

[Text] Barrancabermeja--With 74 billion pesos invested in the secondary recovery project, the Condor Exploitation Company proposes to extract 63 million barrels of crude oil from the deposits in Casabe, Antioquia.

The manager of the Colombian oil enterprise, engineer Enrique Amorocho, has stated that currently there are three drilling rigs being used to clear the wells, some of which have been capped since the departure of the Dutch concession holder, Shell.

Currently daily production comes to only 15 thousand barrels, with is sold to ECOPETROL [Colombian Petroleum Enterprise] at a concession price established by government resolution, this official said.

The government has given this enterprise a grant of 40,000 hectares, on which three production fields are located. The process of secondary recovery involves injecting water into the wells to extract the maximum of crude oil. This technique, used by ECOPETROL at the El Centro deposits, has produced positive results.

NATURAL GAS POTENTIAL DISCUSSED

Bogota EL ESPECTADOR in Spanish 23 Nov 80 pp 4-C, 6-C

[Article by Simon J. Martinez Emiliani: "Natural Gas--New Wealth for Colombia"]

[Text] Until just a few months ago obtaining oil on international markets was an arduous task. There was a short supply of this product making possible dealings on the spot market at prices far above those officially established by the OPEC. Today the situation is different. The dizzying spiral in the OPEC prices has come to a halt at an average of $30 per barrel, and the spot market has begun to shrink appreciably. All of this is due to the surplus of oil available to be found in the Western world.

The delicate political balance in the Middle East in the past year was one of the factors which contributed most to creating a lack of equilibrium in the international balance between supply and demand of this product, and therefore to encouraging the rapid increase in its price. Thanks to the reduction in this tension and in oil imports by the industrialized countries as a result of the goals agreed upon in Tokyo last year, and the gradual replacement of crude oil by alternate sources, it is estimated that world oil consumption will increase from one year to the next by five percent, dropping from 52.8 million barrels per day in 1979 to 50.2 in 1980.

However, this seeming situation of abundance is subject to the decisions adopted by the OPEC as to the production of oil, and to the production increase which can be achieved in the future by the Western countries which are not members of that organization, and to the political situation in the Middle East.

The War Between Iraq and Iran

The conflict which has developed between Iran and Iraq clearly shows that any political change in the Middle East immediately has an effect on the normal supply of oil to the Western or free world. However, and to the relief of the countries which import this hydrocarbon, oil has continued to be shipped through the Strait of Hormuz, without major problems, at the rate of 16 million barrels a day.

This figure represents a little more than three-fifths of the total volume of the exports made by the OPEC prior to the war between Iraq and Iran.

When the conflagration between these two countries broke out, the problem the importer countries faced had its roots in the suspension of exports of oil and its byproducts by these two countries, which came to some 4 million barrels per day, in other words a 6th of the total OPEC exports and a 12th of the consumption of the Western or free world. The interruption of exports from Iran and Iraq has been offset by an increase in the production of Saudi Arabia and the United Arab Emirates. It is possible that Venezuela, Indonesia and other OPEC member countries are also contributing through an increase in their production.

Thanks to this policy, oil prices on the spot market did not develop abnormally last October, as occurred the year before when Iran decided to suspend exports. The apparent price stability seen on the international market, despite the war between Iran and Iraq, is a result of the decline in world consumption of oil due to the economic recession and more efficient utilization of this product; the increase in the production of Saudi Arabia during the last 12 months; and the accumulation of stocks in the Western or free world.

Natural Gas

However, the lack of certainty of an adequate and timely supply of oil has led the countries with a shortage of this product to step up their programs for substituting alternative sources for crude oil. Among these alternatives, natural gas has taken on significant importance to the point that it is regarded today as one of the most valued energy substitutes in the world.

Estimated World Commercial Production
of Natural Gas and Known Reserves
(in billions of cubic meters)

1978	1978	1979	1970	1980
Canada and North America	633.65	631.94	9,264	8,015
Caribbean Area	32.31	38.19	1,255	3,243
Other South American Countries	15.14	15.94	396	804
Middle East	43.77	36.88	6,864	16,839
Africa	20.91	29.61	5,081	5,136
Western Europe	184.91	198.22	4,117	3,742
Far East	70.94	77.86	1,606	4,924
Russia and Eastern Europe	428.42	460.43	9,516	31,145
Total	1,430.05	1,489.07	38,099	73,848

World demand for gas has maintained a stable rate of growth since the beginning of the 1970s. Last year, demand increased on an average by four percent. The main consumers of this hydrocarbon are the United States, the Soviet Union, Canada, the FRG and England. Total production increased from 1.430 billion cubic meters in 1978 to 1.498 billion cubic meters in 1979, as can be seen in the table above. In terms of energy, this production was the equivalent of some 26 million barrels of oil.

OPEC production increased from 6.8 percent in 1978 to 7.2 percent in 1979, that of the United States dropped a little, while that in Eastern and Western Europe, the Far East and the small producer countries in Latin America and Africa showed a substantial increase.

New Source of Income

The gas-bearing structures which have been discovered in our country have resulted from drilling done in the search for oil. This was how the El Dificil (Magdalena), Jobo-Tablon and Chinu (Cordoba) fields were discovered, as well as those in Chuchupa and Ballena (La Guajira), in 1973, just prior to Colombia's conversion from an oil exporter to an oil importer.

If indeed little importance was assigned to natural gas as a source of energy in the past, today it must be regarded as one of the bulwarks of our economy, not only as a substitute for oil and some of its byproducts, but as a possible source of income for our balance of payments.

Thanks to the discovery and development of the Chuchupa and Ballena deposits, the country has been able satisfactorily to solve the serious problem looming over the Atlantic Coast industries using the supply of gas from Cicuco, El Dificil, Jobo-Tablon and Chinu, which did not provide sufficient production and reserves to meet their demand entirely.

Following the discoveries at Chuchupa and Ballena, a number of exploratory wells were drilled on the Atlantic Coast in the hope of finding new gas reserves. Unfortunately, the results have not been very promising, which has slowed the development of the project the national government drafted for the utilization of natural gas.

The known reserves of gas came to 4.6 billion cubic feet as of 31 December 1979. This is equivalent to some 940 million barrels of oil, of which 74 percent is located in the department of La Guajira, at the Chuchupa, Ballena and Riohacha deposits.

Currently these deposits are producing a daily volume of 130 million cubic feet, used mainly by the industries in Barranquilla, Cartagena and Santa Marta and for domestic consumption. This production can be increased in the future to 450 million cubic feet per day.

It is estimated that the reserves at the Cicuco, El Dificil, Jobo-Tablon and Chinu deposits will be exhausted in the early years of the next decade if the current production rate of 90 million cubic feet per day is maintained. Therefore, the projects for the utilization of natural gas should be based on the reserves in the La Guajira deposits and those which will be discovered in the future.

Supply and Demand

During the period between 1971 and 1978, the demand for natural gas increased at a compound annual rate of 8.4 percent. This rate of growth varied considerably due to the changes which occurred in the consumption by the electrification installations.

It is estimated that demand will increase substantially in this decade, from 255 million cubic feet in 1979 to 366 million in 1985 and 438 million in 1990, as can be seen on the following table.

Demand		1979	1980	1981	1985	1990
Barranquilla		100	122	144	148	149
Cartagena/Cordoba		81	100	126	160	175
Guajira (Palomino)		--	--	--	--	50
Santander		74	85	92	115	120
Methanol Plant		--	--	--	--	77
Total Demand		255				
	307	362	423			
Total Demand		255	307	362	423	571
Coal Substitution		--	--	-57	133	
Net Demand		255	307	362	366	438
Supply						
North Coast-Guajira		100	137	177		
Jobo-Tablon		39	33	30		
Sucre-Castor		10	18	33		
Dificil-Cicuco		32	34	30		
Santander-Provincia-Payoa		74	85	92		
Total Supply		255	307	362	366	438

This consumption will be concentrated mainly on the Atlantic Coast, where gas will be used as a fuel for generating electricity, for the production of energy for industries and as a raw material for the petrochemical industry.

In this fashion the substitution of natural gas for almost all of the fuel oil being used in this region and in the two Santanders will proceed.

Toward the middle of the present decade, a part of the natural gas used on the Atlantic Coast will be replaced by coal produced by the CARBOCOL [Colombian Coal Company, Inc] operations, mainly in the cement plants and the electrical plants in Barranquilla and Cartagena.

Projects for the Use of Natural Gas

To date the national government has drafted four projects for the use of natural gas:

1. Methanol plants.

2. Palomino petrochemical complex in La Guajira (ammonia and urea plants).

3. Western gas pipeline.

4. Export of liquified gas.

According to the feasibility studies made by experts in these matters, the above-mentioned projects will be profitable. However, their development will depend on the additional reserves of gas discovered on the northern coast, since those known

do not suffice to supply the projects completely. For the time being, the national government must establish an order of priority.

The second table shows the volume of natural gas consumption for the projected methanol plant and petrochemical complex in Palomino, estimated at 50 billion cubic feet per day and 77 billion cubic feet per day, respectively.

a. Methanol Plant

In our view, this project is of great importance. It involves the building of a plant for the production of methyl alcohol, which could be mixed with gasoline.

Thus it would be possible to reduce the volume of this product imported.

Year	Barrels	Percentage Increase	Volume of Imports
1976	2,616,760	--	36,594,310
1977	3,459,924	32.2	51,454,777
1978	7,708,645	122.8	121,206,035
1979	9,302,998	20.7	314,651,075

Galerazamba-Medellin-Santa Maria....635 km
Santa Maria-Bogota.....192
Santa Maria-Cali.....240
Total.....1,067 km

The table above shows the gasoline imports in the past four years and the increase in comparison to the immediately preceding year.

The demand for gasoline in 1979 came to 27,485,000 barrels and it is estimated that by 1985 this figure will reach 32,100,000. Methanol extracted from natural gas can replace a large part of this substantial volume.

The plans for this plant could be even greater if success is achieved in finding additional reserves of natural gas.

b. Petrochemical Complex

This involves the building of a plant to produce 450,000 tons of ammonia per year and 357,000 tons of urea per year, in order to reduce the deficit we have of these products. This would reduce imports of urea and would contribute to the production of fertilizers.

c. Western Gas Pipeline

This project involves the building of pipelines to transport gas from the north coast to the interior of the country, in order to supply the cities of Medellin, Manizales, Cali and Bogota with this hydrocarbon product, with a spur running to the refining and petrochemical complex in Barrancabermeja. This gas pipeline could be designed so as to cross the Cocorna field in Antioquia, where development has already been begun, so that the gas can be used there as fuel for the production operations using thermal methods.

The construction of this gas pipeline will provide the following benefits:

1. The quantities of fuel, ACPM, kerosene and propane used in industries and for domestic consumption will be replaced by natural gas.

2. The volume of fuel oil exports will be increased, contributing to compensating for the daily increasing value of imports of oil and oil products.

3. It will be possible to supplement the current supply of gas obtained from the Provincia and Payoa fields to the Barrancabermeja industrial complex toward the beginning of the next decade, if the exhaustion of these fields is not offset by new discoveries in the middle Magdalena region.

4. The crude oil which would be used at the Cocorna field, Antioquia, to generate electricity and steam in extracting the heavy oil concentrated there, would be replaced by natural gas.

This crude oil will be used to load the balance plant in Barrancabermeja to produce gasoline for engines.

The planned length of this gas pipeline is 1,067 km, distributed as follows:

Galerazamba-Medellin-Santa Maria, 635 km; Santa Maria-Bogota, 192 km; and Santa Maria-Cali, 240 km (source--PIN).

It is estimated that the market potential might be 150 million cubic feet initially, which could increase by 1990 to 230 million cubic feet per day, and by 1995, to 294 million cubic feet per day. The city of Bogota would probably consume 40 percent of this total.

Export of Liquified Natural Gas

The liquified natural gas project would involve the export of this product to the United States. Initially, two possibilities were considered, calling for the processing of 150 million cubic feet per day and 450 million cubic feet per day, respectively. The first of these possibilities was discarded because it was believed this proposal was not profitable. However, due to the increase which has been seen for natural gas on the international markets, it is now believed that this project might be economically feasible.

It can be concluded from the above figures that sufficient reserves of gas are not currently available to develop all of the projects we have mentioned. The national government will have to establish priority among them based on the programs being pursued by the CARBOCOL in El Cerrejon, which will make it possible to replace natural gas with coal in the cement industry and the electrical sector.

DIM VIEW TAKEN OF REAGAN ADVISORS' DIVERGENT L.A. POLICIES

Caracas EL DIARIO DE CARACAS in Spanish 9 Dec 80 pp 20-21

[Article by New York correspondent Jose Ricardo Eliaschev: "President-Elect Ronald Reagan Lacks a Latin American Policy"]

[Text] The latest controversy triggered among Reagan's group of advisors on international affairs involved the Latin American countries, as had occurred previously with the new president's advisors for South Africa and Taiwan. Just as in those instances, Reagan's close circle denied any overly explicit commitments to regimes considered to be repressive; and, this week, those handling the next administration's relations with the regime in El Salvador were publicly criticized by the new president's spokesman, James Brady. A few days earlier, members of a delegation of Salvadoran businessmen stated that Reagan's Latin American advisors had promised immediate, sizable military aid to the Junta governing that country, to destroy the guerrilla forces opposed to the regime.

Documents recently released in the publication of one of the two analytical groups preparing the forthcoming Latin American strategy indicate that there are vast differences in perception and analysis among the members of the advisory team. Those groups are at the Center for Strategic and International Studies (CSIS) of Georgetown University, in Washington, D.C., and the American Enterprise Institute (AEI), which also operates in the capital.

The Main Enemy

The next government's group of "Latin American experts" includes Roger W. Fontaine, James D. Theberge, Jean J. Kirkpatrick, Pedro Sanjuan and Constantine C. Menges. Fontaine is considered by several sources as the most prominent member of the group, and the weekly publication THE GUARDIAN gave assurance in its latest issue that he might succeed William G. Bowlder as future assistant secretary of state for inter-American affairs, the top-ranking post in the United States administration dealing with Latin America.

Contrary to what is usually thought, this group is not homogeneously Republican. Dr Kirkpatrick and Sanjuan have served in Democratic administrations. The woman participated in two important internal committees at the 1976 Democratic convention; while Sanjuan served during the early months of the now moribund administration of James Carter as assistant to Hamilton Jordan, the White House chief consultant.

The present Latin American policy group of the next administration is, therefore, quite bipartisan in origin; something which insures a relative degree of universality in the plotting and implementation of its policy recommendations.

Menges is affiliated with the Hudson Institute, an academic organization located near New York and publicized by the often spectacular forecasts of its official "futurologist," Herman Kahn.

Fontaine, who is 39 years of age, has written "Brazil and the United States" and "On Negotiating With Cuba," in addition to "Latin America: Struggle for Progress," in collaboration with Theberg. Fontaine has often been described as an expert on Cuban affairs. In a recent interview granted to this correspondent in the CSIS offices, Fontaine explained why the only picture decorating the walls of his office was a print containing the photographs and names of all members of the Politbureau of the Communist Party of Cuba: "One must be aware of the main enemy at all times."

Differences Among the Advisors

A recent study by Fontaine demonstrates serious differences with respect to Sanjuan's views, with features that warrant the claim that the opinions of the former are more realistic and moderate than those of the latter, even though both share a radically anticommunist viewpoint. Fontaine's study, which was also signed by a former official of the Central Intelligence Agency (CIA), Cleto Di Giovanni, Jr, and by a "Venezuelan businessman educated in the United States,"Alexander Kruger, is significantly entitled "The Specter of Castro." Sanjuan's study is entitled "Why We Don't Have a Latin American Policy."

The first and most obvious differences are: a. Sanjuan does not believe in that Castro "specter," and strives to prove that the United States should make an effort not to overestimate the danger of what he regards as a regime in an acute state of decline, the Cuban revolution. b. Fontaine is convinced that the Latin American policy applied by the liberal sector brought to the State Department by Carter has been marked by complete, indisputable coherence; while Sanjuan thinks exactly the opposite about it.

Fontaine claims: "The Carter policy (toward our neighbors to the south) is a coherent, profound repudiation of the past (...). Unlike the policies applied by this administration elsewhere in the world, its policy in Central America and the Caribbean has been aimed at the attainment of carefully considered and well defined goals, which have remained intact; because the regional differences have not received too much damage from the publicity that would be embarrassing for the government." And he adds: "Jimmy Carter's foreign policy for Central America and the Caribbean has been devised over a long period of time by individuals who rejected traditional foreign policy concepts and who devised a policy that has provided the native leftist-oriented movements backed by Cuba with opportunities for progress that are unprecedented since World War II."

Sanjuan has a very different view when he makes an assessment of the past 4 years of United States policy toward Latin America, which he depicts as "a mixture of incompetence, arrogance and ignorance." After claiming that Carter approached international policy matters with a "rural attitude," he states that, between 1976 and 1980, the United States underwent "one of the most confused periods in the implementation

of its foreign policy. Any competent observer must have serious doubts as to whether what the United States attempted to put into practice in Latin America during the past 3 and a half years could even be called a policy."

According to observers, this sharp discrepancy in the evaluation of the immediate past could cause an extensive breach between Reagan's Latin American advisors when it is time to devise his policies for the short and medium term.

Castro Is Not a Revolutionary Hero

Fontaine, shows certain signs of accepting the reality in his view of Latin America. For example, he agrees that the present government junta formed in El Salvador by the Armed Forces and the Christian Democrats is an invention of the State Department, and, on another topic, he admits that what Cuba has with the Soviet Union is a "marriage of convenience." This hardly ideologized view of the reality clashes with the inflamed emotion displayed by the Hispanic Sanjuan, in his view.

For example, Sanjuan, who upholds the almost racist concept that "growth is an organic psychological compulsion of the Soviet state," claims that "Castro has no system to export to anyone. He is not a world leader, nor an antagonist worthy of consideration by the United States; and he is no longer a revolutionary hero in Cuba either."

Compare these heated assertions with Fontaine's opinion: "While, in recent years, the Cubans have increased their influence in the Caribbean and faroff Africa, the United States has pursued an opposite course (...). Few would claim that the Cubans have contrived the crisis in Central America on their own. On the contrary, the instability of the region originates in the historical inequalities among the social classes, which have produced political and economic frustrations among large masses of citizens. (...) We agree that the opposition to Somoza in Nicaragua was very widespread, and that the Cuban backing for the Sandinists was only one ingredient in the revolution."

Sanjuan, for his part, is convinced that, "Fidel Castro is (...) an incompetent socialist, even when he is judged on the basis of the normal failures of socialism." He is of the opinion that the Cuban leader can maintain his power only because he is oppressing his country "in an economy which he has deteriorated rather than improved, and in a nation which was once proud, and which he has reduced to the status of a subservient puppet of the Soviet Union."

The observers underscore the difference between the notion of a "marriage of convenience" between Moscow and Havana upheld by Fontaine, and the idea of a "subservient puppet"of the USSR adopted by Sanjuan.

Mensheviks and Developmentalists

Nevertheless, neither of the two expounders of the forthcoming administration displays complete coherence, even in his own statements. Whereas Fontaine, all things considered, reveals a conspiratorial concept of history, whereby the briefcase that the former foreign minister, Orlando Letelier, was carrying at the time of his assassination contained an entire code leading to a Cuban plot on a hemispheric scale, Sanjuan starts with the same anxious view of the Havana authorities, ending up with revolutionary methods of economic development for a conservative regime.

In the latter respect, Sanjuan maintains: "Latin America's orientation has traditionally been toward the development of overseas markets for selling its raw materials. The customers were always Europe and the United States. With the progress of industrialization, the competitive development of the markets should be spurred on through the entire hemisphere, across national borders, not for the raw materials that were difficult to sell in the immediate past, but for the growing volume of consumer goods now and in the future, refined fuel and by-products, as well as diversified agricultural exports. The United States should take part in this process as a full partner, and not primarily as an exporter of finished industrial products and an importer of raw materials."

Thus, the extreme ideological right would describe some of Fontaine's positions as "Menshevik," while Sanjuan's views disclose a certain "developmentalist" trend.

Fontaine distrusts respect for ideological pluralism, and is convinced that the Carter administration acted in a detrimental manner toward the hemisphere's right wing regimes, favoring, rather, what he terms "the extreme left." However, the latter is not identified, and one might infer from Fontaine's views that the alleged "extreme left" could be embodied by the Salvadoran Col Adolfo Arnaldo Majano, the Panamanian Gen Omar Torrijos Herrera and other possibilities that the State Department at one time regarded as moderates in the region.

All things considered, Fontaine's view of the hemisphere is ominous. He claims that, as a result of the Carter policy, the pro-United States Nicaraguan dictatorship was replaced by a "pro-Soviet regime," the pro-United States military government of Carlos H. Romero in El Salvador was replaced by a left-center regime "backed by the United States Embassy," the current pro-United States military government of Guatemala "is under attack from the Carter administration for human rights violations," and Jamaica, "officially nonalined, and with a tendency toward leftist oratory and action, has received generous assistance from the United States, without any apparent benefit to the donor." This was written prior to Michael Manley's defeat, when Washington was keeping all aid to the English-speaking island virtually frozen.

Although the different nuances are considerable, they do not conceal a broad ideological and political common denominator; but those differences could in the future produce opposition and controversy with respect to the critical policy of the incoming conservative United States Government toward Latin America.

LATIN AMERICAN ARMED FORCES COMPARED

Mexico City EL DIA in Spanish 1 Dec 80 p 12

[Text] Paris, 30 Nov (AFP)--The three Latin American countries that stand out in terms of military might are: Brazil, which has the region's largest Armed Forces numerically; Argentina, which has the best equipped forces; and Cuba, whose forces are the most battle-toughened. These conclusions were culled from data gathered at AFP offices in Latin America and from files here.

With a population 12 times larger than Cuba's and almost 5 times larger than Argentina's, Brazil has a military force of 272,550 men (113,000 recruits), as compared to 206,000 in the Cuban Armed Forces and 139,500 (92,000 recruits) in the Argentine military.

For its part, Argentina is undertaking the largest arms buildup in Latin America, spending $2.8 billion on defense in 1979, compared to $2.09 billion in outlays by Brazil during the same year and $1.1 billion by Cuba in 1980, even though its gross national product is estimated at 4 times less than Brazil's but almost 4 times greater than Cuba's.

With 19,000 men stationed in Angola and 16,500 in Ethiopia, according to the 1980-81 military assessment by the London International Institute of Strategic Studies, however, Cuba is the Latin American military power with the most recent war experience, in the African theater, inasmuch as Brazil's last military undertaking dates back to World War II on the Italian front, while Argentina's goes back almost 100 years, to the triple alliance war against Paraguay, along with Brazil and Uruguay.

Latin America's armed forces comprise a total of 2 million men, while the region's overall defense expenditures amounted to $10 billion last year, $6 billion of which was accounted for by the three aforementioned countries.

Military Alliances

A series of pacts and treaties link Latin American countries with each other and with the United States in the event of aggressions or threats across borders established by treaties (the Chapultepec Act of 1945), to provide for the peaceful settlement of disputes between countries in the region and for group self-defense in the event of an outside attack on one of the members

(the Inter-American Reciprocal Assistance Treaty [TIAR], Rio de Janiero, 1947, and the Charter of the Organization of American States, which comprises the provisions of the TIAR).

The only country that does not take part in the inter-American system is Cuba, which was expelled in 1962. In 1975 the OAS agreed that member countries could normalize relations with Cuba.

In addition, in 1967 25 Latin American countries signed the Treaty of Tlatelolco banning nuclear weapons in Latin America.

Citing reasons of sovereignty, Cuba did not sign the treaty. Argentina signed but never ratified it, and Brazil did so but with a reservation on peaceful nuclear explosions.

For their part, the United States, the Soviet Union, Great Britain, France and China signed Protocol 2 of the Treaty of Tlatelolco, pledging not to use or threaten to use nuclear weapons against the signatory parties.

Argentina Updates Its Arsenal

The Argentine Armed Forces are in a full-fledged process of modernization.

The land army, which has 85,000 troops and around 250,000 reservists, has in addition to 100 U.S. Sherman tanks from World War II, 120 lightweight AMX-13's from France, and production is fully under way on the modern TAM [Medium Argentine Tank], 100 or so of which have already been put in service.

It recently purchased 50 Kuerassier antitank tanks from Austria and has ordered another 120.

The navy has 33,000 men. It has an aircraft carrier (a renovated former British vessel) outfitted with Skyhawk A4Q planes and recently announced that it would be buying 14 Super Etendard fighter planes from France.

The fleet also includes two modern German-built Type 209 submarines and some other U.S.-built subs from the end of the Second World War; 2 Type 42 destroyers, one of them built in Argentina, outfitted with Sea Dart missiles, plus another 8 U.S.-built destroyers; 2 guided missile frigates bought from France, and several Type 148 high-speed patrol boats. The navy also has 23 fighter planes, to be joined soon by the 14 Super Etendards.

The air force has 19,500 men and 206 fighter planes, including 9 British Canberra bombers, 60 Skyhawk A4B pursuit planes, 18 Mirage III-E purchased from France and 26 Daggers (Mirage III's modified by Israel) bought 2 years ago. It also has another eight Mirage fighter aircraft on order from France.

It also has some 40 IA-58 Pucaras, an Argentine-made twin-engine turboprop plane used for tactical support and counterinsurgency; it has another 20 on order.

The Armed Forces took power in Argentina in 1976; martial law had been in force since 1974. Executive power rests with a military president appointed by the Junta of Commanders in Chief and subordinate to it.

Military aid from overseas was cut sharply after the United States decided to suspend arms sales to Argentina based on Washington's charges of human rights violations.

Argentina and Chile have an ongoing border dispute in the south in connection with sovereignty over three islands at the mouth of the Beagle Channel.

This century-old conflict brought Argentina and Chile to the brink of war in late 1978 in the wake of the British Crown's unfavorable ruling for Argentina. The situation has been temporarily settled thanks to the intervention of a papal delegate.

Argentina engages in military cooperation mainly with neighboring nations, Uruguay, Paraguay and Bolivia, to which it generally gives materiel.

Brazil: An Arms Producer

The Brazilian Armed Forces, the largest in the region, attach priority to domestic technology and production to update their weaponry, relying on a modern industrial complex in Sao Jose Dos Santos in the state of Sao Paolo.

The land army, with a contingent of 182,750 men, has 60 medium M-4 tanks, several M-47's, 250 light M-41 tanks, 25 X-1 tanks and has 80 medium X-1A2 tanks on order.

The Brazilian Navy, with 47,000 men, consists basically of a light aircraft carrier, 8 submarines, including 3 Oberons, six frigates, 12 destroyers, 6 minesweepers. It has no fighter aircraft.

The Brazilian Air Force (42,800 men) operates with 173 fighter planes, including 14 Mirage III's, 33 U.S.-built F5E's, 5 F5B's and 70 Xavante counterinsurgency aircraft (the Brazilian version of the Italian Aeromachi).

The Brazilian Armed Forces, which took power in 1964, began a "political opening up" process in 1979. Brazil is not involved in any border disputes with its neighbors, does not receive outside military aid and has a military assistance mission in Paraguay.

Cuba Belongs to No Military Pact

Cuba has not signed any treaty entailing membership in a military bloc, but its Armed Forces use equipment common to the signatories of the Warsaw Pact, except for strategic bombers and nuclear weapons.

In the event of war, Cuba would mobilize in no more than a week a superbly outfitted force of no fewer than one million combatants, not counting auxiliary

services. The Corps of Territorial Militia Units, an institution similar to what Yugoslavia and Vietnam have, is currently being formed.

The Cuban Army, with 180,000 men, has more than 600 tanks, including 60 IS-2 heavy tanks, T-34's, T-54's, T-55's, 50 T-62 medium tanks and PT-76 light tanks.

The Cuban Navy, with 10,000 men, operates three Soviet submarines and several patrol and missile boats.

The air force, with 16,000 men, has 168 fighter planes, including 30 MIG-17's, 20 MIG-23's, 48 MIG-21F's, 30 MIG-21MF's, 40 MIG-19's and 15 MIG-15UTI's.

Constitutionally, the chief of state and head of government is the commander in chief of the Armed Forces, Raul Castro, who is first vice president of the Council of State and the Council of Ministers; he is also minister of the Armed Forces. Functions similar to those of a National Security Council are thought to be performed by the Political Bureau of the Central Committee of the Communist Party, whose first and second secretaries are Fidel and Raul Castro, respectively.

The USSR gave Cuba all of the equipment it received during the first 15 years of the revolution, but subsequent military aid is thought to have entailed economic compensation.

Soviet cooperation also extends to the training and further development of military officers. In addition, there are somewhat fewer than 5,000 Soviet military specialists in Cuba.

Venezuela: The Highest Defense Expenditures

Behind the three main military powers in Latin America, Venezuela, with an estimated GNP of $39.3 billion in 1978, is the country that approved the heaviest defense expenditures in 1980: $804 million.

As far as manpower is concerned, however, the Venezuelan Armed Forces are in eighth place, behind Mexico, Peru, Chile and Colombia as well.

The 27,000-man Venezuelan Army has 142 French AMX-30 tanks, 40 light AMX-13's and 12 U.S.-built M-8 all-terrain tanks.

The 9,000-man navy has four submarines (two German Type 209's; another two are on order), four missile-armed destroyers, five frigates, including an Italian Lupo guided-missile frigate received 3 months ago, while another five Lupo frigates are under construction and will be brought on line gradually in 1981.

The 4,500-man air force has 99 fighter aircraft, including 18 British Canberras, 9 Mirage III's, 20 F-86's and 18 CF-5's from the United States.

Venezuela is involved in a border dispute with Colombia over the delimitation of ocean and underwater areas in the Gulf of Venezuela and has a claim pending to the territory of Esequibo, some 150,000 square kilometers that represent close to 2/3 of the surface area of Guyana.

It has concluded a mutual defense pact with Costa Rica, a country that does not have an army.

Chile: The Sixth Largest Force in the Region

This country, which has the sixth largest military force in Latin America in terms of manpower (88,000 man, 21,600 of whom are recruits), spent $726 million on defense in 1979; its estimated 1978 GNP totaled $15 billion.

Its 53,000-man army (20,000 recruits) has 70 medium M-4 tanks, 10 M-3's, 60 M-41's and 47 AMX-13 light tanks.

The 24,000-man navy (1,600 draftees) has in particular 3 submarines (2 Oberons), 3 cruisers, 6 destroyers, 5 frigates and 3 corvettes, as well as 12 fighter aircraft.

Its 11,000-man air force operates 84 fighter planes, including 16 Hunter F-71's, 18 F-5E/F's, 8 T-33A's and 34 A-37B counterinsurgency planes. It also has 16 Mirage 50 fighter aircraft on order.

The Armed Forces have been in power in Chile since 1973, when they overthrew the constitutional president, Salvador Allende. In addition to its main border problem with Argentina in connection with the Beagle Channel, it is involved in another dispute with Bolivia, which is demanding an outlet to the sea.

Mexico: Second in GNP, Sixth in Military Outlays

Even though it has the second highest GNP in the region, put at $91 billion in 1978, Mexico spent $518 million on defense in 1979, the sixth highest total in the area, in back of Venezuela and Chile.

The Mexican Armed Forces, the fourth largest in Latin America in manpower with 107,000 men (it also has a 250,000-man militia made up partially of draftees), recently began a modernization process. As recently as 1977 it began replacing its cavalry with motorized units purchased from the FRG.

Thus, its army, with 83,000 regulars, has only M-3 and M-5 light tanks.

Its 20,000-man navy consists of older, American-made equipment, including 2 destroyers, 5 frigates, 37 corvettes and 13 fighter planes.

Mexico's 4,000-man air force has 70 fighter planes.

Peru Demanded Withdrawal of U.S. Military Missions

The Peruvian Armed Forces are the fifth largest in manpower (95,500, including 49,000 recruits) and the seventh in defense spending, $366 million in 1979, with an estimated GNP of $12.4 billion in 1978.

The 75,000-man army (51,000 recruits) has 250 T-54 and T-55 Soviet tanks and 110 AMX-13 light tanks from France, as well as 60 medium M-4 tanks built in the United States.

Its 10,500-man navy has in particular eight submarines (two German Type 209's), five cruisers, seven destroyers and six frigates (four are the Italian Lupo, outfitted with antisubmarine missiles and helicopters).

It has an additional four Type 209 submarines on order. Almost all of its larger vessels were built after the Second World War and modernized when Peru bought them. Two destroyers with antisubmarine equipment arrived over the last 3 months from Holland to replace older units.

The 10,000-man air force has 119 fighter planes, including 32 Canberras, 24 Mirage 5-P's and 23 Soviet-built SUJOI SU-22's. With the exception of the Canberras, this is modern materiel purchased over the last 5 years.

American military aid has been suspended since the early 1970's, as the regime of Gen Juan Velasco Alvarado demanded the withdrawal of U.S. military missions. Peru and Cuba are the only two countries in the region that own Soviet materiel.

Peru is involved in a border dispute with Ecuador relating to the delineation of the frontier in the El Condor Mountain Range in the Amazon region.

Colombia: Poorly Equipped

The Colombian Armed Forces command seventh place in the region in manpower (65,800 men) and eighth place in defense spending, $215 million in 1979 (its estimated GNP standing at $14.5 billion in 1978).

Its 33,000-man army (26,500 recruits) is very poorly equipped, having just a few M-4A3 medium tanks and M-3A1 light tanks.

The 9,000 men navy has four submarines (two Type 209's), three destroyers and five American frigates. Except for the two German submarines, the materiel is old.

The 3,800-man Colombian Air Force has 18 Mirage fighter planes.

In addition to the aforementioned border dispute with Venezuela, Colombia is involved in another with Nicaragua, which claims the islands of San Andres and Providencia and the keys of Serrana, Quitasueno and Roncador in the Atlantic.

As to the rest of the countries of South America, Ecuador has a military contingent of 38,800 men; Uruguay, 30,000; Bolivia, 23,800, and Paraguay, 16,000.

In 1979, Ecuador spent $163 million on defense; Bolivia, $118 million; Uruguay, $72 million, and Paraguay, $41 million.

Ecuador has 40 M-3 tanks, 80 AMX-13 light tanks, 2 Type 209 submarines and 50 fighter planes.

The Bolivian Armed Forces have in particular 18 Kuerassier antitank tanks and 41 fighter planes, including 18 Brazilian-made Xavante counterinsurgency aircraft.

The Uruguayan Armed Forces have 17 M-24 tanks, 18 M-3A1 light tanks, U.S.-made frigates, 2 corvettes and 20 fighter planes.

The Paraguayan Armed Forces have 13 M-4 medium tanks, 12 M-3A1 light tanks, 25 fighter planes and have 12 Xavante counterinsurgency aircraft on order from Brazil.

The United States has suspended arms shipments to Uruguay because it feels that the Uruguayan Government systematically violates human rights. The Armed Forces are in power.

Nicaragua: The Best Arms in Central America

In Central America, Costa Rica and Panama do not have armies but maintain paramilitary forces consisting of 5,000 and 11,000 men, respectively.

After the bloody war waged against the Somoza dictatorship, Nicaragua is considered to have the best equipped army in Central America, given the sum total of Sandinist weaponry and the arms captured from the National Guard. Its military manpower is estimated at some 10,000 men, backed by about 40,000 militiamen.

Starting with the war that it waged against El Salvador in July 1969, the Honduran Army entered a professional updating phase by sharply boosting the number of its troops.

They rose from 6,000 to some 11,300, while defense spending totaled $31.4 million in 1979. It has 24 fighter planes, including 12 Super Misterio B-2's. The country receives American military aid.

Honduras and El Salvador signed a peace treaty last 30 October.

El Salvador, where a virtual civil war is going on has a 7,000-man Armed Forces and spent $72 million on defense in 1979. It has 12 AMX-13 light tanks, 17 Huracan planes, 4 Super Misterios, 4 Magisters and 6 Rallye counterinsurgency aircraft. The Military-Christian Democrat Junta that governs the country receives major military assistance from the United States.

The Guatemalan Armed Forces have 14,900 men, and the country spent $76.8 million on defense this year. It has several Stuart light tanks and 10 fighter planes.

American military aid was cut off in 1978 on account of human rights violations. It cooperates militarily with Colombia, Venezuela, Uruguay and Argentina.

Guatemala, El Salvador and Honduras are on the Central American Defense Council, which was formed several years ago to coordinate the extraterritorial defense of the countries in the region.

The Dominican Republic has a 19,000-man Armed Forces; Haiti, 7,000; Jamaica, 4,000 and Guyana, 7,000.

Their defense expenditures in 1979 were, respectively, $91 million, $18.4 million, $17 million and $17 million.

ALARM EXPRESSED OVER LACK OF DEFENSE CAPABILITY AFTER INDEPENDENCE

Belize City THE REPORTER in English 14 Dec 80 p 2

[Editorial]

[Text] The people of Belize do not have to submit to the government's time-table for independence. Even though there is a constitutional conference set for next February and the United Nations has set up parameters within the year 1981, the people of Belize, exercising their right to decide their own future, can adjust this time-table and expand these parameters.

There are compelling considerations which should make us want to change them, and the most pressing of these is that Belize is not in a position to defend herself against a hostile neighbour, and Britain, her only visible defence partner, is not willing to do so once the country becomes independent and develops its own autonomous foreign policy.

The Government of Belize has not been able to come up with anything comparable to replace the British once the troops are withdrawn in a year or two or three. Belize will not only lose an effective defence umbrella, but the spin-off effects of the $10 million a year which Britain spends to maintain it as well.

All the discussion about an international peace-keeping force has not produced a clear plan of action in case the Guatemalans decide to come across the border in force. Even if the Guatemalan army does not march in as a visible target, Guatemala can patrol our waters with its gunboats or choose to come across in platoon-size groups to take up positions in the highlands of Punta Gorda. They could stay indefinitely, sapping our human and other scarce resources and bleeding our country.

In the Belize context a peace-keeping force must necessarily be of a and quality to deter those which we know the Guatemalans have, and since the Guatemalans own fighter and bomber aircraft, the peace-keeping force must have some air cover so that our ground forces do not become sitting ducks. [sentence as published]

If Belize is to resist the Guatemalan advances, she must have these military capabilities. And we don't see any country, apart from Cuba, willing and able to provide such an expensive deterrent force. Once Belize goes to Havana for

military help however, we fling ourselves irretrievably into the Communist Camp, and even if the United States takes no restraining action, we would be committing ourselves and our country, as the people of Cuba did 25 years ago, to the bleakness of Marxist regimentation and a Marxist-Socialist economy.

There is another side to this coin however, and more and more this looks like the real thing. Belize could show token resistance to the Guatemalans, and after a "respectable" period allow them to have their way, like the lady who furiously resists being taken--then settles down to enjoy it.

Is this the real plan? Are our BDF boys being trained as cannon fodder in a secret plan to save face while giving the Guatemalans all that they want?

We don't know the answers. But there is a growing unreality about Belmopan's plan for independence. The plan is over simplistic and too slick by half. It does not take into account the realities of today's situation. It is not only an ego trip with 140,000 persons on board. It looks like an elaborate conspiracy!

Belize has maneouvered herself deftly into a corner from whence it appears we have one of two choices open to us--either we yield to Guatemalan rapaciousness, or we join the Communists and become associates of the most nefarious dictator of the New World!

But the soul is dead that slumbers, and things are not what they seem. We have a third choice. We can return to the negotiating table. We can insist on a referendum. We can spike the independence talks by returning the UDP to the City Council.

We can do all this and more. We do not have to stand like sheep and be led to the slaughter. Come on! How about it?

GUATEMALA SEEN PREPARING FOR 'PROPAGANDA OFFENSIVE'

Belize City THE REPORTER in English 7 Dec 80 p 2

[Editorial]

[Text] Last week's issue of the TOLEDO STAR, the newspaper organ of the minescule Toledo Progressive Party, reported that Belizean soldiers have been undergoing training in Cuba, Panama and Nicaragua as guerrillas.

Quoting one of those Washington lobbyist organizations which calls itself the American Security Council, the STAR reports that the Belize guerrillas are joining Guatemalan terrorists who are trying "by force to put down the government of President Romeo Lucas Garcia."

This report has the flavour of pure propaganda, and we don't think there are many persons in Belize who believe it. But the charge is a sinister one. If the report is being circulated in Guatemala, and the overwhelming odds are that it is being circulated, it probably means that Guatemala is setting up the groundwork for a propaganda offensive against Belize.

If this report has been deliberately planted by the Guatemalans, and we have a sneaking suspicion that this is exactly what has occurred, the reason for it must leap to the mind. The Guatemalans are preparing to use this rumour to drum up hostility to Belize and to recruit support for their own military build-up.

If the Guatemalans can convince themselves that Belize is making plans to move against their government, or as they put it, "trying to force to put down the government of President Romeo Lucas Garcia" through a guerrilla movement, it is only a short step for the people in the Guatemalan military to start justifying counter measures.

For if Belize can move to de-stabilize the Guatemalan government, what is there to stop Guatemala from moving to de-stabilize the Belize government?

This looks like a turn for the worse in Belize-Guatemalan relations. It will need close watching in the months ahead.

AGRICULTURAL PRODUCTION ESTIMATES IN SOUTH-CENTRAL REGION

Soybean Yields To Fall

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 11 Dec 80 p 36

[Text] Exports of soybeans and derivatives (beans, meal and oil) may reach $3.2 billion in 1981 compared to $2.6 billion this year, according to estimates by the chairman of the Production Financing Commission (CFP), Francisco Villella. This forecast, however, will be confirmed only if the production estimate of 15,102,000 to 15,797,000 tons of soybeans for the 1980-81 crop year is fulfilled, which represents an average production increase of only 3 percent in relation to the previous crop year.

But such optimism is not shared throughout the Agriculture Ministry, as estimates made officially by others in the ministry indicate that soybean products will be 14.7 million tons at the most, which corresponds to a reduction of 2 percent in the area planted and 4 percent in production, compared to the 1979-80 crop year. The same study warns that "Brazil may be missing a great opportunity to get a bigger share of the international market, which could be the result of government interference in marketing soybeans here and abroad."

Forecasts

Production estimates for the 1980-81 crop year in the South-Central region, released by the CFP yesterday, indicate an average increase of 6 percent in the planted area of rice, beans, cotton, soybeans and corn. It also reports that only peanuts will have a smaller planted area, estimated at 34 percent less. The area of corn will increase 13 percent and that of beans planted during the rainy season, 9 percent. In terms of output, beans will increase 34 percent and corn, 14 percent.

If the CFP predictions are confirmed, cotton production should be between 440,000 and 472,000 tons, compared to 450,000 tons in the previous crop year; that of peanuts, between 233,000 and 276,000 tons, compared to 385,000 last year; rice, 7,696,000 to 8,207,000 tons, compared to 7,807,000 tons in 1979-80; beans (first crop), 1,319,000 to 1,372,000 tons, compared to 1,001,000 tons in the previous crop year; corn, 21,485,000 to 22,409,000 tons, compared to 19,285,000 tons in the previous crop; and soybeans, 15,102,000 to 15,697,000 tons, compared to 14,888,000 tons in the 1979-80 crop year.

In regard to soybeans, the Agriculture Ministry study reveals serious concerns about the next crop year's results. Analysts are assuming a reduction in average yields nationally. Whereas the CFP estimates an average yield of about 1,750 kilograms per hectare, the Agriculture Ministry study assumes only 1,700 kilograms. The expected reduction is based upon less use of chemical fertilizers due to their high price in comparison to the Basic Operating Cost (VBC) and also the shortage of financing for fertilizing to correct fertility and acidity of soil and the higher prices for certified seeds, the price of which tripled in comparison to that of the grain harvested by the farmer.

Agriculture Ministry specialists demonstrate that, to correct soil acidity and fertility, the farmer would have to spend [about] 16,000 [figure unclear] cruzeiros per hectare and warns that "betting on the farmer's financial capacity to assume disbursements not covered by farm operating costs or for investments is an extremely optimistic aspiration."

Rain Delays Soybean Planting

Rio de Janeiro GAZETA MERCANTIL in Portuguese 29 Nov-1 Dec 80 p 10

[Text] Porto Alegre--The steady rain that fell on Rio Grande do Sul and Santa Catarina during November caused a slight delay in soybean planting but has not harmed the crop. As this paper was informed by the FECOTRIGO [Federation of Brazilian Wheat and Soybean Cooperatives] technical director, Joao Lena, over 60 percent of the 3.9 million hectares forecast for the 1980-81 crop year have been planted. "The rain was heavy and, besides causing delay in some regions, required some crops to be replanted."

In Santa Catarina, according to surveys by the Technical Department of the Federation of Farming and Livestock Cooperatives (FECOAGRO), planting is proceeding slowly, no more than 30 percent of the forecast area being planted. There also was a reduction in the soybean area in relation to the 1979-80 crop year, from 520,000 to 494,000 hectares. The rain, however, was beneficial for the corn and rainy-season bean crops of both states.

Corn Has Larger Area

The Santa Catarina corn crop will occupy an area of 1.2 million hectares (78,000 hectares more than in the 1979-80 crop year) and about 80 percent is already planted. The Rio Grande do Sul corn crop is also almost all planted and should be 2.2 million hectares this year. The exceptions are in the Passo Fundo and Pelotas regions, where 10 percent and 60 percent respectively of the forecast areas are not yet planted.

In the area of the Passo Fundo Wheat Cooperative (COOPASSO), with about 40,000 hectares planted, some delay in planting corn was caused by low levels of mechanization. "But the weather has been good and the rain assures supplies to water sources, which is very important," the COOPASSO technical director, Telmo Gosch, explained.

This year the Santo Angelo Wheat Cooperative (COTRISA) will have 300,000 hectares in soybeans and 40,000 hectares in corn. Half of the latter area is in early corn. "Within 15 days our corn crop will be settled and if the weather keeps up as it is now, we will be harvesting 50 to 60 sacks per hectare in January," the COTRISA superintendent, Silvio Aristeu de Souza, estimated.

The bean crop has very little economic importance in the agriculture of these two states. Rio Grande do Sul will have 176,000 hectares and most of this crop is in a stage of vegetative growth. In Santa Catarina the area of rainy-season beans will be somewhat larger, about 189,000 hectares (9,000 hectares more than planted last year). Irrigated rice is coming along quite well. Planting is well along and 80 percent of the 580,000 hectares forecast for the 1980-81 crop year have been planted. At this time last year 60 percent of the forecast area had been planted.

Rain Damages Wheat Crop

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 6 Dec 80 p 23

[Text] The reduction in Rio Grande do Sul wheat production, initially forecast at 43.4 percent, could be even greater due to the rain that fell on the state all this week. That is the report of the Rio Grande do Sul Rural Extension and Technical Assistance Enterprise (EMATER/RS). The area planted to wheat (1.3 million hectares) should produce about 1.5 million tons. But the rain, which hit the crops at the stage where the ears are maturing, lowered production to a little more than 859,000 tons. With more rain this week, that figure should drop even more.

In the Santa Maria region--where hailstones up to 10 centimeters in diameter and 400 grams in weight fell on 1 December--some greens, corn, watermelon and cassava crops were totally destroyed. Besides delaying planting of rice, soybeans and corn, the excessive moisture caused fungus diseases such as anthracnose and wheat rust. There are as yet no precise statistics about the total reduction of the crop in the region's 29 municipalities. In the 48 municipalities around Porto Alegre, damage was greater. Ten percent of the corn crop was destroyed by erosion and leaching.

Rain Also Brings Benefits

Rio de Janeiro GAZETA MERCANTIL in Portuguese 6-8 Dec 80 pp 1, 9

[Text] Brasilia--Brazil should harvest 55 million to 56 million tons of grain in 1981. The planted area will grow a little more than the 6 percent announced in October when the Agriculture Ministry made its first estimate of the 1980-81 harvest.

The heavy rains that hit several of the nation's regions in recent days--judging by information from state agriculture secretariats, regional offices of the Agriculture Ministry and reports of the Production Financing Commission (CFP)--did not harm the crops. "Other than replanting some corn in Sao Paulo and Minas Gerais, there is no indication of harm to either yield or output," Agriculture Minister Amaury Stabile told this paper Friday. And the information collected by this paper in various producing areas of Sao Paulo, Rio Grande do Sul, Parana and Minas Gerais is that the rain brought more benefit than damage for crops.

When compared with the 52 million tons of grain harvested in the 1979-80 crop year, the crop expected by the government could represent an important increase, as the point from which it takes off is high: in 1979-80 the weather was good and an increase of 8.5 percent in planted area was obtained after 2 years of failed crops and low yields. But the new estimate is less than the 60 million tons optimistically projected by the government at the end of the last harvest.

According to Stabile, the production increase of about 7.7 percent should not be--as it was this year--surpassed by the increase in consumption.

If the weather stays good, higher yields could result in a more significant production increase. The CFP is taking yields obtained in the most recent harvest as a basis for its estimate. If compared with average yields obtained in the 1973-77 period--years in which agriculture functioned relatively well--productivity increased 4.29 percent in 1980, the Agriculture Ministry calculates. During the last 30 years, the average productivity gain was only 3.8 percent.

Agriculture Minister Stabile believes the important point is that the gains in agricultural production came in a year when credit for investments in machinery and farm improvement was tight. After the middle of June the Bank of Brazil was limited to recycling repaid loans, falling short of demand for credit. In the discussion about basic policies for the 1981 monetary budget, Stabile agreed to an adjustment of interest rates and a limitation on coverage of subsidized rural credit for medium-sized and large rural business firms, but believes there is a point bwyond which restrictive policies cannot go.

In his opinion, rural credit cannot have market interest rates, as was agreed upon at a meeting between the planning and finance ministers and their top aides on Wednesday.

"There cannot be market interest rates for financing harvesters, treating such purchases the same as refrigerators," the minister says. He feels that farmers investing in machinery and cattle should have access to subsidized credit, although in a smaller volume than rural producers financing operating costs or incorporating new area for planting.

The impression of his staff is that in February or March, when loan requests for buying harvesters accumulate just before the harvest, the government will have to give in, if it does not do so now. This is due to possible disturbances in the market for agricultural implements, where a finance program is not expected to be established, as is now the case of FINAME [Fund for the Financing of Machinery and Equipment] for industrial firms.

Perhaps an even more important guarantee--which has not yet been given Minister Stabile--is in regard to the price policy that will prevail in 1981. The necessary counterpart of higher interest rates next year, the guarantee of prices free from ceilings or food imports with built-in subsidies to the consumer, is not yet certain.

Rains Benefit Crops

Porto Alegre--The heavy rain that has been falling on Rio Grande do Sul since the beginning of last week--although causing several deaths and making thousands homeless in some of the lower-lying regions--does not worry farmers.

Managers of grain cooperatives interviewed by this paper explain that the rain was not uniform, nor was it very heavy in the soybean-producing area. "It is, in fact, beneficial for planted crops, although it forces farmers to interrupt planting," said Silvio Aristeu de Souza, general manager of COTRISA, in Santo Angelo.

Minimal Damage

In Ijui, Passo Fundo and Sao Borja, according to reports from technical departments of cooperatives, the damages caused by heavy rain are insignificant compared to the benefits it brings to crops.

The same can be said for the irrigated rice crop in the southern part of the state, according to surveys made by FEARROZ. "We had some flooding of recently-planted areas, which caused the seeds to spoil. But this is no problem, because the damage is minimal," said Homero Pegas Guimaraes, FEARROZ president.

Producers are generally pleased with the way soybeans and rice are coming along and with the final stage of corn and beans, which could have a good yield this year. The "early" corn will have to have at least a little more rain this month yet to be considered ready.

Over 60 percent of the soybean area--forecast at about 3.9 million hectares--is already sown. There is a slight delay, which is unlikely to prevent planting during the most suitable period. Of the 587,000 hectares forecast for irrigated rice, 80 percent is sown; the remaining 20 percent is in scattered areas outside the southern part of the state.

Less Fertilizer

What worries COTRISA management in Santo Angelo and neighboring towns, where nearly 1 million hectares are planted, is the use of fertilizer in smaller quantities than recommended. According to surveys by COTRISA and by some Bank of Brazil branches in the region, farmers are backing away from the high prices of fertilizer and in this crop year are using about 60 percent of the amount normally applied.

"The soybeans grow well at first, but show the effects later, when maturing, reducing the yield," says Aristeu de Souza in explaining that a yield of 22 sacks per hectare could fall to 12 sacks. "That is, if the weather cooperates." According to him, citing surveys by cooperatives and bank agencies, a significant number of farmers are using only 80 kilograms per hectare instead of the 150 kilograms recommended.

Problems in Low-Lying Areas

Although the rain that was still falling in Rio Grande do Sul at the end of last week is beneficial to the major crops--soybeans, rice and corn--the same cannot be said of minor (in terms of area planted) crops, such as greens, summer fruits, onions, and rice, corn and beans located in the valleys of the large and small rivers that empty into the Guaiba estuary in Porto Alegre.

Small holdings and mixed farming predominate in low-lying land near lakes or river valleys, where they are much more vulnerable to flooding during continuous rainfall,

as is now occurring. They are mainly in the eastern part of the state, dotted by many lakes (as well as the immense Patos Lake) and several rivers, such as the Sinos, Cai, Gravatai and Jacui, all of which empty at the same point in Greater Porto Alegre.

Survey

Data about crop damage have not yet been computed and even the mayors of the municipalities affected (Torres, Osorio, Santo Antonio da Patrulha, Montenegro, Sao Sebastiao do Cai, Camaqua, Sao Leopoldo and Santa Cruz do Sul, among others) do not know their exact extent, according to what they told Rio Grande do Sul reporters.

In Torres (northern coast), where the largest number of homeless and several deaths occurred, torrential rains and flooding swept away some planted areas of corn, tobacco, bananas, tomatoes and carrots. According to Mayor Cleo Biasi, his municipality lost 80 percent of the carrots and tomatoes planted and he is worried about the fact because Torres is the state's leading producer of carrots, supplying coastal municipalities in season, which will begin in a few days.

Small Farms

In Osorio and Santo Antonio da Patrulha, 100 kilometers from Porto Alegre, and also on the coast, rice, sugar-cane, watermelon and cantaloupe crops were lost, as well as corn and beans. There are thousands of small farms surrounded by innumerable reservoirs and lakes with important production of seasonal fruit such as watermelon and cantaloupe, besides irrigated rice, corn and beans.

Montenegro, Sao Sebastiao do Cai and Sao Leopoldo have the most fruit and vegetable farms. The rising waters of the Cai and Sinos rivers threaten many crops and farms with certain loss which has not yet been estimated. These occurrences can cause some losses in the total crop of corn, bean and rice and also cause supply problems in surrounding areas during coming weeks.

Limited Supply of Seeds

Rio de Janeiro JORNAL DO BRASIL in Portuguese 15 Dec 80 p 12

[Text] Brasilia--Will the supply of farm products improve in 1981? The government assures us it will. But data do not show that. In a report Agriculture Minister Amauri Stabile received from his staff and showed to President Figueiredo, it is noted that the trend of seed production, which is essential for good agricultural production, for increasing yields and for reducing losses from pests and disease, continues growing at a very slow rate.

The production of rice seeds, the grain chosen by low-income people to eat instead of food produced from wheat flour (the prices of which are rising as subsidies are gradually being reduced), for example, increased only 2.3 percent this year, from 148,580 tons in the last crop year to 152,000 at present. Hence, in the 1980-81 crop year the rice harvest will be 9.7 million tons at most, only 0.06 percent greater than that of 1979-80. If there are any crop losses there will be a rice shortage, as consumption in Brazil is now 9,660,000 tons a year.

The Figures

Further evidence that supply is not likely to improve in the coming year is shown by the report's calculation that the production of seed corn, essential for producing animal rations, fell. It is not possible to grow corn with commercial yields without seed corn, which is hybrid and must be bought. The drop in seed production reduces the probability of corn production growing significantly.

Seed-corn production in the 1978-79 crop year was 127,970 tons and in 1979-80 was 110,000 tons. Notwithstanding, the Agriculture Ministry estimated that corn production in the 1980-81 crop year will be 24.8 million tons, 4.6 million tons more than in 1979-80. This projection is based upon an increase of 9.7 percent in the area planted to corn in the North and Northeast regions, which is unlikely to happen, given the prolonged drought plaguing the Northeast.

The increase in yield from 2,026 kilograms to 2,099 kilograms per hectare estimated by the Agriculture Ministry for the 1980-81 crop year is also threatened by the smaller supply of improved seed corn. If the yield from the 1980-81 crop is less than that of the previous crop, which has happened many times, output will be well below the forecast. This happened in the 1977-78 crop year, when the corn yield was 1,230 kilograms per hectare, less than that of the 1975-76 crop, which was 1,610 kilograms per hectare.

Comparing the two crop years, one notes the importance of yield for corn output: in the 1977-78 crop year, corn production in Brazil was 13,738,000 tons, 4 million tons less than the 1975-76 crop, when 17,844,000 tons were harvested. Another indication that corn yield is not likely to increase much--or even decrease--is contained in the report: the purchase of fertilizer fell 3 percent in Rio Grande do Sul and Santa Catarina and 14 percent in Parana--the nation's three largest producers.

The Agriculture Ministry report also estimates the arrival of the 1980-81 crop on the consuming market. According to its figures, the current corn crop will begin coming to market in January: between 825,000 and 860,000 tons from the three major producers. Production from other [states], totaling between 2,380,000 and 2,515,000 tons, will not arrive on the market until February. As these two figures add up to 15 percent of the expected crop, the corn market will not begin to receive stable supplies until March.

The tendency with rice is the same. In December the market will be receiving between 17,000 and 18,000 tons; in January, between 362,000 and 385,000 tons; in February, between 1,268,000 and 1,338,000 tons. The report also shows that there will be a decreased supply of beans starting next February. According to the Agriculture Ministry estimate, the consumer market received 166,000 to 173,000 tons in November; should be receiving 436,000 to 458,000 tons in December; 314,000 to 328,000 tons in January; 280,000 to 293,000 tons in February, by which time 90 percent of the rainy-season beans will have been shipped.

In the case of kidney beans, 24,000 tons came to market in November; 225,000 tons are expected to come to market in December; 179,000 tons in January; and only 46,000 tons in February. And that will be all the rainy-season kidney beans for this year's crop. Nor is the long-term prospect for beans very promising: according to the Agriculture Ministry 5-year plan, bean production will increase very little through the 1984-85 crop year.

The goals set by the Agriculture Ministry are the following: 2,500,000 tons in 1980-81; 2,568,000 tons in 1981-82; 2,637,000 tons in 1982-83; 2,708,000 tons in 1983-84; and 2,781,000 tons in 1984-85. This continues a trend established in recent years, when growth was also slight, causing supply problems: in 1976-77, 1977-78 and 1978-79 the crop was 2,307,000 tons, 2,395,000 tons and 2,280,000 tons respectively.

Estimates

Comparing the figures for planted area and for output per hectare contained in the Agriculture Ministry report on the current crop year, one can see clearly what is happening in agriculture and what can be expected in terms of next year's supply. The government estimated, for example, that at the most the output per hectare of rice in the 1980-81 crop year would increase 1 percent in the 11 states of the Central-South, where 90 percent of our rice is produced; it also estimated that the planted area will decrease between 3 percent and 4 percent in that region.

In regard to rice, the figures show the risk Brazil runs of again having to go to the international market to buy, facing the same problem of 1980, inasmuch as available supply is small: every large producer of rice is also a large consumer. The report's statistics show that the area planted in Rio Grande do Sul, the largest producer, remained stationary; and the planted area decreased in the only states with a production potential to stabilize supply: 5 percent in Mato Grosso and in Goias.

ODUBER URGES DEMOCRACIES TO SUPPORT NICARAGUA

San Jose LA REPUBLICA in Spanish 26 Nov 80 p 4

[Text] What all we democrats of the world have to do is help Nicaragua consolidate a pluralist, democratic regime and not go around talking nonsense, said Daniel Oduber Quiros in commenting on the debate that has arisen in Costa Rica concerning the Socialist International's decisions to help Nicaragua.

Former President Daniel Oduber Quiros expressed regrets that two members of the Political Board of National Liberation joined in fueling a climate of international anticommunist hysteria by speaking out against the Socialist International's decisions in Madrid regarding Nicaragua.

Oduber, the president of the National Liberation Party (PLN) Board and vice president of the Socialist International, was referring to Gonzalo Facio and Elias Soley, who sharply criticized the decision allegedly made by the conference of Social Democrat parties in the Spanish capital.

Oduber said that what really happened was that the conference approved the formation of a committee chaired by Felipe Gonzalez, from the Spanish Socialist Workers Party (PSOE), and members from nine other democratic countries, to prevent world public opinion pressure from leading to an invasion of Nicaragua, as is being plotted.

According to Oduber, Commander Bayardo Arce, the chairman of the Nicaraguan Council of State, who attended the meeting as an observer, reported that armies from countries in northern Central America were bent on invading Nicaragua and on destroying the revolutionary movement. This report, he added, coincided with the occurrence of dangerous incidents on the Honduras-Nicaragua border.

Oduber said that the heated debate that the decision has triggered in Costa Rica is based on a cable that did not tell the whole truth, but mainly on Costa Rica's at times justified dread that a communist offensive might in the future be launched against it from Nicaragua.

Rightwing dictatorships throughout the world are rejoicing because they feel that Regan's victory in the United States spells the defeat of the human rights issue. But these are infantile assessments, Oduber said, because no such change will

take place, and all of these rallying cries for witch hunts are accompanied solely by brutal anticommunist violence in which we have never believed.

Oduber ruled out the possibility that any superpower was interested in turning Nicaragua into a sort of Afghanistan. He asserted that instead Nicaragua is rapidly nearing democracy and the establishment of a pluralist regime. "What we have to do is aid this process by respecting Nicaragua's political dignity and autonomy, not go around talking nonsense ahead of time," he said.

What is really happening in Costa Rica, Oduber said, is that they are putting up a smoke screen to make Costa Ricans forget the frightful economic and social condition that the country is in.

The former president ruled out the possibility that Elias Soley and Gonzalo Facio have met with non-Liberation politicians such as Mario Echandi just to consider his potential presidential bid. We are all friends of Echandi, he noted.

He pointed out later that Echandi one time mentioned to him his desire to run for president, "and on account of my respect for him, I did not say much. That is a decision that only he can make," he stressed.

With regard to Facio's and Soley's harsh comments on Nicaragua and the Socialist International, Oduber said that they are entitled to bring up their disagreements within Liberation or leave the party, if they wish.

"But I do not think," he asserted categorically, "that they are part of a scheme backing Echandi. And it is perhaps premature to think that they are going to leave the PLN," he said.

The former president then referred to the recent border problems with Nicaragua, asserting that coordination is what is needed. "When I refer to coordination," Oduber said in connection with his experience in this regard, which got him branded a traitor to his country, "I mean that we have to make the Nicaraguan Government realize that no invasion that could jeopardize the revolutionary process could be launched from our country.

"We have to coordinate border surveillance to prevent Nicaraguans and Costa Ricans from shooting at each other at every boundary stone. We must not forget how nervous Nicaragua is, because it feels that it is the victim of aggression. I will be the first one to place myself at the orders of the authorities to prevent Guanacaste from once again being the province that suffers the uncertainties of guerrilla politics in Central America, in which at all costs our country must not get involved," he concluded.

FAR TRAINING SYSTEM REVIEWED

Ideological, Patriotic-Military Aspects

Havana VERDE OLIVO in Spanish 23 Nov 80 pp 4-7

[Article by Ruben Fonseca Cervino]

[Text] The ideological education of FAR [Revolutionary Armed Forces] personnel is carried out under the direction of our party, with the participation of political leaders, organizations and apparatus and their alternates: political work leaders, party organizations and the UJC [Union of Young Communists]. The objective of such education is to give combatants an idea of the world based on the concepts of Marxism-Leninism and to ensure their active, transforming influence upon social development.

Our commander-in-chief has said, "It is our ideology which makes us strong and invincible." The ideology of our people is based on Marxism-Leninism, the only scientific concept in the world.

The scientific concept of the world is acquired under the influence of our society's entire training: the method of production, forms of distribution, social services, political-social activities and legal standards. Also exerting an influence on personnel are the specific conditions of military service, combat and political training, camaraderie, regulation of military life and other factors.

In the shaping of personal ideological convictions, there is a method for acquisition of the system of knowledge and skills which encompasses both natural sciences and political ideas and scientific understanding of the real world; in this process, the proper mastery of specific scientific concepts is of special importance.

Mastery of scientific concepts means penetration of the essence of the phenomena they depict; determination of their basic characteristics and that of objects; understanding the dialectic of their development; the unity of the general, particular and individual concrete abstraction. V.I. Lenin said that the formation of abstract concepts and their manipulation "already contain within them the representation, conviction and awareness which one has of the objective connection with the world." ("Complete Works," Vol 29, p 160).

In the formation of scientific concepts among personnel on active military duty, the basic role belongs to the system of Marxist-Leninist training and to political classes. Specifically, we now have had the experience of the years gone by and the conditions have been established for a more profound study of the bases of Marxist-Leninist doctrine by all personnel.

"The system of Marxist-Leninist training is now more stable and its content is more profound than at any prior time; it has succeeded in adequately combining the study of the basic principles of revolutionary theory with everyday problems and in a creative way has linked Marxism-Leninism with the theoretical problems of war and the army," said Antonio Perez Herrero, member of the Secretariat of the party Central Committee at the Third Meeting for Analysis of Attainment of the Agreements and Resolutions of the First Party Congress.

One indication of success in the formation of communist concepts, in the fight against the principles and vestiges of the past in the conscience of the combatants, is the honorable completion of the various tasks and missions which the party has entrusted to the armed forces, the raising of awareness of military duty toward the fatherland by FAR personnel, the advances experienced in assuring the defensive readiness of our socialist state.

The formation of philosophic-scientific concepts must be accomplished through application of the entire extensive arsenal of means, methods and forms which are available to political leaders and workers. In this important work, a positive role is being played not only by study groups and political classes but also by individual reading of the classical writings of Marxism, the speeches of the commander-in-chief, the FAR minister and other party leaders, scientific literature and party newspapers and magazines. An important role is also being played by linkage of this activity with the ideological struggle in general and with the concrete problems of building socialism in our country.

Patriotic-military education has a principal objective of imbuing FAR personnel and the coming generations with the spirit of socialist patriotism, with complete readiness for the defense of the fatherland and with loyalty to the Communist Party of Cuba.

Among the combatant masses, patriotic education is being carried out through study groups and political classes; subject matter and artistic evening sessions; visits to museums and historical sites; and other activities in the instruction process to awaken in the combatant his love for the people's tradition of struggle and his desire to imitate such traditions.

Young workers and other popular sectors receive political-ideological training which assures development of a solid conscientiousness in the fulfillment of their duties to the fatherland and the sacred internationalist duty of aiding other brother peoples.

A principal factor in patriotic-military and internationalist education has been the example of our leaders of independence: Antonio Maceo, who said that he would not sheathe his sword until he saw Puerto Rico free; the heroic guerrilla, Che, who gave his life for the independence of America; Camilo: "...Those who are struggling, wherever they may be, are our brothers..." The leadership of our party, together with the teaching of these principles, has in practice led to the attainment of our objectives.

The spirit of sacrifice, tenacity in the completion of assigned tasks, relations among comrades, responsibility, faith in the party's correct political line, the readiness of the combatant to complete any task whatever and to maintain firmness

in any critical situation in accordance with his principles, depend upon political awareness. These qualities are firmly rooted in the Marxist-Leninist conception of the world, in the ideas and interests of the individual which are identified with the interests of all of society.

The ensuring of the qualities of a communist combatant is the responsibility of the political leaders and workers through ideological education and patriotic-military training.

"The party leaders and organizations in the FAR," according to the Programmatic Platform, "have the duty of carrying on continuing political work with the troops to bring them closer to the party; training them in the principles of proletarian internationalism; strengthening the ties between the FAR and the people; and developing firm patriotic convictions in all personnel."

The complex structure of personnel combat readiness objectively reflects the requirements imposed upon members of the FAR,and in a special way upon the command cadres and officers, who not only have to maintain high internal combat readiness but also must achieve this with their subordinates as a basic condition of the greater capability of our troops to defend the socialist fatherland.

Educational work in the creation of communist qualities in FAR personnel is the task of the entire party and its political entities, from the rank-and-file organizations to the Central Committee; it is the task of all political leaders and workers.

"Communist awareness is not an automatic product of structural transformations," our commander-in-chief emphasized in his report to the First Party Congress. "This must be forged day by day through the living experience of class struggle, through political education and through national and international information. For this purpose, we have the party, its orientation organizations and its schools, with the valuable and activist efforts of the revolutionary press and the mass communications media. With that magnificent school of patriotism and internationalism which are our glorious FAR and our Ministry of Interior; with the social organizations of journalists, writers, artists and professionals; with our editorial, cultural and scientific institutions.

"This is the immense force upon which our revolution can rely to move forward and be victorious in the battle of ideas."

After celebration of the First Party Congress, the raising of the level of education and culture of FAR personnel brought about an upsurge of new forms and means for the realization of ideological work, as required by more training of the caders in this sector of party work, and active participation by all officers.

Twenty years have elapsed since the victory of the revolution. At present, the FAR are taking in thousands of youths who were born and are being raised in the new society which is being built in our fatherland. This necessitates consideration of the qualitative changes experienced by the new generations of combatants, so that the influence of the ideological work will be more effective and more in line with our needs.

At present, as the result of the improvement of ideological education and the class struggle during the period of transition in our country, a new kind of combatant is being shaped, a patriotic, internationalist and worker combatant, the heir of the combat traditions of the Mambi army, of the heroes of Moncada, of Granma, of the rebel army, of Playa Giron, of the clandestine battles against bandits.

One of the central tasks of ideological work, during the last 5 years, consisted in educating our combatants in the communist attitude toward military service, which is part of common, necessary and useful social work.

Our political workers, by emphasizing the importance of strengthening the class character of combat readiness and better political orientation of personnel, established one of the principal directions of ideological work.

Marxist-Leninist training of officers experienced an appreciable increase after the celebration of our First Party Congress. The FAR Central Political Directorate developed and implemented new programs which envisioned the study of the documents and resolutions of the First Party Congress, the speeches of the principal party and state leaders, the Marxist-Leninist theory of war and the army, the political economy of socialism, with several topics applied to the military sector.

One achievement of ideological education was improving officer knowledge and skills evaluation, raising the requirements of semester examinations and the strictness of the rating system used during control, assistance and inspection visits.

The advances experienced in Marxist-Leninist education during the 5-year period made it possible to begin to impart the study of scientific communism to all units which, combined with extension of the conference method to the level of brigades and their equivalents, will contribute to the taking of new and positive steps forward in the teaching of Marxism-Leninism.

Similarly, an appreciable improvement was experienced in the political training of sergeants, soldiers and seamen when a new and stricter system of evaluation was implemented, which permitted the more precise measurement of knowledge and skills acquired by them.

These advances reflect the regular control which leaders, political organizations and political workers exercise over political training and their concern that there be systematic application of the standards and requirements set forth in the instructional documents of ideological work.

In this 5-year period being completed by our FAR, many tasks and missions have been successfully completed which have required of their cadres, party activists and the UJC, and of all personnel, a great investment in energy, desire and revolutionary zeal.

Among these tasks and missions, the following are cited as outstanding examples of extraordinary significance: the completion of internationalist assistance missions to the revolutionary processes of the People's Republic of Angola and Socialist Ethiopia; the assimilation of the complex and modern combat technology provided by the Soviet Union; the gradual increase in the qualifications attained by small and large units in operational, combat and political training; the development of the basic materials for beginning and advanced studies; and the achievements registered in the continuing improvement of the FAR structure.

The participation of Lt Col Arnaldo Tamayo in the first joint Soviet-Cuban space flight, pursuant to the Intercosmos program, was another of the outstanding tasks undertaken by a representative of the FAR in the name of the party, government and the people of Cuba.

Our commander-in-chief, Fidel Castro, evaluated this event during the principal ceremony on 15 October 1980 when he mentioned the first Cuban cosmonaut.

"He is a symbol of the character, decisiveness, courage, worth, intelligence and revolutionary spirit of our people; he symbolizes our heroic combatants, heroic combatants who gave their lives for the victory of the revolution, for the defense of the revolution; he symbolizes the heroic internationalist combatants of our country; he symbolizes our internationalist workers; he symbolizes the vanguards of our working class; he symbolizes the exemplary workers; he symbolizes the heroes of work, ..."

In his report to the Third Meeting for Analysis of Attainment of the Agreements and Resolutions of the First Party Congress in the FAR, Div Gen Sixto Batista Santana, chief of the FAR's Central Political Directorate, described as satisfactory the course followed during the 5-year period in the sector of ideological education.

"The completion of these missions with satisfactory results," he said, "and the advances made in practically all sectors of the activity permit a satisfactory evaluation of political and ideological work."

However, he emphasized, "It is necessary to underscore those deficiencies which are still limiting or impeding the carrying out of ideological work among the troops, so that they can be eradicated as soon as possible."

MGR Military, Political Training

Havana VERDE OLIVO in Spanish 23 Nov 80 pp 28-32

[Article by Jorge Luis Blanco]

[Text] "In the developing and improving of the FAR, a principal role has been assigned to the leaders, officials, political workers and organizations of the party who, over the last several years, have trained combatants in the mastery of modern combat technology and, consequently, have learned contempory military art and have marched at the head of their troops in the repulsion of the enemy's armed aggressions."[1]

In this surface unit of the Revolutionary Navy [MGR], the combat readiness and political training plan is being strictly implemented. The men come and go from one place to another: on deck, in the machine room, in the war room, in each of the torpedo-launching sites, part of the program developed for the present year of instruction is now being carried out.

We reporters for VERDE OLIVO came to this base to learn how the party organizations are supporting everything involving the tasks and missions given to the defenders of our waters.

"A continuing increase in the combat readiness of our units is the center of attention of the party organizations," we were told by a squadron commander.

The problems on which the party must work in the Revolutionary Navy are many and diverse to successfully complete each and every assigned task and mission. Special importance, for example, is given to the political work being done on the ships when they are on a voyage or engaging in combat guard activities. As may be supposed, this increases the demands upon the seamen. Everyone must be prepared to quickly make ready and operate technical weapons and equipment. Doubtless in order to optimally perform these duties, the combatant must possess a high degree of expertise and the proper psychological attitude. It is this point which the communists must strengthen even more, particularly as it directly relates to man.

"Formalism and vagueness are intolerable in the party's political work in the combat guard, possibly the most complex and most important aspect of our political organizations' activity in this as in no other sector. In preparing soldiers for combat guard duty, the communists and political organizations place them, in the political-moral and psychological sense, in the stress situation of actual combat, calling for the actions needed in the event of a war."[2]

We met Ship Lt Pedro Machado Santana, commander of a surface and activist unit of the party, at work in the war room of his torpedo boat. [Name published both as Machado Santana and Santana Machado.]

As is known, the success of the vessel's activities depends upon how its commander behaves in difficult situations and upon personal qualities he possesses, which are reflected in the comportment of the entire crew. He is the most competent and experienced seaman to whose authority all the men under his command are subordinated.

Therefore, it can be said that the commander of a ship has been, is and will be the center of attention in the many activities of his ship by the political workers and party organizations.

"Without the party's support," Ship Lt Pedro Santana Machado said, "it would be almost impossible to perform the tasks of instruction for which I am primarily responsible and assure the proper combat readiness of my boat in general.

"During combat guard activities, for example, the party organizations are supposed to exert an effective effort designed to make the crew understand exactly what mission they are to undertake. Before beginning any voyage, the political orienter--or any other designated activist--meets with the seamen and clarifies all aspects of the combat or instruction mission which will be undertaken."

(At this point, the dialog was interrupted: at this very moment on deck, the political instructor was meeting with the crew. The commander of the boat explained that the instructor was providing information to his personnel about the current international situation.)

"Among the aspects to which most attention is given," Machado Santana continued, referring to the combat guard, "are maintaining the correct complement of the boat and properly utilizing its combined technology and weaponry; there is also a concern that the men are stationed correctly in their respective combat positions. The

political and party work, through specific clarification of these questions, brings out the unquestioned importance of the role it is playing in the maintenance of high combat readiness."

On the Front Line

"The political organizations do not directly organize combat training or the service of troops. They exert constant party influence which guides their activities."[3]

The party is to be found on the front line of all activities in the instruction process being carried out in the unit. The party organizations are familiar with and have an active influence on the combat life of the ships. Criticism and self-criticism are basic elements in the uncovering of deficiencies in combat training and in the education of personnel in general. Additionally, they support the commanders when it is time to take steps to ensure the normal evolution of the seamen's military training.

"Periodically, our cell analyzes matters relating to the instruction process. Successes are mentioned; however, detected deficiencies are principally covered to find quick solutions."

These comments were made by guard technician Ship Lt Agustin Santiago Gomez, secretary of the party cell aboard a torpedo boat and vanguard squadron during the period 1979-1980.

"Our squadron has achieved the top results in socialist emulation," he added. "At present, it is the Initiator Unit of Socialist Emulation in its Naval District."

"To what do you attribute this honor?" we asked him.

"I feel it was the work done by the party organizations and the UJC. They are giving Marxist-Leninist instruction to all personnel as a necessary element for emulation to achieve its principal objective, namely the correct completion of the instruction process and the raising of combat readiness."

"The role of the communist vanguard in the army and navy is clearly manifested in socialist emulation, with the help of which personnel are mobilized to successfully complete the tasks assigned to the armed forces by the party. Socialist emulation is principally channeled into the struggle to improve combat work standards and to shorten the times provided for making equipment and weaponry combat ready.... Emulation helps in the better conserving of equipment and weaponry, lengthening the time between repairs and savings in material resources."[4]

Testing Combat Readiness

During maneuvers, exercises or training sessions, the combat readiness attained during the Year of Instruction is tested. In the course of these activities, the work of the party plays an important motivational role. Every activist is eager to ensure that at every stage there is high morale among the seamen, cohesion throughout the collective, its organization and discipline.

"Maneuvers, exercises and training sessions," Corvette Lt Armando Dieguez Suarez said, "can be considered the principal instruction tasks that permit testing of the state of the unit's combat readiness. For that reason, the planning of political and party work plays a role of vital importance. Account should be taken of the preparation of adequate special emulation plans, the use of propaganda and all the steps to be followed in each of the stages: before, during and after the maneuver is completed, for example.

"During execution of these activities, every activist has a specific function with a view to exerting permanent influence on those surrounding him. There is one result to putting this into practice: most personnel resolutely put up with difficulties, and every man makes an effort to complete assigned tasks."

"After a maneuver is completed, what is the principal orientation of the party's work?" we asked.

"Look, very recently one of our ships had to take a training voyage. When it returned to base, both the party and the UJC engaged in the task of analyzing each of the activities undertaken; errors were examined and ways were devised to improve training even more while personnel are at sea."

"Among the factors which play a decisively important role in the successful execution of a maneuver of this magnitude and complexity is the activity engaged in within our units by the political organizations, under whose direction a large detachment of communists is working who, above all, urge the exemplary completion of their military duties...."[5]

Maintenance of Equipment

The correct maintenance of combat equipment and weaponry is a vital element in assuring the instruction of troops. This task is not exclusively the responsibility of the commanders and technicians but is also, in a pointed way, that of the party organizations.

On this subject, Frigate Lt Ramiro Botello Ruiz of the guard said, "The party gives its support in this sector in several ways. One of these ways, by means of propaganda, is making known the importance of maintaining the equipment in perfect condition; the experience accumulated during the various inspections is generalized and is the subject of study; and, as the principal activity, the cells periodically make a minute analysis of the state of their equipment."

He added, "Of course, maintenance, conservation and the correct utilization of combat equipment is an activity completely organized by the commands at all levels. This task is carried out on the basis of orders and directives which establish the forms and periods for the specific utilization of each of the various kinds of combat equipment. The commanders, technicians and combatants have technical regulations, manuals, instruction sheets and other documents which enable them to efficiently do their jobs; however, political and party work undertaken in that direction, as in the rest of military activities, imprints upon its execution a profound political-ideological content and becomes a source of inspiration for the men doing the executing.

Direct Delegate

Perhaps no one is better equipped to discuss the work being done by the party in connection with the instruction process than guard Frig Capt Juan D. Vina Sosa, deputy chief for Political Work of the Naval District, whom these reporters visited.

"The Comrade Frigate Captain was selected direct delegate to the Second Party Congress," we were informed by the officer who escorted us to his office.

Captain Vina Sosa has a wealth of experience as a political worker in the FAR, an activity which he began in 1960, when he joined the first field artillery units established by the FAR.

We remind you that this year commemorates the 20th anniversary of the establishment of that branch of the service, of which he was one of the founders.

"Well, as a matter of fact I remained in that 122 mm battery to which I was assigned only a short time, After that I went to Escambray to fight the bandits who were operating in that region. It was there that I really began to get involved in political work. At that time, a party to help us with our work did not exist; thus, you can imagine the difficulties we had to put up with.

"In 1964, I entered the Revolutionary Navy; and from that time until now, I have been connected in one way or another with political and party work: I have held positions at the level of surface unit, squadron and, since 1967 in political sections, I have been deputy chief of that important activity.

"When it comes time to evaluate the work of party organizations in connection with the instruction process, we must keep in mind one very important factor, namely, that in the complex and nerve-wracking work to attain a high level of combat readiness, the communists have to be where the situation most requires that they be, however difficult that may be. I am referring to personal example, as communists, with their positive attitude exert a decisive influence on the successful completion of the tasks the crews of our ships have assigned to them.

"As regards the instruction process, political and party work has a vital commitment to support and seek solutions which will make it possible, for example, to shorten the time required to make the forces of the Revolutionary Navy completely combat ready, in the profound mastery and exemplary maintenance of the machinery and weaponry, improving the quality of instruction at all levels. This is achieved with the dedicated work of the political organizations, which educate personnel in the necessary political, moral and pyschological qualities. This is a duty of the party.

"If you hear it said that in a unit the process of instruction of troops is not going well, you can be assured, without fear of contradiction, that political and party work is proceeding badly. That is an irrefutable truth."

Finally, Captain Vina Sosa mentioned his pleasure at having been selected to participate in the Second Party Congress and what this represents for the continued successful march down the road to socialism.

FAR PARTY SCHOOLS RUN BY PROPAGANDA, AGITATION DIRECTORATE

Havana VERDE OLIVO in Spanish 30 Nov 80 pp 7-9

[Article by Jose Czanas Reyes: "The Party Education System in the FAR; Its First Results"]

[Text] The thesis and resolution of the First Communist Party of Cuba Congress on the organization and development of the party educational system has been successfully complied with by the FAR [Revolutionary Armed Forces] with the consolidation of the three levels established: basic, middle and advanced for the Party Schools.

For compliance with such agreement, a serious and sustained work was performed by the party organizations, political organisms, particularly the Central Political Directorate of the FAR, which is the one which manages the schools through the Propaganda and Agitation Directorate. In a little more than three years, the conclusions of studies in one of the three levels by more than 20 percent of the party memberships of the armed institution has been achieved.

Without a doubt, this educational system has had a great influence on the political and ideological work of party members because of the better structure of programs, the application of didactic principles in the process of apprenticeships and the most rigorous selection of students and teachers.

At this time there are more than 120 basic, medium and advanced courses with a high enrollment of nearly 3,000 comrades, among whom are chiefs, officers, sergeants, privates, sailors and civilian workers, not counting those who are studying abroad.

The First School

The FAR Main Club is the pioneer inthe work of party education in the FAR, four months after the first party congress was held, an advanced general training course was begun. Later on there were others on the basics of Marxism-Leninism and propaganda.

The classrooms of the club, suitable for teaching activities, were filled from the truly promising beginning. Months later, the party schools spread to the various armies, branches of the armed forces, divisions, regiments and similar units. By that time there already existed instructions from the chief of the FAR Central Political Directorate, containing the agreement of the council of that body, which instructed that those centers be created progressively in places where conditions existed for their successful development.

Early in 1976, the courses were begun with 61 basic schools and 14 middle-level schools with an enrollment of more than 2,300 comrades. The work was not easy because the units selected at that time had to issue the convocations for those courses and the political sections had to screen the applicants.

In keeping with the desires that this new activity proceed correctly, the Central Political Directorate held a short 3-day course in December 1976 for the school directors and for some propagandists of the armies, branches of armed forces, and leaders of the MINFAR [Ministry of the Revolutionary Armed Forces]. The course accomplished its purpose.

An important aspect of that beginning were other measures taken, prominent among which is the publishing of 15,000 copies of each of several books to insure the continuation of the courses for several years. The instructions on methods to be used with respect to subjects, course programs, study plans, curriculum, student control cards and other materials, were prepared.

Good Teachers, Diligent Students

"From its founding until today, the Advanced School of the FAR Main Club has graduated 164 comrades in four courses: two on general training, one on the Basics of Marxism-Leninism and another two on propaganda," says Lt Cmdr Nieves Milian, the directress of this school.

Nieves, who has long experience in teaching, since she has been involved in teaching directly or indirectly for 25 years, adds that the thing that attracts her attention the most is the high degree of interest shown by the party members in these courses, interest shown by the number of applications continuously reaching that center.

"Moreover," she adds, "attendance, which is in keeping with the nature of that student body, is good, and the rate of successful completion is even better. Obviously, these are adult, mature comrades with a certain background, who one night a week, from 1900 to 2300, punctually report to the classroom. It is well to emphasize that they have capable teachers, the great majority are officers who teach classes at the General Maximo Gomez Military Academy of the FAR."

On Tuesdays and Thursdays, at 1900 on the dot, it is easy to observe the student environment in a certain area of the Main Club. Tens upon tens of comrades of various ranks, grades, professions and careers, all of them party members, come there by various means with briefcases or books in hand and amid salutes and smiles talk briefly before going to class.

These schools have their own characteristics. There is no warning bell signalling the beginning or ending of classes, however, the surprising thing is that both take place punctually. Taking advantage of both circumstances, we talked with three comrades, whose summarized opinions appear as follows:

Toward a Better Vanguard

Lt Col Adalberto Avila Tortosa, chief of an FAR transportation unit: "As a student and a commander I believe that it is extremely important that party education be obtained in any of its levels. From the first class one can begin to put the knowledge acquired into practice, particularly in military psychology and teaching. As one delves more into the subjects, broad and heretofore unknown vistas are opened on the task that one performs."

Avila Tortosa continues: "Several comrades from my unit have graduated from that school. The improvement in the performance of their duties is obvious. I am taking the first year, and except for unavoidable circumstances, I have not missed a class. Although I assiduously participate in study groups and political classes, I believe that the best, because of the methods used and the quality of the teachers, is to have the opportunity to attend one of these schools. I feel pleased to be in it."

Lt Gladys Esther Boada is the substitute for the political work chief in the Grito de Baire Industrial Military Enterprise. She says: "This type of education allows us to attain a greater political and ideological development and, therefore, it trains us better for the daily struggle and the performance of our tasks. The many possibilities provided us by learning Marxist-Leninist theory are incalculable. Everything studied here can be put into practice in the daily work with man.

"I am on the third year and around the middle of 1981 I shall be finished. In our enterprise we have a basic school. It has a good enrollment and attendance ranges from 90 to 95 percent and we have a maximum of promotions. There is no doubt that this type of education is a real success."

Like many other teachers of the General Maximo Gomez Military Academy of the FAR, Maj Guillermo Odelin Chivas, instructor of Scientific Communism, systematically cooperates in teaching with the Main Club school. He says:

"I believe this form of party education to be very positive. To me, as a teacher, the most surprising thing is the interest shown by all the comrades with respect to the various subjects they are taught. These are men and women, many of the latter are mothers, who make a great effort to learn the maximum of the knowledge imparted. They achieve this because the grades in my classes are rarely low."

He adds: "In short, we can say that the resolution of the First Party Congress "On The Studies of Marxism-Leninism in Our Country," is being successfully complied with in the FAR because its cadres and party members adopt the principle issued in a part of that document which states that everyone must know Marxism-Leninism profoundly so as to be better able to play the role of vanguard accruing to us in the building of the communist society."

RESERVE ENGINEER UNIT UNDERTAKES TRAINING MISSION

Havana VERDE OLIVO in Spanish 30 Nov 80 pp 54-57

[Article by Mario Rodriguez: "The Reserve in the First Echelon"]

[Text] For the small engineer reconnaissance unit commanded by First Lieutenant Tapanes, there is no difficult mission that is not accomplished with a high degree of efficiency.

The teaching ability of the young officer has had a positive influence in this. In addition to being fully aware of the concerns and nature of his subordinates, he has known how to lead them step by step along the necessary path of apprenticeship.

This group, consisting entirely of reserve soldiers, is also outstanding because of a high degree of discipline, awareness and acceptance of training, which undoubtedly has allowed the creation of the necessary unity among its members.

For each of these soldiers military duty together with a self-sacrificing effort in factories and shops, are two missions which go hand in hand because as they themselves reaffirm with their daily actions: What would the Revolution be without a solid defense?

Quality Training

"In the next 5-year period, the FAR [Revolutionary Armed Forces] will be provided with an appreciable quantity of even more modern combat equipment, which will be characterized by a high firepower, maneuverability and greater automation of its components...These tasks will require the multilateral training of our reserves, which play a decisive part in the defense plans of the country." (Central Report of the First Party Congress).

It is exactly 1430 when the reconnaissance soldiers with all their equipment prepare to put a new subject in the study program into effect: "The Engineering Observation Post."

After the first instructions from the leader, the march begins toward the place selected for the class, a short distance from the permanent site.

Activities will take place in a terrain with special characteristics, which requires the personnel to put into play all their skill and knowledge.

As we approach the area where the subject will be developed, the uneveness, mounds and abundant vegetation leap into view. All of this, we think, poses a real challenge to the soldiers, who with precision and speed have to prepare the observation post under the direct action of the "enemy."

The movement is accomplished in a surreptitious manner, taking maximum advantage of the broken terrain.

Finally, overcoming many obstacles, the small unit arrives at the selected spot.

The site selected could not be better. The topography actually demands great expertise in effecting observations at the same time that it facilitates them.

It is as if the natural surroundings performed the function of a great material study base capable of helping effectively in the solution of a complex problem posed by the leader.

The chief of the small unit indicates a high point. "Let us take a few minutes," he says, "So that you can familiarize yourselves more with this area before we begin with the first study question."

It was the right moment for learning some of the opinions of these reserve soldiers, who are always ready for the defense of the country.

A short way from us was Raul Armas Fonseca, a worker of the Industrial Fishing Enterprise.

Raul is the same internationalist soldier, the same communist who did not hesitate in taking a determined step forward when the existence of the young Angolan state was in danger.

"I believe," says Raul, "that the training of reserves is a very important task, something for which we must always be ready and accept with real enthusiasm."

Certainly this fighting veteran of the war in Angola, in which he participated in this same unit as an engineer, will never forget all the actions in which he took part for the rest of this life. They helped to improve his knowledge in this important and at the same time, dangerous, specialty.

"At this very moment," says Armas, referring to the importance of the class in which he is participating," the leader has stressed the need for us to carry out all actions as much under cover as possible.

"For many perhaps this is just another requirement of the class, without being aware of the real need for it. However, thinking to myself now, as the saying goes, I note that it is a reality."

Raul accompanies his words with an anecdote.

He recalls how when he was on the southern front in the war in Angola, the chief of the unit gave them the mission of blowing up a bridge over which enemy forces had to cross.

Raul tells how the important mission was planned with a wealth of details, however, the enemy detected the presence of our troops and concentrated his artillery fire in that direction, making the operation much more difficult.

"At those moments," he says, "is when everyone understands that not only success but life itself depends on the proper camouflage."

The officer explains: "The objective of the class consists of having you learn exactly what the missions are that should be accomplished by each member of the engineer observation post, in addition to giving you the necessary practice for your conditioning and performance of observation of the terrain as well as of the enemy."

Moments later, the soldiers began the practical accomplishment of each of the study problems analyzed in the class.

One of the soldiers reports; "Comrade squad leader, I see a group of enemy soldiers planting mines to the southeast at Hill 101."

The squad leader carefully makes notes while the observer continues to follow the movements of the "enemy."

On our way back we witnessed training in the areas of mines and obstacles and in demolitions. The reservists enthusiastically make full use of every moment of the instruction period.

Something is obvious: For the members of this unit, maximum efficiency in the instruction process is a principle which is strictly adhered to, aware that on it will depend the degrees of combat readiness and the successful completion of one of the agreements of our First Congress.

From the Rearguard

"Socialist Vanguard" is the name of this foundry and iron products enterprise, which is engaged in exceeding its production pledges in honor of the historic Second Party Congress to be held soon.

More than once the members of the reserve have been mobilized from its shops. Each time, the comrades who remain in the center double their efforts to make up for the absence of those who go to make up military units.

For all those who remain in the "rearguard," the intensification of the work shift is more than a duty, it is an honor which they accept with legitimate pride.

That is why, at the base of one of the electropneumatic hammers, we came upon internationalist soldiers, Jorge Soler Marrero and Jesus Garcia Rodriguez, hard at work. The latter is the shift chief.

Jorge has been in the enterprise 13 and one-half years and har acquired the status of Party candiate in it.

For him and Jesus and the rest of the comrades of the center, production and defense are two tasks which go hand in hand.

"As long as they remain at the tasks of combat training," says Jorge, "they can be sure that the rest of their comrades will do everything possible to maintain optimum production levels.

"In this way we are preparing even for the case of a real aggression in which the rearguard as well as the front have to contribute everything necessary for victory."

Jorge adds: "At this time we are doing four hours of voluntary work to make up for the absence of the comrades and in order to exceed our pledges in honor of the Second Congress."

Internationalist soldier Jorge Soler Marrero, member of the special battalion that guarded the Peruvian Embassy and the U.S. Interest Office during the "March of the Fighting People," says before the end of the brief interview: "I am sure that our comrades will accomplish the new mission assigned them while we remain in this other strongpoint here in the "rearguard."

Jesus Garcia Rodriguez is an expert operator of the electropneumatic hammer in addition to being classified as a "Blacksmith-A."

At this time Communist Garcia Rodriguez is a shift chief, however, he can often be seen at the hammer or doing other work which requires his presence.

As he himself declares: "I always take a step forward wherever I am needed." Jesus declares: "I believe that mobilizations for the reserves are something the country needs so as to be always ready for defense, moreover, they are a decisive contribution to increasing the combat readiness of our units.

"This is understood by all our working class, that is why in any center you may visit you are going to find the same readiness to undertake the missions entrusted to us in production and in defense."

CENTRAL ARMY TANK BATTALION MEMBERS INTERVIEWED

Havana VERDE OLIVO in Spanish 30 Nov 80 pp 7-9

[Article by Jesus Casal Guerra: "The Men of the Tank Battalion"]

[Text] Located in a part of the vast territory under the watchful eyes of the Central Army, wrapped in the modesty characteristic of all its men, immersed in the dynamism which means compliance with the new and most complex missions, this tank battalion lives and breathes, a simple but very potent piece within the machinery necessarily required by the defense of this soil.

The conversations of the soldiers, the same ones who have criss-crossed the firing ranges under sun and rain, the same ones who have made tatters out of the targets time and again, the same ones who in the parking areas, dormitories, recreational activities, or in moments of concern when facing an alert, maintain a smile on their lips, say more than anyone may think.

They, more than anyone, are the muscles and tendons of this body which vomits fire and shrapnel so that no invader may step on what is theirs, their parents' brothers' and their own children, who know about their tanker daddy and always wait for him at the door at home. That is why we must talk to them, to learn about their past, which is the present [as published].

The Commander Speaks of His Troop

Seventeen years of maneuvers with tanks have made of this officer, with his strong physical makeup, calm look and open gestures which denote cordiality toward all those around him, a genuine tanker, devoted entirely to learning his specialty.

Extremely frugal in speaking about himself, he is not capable of speaking about his two internationalist missions, his work as a commander, or of his successes as chief of the unit. He would rather speak about his men, who in combat posts "have always done the impossible to comply with everything they have been told to do."

The conversation flows and through it, we feel the respect that this veteran tanker feels for his soldiers, the affection for those "who without considering the difficulties that may present themselves, devote themselves to complying and complying;" the confidence he feels for those who in the thunder of action insure the complete success of the unit.

But it is when he begins to talk about what his troop has done that he is tireless. And one after the other he tells "of the missions these boys have accomplished; the interior order that has been achieved despite the particular situation of the unit; their discipline, and in short, their daily life and the results of the work of the battalion, results in which I believe they themselves were the greatest inspiration."

Everything Had Its Beginning

One day in 1979, the public address system ordered a formation. And the blonde Morffa, the tank gunner, Jose A. Morffa Sarmiento, grabbed his cap and belt and thought: "I cannot fail to be there."

It was a gathering to inform them about the commitments made by the unit to honor the Second Party Congress. Although they were very great, Morffa already knew about them because they had been approved by his crew. The battalion, and with it each crew, proposed to achieve ratings of at least "good" during the training year. And that was not a matter of games.

That is why this young soldier, a technician, a graduate specializing in roads, who arrived at the unit around a year and a half ago as a loader, decided to give his all to achieve success in his individual commitments.

"I could not fail the battalion because they all considered me a good gunner. Then came individual firing and that of the entire crew. And we made scrapwood out of the targets, and my tank was ranked "good" and the crew "good" and the company even better. And lead came and went...Well, that was very great."

Morffa, who now wears the Army Vanguard Award, is always talkative, happy, ready to resolve any problem that may present itself in his fighting machine, the dormitory or in the work of beautifying the unit.

When he speaks, he does it without thinking much about what he is going to say, sure of his opinions and the possibilities they have in handling the many things expected of them.

That is why we also asked him about incentives, since everything cannot be work and more work, we thought.

"There are no problems with matters of incentives here. If you are outstanding, do your duty, help to achieve the victories of the battalion, you will surely be rewarded. I myself, without having to go very far, have been given many additional passes so that I may go see my parents more often because they are always concerned about how one is doing his duty here.

"And believe me, that is good, that raises the morale of the people after a period of hard work."

The Consolidation of the Battalion

Days after the commitment, this group became fully involved in the theoretical and practical training tasks of the training year, until the day the program scheduled individual tank firing.

They moved to the firing range and the training continued there. Then came the time to fire the cannon and with it came the first ratings of "good."

As of that moment, the people felt more confident as to their possibilities. Enthusiasm increased; conversations centered around their capabilities in mass firing and their concern for emerging successful.

On arriving at the period scheduled for the crew, the targets were destroyed once more. And Morffa, always with a smile on his lips "incited the other gunners," and the other gunners responded with more targets destroyed, and the battalion was in the clouds as if it had taken off in flight never to land again.

This was the way the first steps were taken in a movement which became more radical day by day, class by class, shot by shot and had its culminating moment in the maneuver with 100 millimeters in which the unit won an "outstanding" in firing and "good" in tactical maneuvers.

But It Was Not Only The Tankers

When one arrives at a tank unit it is logical that one thinks of successes as a problem of the tankers only, however, there are other men, who without being in the fighting machines have much to do with insuring the missions to be accomplished by their comrades. Such could be the case of the drivers, service personnel or the mechanics.

That is why Jorge Luis Rodriguez Morera, although he first expresses his admiration for the tankers, does not feel left out of the victories won by his battalion. As the driver of a ZIL-131, he has also given much to the common cause despite the fact that he has never fired from a tank.

Morera graduated as a driver from courses in that specialty taught in the basic recruit school. Before entering the recruiting process, he worked as a mechanic's helper at the Colon School Transportation sub-base.

"I graduated from the course without many ideas about its importance, however, when I arrived at the unit, when I found out about the daily life of the battalion, I understood how beneficial it had been for me.

"The first missions came and I was trained and ready to perform them. I did lack experience but that came to me through the comrades who had more years than I at the specialty."

But while a tanker has responsibilities, a driver also has responsibilities. And that has been one of the fundamental missions for Morera.

"They care for and maintain their equipment. They are responsible for attacking the objectives of the enemy. Those are their responsibilities to the group. Mine, in addition to being another participant in combat actions, also require the care of equipment the revolution has placed in my hands. And I have devoted myself entirely to that to such a point that I have committed no violations of the rules nor have I had a single traffic accident. I believe that in this way I have also made my contribution."

Everyone Speaks About Lazaro Martinez

Lazaro Martinez Martinez is an example of the fighting spirit present in this battalion. As a member of the Union of Young Communits [UJC], he was faced with the need to serve in the FAR [Revolutionary Armed Forces] for 18 months. Lazaro did not have to think twice and entered the training regiment to receive training as a tank squadron chief.

"To tell the truth, I never thought about becoming a tanker, but that is the way life is. There are times when you are faced with things which leave no room for doubt as to a need. And, of course, as a revolutionary, one volunteers. That is what happened to me."

The grades of Lazaro Martinez during his training as tank squadron commander were good. Once graduated, he arrived at the unit one day with everything required by regulations, to begin his new functions as chief of a small unit.

"Shortly afterward, the comrades at headquarters called me to tell me that it was necessary that I remain with them, that I waive the 18-month period. I did not have to be convinced. In their words one could note the evaluation they had made of my work as a young officer and I was in no position to disappoint them."

It was then that Sublieutenant Lazaro Martinez Martinez presented himself to the personnel chief of the command to request documentation so that he could remain permanently with the tank battalion.

"I had been impressed by the work with the men, with the human relations existing between commanders and soldiers, the discipline that could be felt in the unit, and above all, the results we were obtaining in performing our missions. That is why I decided to remain with the rest of my comrades for whatever time it is necessary."

That Which Cannot Be Considered The End

More than a week ago, at the place where the trophies of the battalion are kept, there is a new banner which represents the effort made by this group of men during the 1979-1980 year.

Red as the blood of the sacrifice of those who fell in the defense of our soil, like the color of the bright future, there hangs on the mast the "Grito de Yara" banner, which the MINFAR [Ministry of the Revolutionary Armed Forces] awards to the vanguard battalions of the FAR.

It is in the possession of this tank battalion, which as its members say, is prepared to continue along the path of even greater victories.

It represents the excellent results attained in combat firing, in the knowledge of tactics, the status of equipment and weapons, general training, and, particularly, that of each soldier.

The chief of the battalion has removed it from its place so that we can see it. Our admiration for this group is redoubled. In the young soldiers, who are also looking at it, can be seen the joy because of what it represents and the new commitment which is already felt.

CHIEF OF STAFF NOTES PROFESSIONALISM IN MILITARY

Santo Domingo LISTIN DIARIO in Spanish 1 Dec 80 p 8C

[Article by Disraeli Guillen]

[Excerpt] The army chief of staff has asserted that the institutionalization and the nonpartisanship achieved by President Antonio Guzman in the Armed Forces "have undeniably charted a course along which the unrepentant banners of caudillos no longer stream and the factions that ignore duty have not set up shop."

Maj Gen Ramiro Matos Gonzalez said that the malignant dregs of factionalism have been swept out of the Armed Forces, so that they can act as a single man, as a single soldier, led by commanders who in imitation of their ancestral leaders are now beginning to hoist the banners of a devotion to service above personal interests.

"Thanks to the loyalty instilled by our president, we can assert that we in the military will never allow factional caudillos and bosses to again take over our spirit of duty and to divert our efforts, which have been so worthily upheld over several centuries of history," Matos Gonzalez stated.

The ranking officer delivered his speech at the reception that the army chief of staff's office gave for President Antonio Guzman and his wife, Mrs Renee Klang de Guzman, to mark the culmination of "Army Day" celebrations. The event was staged at the Armed Forces Officers Recreation Club.

Matos Gonzalez indicated that "the arrogance and the insolent pennant of discord that mediocre minds once unfurled are dead and buried." And he added:

"Our horizon is now marked by a promising dawn of professionalism that will crown our heroic bugles, a professionalism that admits no steps backwards or stubborn faces looking to the past, recalling miseries that have been overcome. We need men who follow higher guidelines and overcome adversity by hard work, faith in their country and a devotion to the unswerving principles of duty, excellence and professional ability."

Matos Gonzalez told President Guzman of "the indomitable loyalty of the Armed Forces towards the constitutional government," stating that: "Our loyalty is far superior to other loyalties, not only because it stems from open gratitude but also because it emerges from our ranks and is an oath decreed by the inexorable voice of history, and as legitimate children of this supreme tribunal of the people, we are loyal followers of their immutable desires," the ranking officer stated.

MILITARY URGED TO REMAIN ABOVE POLITICS

Santo Domingo EL NACIONAL in Spanish 25 Nov 80 p 3

[Article by Joaquin Suero]

[Text] San Isidro, 25 Nov The director general of military training, Col Hector Valenzuela Alcantara, speaking in the presence of President Antonio Guzman, made an impassioned plea to members of the Armed Forces and National Police to "reject any harmful attempt by those seeking to revive factionalism."

The ranking officer called on the commissioned and noncommissioned officers to "ignore everything aimed at undermining the morale, unity and integrity of our institutions."

Col Valenzuela Alcantara made his plea in the speech that he delivered yesterday in the assembly room of the Directorate General of Military Training at the graduation of officers and enlisted men from various training courses.

President Antonio Guzman, who was accompanied by the secretary of state for the Armed Forces, Lt Gen Mario Ibert MacGregor, the chiefs of staff of the Armed Forces branches and the administrative secretary of the presidency, Jose Maria Hernandez, handed out the diplomas to the graduates.

In all, 52 officers and 129 enlisted men from the Armed Forces and the National Police received their certificates.

Their instruction included a command and staff course; an intermediate infantry course for officers; a basic infantry course for officers; a basic infantry course for sergeants; a basic infantry course for corporals; a course in basic health care techniques; an administration course; a course in radio communications and operations and an intelligence and counter-intelligence auxiliaries course for enlisted men.

Col Valenzuela Alcantara said in his speech that factionalism has been eliminated from the military institutions and he called on the troops "to maintain unswerving loyalty."

He added that loyalty must not just "be the spoken word expressing the sincere feelings of recognition that we have for our superiors and reaffirming our

respect for the country's constitution and laws; it is also our duty to constantly improve ourselves to serve our homeland."

The colonel went on to say that service to the country ought to be rendered with optimum efficiency and with a spirit of progress, "a course of conduct that brings us close to the level of the ideal servant that the leadership bodies of the Dominican Armed Forces aspire to."

The acknowledgement speech was delivered on behalf of the graduates by Maj Jose Ramon Garcia y Garcia, from the National Police.

In conclusion, a toast was offered in the graduates' honor.

TORTURE IN COUNTRY DISCUSSED AT CONFERENCE

Santo Domingo EL NACIONAL in Spanish 24 Nov 80 p 16

[Article by Joaquin Suero]

[Text] Reporting to the First National Seminar on Torture, which closed yesterday in the Medical Sciences Assembly Hall of the Autonomous University of Santo Domingo, a doctor, a newsman and a politician agreed that torture is still practiced in the country.

Dr Eliseo Rondon Sanchez, the president of the Dominican Medical Association, felt that the absence of medical care or poor medical care represent an indirect form of "torture that is still practiced in Dominican jails."

He clarified that this form of torture is practiced without any political motivations but that it is in keeping with the view that prisoners have no human rights, "including the right to health care."

Leftist leader Rafael (Fafa) Taveras analyzed the conditions in which workers lived under the capitalist system and, in particular under the previous regime of former President Joaquin Balaguer, concluding that "torture has not run its course in our country."

Fafa Taveras added that "the levels of exploitation that this capitalist system is imposing are, however, prompting mounting protests that wind up as growing confrontation throughout the state's political structure."

The leftist leader felt that this situation "leads me to state that as long as the people's major socioeconomic problems are not resolved, as long as capitalist exploitation is not abolished, we will be witnessing the genocide of the working class, as a result of the overexploitation it is undergoing."

He went on to say that "therefore, torture can be halted in our country only through a growing mass struggle that asserts political freedom, and the death certificate of torture can be written out only with the death of capitalism."

Journalist Jose Rafael Sosa stated that "during the 1978-1980 period, the term of office of Mr Silvestre Antonio Guzman Fernandez, torture and cruel, inhuman and degrading treatment and punishments have been practiced."

Nevertheless, Sosa said that we must acknowledge that torture has ceased to be a systematic practice applied to political prisoners.

He also felt that torture is no longer practiced "because public opinion precludes such inhuman behavior on the part of authorities, basically because these officials are certain that they would be reported."

GOVERNMENT JUNTA ADDRESSES CATTLEMEN, LISTENS TO PROBLEMS

Managua LA PRENSA in Spanish 30 Nov 80 pp 1, 12

[Text] The "Facing the People" Program that took place on the evening of Friday the 28th at "La Subasta" was a straightforward and open dialog between Nicaraguan cattlemen and the Government Junta.

In an atmosphere of frank democracy, the cattlemen outlined the problems affecting them and voiced their complaints, ranging from demands for personal security to their questioning of taxes, borrowing systems, the shortages of basic products, smuggling and, finally, the Nicaraguan diet, which is known colloquially as "the cream of the crop."

The cattlemen and the government authorities agreed on many points, including a search for ways to resolve problems.

Juan Manuel Caldera, from the Managua Cattlemen's Association, voiced concerns that met with immediate responses both from Dr Arturo Cruz and Commander Daniel Ortega Saavedra.

Caldera Calls For Guarantees

Juan Manuel Caldera, a member of the Association of Brahma Cattle Farms, had this to say:

"As you have been saying, this is a quite clear demonstration of our work-related determination to overcome all our difficulties, as our commanders have said. But there are serious problems.

"These problems are:

"One: personal security. We are here; those who are going have already left.

"We are here to work, but we want guarantees for doing it. (Applause)

"We want to know that we are not going to wind up like Jorge Salazar.

"Because...we do not want to kick the government out; rather, we want to work shoulder to shoulder with you."

We Want the Facts

"We are concerned about something else," Juan Manuel Caldera went on to say, "and this is my second question. There has been talk of loans and the many things that are going to get done, as Dr Cruz mentioned, but even if they are not pleasant, what we want are the facts.

"Our export quota was not filled, gentlemen.

"It was envisaged under Plan 80, but based on the little that I know, we are giving up $13 million dollars.

"We need to stimulate production, and this can be done only on the basis of economic incentives and on the basis of the taxes that have been levied without the cattlemen's trade union having been consulted, because we have never been taken into account."

A Country of Privileges

"I repeat that we want to work. Give us the opportunity to do so, because we are capable of producing. Nicaragua is large and has everything that Central America does not.

"Nicaragua has more cattle than the entire isthmus. It is one of the few countries in the world in which 60 percent of the national territory can be turned into grazing land.

"Let us make use of this blessed homeland called Nicaragua."

All Should Get Involved

Responding to Mr Juan Manuel Caldera's comments and views was Commander Daniel Ortega, a member of the Government Junta, who made the following remarks:

"We want to take this opportunity to reaffirm the decision that the Directorate of the Sandinist National Liberation Front made unilaterally before our victory, back around 1977, when the October offensive was on the way, when the group of 'The Twelve' emerged, the decision to guarantee the involvement of businessmen, merchants, etc, not only in the struggle against the dictatorship but also in the future revolutionary undertaking.

"When the Sandinist Front called on Mr Alfonso Robelo and Mrs Violeta Barrios de Chamorro to join in setting up the National Reconstruction Government Junta, it also did so unilaterally, without any sort of pressure, without having any sort of pact with the MDN [Nicaraguan Democratic Movement] or any business group.

"The decision was made in accordance with a political analysis, and it was a patriotic decision to bring all economic, social and political sectors that

had not been seriously committed to the Somoza dictatorship into the country's future reconstruction.

"Thus, the Sandinist Front's decision, which the Government Reconstruction Junta has complied with, is something that endures.

"We think that that is the Nicaraguan Revolution's great contribution to Latin America and the world."

A Revolution That Does Not Sweep Others Away

Ortega went on to say that "this is a revolution that does not sweep away the other social and economic sectors; instead, it seeks to integrate them to benefit the historically underprivileged sectors.

"The point is to join forces, not to exclude some; not, however, to strengthen a specific group but to strengthen the entire country, to strengthen the nation, to strengthen the workers, to strengthen the Nicaraguan people.

"So then, this decision is still one of principle for the Sandinist Front. What is at stake here is its political and leadership capabilities."

Failure

He then stated: "If for 'x' or 'y' reason the revolution is ever forced to shut down and sweep away the businessmen, merchants or major cattlemen, well, simply our undertaking will have failed.

"Or if the revolution were to turn to the right, the undertaking would also be a failure.

"Thus, our challenge is to develop a process in which all social, political and economic sectors can take part."

The Salazar Affair

"Now then," Commander Ortega argued, "logically, as long as the Nicaraguans who remain in the country do not conspire against the revolutionary people's government, they have nothing to fear, but we feel that mention of Mr Salazar is out of place, because as long as he did not conspire against out revolution, as long as Mr Salazar did not engage in attacks on our revolution, he had every guarantee.

"But a person who begins conspiring simply places himself on the opposite path, drifting away from the revolution's possible proposals.

"He places himself on opposing ground to fire at the revolution, to destroy it and to try and impose his own solutions.

"In that case, the situation is different. So, there are and will continue to be guarantees here, because the Sandinist Front's ability to lead is at stake."

Guarantees for All

"We will give guarantees to all Nicaraguans who are willing to take part in the country's reconstruction, regardless of resources, be they many or few.

"But...there can be no guarantees for those Nicaraguans who conspire against the revolution, whether they are millionaires or poor, because there are also counterrevolutionaries of humble extraction, and the responsibility here is not, logically, only the Sandinist Front's.

"We are going to fight. We are trying to make this undertaking possible, because it has created expectations in Latin America, it has created expectations throughout the world, and there are those who would like to see Nicaragua's private sector disappear, who would like to see businessmen, merchants and cattlemen disappear, so that they can say, well, the Nicaraguan revolutionary undertaking is not possible. That is why we are determined to keep the undertaking going, and it will be kept going to the extent that you too help as much as you can."

Grassroots Pressure

Ortega asserted: "To the extent that we bolster production, which is a key point, we are going to lessen the social pressures on us, because there are social pressures here. We are not going to deny it.

"Although it is true that the economic situation of cattlemen and growers here is being hard hit, they do have certain resources and certain defenses.

"Imagine the situation of rural and city workers. They are in more difficult straits because they are also suffering the impact of an economy that is being battered by the domestic and world economic situation."

CSN DOCUMENT OUTLINES ORGANIZATION'S STRUCTURE, PRINCIPLES

Managua BARRICADA in Spanish 3 Dec 80 p 4

[Text] It is with the greatest satisfaction that BARRICADA, the newspaper of the Nicaraguan people's revolutionary vanguard, offers all its readers, especially the hundreds of thousands of workers and peasants, this historic document, which reflects the loftiest achievements made to date in connection with working class unity.

This document, which explains the nature of the Labor Union Coordinator of Nicaragua [CSN], its basic principles, its battle plan and its bylaws, must henceforth become a guide for unified labor union action, aimed at intensifying the workers' class unity. We issue a fraternal appeal for its extensive dissemination by means of posted notices in all work centers, schools, state institutions and peasant districts. Let there be no Nicaraguan who is unfamiliar with this historic step to unify the driving forces of the revolution. We also await information concerning the results of the workers' discussions of this matter, and their comments; our pages are available for this purpose.

I. What the Labor Union Coordinator of Nicaragua Is

The Labor Union Coordinator of Nicaragua is the voluntary union of the following labor federations and organizations:

a. Confederation of Labor Union Action and Unity (CAUS)
b. Federation of Health Workers (FETSALUD)
c. Union of Nicaraguan Journalists (UPN)
d. Agricultural Workers Association (ATC)
e. National Association of Nicaraguan Teachers (ANDEN)
f. Confederation for Labor Unification (CUS)
g. Workers Front (FO)
h. General Labor Confederation (Independent) (CGTi)
i. Sandinist Workers Federation (CST)

The Labor Union Coordinator of Nicaragua has been established for the purpose of developing in our country united action among the labor organizations, as a process that should and must lead, step by step, to the most deep-seated revolutionary unification of our labor movement, which will make it progress toward more compact forms of unity, and which will lend it all the strength that it needs for national reconstruction and for making the conquest of its most cherished class aspirations a reality.

The labor organizations comprising the Labor Union Coordinator of Nicaragua include and organize all workers, both men and women, manual and intellectual, into a union, regardless of their race, political or religious convictions, or their varied trades occupations and special fields of endeavor, who voluntarily join its ranks through their unions or rank and file organizations.

The Labor Union Coordinator of Nicaragua respects the ideological and political concepts held by the leaders and rank and file of the unions and federations that comprise it; but, although it upholds the principle of freedom of thought and speech, it rejects for its policy all theories and positions that are incompatible with the interests of the working class and the process of revolutionary change in our country. Also, it does not tolerate ambitions for supremacy among its members, in the interests of the perpetuation of democracy and brotherhood in its ranks, and the development of unity among the organizations which comprise it.

CSN [Labor Union Coordinator of Nicaragua] coordinates, advises and backs all the labor federations and organizations affiliated with it for the general performance of their overall tasks, in accordance with the role that is incumbent on it during this phase of the country's national reconstruction.

II. Basic Principles of the Labor Union Coordinator of Nicaragua (CSN)

1. CSN will cooperate with the member federations to unite and mobilize the laborers and workers in general for performing all the tasks that we have set for ourselves under the revolutionary banners of the working class, to defeat and isolate from the masses the forces of imperialism, the native oligarchy and the bourgeois parties.

2. CSN upholds the principle of the firm unity of the working class and the poor peasants, recognizing these forces as the driving forces of the Sandinist Popular Revolution.

3. CSN will act to bring about the consolidation of the working class and the development of its supreme role in the political, economic and social changes that we are pursuing, and in the battle to intensify the Sandinist Popular Revolution.

4. CSN, in accordance with the principles of the workers' right to freely elect their leaders and to revoke their mandates when they are remiss in their duties, is promoting collective, democratic discussion of issues, and the use of criticism and self-criticism as a means of correcting the shortcomings and eliminating the mistakes, flaws and weaknesses in the discharge of their functions.

5. CSN is not part of the state apparatus; it has its own leadership as a broad organization of the workers.

6. CSN is not an organization of any political party. Affiliated with it are the labor federations and national organizations with equal rights and obligations, regardless of their political orientation.

7. CSN strives for the unity of the working class in a Single Workers Federation, which responds to the historic tasks of the labor movement.

8. CSN upholds the principle of proletarian solidarity and the cooperation of workers from all countries in their struggle for national liberation and for the social progress of their peoples.

9. The Labor Union Coordinator of Nicaragua makes note of its firm support for the National Reconstruction Government Junta, and its resolute backing for the revolutionary leadership of the Sandinist National Liberation Front.

III. CSN's Battle Plan

1. To support, fortify and defend the Sandinist Popular Revolution, the national sovereignty and the self-determination of our people from the attacks of the native and foreign reactionaries, and from the dangers of internal counterrevolution or imperialist intervention in any of the forms in which it appears.

2. To strive consistently and zealously on behalf of a constant increase in production and productivity, and the fulfillment of the goals of national reconstruction.

3. To give an impetus for greater participation by the workers in the Sandinist Popular Militias, under the leadership of the Sandinist Popular Army (EPS), so as to give the laborers and workers martial skills so that they too may militarily defend the revolution and its progress.

4. To strive for the preparation of a new wage scale based on the country's economic situation, a measure intended to benefit the workers who earn the lowest wages, and, at the same time, to adopt effective measures for curbing speculation.

5. To protect the workers' rights, and to strive to improve their living and working conditions. For these purposes, to strive to meet the social and labor requirements that will make it possible to raise their real wages.

6. To counter the inconsistent positions calling for indiscriminate wage hikes which only hurt the real interests of the working class in general, and which are obstacles to the process of the country's economic reconstruction.

7. The solution to every labor dispute or problem should first be attempted without resorting to a stoppage of work. This by no means represents a renunciation of the right to strike, but what we want is to assert that strikes should be the last resort of the workers, and that all expedients should be exhausted before resorting to them; because every work stoppage undermines production and interferes with the fulfillment of the plans and programs of the Government of National Reconstruction and the strategic design of our Sandinist Popular Revolution.

8. To work and cooperate for the revision of the Labor Code, so that it will befit the country's revolutionary status.

9. To battle against bureaucratism, abuse of authority, negligence and waste in the state enterprises.

10. To make a constructive, revolutionary contribution to the improvement of the state administration and to the greater success of its activity.

11. To strive to prevent the flight of capital and damage to production in the private business firms.

12. To strive for the fulfillment of the economic reactivation program for the people's benefit, and for the workers' active participation in the economic management of each business firm.

13. To arrive at, and fulfill the collective work contracts in all business firms, as a principal means of establishing the workers' rights and duties.

14. To strive for the fulfillment of the labor legislation and the administration's obligations toward the workers.

15. To strive for the implementation of the occupational safety and health measures, in order to preserve the health and lives of the workers.

16. To heed the complaints, criticism and suggestions of the workers, and to help them, insofar as is possible and fair, to resolve the problems cited therein.

17. To accept and encourage the workers' proposals that are useful to the development of the economy.

18. To foster and cooperate in the development of sports, recreation, leisure time activity and culture among the workers.

19. To organize volunteer work as a contribution from the workers to the economy, and as a reflection of a new revolutionary attitude toward work.

20. To continue enhancing the political and ideological education of the workers.

21. To attend to and develop the workers' technical self-improvement.

22. To constantly raise the workers' labor consciousness, most particularly through the intensification of work discipline. For this purpose, there will be promotion of:

a. Daily punctual attendance at work
b. Maximum utilization of the work day
c. Increased production with the required quality
d. Constantly increased work productivity
e. Respect and care for the people's property
f. Savings of raw and other materials, fuel, electricity and water
g. Efficient maintenance of equipment and machinery

This will be applicable to private business firms.

23. To give an impetus to the development of our economy and the social progress of our people, we shall strive to:

a. Promote the opening of the discussion aimed at promulgating an intensely democratic, antifeudal, antioligarchical and anti-imperialist agrarian reform, that will

serve as an essential foundation for the development of our productive forces, of the national economy and of the social progress of the peasants and the entire Nicaraguan people.

b. Retrieve all our natural and national resources.

c. Achieve the agricultural-livestock and industrial development of Nicaragua based on the maximum utilization of its own natural resources and its own raw materials.

IV. Bylaws of CSN

1. Concerning the CSN's decisions.

a. The decisions that are made within the Labor Union Coordinator of Nicaragua will be arrived at through consensus; in other words, resolutions will always be reached unanimously.

b. Every matter to be resolved will be discussed previously, but it will be allowed to discuss documents prepared earlier, provided they are sent to each federation 4 days beforehand.

2. The relations among the various entities affiliated with the Coordinator will be marked by mutual respect, and democratic standards will at all times prevail over any position of supremacy.

3. Public statements made on behalf of CNS:

Public statements on behalf of CSN may be made only on the basis of decisions reached by the Executive Committee. However, its members, as representatives of their respective organizations and at all times on behalf of the latter, are at liberty to make public statements regarding the work of their organization in CSN.

V. Leadership Organs of the Labor Union Coordinator of Nicaragua

1. The National Labor Union Assembly of CSN

The superior organ of CSN will be the National Labor Union Assembly, which will be comprised of the national executive committees of the labor union organizations which are its members (with a number of leaders not to exceed seven for each organization), five general secretaries of departmental committees of each organization, and general secretaries of rank and file unions, according to the notice agreed upon by the CSN Executive Committee, which will determine proportionately the number of workers affiliated with each organization. An attempt will be made to have the attending unions be the largest in the economic area that they represent, and based on the number of their members.

The National Labor Union Assembly will meet regularly every 6 months, and in special session at the decision of the CSN Executive Committee

The National Labor Union Assembly will devise the work line to be carried out by the unions in the same manner as was used by the First Assembly for Unity of the Carlos Fonseca Workers; and it will be informed of, and evaluate the work done by CSN during the period between assemblies.

2. The National Council of CSN

The National Council of CSN is the meeting of all members of the National Executive Committees of the labor union organizations which comprise it (with a number of leaders not to exceed seven for each organization).

The National Council of CSN will convene regularly every 3 months, and in special session at the decision of the National Executive Committee.

At its meetings, the National Council will analyze the fulfillment of the decisions of the National Assembly, and will recognize the measures that should be taken for the total success of the established plans.

The National Council will be the top-ranking entity of CSN leadership between one National Labor Union Assembly and another.

3. The National Executive Committee of CSN

The National Executive Committee of CSN consists of the general secretaries of the labor union organizations, or their standing delegate, plus one alternate with equal decision making authority who is a member thereof.

The members of the National Executive Committee will elect a coordinator and a deputy coordinator, who will discharge the functions of a secretary. They will be responsible for overseeing and coordinating the work of this Executive Committee for a period of 6 months, duties which will be rotated among all its members.

The National Executive Committee will meet regularly once a week, and in special session when the coordinator and deputy coordinator so stipulate, or at the request of any of its members, conveyed through the coordinator.

To back and aid the work of the National Executive Committee, the following working commissions will be created:

a. Commission for Organization and Finance
b. Commission for Labor and Social Affairs
c. Commission for Production and Volunteer Work

These commissions will consist of the members of the executive committees of the organizations comprising CSN (one for each organization) and participating in the National Council.

The Executive Committee of CSN may establish other working commissions, as it deems fitting and necessary for the performance of the tasks.

The coordinator, in agreement with the deputy coordinator, will send to each member of the Executive Committee the agenda for the meeting 48 hours in advance of the date set. All members of the Executive Committee are entitled to request a discussion of any aspect of the agenda, notifying the coordinator thereof 4 days prior to the meeting.

The coordinator and deputy coordinator are responsible for sending the minutes of the Executive Committee meeting to all its members within a period of 48 hours following the meeting.

4. Official Publication of CSN

Periodically, a CSN publication will be put out, which will be its official organ. Each issue will contain reports on the activities carried out and the work that must be done at the time. It will also print articles about the different organizations that comprise CSN which will intensify the workers' unity, within the context of the decisions that have been made.

5. CSN in the Departments

CSN Departmental Executive Committees will be formed in the departments in a manner similar to that of the organ of national leadership, to establish the mechanisms necessary for the continuity and fulfillment of the CSN's decisions.

For this purpose, each month a meeting will be held between the National Executive Committee and the general secretaries of the Departmental Committees of the organizations comprising CSN, to coordinate and pool the efforts for common action to execute the decisions emanating from the national entities and all the proposals that may arise on that level, to intensify the unity of the workers around the defense and consolidation of the Sandinist Popular Revolution.

VENDORS ASK 'LA PRENSA' TO HELP INVESTIGATE COMPLAINTS

Managua LA PRENSA in Spanish 29 Nov 80 pp 1, 12

[Text] On an invitation from APOCROBAMA, the association of Oriental Market vendors, journalist Pedro Joaquin Chamorro Barrios held a lively dialog with more than 200 small merchants on Thursday evening.

Speaking colloquially, the market vendors shared their concerns and problems with Chamorro in a brotherly discussion after hearing a short talk on freedom of expression that they requested of the newsman.

Chamorro Barrios mentioned the decrees issued by the Government Junta that restrict freedom of the press in Nicaragua, as well as the predominance of the partisan media alined with the Sandinist Party.

Continual Harassment

"As independent media," he pointed out, "we have been continually harassed by all of the official media in an ongoing campaign of slander and insults."

In their questions the Oriental merchants expressed their concerns over problems such as Nicaragua's international image, restrictions on freedom of the press and the withdrawal of several political parties and union representatives from the Council of State.

But the market vendors expressed their main concerns spontaneously.

"We can't put up with the CDS [Sandinist Defense Committees]," said one of the women at Oriental in speaking out against the inexplicable attitude of the coordinator of the 'Luis Alfonso Velasquez' block, who accused them of being reactionary because they did not attend the front's latest demonstration.

"You're Robelo backers," he told them. "Why don't you ask Robelo for rice and corn." He then threatened to kick them out of the market under the "laws" of the intendancy.

"What can we do about the CDS? The entire market can't stand it," she said. Chamorro Barrios told them in reply that only by protesting could they bring out these irregularities, which most of the people are against.

Another Headache

The second "big headache" of the market people is the creation of the wholesale and retail markets, of which they have heard no further news. Most of them cannot afford a new spot in the market under construction and do not want to leave their children with strangers while they are at work, which they have been told will be the case when the new facilities are opened.

"LA PRENSA, which is the people's mouthpiece," said one of the vendors, "ought to investigate what this market is going to be like." He underscored his concerns over the future of the vendors, pushcart vendors, drivers and other people who work at the market and who live "from day to day" because they have no money. "What is going to happen to these people who have neither stalls nor stores, the poorest people of them all?" he asked.

Investigative Efforts

Chamorro promised that LA PRENSA would conduct a journalistic investigation into the plans for the wholesale market, its positive as well as its negative aspects.

The problem of a Villa Venezuela CDS that wants to remove several teachers from a school was brought up by another woman vendor, who spoke out against this further example of an improper course of conduct by people who are not Education Ministry authorities.

The Masses

"We were comrades-in-arms with Pedro Joaquin Chamorro during a time when we were persecuted by eavesdroppers and the civil reservists of the Somozist guard. But they never told us because we were against them, they were going to stop us from being merchants or doing any sort of work, as is happening today with all these people who claim to be the eyes, ears and who knows what else of the government," said the merchant, who was interrupted on several occasions by outbursts of applause.

Recalling how the entire market took to the streets on several occasions to defend LA PRENSA throughout the years of the dictatorship when the paper was threatened for championing the people, the impromptu speaker said: "And today they treat us like counterrevolutionaries, as if we were big Somozists during those days.

"If we don't do what they want, these masses say that we can't work. Well, these people just don't know God or they don't know that He provides these supplies so that man can have the strength to live with his entire family...We are not counterrevolutionaries. We are with the revolution. Asking for the right to work is not being counterrevolutionary," he pointed out in conclusion as he was interrupted by applause.

Not for Loafers

"I am definitely in complete agreement with you that asking for the right to work is revolutionary and that taking the right to work away is counter-revolutionary," replied Chamorro, adding that the revolution is not for loafers; it is for hardworking people like the workers at the market, who perform an extremely important social function with the sweat of their labor.

Another vendor complained about a woman CDS coordinator who uses the market stall leasing cards to claim sugar shipments and then resells them to the vendors through a middleman at a higher price, as well as other similar problems.

In several other comments the vendors defended their right to belong to the associations that they want to join and not to join the ones that they do not want to be members of. They also complained that several CDS members carry weapons and commit many injustices in showing off their power.

In addition, on several occasions they demonstrated in support of LA PRENSA, which they called "the only paper of the people." One of the last questions was why a paper with what they regarded as "light circulation" had taken over what had always been LA PRENSA's motto, "the paper of Nicaraguans." Chamorro Barrios' answer to them was that the Nicaraguan people themselves conferred this title every day with their acceptance of LA PRENSA, which they preferred to the other papers, which can take whatever title they please because no one can deny them the right to fool themselves.

EDITORIAL URGES 'HIGHER' PROFILE IN EL SALVADOR

Caracas EL DIARIO DE CARACAS in Spanish 14 Dec 80 p 6

[Editorial: "El Salvador, Washington and Caracas"]

[Text] El Salvador is on the threshold of a new period of upheaval wherein the mere fact of having appointed a civilian president (in this instance, Napoleon Duarte) is not necessarily of critical importance.

The United States and its discouraged government is belatedly applying the resources of power and a measure of economic and military assistance to establish civilian preeminence in the Government Junta. Many may now wonder about the force of the principle of non-intervention, and others may justify the United States' decision by claiming that it benefits the establishment of democracy in that country. The wisdom of Washington's decision to impose stringent conditions on its position toward the Salvadoran regime will be ascertained only as events transpire.

The latter, in turn, are subject internally to the willingness of the leftist belligerent forces to accept the new reality of cooperating with the Christian Democrat, Napoleon Duarte; and the terrorism of the right and the attitude of the Salvadoran Armed Forces in the new political scheme remain to be seen. In the final analysis, it will now depend on Napoleon Duarte to arrive at the truce that will enable the country to recover from the bloodshed and to break the cycle of violence in that nation.

The prognostications for Duarte's success tend to be skeptical. The left is preparing its "final offensive," and will announce a parallel cabinet, attempting to gain international backing and recognition, on the basis of the precedent set by the Sandinist Front in Nicaragua. In view of this prospect, Duarte will have to have very strong support, both internal and external, if the effort at pacification which now seems so difficult and far removed is to be expected of him.

For Venezuela in particular, the situation poses the dilemma of openly assisting a regime headed by Duarte. This would probably entail criticism from the opposition of the politicization of the assistance, and would create internal problems. In the event that it were to maintain the low profile that currently typifies Venezuela's presence in El Salvador, Venezuela would run the risk of losing the historic opportunity to "consolidate and uphold democracy on the continent." Jimmy Carter's government, in its final month, does not have much to lose in the Salvadoran predicament.

From Venezuela's standpoint, however, the political and social development in that country is fundamental, and its success or failure could well have an effect on the next 2 years of government of the administration of President Luis Herrera Campins. It is a decision which cannot be postponed.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

OLADE APPROVES LATIN AMERICAN ENERGY INTEGRATION

Mexico City EXCELSIOR in Spanish 29 Nov 80 Sec A pp 3, 30

[Text] Today, the 11th Session of Ministers of Mines and Energy of the 25 countries which make up the Latin American Energy Organization (OLADE) adopted a strategy and a plan for the development of their resources which will guarantee them, in addition to their independence, "the rational, optimal and fitting utilization of energy as a basis for the goals of independent, self-sustained, economic and social growth of the countries in the region."

This plan, which was adopted in view of the complexity of the worldwide economic and political plans which have cropped up in the area of energy, was devised by Mexico, Brazil, Colombia, Costa Rica, Ecuador, Nicaragua, the Dominican Republic and Venezuela "within a context of diversification and rationalization of production and consumption, based on the development of the natural resources that are available in the region."

The meeting was opened this morning by Diego Uribe Vargas, the Colombian foreign minister (President Turbay Ayala did not attend), who emphasized that the OLADE member nations must unite in the most extensive integration with respect to energy, so as to maintain their independence.

Manuel Torres, head of the Cuban delegation, complained about the impossibility of reaching agreement on "the global negotiations concerning the position of some governments of these industrialized countries, primarily the United States, whose contemporary economies have been built up on the colonial, neocolonial and imperialist system."

The Cuban delegate added that, after 15 years of negotiations, "if we take the first UNCTAD [United Nations Conference on Trade and Development] as a starting point, it is confirmed once more that they are not willing to restructure the world economy for the benefit of the entire international community, rather than that of a few nations."

The Cuban, Torres, declared: "The so-called energy crisis is part of the current problems involving international economic relations and, since this is so, the unity of the developing world, based on mutual cooperation, is important for solving them; and OLADE is an appropriate framework on the regional level for this purpose."

The Program Was Upheld

At the meeting, Humberto Calderon Berti, the Venezuelan minister of mines and energy, upheld the "Program of Energy Cooperation for Central American and Caribbean Countries," which was signed on 3 August in San Jose, Costa Rica, by the presidents of Mexico and Venezuela, Jose Lopez Portillo and Luis Herrera Campins, respectively. The document stresses that, "In order to attain their goals of economic and social progress in an atmosphere of peace and freedom, action involving unified cooperation is indispensable among the developing countries."

Mexico and Venezuela reiterated the fact that they propose to continue providing for "the domestic consumption of oil of imported origin, in the nations of the area, allocating for this purpose a total volume of up to 160,000 barrels per day, and contributing to the pertinent government financing." The countries which are the beneficiaries are Barbados, Costa Rica, El Salvador, Guatemala, Honduras, Jamaica, Nicaragua, Panama and the Dominican Republic.

The meeting of ministers of mines and energy also backed the recent position assumed by the government of Ecuador, "in the defense of its maritime rights," and condemned "the embargo ordered by the United States Government on tuna exports from Ecuador and other Latin American countries to that country's market."

Carlos Alzamora, permanent secretary of the Latin American Economic System (SELA), also emphasized, as an example of cooperation, the Mexican-Venezuelan agreement on energy assistance to the Central American and Caribbean nations. He urged Latin America to "face the challenge of regional energy cooperation on behalf of its own interests."

The Peruvian, Alzamora, added: "The region's vast energy potential must cater primarily to the political and economic interests and requirements of Latin America; and autonomy in the control and disposal of the region's energy resources can only be assured within the context of a Latin American program."

Consolidating the Autonomy

The SELA secretary also observed: "The progressive discovery of new energy resources in strategic areas of the region makes our action even more advisable within a strong national front which, combining the interests of producers and consumers in a unified, equitable fashion,will make it possible to better withstand the pressures, and to consolidate Latin America's autonomy in the field of energy as an essential requirement for its independent development structure."

The Argentine under secretary of electricity, Bernardo Bronstin, remarked that, although his country is not a member of OLADE owing to difficulties at the beginning of the prior negotiations, it is in accord with its main policies, especially with regard to the view that "it is necessary to rationalize consumption, to diversify the sources of production, to explore and control hydrocarbons and to burn the least amount of fuel to produce more electricity."

He stressed that Argentina is calmly facing its energy future, because of its vast potential; adding that 92 percent of the consumption is provided for with hydrocarbons. But his country is also developing other sources, particularly nuclear and hydroelectric power.

At the meeting, approval was given for a proposal to the effect that, in view of the current situation and the worldwide energy prospects, the aspiration of the Latin American countries which are members of OLADE in their relations with the OPEC nations should be the following:

The potential reductions in hydrocarbon production in the OPEC member nations should not affect the volumes exported to the developing countries and, in addition, there should be a guaranteed supply of hydrocarbons required for the economic and social development of those countries.

Special attention should be paid to the concluding of long-term sales contracts at official prices among the Latin American governments, eliminating from those contracts the terms that prevail on the spot markets.

PEMEX TO PROSPECT ON CUBAN COASTAL SHELF

Mexico City EXCELSIOR in Spanish 4 Dec 80 Sec A p 4

[Text] Mexican technicians will explore in search of oil in Caribbean waters belonging to Cuba, and there will be an increase in sales of refined and petrochemical products to the West Indian island, in accordance with the contracts that were signed during the visit paid to that nation by engineer Jorge Diaz Serrano, general director of PEMEX [Mexican Petroleum].

Technicians from PEMEX are exploring the continental shelf of China, as well as in Nicaragua and Costa Rica, and they will soon extend that work to Cuba and Panama.

These PEMEX activities (of the leading exploring nation of the world during the 1970's) are reinforcing the initiation of the World Energy Plan proposed by President Jose Lopez Portillo to the United Nations.

As Diaz Serrano announced shortly before leaving for Cuba, an attempt is being made to begin drawing the geological map of the continent, and to foster the assurance for the nations with which contracts of this type have been signed that they will be able to support their autonomous development with the utilization of natural resources.

Following the visit paid to Cozumel, Quintana Roo, by Comdr Fidel Castro, the West Indian government requested Mexico's advice in solving serious problems that had cropped up for it in the Nico Lopez refinery in Havana.

Mexican specialists studied that situation, and resolved it.

During Diaz Serrano's visit to Cuba, the appropriate mechanisms will be sought to enable the technical advice to continue.

PEMEX TO EXPORT TO HAITI, HONDURAS, PHILIPPINES

Mexico City EL SOL DE MEXICO in Spanish 6 Dec 80 Sec B p 3

[Text] Starting next year, Mexico will supply increasing volumes of crude to Honduras, Haiti and the Philippines, until they reach a total of 19,500 barrels per day.

In addition, insofar as Haiti is concerned, a special contract was signed for the provision of up to 14,800 kilograms of liquid gas per day.

The foregoing announcement was made by Mexican Petroleum, which explained that up to 6,000 barrels per day would be exported to Honduras, 3,500 to Haiti and 10,000 more barrels per day to the Philippines.

PEMEX reported that the Mexican oil supply to Honduras is related to the San Jose Agreement signed in Costa Rica by President Lopez Portillo of Mexico and President Herrera Campins of Venezuela.

As for the exports to Haiti, this document was signed with the Ministry of Mines and Energy Resources of that country.

The Philippines will receive up to 10,000 barrels per day of Mexican crude, through the Philippine Oil Company, holder of the pertinent contract.

PEMEX noted that, in accordance with the terms arrived at for each contract during the respective talks, the oil supplies to the aforementioned countries will start during the first half of 1981.

The respective contracts were concluded on 26 November of this year for Haiti, on 27 November for the Philippines and on 3 December for Honduras.

PEMEX CRUDE TOO COSTLY FOR DOMINICAN REPUBLIC

Mexico City EL SOL DE MEXICO in Spanish 6 Dec 80 Sec B pp 1, 4

[Text] Santo Domingo, 5 December (AP)--Today, the technical secretary of the Dominican presidency stated that the contract to finance the Mexican oil supplied to the Dominican Republic which was established through the San Jose Agreement has met with several obstacles insofar as its implementation is concerned, including the fact that the Mexican hydrocarbon is more expensive than the Venezuelan.

Ramon Martinez Aponte, who took part in three Mexican-Dominican meetings to attempt to implement that contract, said that a barrel of Mexican oil costs the Dominican Republic about a dollar more than that supplied currently by Venezuela, which provides 96.5 percent of the oil that this nation consumes.

Martinez Aponte also remarked that the cost of transportation from Mexico is 400 percent more expensive than from Venezuela, and that the Mexican oil is a heavy crude which cannot be processed at present in the Dominican refinery.

The Dominicans use five types of fuel, processed by the state refinery established with joint capital and the Shell company, and for this purpose a reconstituted oil supplied by Venezuela is used.

Martinez Aponte said: "we have hope, but not assurance," that a solution will be found to enable the Dominican Republic to start the process of utilizing the oil financing based on the agreement signed in San Jose.

This agreement, from which the Dominicans are already benefiting on the part of Venezuela, allows the country to receive financing lines for oil purchases representing 30 percent of half of the annual bills for hydrocarbon purchases, estimated at about 14,000 barrels per day, at an annual cost of some $60 million.

The Dominican Republic estimates that, in 1980, it will spend a total of about $500 million on oil purchases.

Last week, President Antonio Guzman met with his Mexican colleague, Jose Lopez Portillo, in Cancun (Mexico), where the rulers and their ministers discussed the plan for the financing agreement and other topics directed toward an increase in the trade between the two nations.

However, Martinez Aponte stated that no solution was reached that would enable the Dominican Republic to engage immediately in importing Mexican oil. And he commented: "If we were willing to accept the higher cost, amounting to approximately a dollar more than the price of the Venezuelan oil that we are receiving, we could start importing Mexican oil into the country immediately. But we cannot embark on a financing plan when we would multiply our current costs involved in the purchase of hydrocarbons."

PARANA TO ESTABLISH SHALE EXPLOITATION PROGRAM

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 23 Nov 80 p 6

[Text] Curitiba--Parana's southern region is one of the poorest in the state. Its only two resources--pine trees and mate--are disappearing, and the poor soil makes large agricultural projects impossible. But its inhabitants were the only ones in the state during World War II who did not suffer from the fuel shortage. The reason is that a huge reserve of shale exists there, in some places as an outcropping, and it is very easy to extract. It became common practice in that period to obtain fuel oil by small-scale retorting of the shale.

Now, with the new crisis, the state government intends to resume the experiment by establishing the Shale Microretorting Program as part of the Parana Energy Plan. Last week Governor Ney Braga submitted to Minister Cesar Cals a proposed agreement between the Parana Electric Energy Company (COPEL)--the organization responsible for carrying out the Parana Energy Plan--and PETROBRAS [Brazilian Petroleum Corporation]. That agreement covers reestablishment of the program's possibilities both in the area of technological cooperation and in the determination of the area that can be exploited by means of the system in question.

The potential of the Sao Mateus region is already well known. Studies by PETROBRAS show that in an area of 64.5 square kilometers with a thickness of 30 meters, exploitation of the existing shale reserve can produce 560 million barrels of oil, 3.9 million tons of liquefied gas, 19 billion cubic meters of fuel gas, and 8.7 tons of sulfur. The oil content totals 6.4 percent in the upper layer and 9.1 percent in the lowest layer. That potential is justifying construction by PETROBRAS of an industrial shale plant, which it may begin building next year at an investment of 114 billion cruzeiros.

Why, then, is the state government concerned to propose small-scale exploitation? Pedro Demeterco, COPEL's director of energy development, lines up a number of reasons to justify the proposal. Among them, he regards as important "the fact that shale exists in a poor and extremely needy region that could be directly benefited by a small-scale project." He explains that it is not a question of setting microretorting up in opposition to the large-scale exploitation being proposed by PETROBRAS. The Sao Mateus reserve includes large areas of exploitable secondary deposits, and--a very important point for Pedro Demeterco--they can be exploited by private enterprise.

Microretorting is a simple process of obtaining oil by heating the rocks containing shale. During the war, the shale was placed in tightly closed cast iron drums,

each having a small tube through which the gas could escape and then be transformed into oil. Heating with a simple flame was the only step needed to obtain it, and the oil thus obtained was placed directly into the vehicles, which could thus be used throughout the period of the fuel shortage.

Today's proposal is more sophisticated, since COPEL is intent on finding a model that will "be attractive to private enterprise." But the principle is the same: an iron retort and some kind of heating. What Demeterco has in mind is "a viable and cheap alternative using simple technology."

A prototype of the system does not yet exist, but the technological solution can easily be found with the help of PETROBRAS, and Demeterco feels that such cooperation will be possible without problems because "the know-how at PETROBRAS is national property." In his opinion, the most important thing now is acceptance of the project, which certainly "will produce shale oil for less than what we are paying now." And its quality will be equal "to the best petroleum from the Middle East, because it is light oil."

Obviously, the oil obtained by microretorting cannot be used as vehicle fuel without further processing, as it was in the past. The oil in question here is rich in all the natural elements of petroleum and will have to be refined for consumption. In its crude form, however, it can be used as fuel oil, for feeding boilers for industrial purposes, or for producing some kind of household energy.

But Pedro Demeterco is also thinking of simple alternatives for extraction, and he feels that it is possible even to set up shale mining cooperatives along the secondary deposits. He says, "Small-scale manual extraction is not going to harm large-scale mechanical exploitation." He also believes it is possible even to form cooperatives for producing oil to satisfy regional consumption requirements. All of this can be done with technology that is simple and accessible to the small producer, who will extract oil on a small scale--from 500 to 1,000 liters per day.

But, he says, this is not simply a matter of "backyard extraction, as it was during the war." With the help of PETROBRAS, it is possible to find simple and cheap ways of setting up microretorts. And he recalls constantly that participation by small producers, in whatever capacity, is important to the whole, "since even today, it is still the small brickyards around Curitiba that produce bricks for the big housing complexes belonging to the BNH [National Housing Bank]."

According to Demeterco, small-scale shale exploitation will not even cause problems in environmental pollution, because "these are not large projects, and the residues can be absorbed by the producers themselves." The state organization for this sector can itself take charge of solving the environmental problems. In addition, the possibility of extracting shale oil means that "even the worthless land in that region will increase in value, making it possible to improve the standard of living of the local inhabitants."

Dreams? Demeterco asserts that they are not. The reaction by Parana businessmen to the proposal has been very positive, and interest in the matter, says Demeterco, "is growing precisely because it is a project suited to the possibilities of Parana's businessmen." He explains that the state's intervention in the project will be limited to "studying, designing, and setting up a project that can be utilized by

private enterprise." Demeterco feels that the Shale Microretorting Program, with its small-scale exploitation, "will work out fine just as it did in the past." For that to happen, all that is needed is the decision to begin it conscientiously or else wait until the absolute lack of petroleum again makes it necessary to search rapidly for new alternatives.

ANNUAL COAL DEFICIT OF SIX MILLION TONS FORESEEN BY 1985

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 30 Nov 80 p 50

[Article by Inacio Luiz Soares]

[Text] Porto Alegre--Brazil will begin 1985 with a deficit of almost 6 million tons of coal annually. And what is more, the country is not prepared to train the 11,900 skilled workers that will be needed by PROCARVAO (National Coal Program). Those conclusions were reached by the Anthracite Coal Seminar sponsored in Porto Alegre last week by the BNDE (National Economic Development Bank). Although they did not draw up a formal final document, the four groups set up during the meeting presented a series of technical recommendations that may help the government when it sets the policy for PROCARVAO.

Reginaldo Treiger, the BNDE's operations manager and a member of the working group on coal prospecting, extraction, and beneficiation, said that the combined estimates by the state governments of Rio Grande do Sul, Santa Catarina, and Parana indicate that the country will be consuming a total of 24.5 million tons of coal annually in 1985 (five times as much as today). PROCARVAO expects to open 18 new mines (10 in Santa Catarina, 6 in Rio Grande do Sul, and 2 in Parana) in the meantime, and they, together with the mines already in existence, will be producing 18.7 million tons annually in that year. That leaves a deficit of exactly 5.8 million tons.

The rough estimates of consumption by sector are as follows: 11 million tons per year for gasification, 5.5 million for the cement industry (between 45 and 50 units), 2 million for steelmaking, 4 million tons for thermoelectric powerplants, and 2 million for other purposes.

The alternative chosen by the group's members for avoiding the shortage--although only partially--is for the cement industry to begin participating in the extraction and beneficiation of the coal it uses. That proposal has already been accepted by the SNIC (National Union of the Cement Industry), which would collect from its members the funds needed to finance the investment.

But there is a problem with time. The SNIC has already been awarded the contract for two coal mines in Rio Grande do Sul (Leao Norte and Seival) that will produce 2.8 million tons annually. After prospecting, it takes from 3 to 5 years for a mine to begin operation, and Reginaldo Treiger believes that even those two deposits may not be producing by 1985.

In any case, the experts have calculated that the project for self-sufficiency in coal for the cement industry will probably require $600 million, of which 20 percent ($120 million) would consist of the industry's own funds. The remaining $480 million would be financed by the FME (Energy Mobilization Fund). In addition to a technical speed-up in opening the Leao Norte and Seival mines, urgent impetus needs to be given to moving ahead with plans for exploring for the 2.9 million tons necessary for meeting the demand from the cement industry in 1985.

Personnel and Funds

Manpower training is another aspect considered fundamental and problematical as far as implementing the program is concerned. Reginaldo Treiger's group estimates that PROCARVAO will absorb 17,000 workers over the next few years. Of that number, 70 percent (11,900) will have to be skilled manpower, but if a firm policy on manpower training is not adopted now, there will be a shortage of workers that may hamper the substitution of coal for petroleum. Honorato Antonio Tomelin, superintendent of technology and environmental protection in the Planning Office of the State of Santa Catarina and coordinator of the group that studied utilization and consumer categories, recalled that the problem becomes even more serious when it is learned that for 20 years practically no one has been studying the use of coal in Brazil.

The experts predicted that a total of $8 billion would be needed from 1981 to 1985 to implement the entire program from prospecting to putting into operation the transportation network needed to carry the coal and its byproducts to the final consumer.

In the three southern states, the phase of prospecting, extraction, and beneficiation will consume about $1.5 billion. In addition to the evaluation and opening of new mines, that project calls for financing the technology of prewashing the coal at the pithead to eliminate heavy impurities.

In the second stage of development, according to an estimate by Rene Lucio Rech, director of research at the Rio Grande do Sul Foundation for Science and Technology--who coordinated the work of the group on technology and combustion, gasification, liquefaction, and other programs--another $3.3 billion will be needed. Those funds are to finance the construction of gasification plants and the adaptation of industrial equipment to use coal instead of fuel oil. The project calls for replacing 95 percent of the oil now used by industry with coal by 1985.

Aside from that, Honorato Antonio Tomelin said his group concluded that another $2.6 billion will be needed to adapt thermoelectric powerplants and steel mills to the use of coal. In this case, $300 million will be spent on the SIDERSUL [expansion unknown] Project in Santa Catarina alone. That plant is to produce 400,000 tons of sponge iron annually.

But the main demand by everyone--chiefly the businessmen--is for the establishment of a firm policy on coal so as to insure not only a dependable and steady supply but also stable prices based on costs and a suitable transportation infrastructure.

BRIEFS

SOLAR ENERGY LIMITATIONS--Last week Cesar Cals, minister of mines and energy, received the final report on the use of direct solar energy that was developed by a task force set up in August. The conclusion reached by the task force is that the consumer market is still in an embryonic stage and therefore requires incentives such as subsidized financing, a market reserve, technical demonstration projects, and other facilities. The task force, consisting of members of the MME [Ministry of Mines and Energy], PETROBRAS [Brazilian Petroleum Corporation], ELETROBRAS [Brazilian Electric Power Companies, Inc], private enterprise, and the CNPq (National Scientific and Technological Development Council), explained the reasons why Brazil's consumer market is still of an embryonic nature as regards the use of solar energy: the initial cost of installing the equipment is quite high with amortization of the long-term capital investment, and there is a great lack of technical familiarity with the subject. That is why, even considering its use for water heating, seed drying, the desalination of salty or brackish water, steam generation, refrigeration, and photovoltaic conversion (the transformation of solar energy into electric energy), national industry's current annual capacity does not exceed 108,000 square meters of solar collectors--corresponding to only 150 equivalent barrels of petroleum daily. The solution recommended by the task force consists of encouraging the consumer through government incentives on a wide scale. CHICOASEN INVESTMENT IS NOW 21 BILLION PESOS

Mexico City EXCELSIOR in Spanish 29 Nov 80 Sec A pp 4, 28

[Text] Tuxtila Gutierrez, Chiapas, 28 November—Next Tuesday, President Jose Lopez Portillo will open the Chicoasen Hydroelectric Plant. A total of 21 billion pesos was invested in it, and it will generate 8 percent of the energy that the country requires: 5.5 billion kilowatt hours per year.

Aboard a small yacht owned by Mexican Petroleum located at the dam, the chief executive will make a tour of the reservoir of that plant (21 kilometers long), and will land in front of a monument to the producers of what is now considered the most important facility in the national electrical system, to unveil a commemorative plaque, and visit the powerhouse.

The general director of the Federal Electricity Commission, engineer Alberto Escofet, made the foregoing announcement here, and reported that five turbogenerator sets (each with a capacity of 300,000 kilowatts) would be put into operation; although the powerhouse will also contain three more turbogenerators with the same capacity, that will be installed as soon as the consumption requirements so demand.

During a brief interview that he granted last night at the hotel to technicians and workers, engineer Escofet announced that in January, and June or July of next year, two thermoelectric units (each with a capacity of 300,000 kilowatts) will be put into service in Manzanillo, Colima, in which 3.5 billion pesos were invested. He also stated that four thermoelectric units, also with a capacity of 300,000 kilowatts apiece, would be installed in Ocotlan, Jalisco.

In response to a specific question, the director of CFE [Federal Electricity Commission] said that the project of the greatest scope for the entity that he directs during this decade may be the possible construction of the Boca del Cerro hydroelectric plant in the bed of the Usumacinta River, on the Guatemalan border, and that for its execution it will be necessary to sign an international agreement with the neighboring country to the south; although, "the first feasibility studies are already being made, because that plant could produce as much as 3 million kilowatts; in other words, twice what Chicoasen will generate."

He also replied that in 1981 no new crises, or periods of blackouts such as the one recently eliminated, are anticipated.

In addition, he remarked that our country would soon have to decide which nuclear electric technology or combination thereof are advisable for it, since it will be required to generate 20 million kilowatts through that source.

Record Construction Time

He noted that, of the 100,000 large and small towns in our country, 22,000 now have electric power service; adding that, "unfortunately, however, there are another 78,000 which, owing to their dispersion in all parts of the national territory, are lacking in it."

He then reported that the power now being generated in Chicoasen is distributed to the system through several transmission lines on the Chicoasen-Juile-Temascal-Topilejo route with 400,000 volts. He added that this hydroelectric projects was built "in record time: 6 years from the time when the digging of the access roads began."

He said that during the previous 23 years, an analysis was made of the basin's pluviometric regimen, with runoffs deduced from January 1952 to May 1961, and with runoffs observed at the project's hydrometric station from June 1961 to December 1974.

He said that, at the same time, various geological studies were made of an approximate area of 1,500 square kilometers, to determine seismic risks. These investigations showed that the acceleration was minimal, and that the physical state of the earthquakes recorded in reports kept at the construction site adjoining the project, many of which date back to the 16th century, has not been affected by movements or adjustments in the subsoil. In any event, and in view of the fact that on the site there is a crevice known as the "Chicoasen fault," the geologists who participated in these studies opted for the construction of a rock-fill dam instead of the arch-dome type made of concrete.

CHICOASEN TO GENERATE 1.5 BILLION WATTS

Mexico City EL DIA in Spanish 3 Dec 80 p 3

[Text] Chicoasen, Chiapas, 2 December—President Jose Lopez Portillo visited this region of Chiapas, where he opened one of the largest and most important works projects of his administration: the Chicoasen Hydroelectric Powerplant, which will henceforth bear the name of Manuel Moreno Torres.

At the ceremony, the general director of CFE [Federal Electricity Commission], Alberto Escofet, said among other things that we in Mexico have the capacity to become great if we have the desire to do so.

The Manuel Moreno Torres dam is located at the outlet of the drainpipe where, at another time, the volume of flow of the Grijalva River became treacherous, a feature which man succeeded in destroying, leaving as evidence of his domination the installations of the dam which has a capacity to generate up to 1.5 billion kilowatts of electricity, 10 percent of which is already installed, which will represent a savings of 10 million barrels of fuel oil per year.

The studies aimed at learning the potential offered by the terrain and the region itself for the dam construction actually began in 1900, although it was not until 1952 that the hydrological studies were started, and 1974, when, with Jose Lopez Portillo as director of CFE, the construction program got under way. And it was today that the president of the republic, at the foot of the monument to the CFE worker rising vigilantly at the top of the dam, opened the facility.

Labor Unity

Speaking at the ceremony was Senator Leonardo Rodriguez Alcaine, secretary general of the Mexican Electrical Workers Union (SUTERM), who, on behalf of his union, made an appeal for unity and work, and for not allowing productivity to be a rhetorical or demagogic device, but rather a responsible practice that is established on the basis of occupational self-improvement and results in the quality and quantity of the work that is produced.

He reiterated some of the conclusions from the 7th Regular General Congress that the electrical workers held recently in Puebla, such as those relating to the previous liquidation of the central light and power company to prevent duplication of technical and administrative responsibility which, he said, caused CFE economic problems. And he asked again that the legal study be started on enactment of a single work contract within the nationalized electrical sector, also requesting that

labor union integration become a reality within the Confederation of Mexican Workers [CTM].

Rodriguez Alcaine declared that the desire for improvement, legitimate protest and the citizens' criticism should stimulate progress in a democratic society such as ours, but he warned that, when the desires, criticism and protests are not backed by right and law, when they are guided by grudges and not reason, they hamper the sound development of the country, and the material and moral improvement of the working, peasant and popular classes.

The leader of SUTERM made a criticism of the "learned," stating that what they learned in the advanced schools could prove to be pedantry if it does not have a constructive, realistic application; remarking: "What the people need are ideals that will enhance their progress, and political, economic and social ideals associated with the interests of our people."

In his comments, Rodriguez Alcaine referred to all the problems of concern to his union, including in that list the attacks that it has received for having made the decision to become affiliated with the Institutional Revolutionary Party.

Tribute and Recognition

All the speakers who addressed the audience at this ceremony gave extensive praise to engineer Manuel Moreno Torres, citing his qualities as a worker dedicated to what this hydroelectric project which he directed for many years meant to him (he died a few months ago).

It was at the request of Lopez Portillo himself that the Chicoasen dam now bears the name of Moreno Torres. The president declined the offer made by the electrical workers to give this facility the name Jose Lopez Portillo, paying eternal tribute to the endeavor and the worker who expended all his efforts on it: Manuel Moreno Torres.

Great appreciation for that decision was expressed by the engineer's widow, Cristina Gonzalez de Moreno Torres, at the ceremony itself.

The union representative for the Chicoasen hydroelectric project, Esteban Acosta Heredia, who spoke on behalf of the workers participating in the construction of this facility, in turn, told the president of the republic that the Moreno Torres dam was designed to enable the people to lead their lives without moral and material privation, and renewed his commitment to finish this project satisfactorily and within the time period scheduled.

Other Activities

On this second day of the fifth year of his administration, Lopez Portillo, on a working tour of Chiapas, flew over the installations for the Tuxtla Gutierrez drinking water system. In Chiapa de Corzo, he boarded a boat which took him on a tour of the beautiful, impressive reservoir of the Chicoasen dam, following which he went to the monument honoring the CFE worker, where the ceremony that we have described here took place.

Later, he made other tours of the hydroelectric facilities in the area, and subsequently departed for Tuxtla Gutierrez, where he opened the Government Palace, visited an exhibit at which the projects executed by Governor Juan Sabines Gutierrez were explained, and officiated at the function at which the latter delivered a report in the Chiapas movie theater.

The president also opened the Chiapaneca Regional Fair, at which he was offered a meal; and, after the festivities, he returned to Mexico City.

URAMEX: POSSIBLY 50 PERCENT OF NATION HAS URANIUM ORE

Mexico City EL DIA in Spanish 7 Dec 80 p 6

[Text] The experts from Mexican Uranium (URAMEX) are of the opinion that uranium deposits may possibly exist on 1.1 million square kilometers of national territory, which is tantamount to saying that we can hope to find uranium on only 56.2 percent of the area of the Mexican Republic.

The foregoing statement was made by Dr Carlos Graef Fernandez, a high-ranking [redacted] of URAMEX, an exclusive government agency for exploring, developing, processing and marketing uranium, as well as the only agent for carrying out the various phases of the nuclear fuel cycle that can be implemented in Mexico. In an article published in the latest issue of the magazine ENERGIA, Dr Graef Fernandez states that this company has set as a short-term goal an inventory of the uranium-bearing deposits on 450,000 square kilometers; which means that the inventory will cover slightly over 40 percent of the area yet to be explored.

The researcher notes that URAMEX will acquire an importance similar to that of PEMEX [Mexican Petroleum], when more nuclear electric plants are built. He said that its historic role would be that of generating the electricity which is now produced by oil.

In this regard, he said that, at the present time, it is a shame to burn the huge amounts of fuel oil required to generate electricity, when the uranium which could relieve the nation of this task is in existence.

He announced that, in order to supply the uranium needed for the nuclear electric plants, four processing plants would soon be built, as well as another for extracting uranium from phosphoric acid, which is an intermediate step in the manufacture of fertilizers from phosphoric rock. The larger plant will be built in the Pena Blanca mountain area of Chihuahua. It will be a plant equipped for doubling if need be. It will have a daily milling of 600 tons of ore, and an annual production of concentrates equivalent to 245 tons.

URAMEX purchased two mobile processing plants from Spain, which will be installed in the deposits in Sonora and Nuevo Leon-Tamaulipas.

Furthermore, in order to make use of the uranium contained in the phosphoric rock, URAMEX and FERTIMEX [Mexican Fertilizer] will cooperate on the construction of

another plant for extrating uranium from phosphoric acid in the fertilizer plant that is operating in Pajaritos, Veracruz.

Antonio Ponce, a scientist from the National Nuclear Research Institute and industrial management secretary of the Single Union of Nuclear Industry Workers (SUNTU), for his part, stresses that the need for a Mexican nuclear electric program is becoming more clearly evident each day.

"Oil, which has more rational uses and an increasing strategic value, should not continue to be burned to generate most of the electricity that we consume," he explained, while noting that hydroelectricity, which in itself is limited, entails problems such as the one which occurred recently in a serious manner: the lack of generation due partly to the absence of sufficient rainfall.

He said: "The only major short-term alternative is nuclear electricity;" and in this regard he pointed out that a kilogram of uranium as fuel produces energy equivalent to that generated by 11,800 barrels of crude oil.

He remarked that the matters being discussed at present about the nuclear electric policy are for the purpose of giving the country autonomy in the decisions concerning the operation of plants with natural uranium, or dependence and, at best, a presumable interdependence on or with countries for essential services required to operate the generators.

The scientist stressed that, underlying the discussion, there are two different concepts of national development: One proposes our own technological development, creating a national nuclear industry, and the other seeks to continue with the present experience of the electrical sector, purchasing virtually everything abroad, with designs and construction based on contracts, which in the nuclear field would necessarily involved foreign companies.

Ponce stated that, so long as these decisions are delayed, we shall have to depend to a greater extent on assistance and the purchase of services abroad.

SONORA BECOMING LEADING URANIUM PRODUCER

Mexico City EL SOL DE MEXICO in Spanish 27 Nov 80 Sec B p 4

[Text] Hermosillo, Sonora, 26 November--It has been announced that Sonora will be the leading uranium producer in the country after September of next year, when the development programs begin at the Los Amoles mine, which has reserves estimated at 5,000 tons, 100 of which will be processed annually, at the rate of 2.3 million pesos each.

The foregoing information originated at the first national symposium on uranium exploration, in which over 100 native and foreign geologists are participating, having delivered reports on the gains made in the exploration and technology of that ore.

C.P. Jose Salido Rochin, a delegate from Mexican Uranium's (URAMEX) Northeast Zone, announced today to those attending the function the aforementioned program that will be carried out in 1981, and underscored the participation by several nations of the world, which have shown an interest in matters relating to the uranium deposits that are being explored in Mexico; because that energy source has also been detected in volcanic rock in the state of Chihuahua, where gratifying prospects have been offered.

Salido Rochin said that, at present URAMEX is building a processing plant for the Los Amoles ore purchased in Spain, which will go into operation in September 1981, the date when the programs to develop that energy source in Sonora will get under way.

The URAMEX representative showed the participants in that symposium, during a tour of Los Amoles, the mechanisms that the parastate entity has installed in the extensive uranium deposits, which will occupy a major position in what will be an ore complex, located in the municipality of Ravon, the only one in the country, where the various types of technology that Mexico has for the exploration of deposits of that ore were demonstrated.

BRIEFS

MENEVEN DRILLING IN ORINOCO--MENEVEN has drilled 121 wells in the Orinoco petroleum strip and 90 of them revealed petroleum deposits with crude qualities of 18 degrees API, representing a highly satisfactory success percentage, as was disclosed today by that branch of Venezuelan Petroleum. According to the PDVSA [Venezuelan Petroleum, Inc] report, MENEVEN is operating the Hamaca-Pao area over a surface of 8,500 square kilometers in the Orinoco petroleum strip. Its exploratory evaluation program began in that area in July 1979 and, in a little more than a year, resulted in the drilling of 121 wells. In the 90 wells completed so far, where petroleum deposits were discovered, 57 horizons were studied and another 19 horizons are now being evaluated. The technology used in drilling and well evaluation is the same that was developed by MENEVEN throughout 46 years of experience in nearby heavy petroleum areas, where more than 600 million barrels were produced and where the Venezuelan team that now manages the operation was trained. On the basis of this experience, PDVSA assigned the Hamaco-Pao area to MENEVEN to develop the 100+ Guanipa program whose output goal involves an additional potential of 100,000 barrels of heavy petroleum per day. [Text] [Caracas EL UNIVERSAL in Spanish 16 Nov 80 Sec 2 p 7] 5058

PDVSA SALARIES INVESTIGATED--The case of pay raises at Venezuelan Petroleum amounting to as much as 50 percent and retirement pay of 30,000 bolivares per month in Viasa will be investigated by the Committee of the Comptroller of the Chamber of Deputies. Gustavo Mirabal Bustillos, committee chairman, announced yesterday that he would ask the companies mentioned to provide the pertinent documentation. The report was first released in a letter sent by Deputy Juvencio Pulgar to Mirabal Bustillos. Pulgar based his letter on a story in EL NACIONAL which mentioned these facts. The pay hikes at Venezuelan Petroleum would come to something like 80,000 or 90,000 bolivares per month in some cases. Juvencio Pulgar then said in his letter that the parliamentary delegation from Zulia, in the course of some meetings held in Lagunillas, asked Mining Minister Humberto Calderon Berti about this matter and his response was evasive. "Without any advanced judgment," Pulgar added, "on this presumed fact, I believe that the Committee of the Comptroller must gather information on this situation and the best thing will be to request the payrolls on the company's executive level." He then said in his letter that the story in EL NACIONAL reported retirement pay at Viasa, in the highway contract project, amounting to as much as 30,000 bolivares per month, which is why the committee likewise requests information from the Venezuelan airline. A special committee was also formed within the Committee of the Comptroller to investigate presumed irregularities in the construction of an urban development in the metropolitan area of Paraguana, in Coro, State of Falcon. The report was made by Ramon Antonio Goitia

Revilla and notes that the national executive branch ordered backing for the amount of 100 million bolivares for the development of this housing complex. The negotiations were handled between the Foundation for Municipal Development of the Community and the Precoven C. A. enterprise. The investigating committee will be chaired by Social Christian Party Deputy Antonio Sotillo Luna. It was also resolved to investigate irregularities in the handling of the food certificates during the Second Youth Games, to be held in Ciudad Bolivar; this investigation was requested by the office of the president of the Chamber of Deputies. Gustavo Mirabal Bustillos finally announced that the case of irregularities in the loan granted by the Swiss bank to CANTV [National Telephone Company of Venezuela], in the amount of 8 million bolivares--a report which was already approved unanimously by the committee--will next week be submitted to the Chamber of Deputies for consideration so that, after passage, it can be forwarded to the Office of the Attorney General and the Office of the Comptroller General of the Republic. [Text] [Caracas EL NACIONAL in Spanish 14 Nov 80 p D-9] 5058

OIL TOWNS RELOCATED--Energy and Mining Minister Dr Humberto Calderon Berti yesterday announced that decisions were made regarding the execution of the program for the relocation of petroleum fields and cities along the eastern shore of Lake Maracaibo for the purpose of starting the extraction of large volumes of medium and light crude discovered under the concrete of cities such as Lagunillas, Ciudad Ojeda, and Cabimas. The minister refrained from giving any figures on the volume of crude that might be there but of course everything possible will be extracted with the available technology. Nevertheless he said that "at 1978 petroleum barrel prices amounting to $14, it was roughly estimated that the available reserves would be worth something like 300,000 million bolivares." But since the price of petroleum has doubled since then, it is probable that this estimate can also be doubled. On the other, Minister Calderon Berti said that the program for the relocation and rebuilding of cities and encampments in the area mentioned will cost slightly more than 5,000 million bolivares and will naturally be carried out in various stages over several years. In any case, Minister Calderon Berti admitted, this subjacent petroleum in this zone is a part of the reserves which the country has for the future. In other words, it does not mean that this crude must be produced now or within 5 years. This is a reserve which will be kept until it has to be tapped. [Text] [Caracas EL UNIVERSAL in Spanish 8 Nov 80 Sec 1 p 14] 5058

NEW GAS STATIONS BUILT--Caracas, 12 Nov (VENPRES)--The country's petroleum industry throughout Venezuela will build 128 new service stations, according to an announcement by the domestic market director of the Ministry of Energy and Mining, Jesus Gonzalez Escobar. Gonzalez Escobar specifically indicated in the latest edition of the weekly newletter put out by that office that there are 637 gasoline pumps along Venezuelan roads and superhighways and that it is necessary to build an additional 128 gas stations. "To be able to carry out this entire ambitious construction program, the petroleum industry will invest 255,000 million bolivares in the next 5 years," he reported. The domestic market director noted that this pump construction plan will be broken down as follows: 60 million bolivares for 1981, 55 million bolivares for 1982, 30 million bolivares for 1983, 40 million bolivares for 1984, and 50 million bolivares for 1985 [as published]. The new service stations will be distributed as follows: six in the Federal Distric for the State of Anzoategui, 2 in Apure, 10 in Aragua, 2 in Barinas, 5 in Bolivar, 4 in Carabobo, 2 in Cojedes, 6 in Falcon, 4 in Guarico, 6 in Lara, 2 in Merida, 14 in Miranda, 8 in Monagas, 2 in Nueva Esparta, 7 in Portuguesa, 4 in Sucre, 6 in Tachira, 5 in Trujillo, 4 in Yaracuy, and 9 stations for Zulia.

Gonzalez Escobar pointed out that there are 1,637 service stations in Venezuela and that a study conducted by Maraven revealed that there is a shortage of 517 and 276 gasoline and gas-oil outlets, which justifies the construction of the new pumps. [Text] [Caracas EL UNIVERSAL in Spanish 13 Nov 80 Sec 1 p 23] 5058

NEW MENEVEN TECHNICIANS—The MENEVEN enterprise, an affiliate of Venezuelan Petroleum, has set itself the objective of training some 180 individuals with baccalaureate degrees in engineering over a period of 7 years in order to turn them into supervisors and operators of 17 drilling rigs of its own and 20 on contract. Those engineering graduates have come out of the INAPET (Petroleum and Petrochemical Training Institute). This information was released in Mexico City last week by Engineer Gregorio Valderrama, national drilling manager of MENEVEN during the presentation of his report to the Second Latin American Drilling Congress meeting in that capital. Valderrama said that MENEVEN is using two training drilling rigs in the State of Anzoategui. They trained 80 operators during the first year of operation. The students join the course as workers, protected by collective bargaining contracts, and, depending upon their potential and individual possibilities, they can be trained on the following levels: a drilling rig mechanic and a drilling rig worker can be trained in 6 months; a derrickman can be trained in 1 year; a driller can be trained in 2-1/2 years; and a foreman takes 3 years to train while a supervisor must train for 4 years. He also announced that MENEVEN is currently operating 9 drilling rigs of its own and 9 under contract for drilling purposes. It furthermore has 20 drilling rigs used for the reconditioning of wells in Oriente and 3 under contract in Lake Maracaibo. For the year 1982, plans call for the purchase of 2 new equipment units to train specialized personnel in well reconditioning. The graduates admitted to those courses must pass a psychological-technical examination to determine whether they can withstand the rigorous working conditions demanded by petroleum drilling. The students so far have drilled 11 development and digging wells which are semiexplanatory. They have put in 290,000 man-hours without accidents, reflecting the quality of the discipline employed in their training. [Text] [Caracas EL UNIVERSAL in Spanish 8 Nov 80 Sec 2 p 12] 5058

DISSIDENT HAITIANS, DOMINICAN PAPER ON PROBLEMS IN HAITI

Paper Scores Duvalier

Santo Domingo EL CARIBE in Spanish 6 Dec 80 p 10

[Text] Human rights have never been respected to the extent they should be. That is lamentable. But even the most zealous enemies of human rights have at least paid them lip service.

Jean Claude Duvalier, Haiti's "lifetime president" by virtue of his being the son of the late "Papa Doc," the bloody tyrant, has gone beyond the limits of what is reasonable and appropriate. He has openly sneered at human rights.

This mockery deals a direct blow to the heart of a universal desire among men who in all parts of the world see in individual freedom an attribute which, as many constitutions proclaim, should be inalienable.

Duvalier has committed an inexcusable affront. He cannot and should not be forgiven the cynicism with which he has treated men and women whose only crime has been to fight passionately for the freedom the Haitian people deserve so well.

LHDL on Educational Repression

Santo Domingo LISTIN DIARIO in Spanish 6 Dec 80 p 2

[Article by Eduardo Montano]

[Text] The president of the Haitian Human Rights League (LHDH) yesterday claimed that in Haitian schools children's minds are being twisted. They are being inculcated with hatred, scorn and fear of Dominicans.

Gerard Gourge argued that "the time has come to make a serious and objective study of the situation in order to do away with the prejudices that have historically been transmitted and conditioned in us."

Speaking at the seminar on Dominican-Haitian relations, Gourge explained that "just as in Haiti, here in the Dominican Republic a false national image is being created among youths, resulting in a scornful attitude, racial discrimination, exploitation and the perpetration of crimes against our Haitian brothers."

He observed that the Dominican Republic fought its struggle for independence in a formal manner, and that "the traces left by this process were distorted by the interpretations of some Dominican historians of the thirties.

"These historians," stated the president of the LHDL, "were the apologists and ideologues of the dictatorships of Rafael Trujillo and later Francois Duvalier."

Gourge stated that "in addition to falsifying historic events, these interpretations have served to justify the inhuman treatment of thousands of Haitian agricultural workers who each year contribute to the economy to the benefit of the powerful sectors of both countries."

Moreover, Dr Ramon Quinones, executive director of Caribbean Studies and Documentation (EDOC), which organized the seminar, explained that the seminar was held in order to analyze relations between this country and Haiti from 1844 to the present.

He argued that "we are also interested in delving into and elucidating all the problems that have historically determined those relations.

"We are interested in discussing the ideological-racial factors that have influenced the attitude of mutual rejection and fear of the two countries," stated Quinones.

He pointed out that the EDOC is attempting to delineate the general features of a new relationship that will truly benefit Haiti as well as the Dominican Republic.

The director of EDOC indicated that "our concern for the problems that plague the nations of the Caribbean and our solidarity with the causes of the various nations in their struggle for rights and freedom, do not allow us to view with indifference and irresponsibility the situation that is now being suffered by our neighbors in Haiti."

At the beginning of the seminar Porfessor Virgilio Bello Rosa, dean of the School of Humanities of the Autonomous University of Santo Domingo, also made a speech on Dominican-Haitian relations since the republican era.

He explained that since 1844, when Dominican independence was proclaimed, there has been an effort to encourage hostility between our country and Haiti.

Bello Rosa stressed that "the majority of writers emphasize only the conflicts and problems we have had with our Haitian neighbors."

He stressed that "this has led to the current attitude of mistrust between the two nations, which precludes any real and effective rapprochement."

CASC on Political Repression

Santo Domingo LISTIN DIARIO in Spanish 6 Dec 80 p 4

[Text] The Autonomous Confederation of Classist Trade Unions (CASC) yesterday protested the repression that is being practiced in Haiti against political leaders who oppose the regime of Jean Claude Duvalier.

In written statements, the CASC also points to the mass dismissals in Haitian businesses where unions affiliated with the Autonomous Union of Haitian Workers (CATH) are being formed.

"The repression of the political leader Silvio Claude and his family, as well as the labor leaders affiliated with CATH, brings home the brutal manner in which the defenseless people have been treated for years," asserts the organization.

It adds, "We cherish the hope that the international human rights organizations, the International Labor Organization and the democratic nations of Latin America will take vigorous measures against the Haitian Government in order to put an end to repression in that poor country."

The CASC indicates that it has conveyed its criticism of the dismissal of union leaders to President Jean Claude Duvalier. About 100 of these labor leaders have been fired.

"We call upon the Haitian emigrants residing in this country," states the labor organization, "to come together and defend the right to organize, thus maintaining justice in neighboring Haiti."

In addition, the CASC expressed its support for the open dialog that has been initiated between labor and management reprsentatives.

In the opinion of the CASC, that dialog should be based on a respect for union freedom, the freedom of association and the right of workers to participate in the overall development of Dominican society.

"Christmas time is generally when some employers make appeals for unity and dialog. We are ready to respond to such an appeal," the organization states.

RDNP Calls for Aid

Santo Domingo EL NACIONAL in Spanish 4 Dec 80 p 4B

[Article by Manuel Perez Santana]

[Text] An organization of Haitian exiles located in Venezuela requested that Dr Jose Francisco Pena Gomez, secretary general of the Dominican Revolutionary Party (PRD), utilize "all means" at his disposal on the international level to support the struggle for democracy and respect for human rights in Haiti.

The Caracas central bureau of the Regrouping of Haitian National Progress Democrats (RDNP), in a letter to Dr Pena Gomez, requests his "urgent intervention in support of the liberation of the victims of arbitrary acts by the Duvalier dictatorship."

In the letter to the PRD leader, the Haitian politicians indicate that the Duvalier dictatorship "has unleashed a wave of repression against independent journalists and opposition leaders."

The organization denounces the imprisonment and "disappearance" in recent days of several qponents of the dictatorship.

It points out that the station Radio Haiti Inter is under military supervision.

Among the opposition leaders who have been imprisoned or are missing are Jean Dominique, director of Radio Haiti Inter; Gregoire Eugene, president of the Social Christian Party of Haiti; Pierre Clitandre, chief of the weekly LE PETIT SAMEDI SOIR; Jean-Robert Herard, columnist for LE PETIT SAMEDI SOIR; and journalists Compe Pluma and Constant Pognon.

Also named as missing or imprisoned are Joseph Lafontant, secretary general of the Human Rights League; Francoise Dominique, painter and artist; the wife of the president of the Christian Democratic Party and his daughter, Marie-France Claude.

The letter to Dr Pena Gomez is signed by Lislie F. Manigat, university professor; Jean Marie Benoit, business manager; and labor leader Georges Fortune. All are members of the RDNP Caracas central bureau.

PDS, PP AGREEMENT GOOD FOR COUNTRY, SAYS BRIZOLA

Rio de Janeiro O GLOBO in Portuguese 3 Dec 80 p 4

[Text] Porto Alegre (O GLOBO)—The president of the PDT [Workers Democratic Party], former Governor Leonel Brizola, said yesterday that "the Government parliamentary front shrinks every day and it is possible that within a short time it will no longer have the strength to maintain its political hegemony."

Brizola said: "In view of such circumstances, it will have to open a broader discussion with the parties and, therefore, with the civilian population or with a specific party, which according to news reports would be the PP [Popular Party], to build a greater support base."

Brizola said that "many believe that such possibility would be favorable to the reconstruction of democracy because a man such as Senator Tancredo Neves could come to an agreement with the government, providing the system would make him great democratic concessions."

Surprise

Brizola did not wish to comment on the warning the PDS [Social Democratic Party] leader in the Senate, Jarbas Passarinho, made to Luiz Carlos Prestes and Miguel Arraes when he spoke at the PDS Convention, that they respect constituted order because the country is prepared to confront armed struggle. The former governor said that he is first going to inform himself and then he is going to make an evaluation because he does not know the complete text.

"I find it hard to believe that Senator Passarinho could have made such statements," said Brizola.

On statements by President Joao Figueiredo about the electoral system, Brizola said:

"The statements by the president will aggravate the climate of suspicion which already existed. We of the PDT are convinced that the government will not have the power to impose any type of restriction or artifice as has been announced, not only because of the shaky condition of its majority in the Congress but also because of the concern about the public opinion of the country."

OPPOSITION COALITIONS SEEN NECESSARY TO COUNTER GOLBERY STRATEGY

Brasilia CORREIO BRAZILIENSE in Portuguese 5 Dec 80 p 17

[Article by Joao Bosco and Francisco Mascarenhas: "PDS, PP, PT, PDT, PTB, Who Will Be In Power After The 1982 Elections? Possibilities.]

[Text] The equation is simple and applies to practically the entire country. In the states in which the opposition parties do not rally around a single candidate, the PDS [Social Democratic Party] will elect the governor. Such a coalition, apparently simple, is indeed the greatest problem with which the candidate hopefuls are already grappling. In some states such as Rio de Janeiro, Rio Grande do Sul and Sao Paulo—strong antigovernment redoubts—it is unlikely that the opposition community will find a common denominator in the race for power.

This complex picture, incidentally, reflects the strategy of Gen Golbery do Couto e Silva, which began with the party reform that abolished the ARENA [National Renewal Alliance] and the MDB [Brazilian Democratic Movement]: Divide and conquer. Difficulties are aggravated as the voters, still confused by the spate of new party initials, tend to gravitate more toward names than toward ideas or doctrines. Added to this is the expectation, now more concrete, of the introduction of new rules of the electoral game such as, for example, complete entailment of votes (from councilman to governor), the end of the fractional party slate and the mixed district vote, to name only a few.

For many politicians, to foresee coalitions and diverse alliances, primarily when speaking of major party elections, is not an exercise in soothsaying lacking good sense. The leader of the PP [Popular Party], Deputy Thales Ramalho, for example, believes that those processes are so natural and inevitable for the plural party system, that even if there were legislation forbidding them, no one could prevent the nomination of the same candidate for governor by all the parties. He even believes that the opposition parties will have the chance, by uniting around a single name in several states, to lead their members to climb on the same platform and support a single candidacy.

At the side of that candid picture of solidarity painted by Thales Ramalho, however, there is another specter which constantly flits around the opposition parties, particularly the lesser parties such as the PDT [Democratic Workers Party], the PT [Workers Party] and the PTB [Brazilian Labor Party], and that is the minimum support in votes required by the Party Reform Law. This law, copied from the German model, says that the party which does not obtain the equivalent in votes of 5 percent of the voters counted in a general election for the Chamber of Deputies and which is not present in at least nine states with a minimum of 3 percent of the votes in each one of them, does not have the right to be represented in the Federal Senate, the Chamber of Deputies and the Legislative Assemblies. This new complicating element introduced in the new Political Party Organic Law, comes to join the almost unsurmountable problems of regional nature, particularly where political feuds in the majority of cases are bitter.

Therefore, the small parties will mandatorily have to nominate candidates to those offices running the risk of not obtaining the necessary votes for obtaining representation and of having their registration suspended in the Superior Electoral Court. The difficulty for them, however, will reside precisely in finding names capable of attracting the voters. Within that picture, specific alliances, which would include representatives of the dissident PDS in some states, is not a very remote possiblity.

The process of succession, nevertheless, has begun. Despite the uncertainties shown by the oppositon parties about casuisms, candidacies multiply. Any forecast is premature, but speculations help to outline a picture of how the main actors on the Brazilian political scene are going to act up to 15 November 1982. If the elections were held now, the correlation of forces state by state would be the following:

Sao Paulo

The PMDB is openly the favorite of Senator Franco Montoro. However, it could be the worst state for the opposition if the present picture remains unchanged. The appearance of many candidates with undoubted voter support such as Olavo Setubal (PP), Janio Quadros (PTB) and even the possibility that the PT will nominate Lula or another, makes a more accurate prediction impossible. To aggravate the opposition division, there is also the fight by Senator Orestes Quercia to become the PMDB candidate. In this case, the PDS could emerge victorious within the Golbery strategy of dividing the opposition votes and electing a government candidate with a low percentage of the voters.

Rio Grande do Sul

Simon

A traditional opposition stronghold, here also the government could make use of the division among its adversaries in the contest for Piratini Palace. The most prestigious opposition candidates are Senator Pedro Simon and Deputy Alceu Collares, but even another could win without great difficulty if he competed only against the probable PDS candidate, the present minister of social welfare, Jair Soares. It is one of the most divided states in terms of the opposition. On one side is Pedro Simon and on the other is the strong Brizola candidate, Alceu Collares. Recently the PP became electorally viable when it received the support of former Governor Sinval Guazelli.

Rio de Janeiro

Miro

The most probable winner in the 1982 elections is PP candidate Miro Teixeira, who in the last elections in which he was involved obtained no less than half a million votes. Moreover, Rio de Janeiro presents a very special facet in the general picture: It is the only state where the opposition is in power through Governor Chagas Freitas, thought almost unbeatable because he holds the state machinery. However, there could be an even contest if there were to be a complete union of the other parties, including the PDS, against the PP. The PMDB, however, has already nominated Senator Roberto Saturnino; the PDT intends to compete with former Governor Leonel Brizola, and even the PTB has already taken the picturesque Aarao Steinbruch into the streets in a full fledged campaign. The PDS, occasionally in opposition in the state, since there is a common enemy, should run the present prefect of niteroi, Moreira Franco, or, a very remote possibility, even the electorally ineffective Dr Guilherme Romano. The last two also reflect the exact poverty in votes of the official party, which has little or no chance in the state.

Parana

Furtado

The PP has in former Governor Jaime Canet the probable successor to Ney Braga, however, if the present governor--recovering gradually from recent surgery--is successful in the difficult task of maintaining the PDS united, he may win in the election. The PMDB should soon play its two cards and choose the one which has the strongest support, either Senator Jose Richa or the formerly cassated Alencar Furtado, both with strong voter support. Those two also make up the most antagonistic groups in the state, although they are in the same party. Greater and more precise definitions, however, will depend precisely on future alliances which certainly be made.

Santa Catarina

Evelásio

The logical candidate of the PMDB will be Senator Jaison Barreto. Within the PMDB itself, however, there are factions who prefer--and they are fighting for it--the candidacy of the former prefect of Joinville, Pedro Ivo. The PP should nominate Senator Evalasio Vieira, while the PDS awaits the possibility of finding an arrangement with one or the other, since its own chances are minimal. It will not hesitate, however, to nominate the former prefect of Florianopolis, Esperidiao Amin, if it feels it has a chance. The oppositon parties, as in the rest of the country, still has the need for unity.

Pernambuco

Freire

Perhaps the most contested of elections. The PMDB is strong with its natural candidate, Senator Marcos Freire, but still has others such as Miguel Arraes and former Deputy Jarbas Vasconcelos. The PDS is going with Nilo Coelho, senator and former governor, or with Federal Deputy Ricard Fiuza, with the remaining option of Moura Cavalcanti. The PDT has Deputy Sergio Murilo, who according to rumors, can wind up by transferring to the PP. He denies these reports vehemently. It can also nominate Francisco Juliao.

Paraiba

The picture favors the opposition parties which, however, run the same risk of breaking their unity. Antonio Mariz for the PP and Marcondes Gadelha for the PMDB are the strongest but may, if divided, help the PDS candidate, Wilson Braga. Even though in the not-too-distant past they formalized an alliance to elect Senator Humberto Lucena, Gadelha and Mariz are of traditionally rival families. Thus, Humberto Lucena could emerge as the third opposition candidate.

Rio Grande do Norte

Agnor

The recent support of the PDS by Deputy Carlos Alberto (formerly of the PMDB and PTB) turns the picture 360 degrees, which previously openly favored the opposition. If he were to remain as the natural candidate (because of the number of votes he already is) of the PDS, the government practically had its stay in Potengi Palace assured. Until that change by Carlos Alberto, the PP appeared as the obvious favorite with its candidate, former Governor Aluisio Alves, helped by the division into different factions of its principal enemies: Senator

Dinarte Mariz and Carlos Alberto. However, it concluded by bringing its two enemies together, which makes things more difficult for the PP. The PMDB, surprised by the defection of Carlos Alberto, stopped to think, but it could nominate state Deputy Roberto Furtado or even Senator Agenor Maria. Those two names, however, are mere speculations.

Piaui

Silva

Senator Alberto Silva of the PP is without a doubt the most prestigious candidate. The voter advantage in the state, however, was always on the side of the official party, which may elect Deputy Hugo Napoleo or even former Minister Reis Velloso. Alberto Silva himself has been greatly urged to return to the official party.

Bahia

Chico

Perhaps the most comfortable state for the opposition parties if they rally around one candidate. They have a veritable arsenal of electoral assets, all with a common enemy: the present governor, Antonio Carlos Magalhaes. Up to now the PMDB candidate is the formerly cassated Waldir Pires, which, however, is already dividing the party. At any rate, it also has Chico Pinto, Romulo de Almeida and Josaphat Marinho. The PP has in former Governor Roberto Santos an undeniable strength. The PMDB members who do not agree with the Waldir Pires candidacy--five members of the Federal Senate among them--believe that the most eligible is Deputy Chico Pinto followed by Romulo de Almeida and then by PP candidate Roberto Santos. After them comes Waldir Pires. Marcelo Cordeiro, the youngest federal deputy of the Bahia PMDB, will seek the prefecture of the capital. The PDS must hope that the division persist, which as everyone knows, is very unlikely.

Sergipe

Franco

The Augusto Franco empire remains impregnable and it is unlikely that it will cease to direct the decisions of the electorate. There is not the slightest chance for the opposition in this state.

Alagoas

Suruagy

If Senator Teotonio Vilela enters the race, Deputy Divaldo Suruagy, the open favorite, could have some difficulty. Teotonio, however, is inclined to try for the reelection of deputy: Jose Costa, also of the PMDB. Suruagy is held to be the strongest, however.

Para

The contest for the regional command of the PDS between Senator Passarinho and the present governor, Alacid Nunes, has already begun to help the traditionally weak opposition parties in the state. Passarinho, who does not intend to leave the Senate because his name is on the list of "presidentials" in 1985, should, even so, appoint the successor to Alacid, since he has the declared support of Figueiredo. Only Jader Barbalho of the PMDB has enough voter support to make a run for it in the opposition.

Acre

The PMDB Shows an undeniable growth in the state, this time, ironically, helped by the apparently irreversible split in the PDS. In this case the probable favorite candidate is Deputy Nabor Junior.

Amazonas

One of the few states where the PTB of Ivete Vargas has a chance. The name of former Governor Gilberto Mestrinho is sufficiently strong to threaten the other competitors. Raimundo Parente of the PDS could offer some resistance but he will certainly not be successful. On the other hand is the PMDB, also very strong, which should enter Councilman Fabio Lucena or someone from his group.

Mato Grosso

Gastao Muller of the PP will have little chance against his PDS adversary. It is not known yet whether it will be Senator Vicente Vuolo or Senator Benedito Canellas. However, if Muller were to obtain the support of the PMDB he would then have concrete possibilities.

Mato Grosso do Sul

The government created an apparent crisis when it dismissed Governor Marcelo Mirando. This, however, will not affect the picture of the control exercised by the PDS, if for no other reason than that the exchange of Miranda for Pedrossian, according to Planalto, had strictly electoral objectives, which means the decision to insure the next governorship.

Espirito Santo

The PDS should win here also. The PMDB did not even manage to put together its regional directorate, while the government party names are acknowledgedly strong at the regional level. For example, there are former Governor Elcio Alvares or Federal Deputy Teodorico Ferraco. With fewer chances, there could be Deputy Gerson Camata or Max Mauro of the PMDB.

Goias

Easy, but less apparently so, for the opposition. However, the division existing among the opposition parties is the most obvious and the picture the most confused. This climate, incidentally, has already caused the brothers Santillo to leave the party (they had gone to the PT) and return to the PMDB. However, despite this, there is at least the guarantee that unity will come. In this case, despite the growing prestige of Governor Ary Valadao, it will conclude by electing a governor. To aggravate the picture of division, there is also the recent integration of former Governor Irapuan Costa Junio, whose joining shocked the major part of the PMDB members in the Federal Chamber.

Ceara

Former Governor Adauto Bezerra is the favorite and will have the all-out support of the present governor, Virgilio Tavora. Minister of Mines and Energy Cesar Cals, in turn, is watching carefully and could be the help that Bezerra does not yet have in the PDS. Senator Mauro Benevides is the most prestigious name in the

opposition (he will run from the PMDB) but there are unfavorable comments about his chances even if he runs by himself with the complete support of the other antigovernment parties.

Maranhao

Sarney

Everything indicates that the succession will be decided by PDS Chairman Senator Jose Sarney, who if he does not run, will appoint either Alexandre Costa or Deputy Edison Lobao. However, the PDT has the electorally strong Neiva Moreira, who could upset the government's plans, particularly after the recent departure of Deputy Epitacio Cafeteira of the PMDB, who will probably go to the PT which already has Deputy Freitas Diniz. Neiva Moreira, however, is the strongest.

GUERREIRO REJECTS 'OUTSIDE' DOCTRINES FOR LATIN AMERICA

Sao Paulo O ESTADO DE SAO PAULO in Portuguese 30 Nov 80 p 14

[Article by Carlos Conde: "Guerreiro Criticizes Theories and Doctrines 'Which Come From Outside!"]

[Text] In Buenos Aires yesterday, Minister Saraiva Guerreiro rejected the idea that any doctrine for application in Latin America can be formulated outside the region. The minister of foreign affairs made this statement in an address to the Argentine Council for International Relations as part of a seminar which is discussing Brazil-Argentina relations in the decade of the 80's.

Guerreiro criticized "antiquated concepts," political doctrines and theories of government "formulated outside our region and which fail to consider our specific characteristics and interests." He also rejected expectations that the foreign conduct of Latin American nations can be molded by sometimes anachronistic "abstract models, whose ethical respectability and universal respect is far from being unquestionable."

In the opinion of the Brazilian minister, there exists today what he called "a museum of ideas," which originated and were largely formulated in a context strange to Latin America, and "whose legitimacy and utility must be subjected to a permanent criticism." He was speaking about theories which pay exclusive or exaggerated to a single factor, whether it is geography, "a strictly retrospectric history," or "blind and irresistable economic forces." He argued: "We suffer the exacerbated influence of geopolitical concepts, which while they were useful for understanding some past situation, can be of little inspiration to us in our future conduct. I also refer—among many other possible examples—to doctrines which preach simple balances of power and offer us nothing more than the consolidation of imbalances, which are exactly what we must seek to abolish." Repudiating "imported models," the minister of foreign affairs said that Latin America must "think" about its own doctrine.

Without Illusions

Saraiva Guerreiro declared that it is necessary to disdain simplistic lines of thought that reduce reality "to black and white," that divide nations into "allies and enemies" and view men as "angels or demons." He believes those systems frequently lead to narrow, unrealistic and deceitful options.

Saying that it is necessary to seek a fair and modern international order in which no hegemonies predominate, the minister traced the foreign profile of Brazil: "Our foreign actions must calmly and clearly reflect that political concept. Brazil is a peaceful country. We do not consider ourselves better than anyone, we do not try to give lessons, we do not aspire to any hegemony nor do we seek to control or guide events. We are partners ready to cooperate on the basis of equality and mutual respect."

Guerreiro declares that Brazil will not allow itself to be deceived by illusions: "We are aware of the structural and universal nature of underdevelopment. We do not assay unusual solutions, which ignore that problem or magically make it disappear.. Our recent progress is tenacious and real and we expect to continue in that direction. But it will not be superficial praise or apparently seductive categorizations such as that of "emerging power" or "newly industrialized country" that will make us forget our real status and where our genuine interests lie."

Attitude

The minister believes that Brazil perhaps does not exactly have a policy but "a simple attitude," for example, toward Latin America and Africa. Speaking more specifically about Brazil's neighbors, Guerreiro explained: "In order for the Brazilian attitude to effectively become a policy, the uninhibited and aware cooperation of all our neighbors, the Argentines in particular, would be necessary. As far as we are concerned in Brazil, we are prepared to try to understand the concerns of our neighbors and the members of our community and to work together with them." He added: "We do not feel capable, nor do we have the desire to do so, of providing prescriptions to the other Latin American countries. I believe that beneath the spirit of the countries of our region, all proud of their respective national identity, lies the awareness that we make up a family whose collective welfare is of interest to each of them."

Position

Guerreiro demonstrated Brazil's position in the West and the Third World simultaneously: "One of the erroneous options is that of whether we should consider ourselves included among the countries of the West or the Third World. The option is false--and I speak for Brazil--because we belong simultaneously to both groups. By the way in which we inject ourselves in the global economic and political structures, we are obviously part of the Third World; because of the intensity of our relations with the West because of our cultural ties, we are clearly bound to the western countries. We do not bear any blame because reality is complex and multifaceted. It is up to us and the other nations with whom we have relationships to accept that fact and to live with it and rationally and objectively exploit the opportunity it presents."

The minister of foreign affairs advocated a "rational and objective" dialog and he believes that dialog may lead to solutions of controversies and doubts among nations. "That attitude also contains the acceptance that certain conflicts of interests belong to the routine of international life, that is, that a certain

ratio of the conflicts of interests are part of the nature of things and are inevitable. However, as government officials, that which is of the most interest to us is the view the parties have of those conflicts and the way in which they deal with them."

Argentina

In two passages of his 12-page lecture, Minister Saraiva Guerreiro called the Argentines "friends" and "dear friends." In two passages he referred particularly to relations between Brazil and Argentina: "While our relations today are so positive, it is due not only to the objective coincidence of interests but also to the political nature of our diplomacy. I believe it is proper within this context to express my appreciation and admiration for the handling of Argentine foreign policy, which reveals the lucidity and consistence which naturally guide this country in its search for a happy future."

Referring to the need for "frank and open attitudes in facing foreign policy problems," Guerreiro once more mentioned bilateral dialog with Argentina: "I had the very special pleasure of undergoing that experience and the feeling of serene confidence it gave me and my interlocutor during the 15 minutes in which for the first time I had the opportunity to talk with Carlos Pastor on 16 March 1979. That mutual confidence served to stimulate the development of Argentine-Brazilian relations of friendship."

PP CRITICIZES GOVERNMENT, REJECTS ALL AGREEMENTS

Rio de Janeiro O GLOBO in Portuguese 5 Dec 80 p 4

[Text] Brasilia (O GLOBO)—In an official note revealed yesterday, the PP [Popular Party] national directorate describes government actions as being characterized by "authoritarianism in the political field, money-oriented ruthlessness in the economy and a cold inhumanity in the social field." The document says: "As long as that deplorable situation remains, the Popular Party will not accept any agreements with the government leaders of the country because its commitments are with the people and an agreement with their torturers to maintain the existing situation would be a betrayal of those commitments with which it does not compromise or negotiate."

The Note

Following is the text of the PP document:

The national leadership of the Popular Party, meeting yesterday under the chairmanship of Senator Tancredo Neves, with the attendance of leaders Thales Ramalho and Gilvan Rocha as well as the chairmen of the provisional committees in all the states, after hearing the report of each of them on the party status in the various units of the federation, agreed to adopt all the measures necessary for strengthening it; attending, within the limits of its possibilities, to all the requests made by regional leaders. During discussions, and from the information collected, it was confirmed that a spirit of optimism and confidence is encouraging all party members throughout the country because of the wide acceptance the PP is finding in all strata of Brazilian society.

With respect to political decisions, the following were unanimously adopted:

A. To maintain the party on the line it has been following, a line of clear, firm and responsible opposition to the policies put into practice by the government, that is, authoritarianism in the political field, money-oriented ruthlessness in the economy and a cold inhumanity in the social field. The process of redemocratization of the country proceeds at a slow pace, with advances and retreats in a climate of uncertainty and insecurity. The afflicted and anguished people are seized by dispair, faced by exasperating living conditions, without being able to harbor any hope on the tomorrow that awaits them.

Either the government becomes aware of its responsibilities to the nation, insuring for it days of peace and economic security soon, or it will have to take the place in history that its ineptness will reserve for it.

As long as this deplorable condition remains, the PP will not accept any agreement with the government leaders because its commitments are with the people and an agreement with their torturers to maintain the existing situation would be a betrayal of those commitments with which it does not compromise or negotiate.

At this moment, the opposition is the most worthy strongpoint for the defense of democratic principles, the moral and material development of the country and the very honor of the nation. We shall not desert it and we shall remain in it to continue the struggle.

B. With respect to the momentous problem of filling the positions of the Chamber of Deputies Board in the next legislative session by unanimity, the national directorate of the PP deliberated ratifying the note of the deputies, which called upon all the parties for an open and fair agreement aimed at giving the Chamber of Deputies an independent, honorable and free board, alien to palace intrigue and originating, without any outside interference, from the midst of the venerable institution to guarantee its sovereignty, dignity and prestige.

On the other hand, it also decided to recommend to the deputies the adoption of an independent slate headed by the illustrious Deputy Djalma Marinho, which would also contain not only representatives of all the parties of opposition, but also of the groups which may join that patriotic movement of democratic resistance and of honor to the National Congress.

Finally, the national directorate appealed to all leaderships in the states to intensify the work of creating new provisional committees in the municipalities and also that of recruiting new members so that the next conventions may be held with a greater and more solid popular support.

CARAZO SAYS COUNTRY WILL ALWAYS WELCOME REFUGEES, EXILES

San Jose LA REPUBLICA in Spanish 18 Nov 80 p 2

[Text] President Rodrigo Carazo yesterday stressed the importance of preserving and defending the system of law and order in Costa Rica so that no Costa Ricans will have to seek asylum or refuge in another country.

The statement by the chief executive was made in the Irazu Hotel during the opening of the Regional Seminar on Refugees and Information Media, organized by the International Commission of the University for Peace.

Mr Carazo emphasized that the people in Costa Rica must continue to fight to defend human rights and that the country must continue to be a place of asylum and refuge for political persecution victims.

He commented that the migration flow of Chinese, blacks, Italians, Americans, and other nationalities, who come to populate Costa Rica, is evident proof that, in the heart of America, there has risen a nation which has the double responsibility springing from its past and from its humanitarian condition.

He noted that, as a result of the current time, no country can escape the results of violence, the hegemonic struggle, and the domestic political problems of each of the nations that cause the migration of large numbers of people.

Mr Horst Haugust, representing the Friedrich Naumann Association, who also attended the ceremony, said that the communications media are responsible to the public because only through the media can one find out who the refugees are.

Haugust said that the newspaperman must prepare society so that it will be able to understand the problems of the refugees and so that it may realize that keeping those people as asylum seekers in their country does not necessarily imply that citizens are going to lose jobs.

In the meantime, Phillip Sargisson, the regional representative of ACNUR [UN High Commission for Refugees] stressed that the refugee rate has been rising in Central America.

Just 10 months ago, there were 10,000; 4 months later there were 20,000 and right now there are 70,000 refugees on the isthmus.

Sargisson noted that the main problem is that the refugees are being considered as fifth-rate persons whereas they should be helped and should be given means for survival.

CARTER'S ELECTION DEFEAT, REAGAN'S WIN NOTED

Havana JUVENTUD REBELDE in Spanish 5 Nov 80 p 6

[Article by Lillian Lechuga: "United States: A Different Landscape"]

[Text] President Carter's resounding defeat at the hands of his adversary, Republican candidate Ronald Reagan, caused surprise in most of the international press centers. The electoral race had been so hard fought that even during the voting the experts themselves did not risk making any predictions. The only reference point was that offered by the opinion polls, which generally conceded only a small lead at the 11th hour to the former governor of California.

However, early last night President Carter had already acknowledged the victory of his Republican opponent, whom he congratualted and to whom he offered his cooperation, wishing him to find no difficulties during the transition period until 20 January, when the new occupant will take possession of the White House.

Reagan, the oldest presidential candidate in the United States to take on the responsibility of chief executive, is a figure who represents the most reactionary positions within the North American political, economic and social order.

The people of the United States, oppressed by the rate of inflation--about 13 percent at the present time--and by countless economic and social problems, seem to have voted more against the desperate situation they are experiencing, which is inherent in the system, than for Ronald Reagan.

Nevertheless, on the domestic front the election of Reagan means even greater support for big capital and offers even more impunity to act to racist and neofascist groups operating in the United States.

Regarding international relations, it is no secret that the avenger of Hollywood westerns will encourage--as he himself has said and repeated--a tougher policy against liberation movements and progressive governments all over the world.

Under these conditions, the North American people have chosen the program of the Republican Party and have inflicted a crushing defeat to the Democratic candidate, who is the first incumbent president not to be reelected since 1932.

The Republicans, for the first time in 26 years, also wrenched control of the Senate from the hands of the Democrats, removing from the public arena such recognized members of the upper house as Frank Church, Jacob Javits [as published] and George McGovern.

Regarding the final results, with 95 percent of the votes counted, Ronald Reagan had succeeded in accumulating 469 electoral votes from the states, which was much more than the 270 votes that he needed to cross the threshold of the White House. According to the latest forecasts, Reagan could get 475 of the 538 electroal votes, leaving only 63 for Carter.

With the 4 November election day in the United States concluded under these conditions, expectations were growing about the future positions that the archconservative president-elect would take in the international arena and on the domestic scene the analysts wondered what magic wand Reagan could bring into play to relieve the economic crisis that the United States is undergoing, summed up in the enormous unemployment figure.

The commentators were arguing that Reagan's economic promises sounded good, but they remembered that the landscape looks different from the White House than from the opposition.

GREAT OCTOBER SOCIALIST REVOLUTION HAILED

Havana GRANMA in Spanish 7 Nov 80 p 1

[Editorial: "Long Live the 63rd Anniversary of the Great October Socialist Revolution"]

[Text] All of progressive humanity and the world revolutionary movement is today commemorating the 63rd anniversary of the Great October Socialist Revolution, justly considered the most important event of this century.

That 7 November 1917 (25 October according to the old calendar) was the day that marked the start of an irreversible historical process that at the same time was a qualitative and permanent leap in social development. Because the revolution that the shots from the cruiser Aurora announced to the world in the old Russia of the Czars and the resolute action of the workers, peasants and soldiers led by Lenin and the Bolshevik Party began a new era characterized by the downfall of the old exploiting world, the socialist revolutions and the successive defeats of colonialism, imperialism and reactionary opposition on a world scale.

The dreams of social justice and the scientific forecasts of Karl Marx and Frederick Engels became a reality on one-sixth of the earth. Marxism, at the same time, gained strength notably from the new conditions created by monopolist capitalism and the enormous contributions of Vladimir Ilich Lenin as the theoretician and expert of the revolution and the leader and statesman in the building of the proletarian socialist state.

The influence since then of the Great October Socialist Revolution on the destiny of all the nations and peoples on earth has been extraordinary, despite the involvements of imperialism and the international reaction to avoid it and to destroy the first worker and peasant state, involvements that have included from the most brutal means of blockade against the Soviet people, the financing and equipping of counterrevolutionary groups to stir up civil war, encouragement to Nazi territorial ambitions and the launching of the fascist hordes with all their machinery for crime and war against the territory of the USSR and atomic blackmail, to the most modern campaigns of slander and ideological diversionism with the self-deceived aims of impairing the enormous prestige of the Soviet Union.

Lenin had already warned early that confronted with the Soviet people all the enemy's maneuvers would be shattered. In April 1920 Lenin said, "The steadfastness,

perseverance, inclination, determination and capacity to try 100 times, to correct another 100 and to achieve the goals proposed at all costs--the proletariat has acquired these qualities during the 10, 15 or 20 years that preceded the October Revolution and during the 2 years elapsed afterward, by suffering deprivation, hunger, ruin and disasters never seen. These qualities of the proletariat are the guarantee that the proletariat will triumph."

And that is what happened. Nothing has been able to break the glorious example of thethe October Revolution or the one thousand times heroic effort of the Soviet people in building the first socialist state in the world, which is also an example of perseverance, self-denial, love for their homeland and unlimited loyalty to the beautiful principles of proletarian internationalism.

From a destroyed, blockaded and starving Russia in 1917, the homeland of the Great October Revolution was transformed into the powerful socialist state that is the Soviet Union of our time, a stronghold of peace and internationalist principle.

The Soviet people, forged by their glorious Communist Party, not only were capable of maintaining their independence and their freedom, but made a decisive contribution to the work of saving humanity from slavery and the barbarity of fascism.

The Soviet Union, the state founded by Lenin and the Bolsheviks, played a decisive role in beginning a period of revolutions that would give rise to the community of socialist countries, to the final collapse of the colonial system, the violent development of the national liberation movement and the gradual transformation of power relationships in the world.

The warmongering aims of imperialism have been curbed thanks to the USSR's firm stand in defense of peace. The supreme interests of the world revolution and of the safety of peoples confronted with the greed and warmongering of the imperialist powers have at all times guided the foreign policy of the Soviet Union, which is based on Leninist principles of peaceful coexistence.

The October Revolution, and beginning with it, the building of a socialist state of extraordinary technical, military, political and economic power became determining factors for the successes of the national liberation movement in Asia, Africa and Latin America.

Throughout these 63 years many peoples in the world have closely felt the timely solidarity and the generous help of Lenin's homeland. History contains many examples of this communist solidarity with the revolutionary movement, from the early years to more recent times, which are an expression of unlimited attachment to the principles of an unchanging line of conduct in international policies of the USSR. This is an unobjectionable and indisputable truth.

In our own revolutionary process this truth is rooted with expressive clarity. Thus, Comrade Fidel in his central report to the first congress of our party clearly emphasized it:

"Without the resolute, solid and generous help of the Soviet people, our nation would not have been able to survive the confrontation with imperialism. They bought our sugar when our market was brutally suppressed by the United States. They supplied us with raw material and fuel that we would not have been able to obtain any other place in the world. They sent us free arms with which we resisted the mercenaries in Giron and equipped our Revolutionary Armed Forces to exact the highest price for any direct aggression by the United States. They gave extraordinary support to our economy in the crucial years of the economic blockade. Thousands and thousands of Soviet military and technical specialists helped to train our armed forces or supported with their aid practically all the branches of our economy. The effort of the Soviet people was supported as much as possible by other socialist countries.

"The debt of gratitude contracted with the glorious party of the Soviet Union and its heroic people will never be erased from our hearts. In the solidarity offered to Cuba, a country located thousands of miles from the USSR, the internationalist dreams of Marx, Engels and Lenin were fulfilled, and the immortal October Revolution was hurled with invincible force on the destiny of this continent."

The commemoration of the 63d anniversary of the Great October Socialist Revolution by itself represents an event of world importance. In Cuba, moreover, the struggle of our people for their second and final independence is indissolubly linked to the triumphs of our socialist revolution, the tasks that occupy us at the present time and the future of our common cause.

For all these reasons, this 63rd anniversary celebration is an unparalleled opportunity to repeat the feelings of admiration, respect and affection of our people, party and government for the people, party and government of the USSR; to confirm our limitless trust in the homeland of Lenin, to assure, as Fidel has done, that "these bonds that thus are formed and develop in the principles, the history and the purest and most unselfish feelings of our peoples are indestructible and eternal."

Long live the 63d anniversary of the Great October Socialist Revolution

Eternal glory to Lenin and to the Communist Party of the Soviet Union

BILATERAL TRADE AGREEMENT SIGNED WITH CANADA

Havana GRANMA in Spanish 17 Nov 80 p 5

[Article by Alberto Rabilotta]

[Text] Ottawa, 16 Nov (PL)--The third annual meeting of the Cuban-Canadian Intergovernmental Joint Commission for Bilateral Economic Relations concluded its work with the signing of a document that contains the progress achieved.

The commission, which met in the conference hall of the Ministry of Industry and Trade in Ottawa, studied bilateral economic relations, which in recent years have increased substantially.

The Cuban delegation was presided over by Raul Taladrid, director of nonsocialist developed countries in the State Committee for Economic Cooperation, and the Canadian delegation by J. McNeil, director general of the Western Hemisphere department of the Canadian Ministry of Trade.

Cuba is now Ottawa's fourth largest customer in Latin America and its first in the Caribbean, while Canada is one of Cuba's main nonsocialist suppliers.

McNeil told PRENSA LATINA that the work of this third annual meeting had been productive.

In 1979, trade between Cuba and Canada totaled more than $360 million, and in 1980 a considerable increase is expected.

In 1979, this exchange consisted of about 257 million Canadian dollars for Cuban purchases in Canada and about $106 million for Cuban sales to Ottawa.

McNeil described the sessions as productive and stressed Cuba's importance for the Canadian market.

Taladrid also was equally satisfied with this meeting of the joint commission and with the development of bilateral trade.

Among the specific topics that the commission included in its talks are: the interest of both countries in undersea oil drilling and exploration in Cuba and in developing a tourist base there.

REGULATION ON 1981 SPECIAL SUGAR HARVEST EMULATION

Havana TRABAJADORES in Spanish 15 Nov 80 pp 4-5

[Passages enclosed in slantlines printed in boldface]

[Text] Introduction

The Special Sugar Harvest Emulation is aimed at channeling the efforts of the workers in agricultural and industrial activities to make it possible to fulfill the commitments set forth in the historic event emulation quotas drawn up by the collectives for each fiscal year.

The organization of the Special Sugar Harvest Emulation will be based on the approved guidelines for economic and social development. Its fulfillment depends on the sectors and branches involved in achieving greater efficiency in our harvests.

The special emulation will help achieve better technical and economic results in the harvest. This contributes to more solid economic development. The emulation will help improve planning, organization, execution and supervision of all activities related to the harvest. It will also encourage the workers to achieve these objectives and increase their revolutionary awareness.

The National Committee of the CTC [Central Organization of Cuban Trade Unions] has evaluated emulation experiences from our past harvests. In order to strengthen labor discipline and increase the productivity of the agricultural, industrial and transportation workers, it has resolved the following:

Section I. Objectives

Article 1. The Special Sugar Harvest Emulation is organized to stimulate, materialize and channel the initiative of all participants in harvest activities and to strengthen ties between the agricultural and industrial workers, interesting them in the results of their common work, in order to achieve more sugar with better quality at a lower cost through fulfillment of the technical economic plan.

Article 2. It should also dynamically develop the Million Arroba Movement based on the principle that all participants in cutting (manual and mechanized), loading and hauling activities must analyze the real possibilities of increasing the results from the past harvest in order to achieve greater production and productivity and strengthen labor discipline.

Article 3. Another objective is to develop the Sugar Industry Emulation to achieve greater industrial efficiency in extraction of sugar from cane, fulfillment of the grinding quota for each mill, optimum operation of equipment, savings in the use of fuel, achievement of the best quality at the lowest cost and strengthened labor discipline.

Article 4. It should improve agroindustrial evaluations by integrally analyzing the results of the special emulations for industry, agriculture and transportation so that they reflect the degree of efficiency achieved in sugar harvest activities at the enterprise, provincial and national levels, involving all the participants in producing more with better quality at a lower cost.

Section II. General Principles

Article 5. The Special Sugar Harvest Emulation is organized and directed at all levels by the leadership organs of:

The CTC; and

The National Sugar Workers Union and the National Union of Transportation Workers.

Article 6. The CTC, the National Sugar Workers Union and the National Union of Transportation Workers will coordinate the necessary work plan at each level with the Ministry of the Sugar Industry to guarantee the effective participation of the administration in the fulfillment of the Special Sugar Harvest Emulation requirements for organization, development and systematic control.

Article 7. The national unions that participate in the sugar harvest through mobilization of their members will be responsible for complying with this regulation and, depending on their position, developing specific miniemulations that stimulate the volunteers at the camp, municipal, provincial and national levels.

Article 8. The Special Sugar Harvest Emulation will be based on fulfillment of the indicators established for each activity from the lowest to the highest level. These indicators will be announced to each participating worker at the assembly held before the beginning of the harvest. Individual and collective commitments will be made then.

Article 9. Evaluations for each period will be determined by the planned dates for each activity; failure to supply information on time and in the correct form will be cause for disqualification in that period. The administration (Ministry of the Sugar Industry and Agricultural Transportation) will be responsible for contributing the necessary data and doing the corresponding evaluation. The CTC, through established controls, will evaluate the results of the integral evaluations at each level based on the summary of the special emulation for the Sugar Workers Union, the Union of Transportation Workers and volunteer cutters.

Article 10. The awards presented will be those set forth in this regulation. Others which would interrupt the necessary balance wherein all recognition corresponds to achievement cannot be established.

Article 11. Systematic propaganda will be developed so that all the workers know the progress of the harvest. There will be publication of the results of the

evaluations and comparisons with the quotas, using all means of communication: posters, bulletins, blackboards, local radio, radio and printed press and television, etc.

Section III. Organization, Supervision of Emulation

Chapter I. Indicators

Article 12. Industrial sector:

a) Fulfillment of raw or refined sugar production quota;

b) Fulfillment of recovery quota;

c) Fulfillment of work attendance quota;

d) Quality of sugar (conditioner); and

e) Costs (conditioner).

Article 13. In the agricultural sector, the following will be evaluated individually in all activities at the brigade, squad and base levels:

a) Work attendance at the percentage established; and

b) Fulfillment of the quota (planned wage-real wage).

The combine brigade and high productivity contingent will be measured by:

a) Attendance;

b) Production; and

c) Productivity.

The enterprises will be measured by:

a) Fulfillment of production quota; and

b) Quality of cane that reaches the mill.

The rest of the provincial collectives will be measured by:

a) Fulfillment of delivery quota;

b) Work productivity; and

c) Percentage of attendance at cutting according to the plan.

Chapter II. Evaluations

Article 14. Based on the organizational nature of each activity, evaluations will be made:

a) Every 10 days in industry;

b) Semimonthly in agriculture; and

c) Monthly (industry, agriculture and transportation).

Article 15. The levels at which the evaluations will be held are:

a) At the base level (manual and mechanized brigades and cane districts), semimonthly on the 17th and 2nd of each month and every 10 days to verify fulfillment of the delivery, productivity and attendance quota; at the mills, every 10 days. There can be frequenter informal evaluations—that is, daily and weekly—if work results advise this.

b) At the cane camps, semimonthly on the 19th and 4th of each month.

c) At the mills or contingents, semimonthly on the 21st and 6th of each month and, at the municipal level, on the 23rd for the results of the first half of the month.

d) Monthly from the 8th to the 12th, the following evaluations will be made:
In the cane enterprise, at the provincial and national level for agricultural workers;
At the provincial and national level for industry;
At the municipal or equivalent level, provincial and national level for volunteer cutters; and
In the agricultural transportation enterprises, at the provincial and national level for the Union of Transportation Workers.

e) National evaluation for all activities will be from the 15th to the 20th of the month after the report.

Article 16. The following will participate in each evaluation:

In industry:

a) At the area, shift and department level, the executive secretariat of the union section, the appropriate administrative official and the workers;

b) At the enterprise level, the executive secretariat of the union bureau, the administration of the enterprise, the general secretaries and secretaries of emulation of the union sections. They will evaluate work results and report to the workers at the monthly production assemblies; and

c) At the provincial level, the emulation committees of each mill and delegations of winners.

In agriculture:

a) At the brigade (manual and mechanized) and district level, all the workers;

b) At the enterprise level, the executive secretariat of the union section, the administration of the districts, manual and mechanized brigade chiefs and the best

workers. The PCC [Communist Party of Cuba] and the UJC [Union of Young Communists] will be invited in each one of the above activities.

c) At the provincial level, the executive secretariat of the union bureau and the administrative leadership of the enterprise, the best workers and representatives of the collectives in each one of the activities in the province.

Each month the union and administrative leaders in the provinces will participate at the national level to evaluate industry, agriculture and transportation.

In March, the best workers from each activity at the national level will attend in addition to the union and administrative leaders of each province. On 6 August, the final evaluation will have the same group of participants.

Volunteers

a) At the brigade level, all the cutters will participate.

b) At the camp level, the members of all the brigades will participate.

c) At the contingent or mill level, representatives of the union committees, the camp chiefs, the chiefs of the best brigades and the best cutters in each camp will participate.

d) At the municipal or equivalent level, representatives of the union leadership of the contingents, battalions and mills will participate in the meeting to analyze the first half of the month. Monthly the participants in the semimonthly meetings and delegations from the best cutters in each contingent, battalion and mill will participate.

e) At the provincial level, representatives of the union leadership of the column, contingents and battalions will participate in the meeting to analyze the first half of the month. Monthly the participants in the semimonthly meeting and delegations from the best camps and brigades and the best cutters in each column, town, contingent and battalion will participate.

f) The secretaries of volunteer work of the national unions and provincial CTC will participate in the national meeting.

Hauling by Truck (Agricultural Transportation)

a) At the brigade level, a delegation of the union section headed by the secretary of emulation, production and volunteer work and the drivers selected as the best for the month will participate with the administration, PCC and UJC invited. A member of the union bureau of the enterprise should always attend these evaluations if possible.

b) At the enterprise or provincial level, the executive secretariat of the union bureau and a delegation from the administrative leadership of the enterprise will participate in the monthly evaluations as well as a delegation from the provincial union. The union sections of the brigades and the comrades selected as the best in each brigade should also participate.

c) At the national level, a delegation from the provincial committee of the Union of Transportation Workers and the administration will participate as well as a delegation of the best workers selected by each province.

Article 17. At each evaluation, the following will be selected:

In industry:

a) At the mill level:
    Best worker in each area;
    Best brigade in each area; and
    Best area.

b) At the provincial level:
    Best mill in each group;
    Best mill in sugar production;
    Best mill in recovery; and
    Best mill in attendance.

c) At the national level:
    Best mill in all indicators (overall) in each category;
    Best province in production;
    Best province in recovery;
    Best province in quality;
    Best province in savings;
    Best province in costs; and
    Best province in attendance.

In agriculture:

a) At the district level (semimonthly and monthly):
    Best male cutter;
    Best female cutter;
    Best teamster;
    Best traditional hauling operator;
    Best mechanized hauling operator;
    Best loader operator;
    Best combine operator;
    Best loader operator and helper;
    Best regular group;
    Best regular brigade;
    Best combine brigade; and
    All individuals and collectives that fulfill their tasks.

b) At the enterprise level:

Monthly first, second and third places will be awarded in:
    Male cutters;
    Female cutters;
    Teamsters;
    Traditional hauling operator;
    Mechanized hauling operator;

Loader operator;
Best group;
Best brigade;
Best mechanized brigades; and
Best districts.

c) At the provincial level (monthly):

The same selection as at the enterprise level with the addition of:
Best cane enterprise; and
Best high productivity contingent.

d) At the national level:

The same indicated for the provincial level with the addition of:
Best province in mechanized cutting;
Best province in manual cutting;
Best province in mechanized loading;
Best province in hauling with oxen; and
Best province in hauling with tractor.

At the end of the harvest, the mills that were national winners in each category as well as for each province will be selected.

Volunteers

a) At the brigade, contingent or mill level, the following selections will be made:
Cutters and brigades that fulfill the established cutting and attendance quotas; and
Best cutters, best brigade and best camp for each contingent or mill.

b) At the municipal or battalion level, the following will be selected:
Three best cutters;
Three best brigades; and
Three best camps.

c) At the provincial level, in addition to the above, the following will be selected:
Three best towns; and
Best contingent or mill.

d) At the national level, the following selections will be made:
Three best male cutters;
Best female cutter;
Three best brigades;
Three best camps;
Three best towns; and
Fulfilling provinces.

Hauling by Truck (Agricultural Transportation)

a) Brigade

The union sections must select the following monthly:
Three best drivers in hauling conventional cane (long cane);
Three best drivers in hauling cut cane;
Three best drivers in transshipment;
If a brigade has a single hauling system, only three drivers will be selected—that is, first, second and third places.

b) Province

Through the union bureaus, the following must be selected monthly:
Three best truck drivers;
Three best truck drivers in hauling conventional cane in combines; and
Three best truck drivers in transshipment.

At this level, the best brigade in hauling cane will be selected monthly, not applying the hauling systems in this case but only the final results.

d) National

There will be the same selections as made at the provincial level plus: selection of the best province in hauling cane and the best brigade.

The provincial CTC, in coordination with the sugar harvest sector, can establish overall selections of the best town.

Selection of the best will be made from among those that achieve the largest overfulfillment of the established quotas or tasks.

Article 18. The following incentives will be awarded:

Industry

a) At the mill level:

The incentives will be pennants for the miniemulations organized by the mill emulation committee.

b) At the provincial level:
Rotating pennants to the best mills in each group; and
Rotating pennants to the best mills for each indicator.

c) At the national level:
Rotating banners to the best mill in each group; and
Rotating banners to the best province for each indicator.

d) At the end of the harvest, certificates of merit will be presented to the mills that have achieved the greatest efficiency in the fulfillment of each one of the indicators in this emulation.

Agriculture:
Rotating triangular pennant to the best individuals in the district;
Rotating pentagonal pennant to the best collectives in the district;

Certificates that indicate the rank achieved to the best individuals in the enterprise;
Rotating pentagonal pennant to the best collectives in the enterprise;
Diploma that indicates the rank achieved to the best individuals in the province;
Pentagonal pennants for group, brigade and squad in the best collectives in the province; and
Banners to the best enterprises and contingent.

Material incentives for industry and agriculture:

There will be material incentives for the best:
At the enterprise level (monthly);
At the provincial level (quarterly); and
At the national level (on 6 August).

Nationally:
Diplomas that indicate the rank achieved for individuals; and
Banners (rotating) for the best contingent and best provinces per activity.

Final evaluation:
Each province will present a trophy to its best industrial and agricultural enterprise;
Nationally a trophy will be awarded to the best agricultural and industrial enterprise;
The best individuals in the sugar harvest will receive a plaque honoring them;
After the harvest, material incentives will be presented to the best individuals at the enterprise, provincial and national levels for the level of selection and the results achieved during the harvest; and
The best collectives with recreational activities; these incentives are for industry and agriculture.

Volunteers

a) Bonuses to the cutters that fulfill the established quotas and attendance;

b) Certificates to the brigades that fulfill the established quotas and attendance;

c) At the brigade, contingent or mill level, the following incentives will be awarded:
Metal badge and certificate to the best cutter on each brigade;
Pennant and certificate to the best cutter in each brigade;
Pennant and certificate to the best cutter in the camp;
Pennant to the best brigade in each camp;
Metal machete and certificate to the best cutter in each contingent or mill; and
Pennant to the best brigade and best camp in each contingent or mill

d) At the municipal or battalion level, pennants or certificates of merit will be presented to:
Three best cutters;
Three best brigades; and
Three best camps.

e) At the provincial level, the following will be awarded:
Nickel-plated machetes and certificates of merit to the three best cutters;
Pennants to the three best camps;
Banner to the best contingent or mill; and
Pennants to the three best towns.

f) At the national level, the following will be awarded:
Diplomas of merit to the three best male cutters and the best female cutter as well as corresponding material incentives;
Pennants to the three best camps;
Banners to the three best towns; and
Banners to the fulfilling provinces.

The incentives will be presented to the winners at their places of work after the national meeting is held.

At the end of the sugar harvest, pennants will be awarded to the provinces and unions that have fulfilled the established conditions with respect to brigades with a million or more arrobas of cane cut during the sugar harvest on the basis of fulfillment of the Million Arroba Movement.

The members of the best brigades and camps selected in the final sugar harvest evaluation (emulation) will receive diplomas of merit for their work.

Hauling by Truck (Agricultural Transportation)

a) Drivers

Monthly, the union section will award a rotating pennant to the best driver for each hauling system.

Monthly, the union bureau will present a bonus to the best driver for each hauling system.

Nationally, a certificate will be awarded to the nine best drivers who have been selected in the nation each month.

b) For the brigades

Monthly, a rotating pennant will be awarded to the best brigade in the province.

Monthly, a rotating banner will be awarded to the best brigade in the country.

c) For the provinces

Nationally, a rotating banner will be awarded to the provinces that rank in the first three places based on established indicators.

The provinces that have overall selections of the best town will award a pennant of merit for this.

Article 19. The semimonthly meetings and monthly evaluations of the Sugar Harvest Emulation will be convoked by the Sugar Workers Union, the Union of Transportation Workers and the CTC at the corresponding levels on the same day and in the same place.

Article 20. The monthly emulation evaluations at the municipal and provincial levels will be held as follows:

Morning session:

Those attending the evaluation for each activity will be convoked based on the following:

Agenda

Analyses of emulation results in the different sugar harvest, industrial, regular, transportation and volunteer activities.

Each activity will be analyzed separately.

Afternoon session:

The emulation evaluation of all sugar harvest activities will be convoked by the CTC. There will be a plenary session in which the following will be discussed and approved:

a) Report of the Sugar Workers Union on monthly emulation results; presentation of corresponding incentives.

b) Report of the Union of Transportation Workers on results of hauling by truck; presentation of incentives.

c) Report of the CTC on emulation results for volunteers; presentation of corresponding incentives.

d) Conclusions

Section IV. Million Arroba Movement

This will cover all participants in manual and mechanized cutting and loading and hauling cane.

Chapter III. Manual cutting

Article 21. All cutters (volunteer and regular) and others involved in this activity can participate in this four-step emulation of the Million Arroba Movement if they meet the following requirements:

a) They must belong to brigades.

b) The brigades cannot have more than 48 cutters.

c) The days indicated on the tables for the steps as well as for the million mark must be followed; this merely means fulfilling the average quota established by the resolution and 80 percent attendance at the cutting.

d) No brigade can receive outside help in cutting.

e) During the first step (250,000 arrobas), the brigade will make the necessary adjustments and changes in cutters for best organization in order to fulfill the planned number of days for this first step.

f) After reaching the first step (250,000 arrobas), the commitment form will be filled out with the full names of the cutters who actually make up the brigade in order to continue to the million or millions that they are committed to cut. Once filled and signed, that form must be delivered within 24 hours to the next higher level.

g) The original commitment form must be sent to the national CTC. If this commitment does not reach the national CTC on time and in the correct form, the brigade will not be considered in the Million Arroba Movement.

h) The brigades cannot increase or change cutters whose names appear on the signed and delivered commitment.

i) The number of brigade days on the tables for the steps as well as for the million marks will be based on the cutters in the brigade at the beginning of each step.

j) The established steps are as follows:
First step: 250,000 arrobas;
Second step: 500,000 arrobas;
Third step: 750,000 arrobas; and
Fourth step: 1,000,000 arrobas.

k) Although the steps consist of 250,000 arrobas of cane each, these will be accumulated to analyze the next higher step, in cane as well as in days to be completed and actually used, in order to learn to what degree it is fulfilled or not fulfilled.

l) The brigades that do not follow the days established for each step on time and in the correct form will not receive the corresponding incentives although they can aspire to the next higher step, deducting their days of delay.

m) All the brigades that have made a commitment must make a report even if they have not followed the established days on the tables.

n) Information on the steps and millions reached should be reported within 24 hours of achievement.

ñ) Any brigade can be disqualified if it does not meet the mentioned requirements.

Information on the steps and millions achieved must be sent to the national CTC on the established forms and must be certified by the cane district when a million mark is reached.

Article 22. In order to achieve these objectives, the supervisory comrade must plan the evaluation of fulfillment of the days for the step and the types of cane cut when the brigades are organized. This permits control during the harvest of the work of the brigade and lack of fulfillment, fulfillment or overfulfillment of the task. It also makes it possible to learn in time when there are delays and, consequently, to determine the causes and adopt the necessary measures to make up for the lost time. This planning can be done daily or with each change of type of cane or cutting.

Article 23. Moral incentives:

a) First step

The brigades that achieve 250,000 arrobas of cut and loaded cane within the planned number of days will be designated: Brigade /with Organization/.

b) Second step

The brigades that cut and load 500,000 arrobas of cane within the planned number of days will be designated: /Effort and Productivity/ Brigade.

c) Third step

The brigades that cut and load 750,000 arrobas of cane within the planned number of days will be designated: /Road to Victory/ Brigade.

d) Fourth step

The brigades that cut and load 1 million arrobas of cane within the planned number of days will be designated: /Jesus Menendez/ Million Arroba Brigade.

e) The brigades that cut and load 2 million arrobas will be designated: /Victoria de Giron/ 2 Million Arroba Brigade.

f) The brigades that cut and load 3 million arrobas will be designated: /Bronze Giant/ 3 Million Arroba Brigade.

g) The brigades that cut and load 4 million arrobas will be designated: /May First/ 4 Million Arroba Brigade.

h) The brigades that cut and load 5 million arrobas will be designated: /Mambises of the 20th Century/ 5 Million Arroba Brigade.

i) The brigades that cut and load 6 million arrobas will be designated: /Heroic Warrior/ 6 Million Arroba Brigade.

j) The brigades that cut and load 7 million arrobas will be designated: /Followers of Che/ 7 Million Arroba Brigade.

k) The brigades that cut and load 8 million arrobas will be designated: /Anniversary of the Attack on Moncada Barracks/ 8 Million Arroba Brigade.

l) The brigades that cut and load 9 million arrobas will be designated: /Anniversary of the Triumph of the Revolution/ 9 Million Arroba Brigade.

m) The brigades that cut and load 10 million arrobas will be designated: /14th Congress/ 10 Million Arroba Brigade.

n) The manual cutting and loading brigades will receive pennants for the different steps and the Million Arroba Banner when they reach that figure.

ñ) Pennants for the steps and banners for millions of arrobas will be presented by the province when it receives the required reports. The national CTC will present pullovers to the provinces after receiving the corresponding reports.

o) Incentives for the Million Arroba Movement will be presented to the brigades according to the requirements; they will be preserved because of their value as stimuli for increased productivity.

p) At the end of the harvest, the moral incentives won by each brigade in the Million Arroba Movement must be publicized in posters at the cutters' job centers.

Article 24. Organization, development and supervision of the Million Arroba Movement as part of the sugar emulations will be evaluated at the national union and the provincial CTC levels with regard to the following aspects:

a) Increase in the percentage or number of brigades that cut a million or more arrobas of cane compared to the results of the previous harvest for each union or provincial CTC.

b) Mixed brigades are included in the province where they are located.

c) At the end of the harvest, each fulfilling union and province will receive incentive for fulfillment.

The levels of the union movement that, in one way or another, take care of the activities involved in the organization, development and supervision of the Million Arroba Movement will be responsible for:

Organizing the regular cutters based on union membership when all the conditions are present to form one or more brigades for each union, not mixed; and

Each union or level of the CTC in each area, contingent or mill that has an assigned number of workers to be mobilized must distribute the best and most conscientious cutters among all the brigades in order to pass on their experience and work spirit to a greater number of collectives, in this way increasing the number of brigades that cut a million or more arrobas of cane. This will affect the development and growth of the Million Arroba Movement during the present harvest.

Chapter IV. System of Medals and Honorary Titles of Cuba

Article 25. According to Law No. 17 of 28 June 1978 which establishes the norms for the System of Medals and Honorary Titles of Cuba and Decree Law No. 30 of 10 December 1979, the participating workers in the harvest, based on the results they achieve, can be evaluated by the secretariat of the national CTC and proposed to the Council of State based on the above laws.

The proposals will be based on the appropriate statutes or regulations for each award or honorary title.

Chapter V. Mechanized cutting, loading and hauling

Article 26. Requirements that will measure the Million Arroba Movement in mechanized cutting, loading and hauling:

a) To establish commitments for individual and collective cutting (operator and brigade) with the minimum of 1 million arrobas, 100 percent of the quota and 80 percent attendance.

b) The operators who do not follow the established number of days for each million on time and in the correct form will not receive the corresponding incentive although they can aspire to the next higher step if they deduct the days of delay; that is, reach 2 million arrobas within the time planned.

c) All the operators and brigades that have fulfilled their commitment will be reported periodically even if they do not fulfill their quota in the planned number of days on the table.

d) Any operator or brigade that does not meet the indicated requirements can be disqualified.

Article 27. The following incentives will be awarded:
A pennant to the operators who reach 1 million arrobas.

a) The operator who reaches 2 million arrobas cut or loaded will receive the /Victoria de Giron/ 2 Million Arroba Operator Pennant.

b) When he reaches 3 million arrobas cut or loaded, he will receive the /Bronze Giant/ 3 Million Arroba Operator Pennant.

c) The operators will receive a pullover for each million they cut, load or haul based on the established norms and principle.

Brigade

a) When the collective that operates a combine has cut a minimum of 1 million arrobas of cane, it will receive the /Jesus Menendez/ Million Arroba Squad Pennant.

b) The brigade that reaches an average of 2 million arrobas cut by machine will receive the /Victoria de Giron/ 2 Million Arroba Squad Pennant.

c) The brigade that reaches an average of 3 million arrobas cut or loaded by machine will receive the /Bronze Giant/ 3 Million Arroba Squad Pennant.

Section V. Individual Emulation

Chapter VI. Cutters involved in manual cutting

Individual incentive for cutters is called the /Million Vanguard/.

Article 28. The /Million Vanguard/ diploma will be established for the Youth Labor Army integrated into brigades or groups that reach the following requirements during the harvest:

a) Male cutters

For cutting for a collection center, burned or green cane, manual cutting and loading of burned and green cane: 150 percent fulfillment of the quota and 80 percent attendance.

b) Female cutters

The female cutters will receive the same award for all types of cutting listed in the above clause if they fulfill 100 percent of the quotas and 80 percent attendance.

Chapter VII. Mechanized cutting, loading and hauling

The following are established as incentives for operators, truck drivers and teamsters:

Article 29. To be awarded the /Million Vanguard/ diploma, they must meet the following requirements:

a) Fulfill 80 percent attendance during the grinding days of the mill for which they work.

b) Overfulfill the daily quotas on the following basis:

Activity	Quota
Mechanized cutting	1.0
Mechanized loading, hauling with truck Hauling operator, teamsters	1.5

Final Provision

The National Sugar Workers Union and the National Union of Transportation Workers will draw up specific methodologies based on this regulation.

The planned participation of workers and leaders in the different evaluations explained above must not interfere with the normal development of sugar production activities.

Given in the city of Havana on 26 October 1980, "Year of the Second Congress."

LAY JUDGES IMPORTANT PART OF LEGAL SYSTEM

Havana JUVENTUD REBELDE in Spanish 21 Oct 80 p 2

[Article by Juana Maria V. Sol; for previous articles on this subject see JPRS 76982, 11 December 1980, No 2225 of this series, pp 92-96]

[Text] Performance of lay judges in their legal functions is indispensable.

"Among our lay judges we have simple and common men of the people: good workers and good citizens. They are, at the same time, the closest link between our people and our laws."

Gladys Elejarde, our interviewee, is concerned with anything that has to do with documenting lay judges in La Habana Vieja Municipality. When we visited her, she was immersed in the process of confirming those workers who will continue their functions in the tribunal, which takes place every 2 and 1/2 years.

"However," she explained, "this task, which the party supports completely because of its importance within the legal system, is not understood as well as it should be by the various work center administrations, which refuse to give the judges time off to carry out their duties, delay their departure or simply harrass them.

"Sometimes we have people tell us that it is impossible, for example, for them to go to the work center, since once it is known that they are lay judges, they are not accepted, not wanted; or that their offices or their immediate superiors refuse to allow them to leave during the 2 months required annually of tribunal personnel.

"We think critical and revolutionary analysis is lacking. The judge is going to carry out a social function of extraordinary importance, and his absence does not harm his place of employment, since the Ministry of Justice, through a state transaction, reimburses the employer for the judge's salary."

Bearer of Our Laws

The legal procedure, in any of its expressions--civil, criminal or labor--must be developed in accordance with established legislation, therefore, it is impossible to do the work without the lay judges.

Article 127 of the Constitution of the republic establishes rendition of services by workers elected to represent the masses in the People's Tribunals, from the municipal to the supreme court.

At the same time, Paragraph 4 of Article 77 of the Law of Organization of the Judicial System establishes that:

"Lay judges discharge their functions each year in two nonconsecutive periods of 1 month each," a measure which tries not to endanger their jobs. The process of electing this active element in our judicial system began on the initiative of the masses, who know their attitudes toward the people as a whole, as well as their human and revolutionary qualities.

This task is carried out by the party in the municipalities, and after the respective biographies have been studied, the names are given to the minister of justice, who proposes them to the organs of the People's Government. The latter may accept or reject them by direct and secret ballot.

Once the lay judge has some experience, the tribunal which has evaluated his work may propose that he be confirmed in that position. He can and should train the citizens within the community in any questions of a judicial nature or instruct them with respect to their rights and duties, which makes him, in effect, a bearer of our laws.

Violation of Article 127

What happens when the administration of a work center refuses to comply with an established law of our constitution?

First, it makes the work of the tribunals difficult: Normal matters are delayed on the administrative level, and work concerning legal procedure is paralyzed.

The presidents of the tribunals, therefore, can proceed under Article 161 of the Criminal Code, entitled "Refusal of Assistance," which reads: "Any public official who a) does not lend the required cooperation to the administration of justice or refuses public service when this is required by competent authority, incurs a penalty of 3 to 9 months' imprisonment or a fine to be paid in 100 to 200 installments, or both, and if, as a consequence of the circumstances referred to in the above paragraph, there is serious harm to the national interest or to any person, the penalty is 6 months to 3 years' imprisonment or a fine to be paid in 200 to 1,000 installments."

However, they usually resort to the normal mechanisms: first they send a written request for the worker's services, in which the above constitutional provision is quoted; if this does not bring any results, they visit the work center, and finally, if there is no other alternative, proceedings must be started, because the work center has violated the constitution.

FAR CIVILIAN WORKERS HOLD EMULATION MEETING

Havana VERDE OLIVO in Spanish 23 Nov 80 p 55

[Article by Katia Valdes]

[Text] The MIN FAR [Ministry of the Revolutionary Armed Forces] Units and Dependencies Section of the SNTCFAR [National Union of FAR Civilian Workers] held a gala celebration on the occasion of its emulation plenary session for the 1979-1980 year of instruction in the Santa Maria del Mar Military Center installations. During this session, material awards were made to the winning units and vanguard workers of the section in the recently ended emulation period.

The best center banner was awarded to units 1122, 3088 and 9378 in the categories of scheduled production, education center and scheduled services, respectively.

The rank-and-file workers selected as vanguards of the entire section were Manuel J. Gonzalez Leyva, Jose M. Rodriquez Pendas, Margarita Torres Sanchez, Luis A. Acosta Rivero and Sergio Muguercia Sanchez.

This award was conferred upon the following worker-helpers: comrades Jose Delgado Hernandez, Jose Gomez Crespo, Maria Teresa Cabrera Sardinas, Osvaldo Rodriguez Darias, Eduardo Camacho Perez and Ivan Rodriguez Perez.

In the technical category, workers Herborto Bernal Puertas and Felix Batista Pena were selected.

The enthusiasm of civilians in units and dependencies of the MINFAR in the performance of their duties during the past year of instruction was exemplified in comments by vanguard Jose M. Rodriguez Pendas, of Military Unit 3088, who committed himself not only to keeping the banners of emulation flying high but also in the future to achieving greater and better victories on this fundamental front of our workers movement.

The ceremonies were chaired by Col Jose Garcia Trujillo, president of the sectorial superior committee for emulation; Andrès Argote, first secretary at that trade union level; Jose Gutierrez Penaranda, member of the SNTCFAR secretariat; and senior and junion officers of the various units.

UJC IN FAR CONSTRUCTION HOLDS REVIEW MEETING

Havana VERDE OLIVO in Spanish 23 Nov 80 p 56

[Article by Raul Brizuela]

[Text] With a view to analyzing the results of the work of the youth organization during the 1979-1980 instruction year, a seminar for instructors of the UJC [Union of Young Communists] of construction and housing organizations of the FAR [Revolutionary Armed Forces] was held recently.

During the seminar, the best experiences were described and guidelines and tasks were established for the current year of instruction, 1980-1981.

The program, in addition to analysis of the central report and the reading of several special presentations, included debate of questions relating to the work of the UJC in support of production and services, as well as methodological studies on the change in documentation, development of the assembly process and of documents containing guidelines for work in agitation and propaganda.

Participants in the seminar visited units which had distinguished themselves by the work of the UJC in all offices, particularly in its support in meeting production and services plans. Particularly instructive were the visits to Brigade 1 of ECM [Mambisa Steamship Enterprise] No 6 and Brigade 2 of ECM No 10, as well as participation in two socialist emulation inspections.

When he made the concluding remarks, Lt Col Gerardo Thaureaux, chief of the political section of constructions and housing of the FAR, emphasized the quality, enthusiasm and profundity with which the seminar had been conducted.

He stressed the principal points debated and called for redoubling the role of the UJC in production and services, raising the internal standards of operation in the organization and going more deeply into political-ideological work with the youth masses.

In another part of his speech, he urged the youth leaders assembled there to develop a meeting process at the level of the Second Party Congress and reiterated the confidence the command and the party have in the UJC and in the capability of its cadres to implement the guidelines and acquired experiences in their units.

FAR MAGAZINE 'EL OFICIAL' IN CIRCULATION

Havana VERDE OLIVO in Spanish 23 Nov 80 p 55

[Text] EL OFICIAL issues No 4 and 5, 1980, will soon be placed on sale at Military sales Centers. This magazine provides articles of great interest and utility for the most diverse military specialties. In No 4, the reader will find articles of general interest such as: "Chinese Militarism," "Zionism: Instrument of Imperialism," "The Guerrilla Movement in the Fatherland's Great War," "The Duties of an Officer," "The Method of Parallel Planning" and others.

Officers of the CEM [Military Training Center] can read articles on the basics and principles of socialist military instruction, the sociological aspects of instruction and what the EME [Study Materials Program] should be like. The magazine includes articles on artillery, topography and mass extermination weapons. Aerial reconnaissance of the capitalist countries is another of the topics dealt with in a documented article.

The "Let Us Get To Know the World" section contains a historical, political, economic and geographic panorama of the Kingdom of Morocco. This article also contains an analysis of its armed forces.

No 5 contains such interesting articles as: "Preparation for the Normandy Landing," "The Feudal Traditions of Maoist Militarism," "Desert Terrain and Its Effect on an Offensive," "CIA: Three Letters Which Spell Crime," "The Influence of the Press in Combat" and others.

The tactical section is devoted to the defense of a city by the IM Battalion and the calculation of march by intervals of time, while the section on mass extermination weapons covers the topic of complete special treatment under night conditions and the use of the light flamethrower in the offensive. Additionally, this number has articles of interest to specialists in reargauard action, military engineering and information.

The "Let Us Get to Know the World" section in this issue is devoted to the Republic of Chile.

In both issues, the usual sections are retained: "Perhaps You Did Not Know," "Foreign Military News," and the usual summaries of the most important articles.

SEPMI ACTIVITIES, OPPORTUNITIES EXPLAINED

Havana JUVENTUD TECNICA in Spanish Aug 80 pp 70-72

[Article by Jose R. Garcia Gonzalez]

[Text] The Society for Patriotic Military Education (SEPMI) is considered a suitable means of providing vocational guidance for advanced military specialties and technologies. It has many subject-matter centers where children and juveniles can make decisions relating to their professional futures.

The SEPMI has the following objectives: to make known the military skill areas and the heroic traditions of the Cuban people and their Revolutionary Armed Forces; to work systematically on the early training of youths before they are called into a active military service; and to promote the development of technical-military sports in the country.

The basis of the SEPMI are the Rank-and-File Associations which can be established in any work center, cooperative or school which has a minimum of 10 interested youths.

These associations have the responsibility of forming Technical-Military Sports Clubs to ensure the participation and advertisement and development of such sports among the populace and principally among 12-year-old girls and boys.

Youths or adults who are members of the SEPMI have the right to request membership in any of the clubs run by the Rank-and-File Association and, based on their particular interests, to participate in the following specialties: air sports (parachuting, airplane modeling and hang-gliding), water sports (rowing, kayak, powered navigation, skin diving, and scuba diving) and radio sports. Orientation on the terrain, motorcycling, map reading and marksmanship.

This activity, in addition to preparing our youth and people in general for the defense of the fatherland, arouses the interest of its members in the above-mentioned technical-military specialties.

ISA CONDE DISCUSSES PCD MEMBERSHIP, LEFTIST UNITY

Membership Drive

Santo Domingo EL CARIBE in Spanish 6 Dec 80 p 4

[Article by Ruddy L. Gonzalez]

[Text] The Dominican Communist Party (PCD) last night made known its official program at a public function that took place in the headquarters of that political organization.

PCD Secretary General Narciso Isa Conde made a speech in which he advocated Dominican leftist unity in order to attain power.

Isa Conde also said that last night's ceremony also successfully concluded the first stage of the membership campaign carried out by the PCD throughout the country and stated that during that period the Communist Party obtained approximately 47,000 new members.

He said that the PCD membership campaign will be resumed on 15 January and will continue until the closing date in 1981 for PCD membership applications with the Central Electoral Board (JCE).

He pointed out that the PCD program is a full and amended version of the initial plan that was approved at the Second Congress of the Dominican Communist Party, in March 1979.

Isa Conde said that "this amended and corrected version of the initial plan contains a political plan and is the result of an investigation of our reality and and several years of theoretical effort."

He pointed out that "the compilation and discussion of various aspects, the examination and the statement of concepts, the introduction of hundreds of amendments, the updating, the synthesis of various trends that led to the attainment of this edition that we are presenting today has been the result of an intensive collective task, not free of evident delays and failures prior to the definitive publication."

Isa Conde added that "we now finally have the definitive edition of the Dominican Communist Party program, based on a Marxist interpretation of our reality. It contains an extensive and profound diagnosis of the society in which we live, specific orientations for its change, and the type of society for which we are struggling; an aggregate of theses that include formulations on religion, the military, the question of women, and of trade unionism; and the bases of our international policy."

He added that the PCD program "is a program of struggle, a program that strengthens the unity of our party, a quality program that in this regard places the PCD above all of the country's organized parties, which in the best of cases have nothing better than very deficient programs or do not go beyond general statements."

He said that the marked drop in popularity of the government and of the Dominican Revolutionary Party (PRD) and the expectations that its possible electoral defeat in the forthcoming 1982 primaries creates calls for an order of the day discussion of options for replacement, specifically on the prospects of communists and of leftists, as well as on the necessity for unity as a means to power, and its already growing political influence in the national life.

He indicated that nowhere in the PCD program is there any indication that the party will compete exclusively in only the 16 May 1982 elections and said that the PCD therefore asks communists to unite in forming a front for the purpose of winning in the primaries and of attaining power in the country.

Tens of communist militants and leaders were present at the function that celebrated the issuance of the PCD program.

Supports Unity

Santo Domingo LISTIN DIARIO in Spanish 6 Dec 80 p 12

[Article by Eduardo Montano]

[Text] The Dominican Communist Party advocated that all leftist political organizations unite in order to participate together in the general elections scheduled for 1982.

PCD Secretary General Narciso Isa Conde made a speech during the ceremony of the PCD Membership Campaign in which he explained that "we have been expressing the need for the unification of leftist organizations for about 2 years."

"In March 1979, immediately following the II Congress of the PCD, we said that it was indispensable for the left to unite and form an intensive unitary movement with clear anti-imperialist determination," the political leader pointed out.

Recently Professor Juan Bosch, chairman of the Dominican Liberation Party, called for unity of the leftist parties for the purpose of participating in the forthcoming electoral primaries.

Bosch declared that we in the leftist organizations "must unite and try to attain power because of the blunders of the government of the Dominican Revolutionary Party."

Narciso Isa Conde said that "the necessity for organizations to unite constitutes one of the basic necessities of the Dominican revolutionary process.

"Every leftist party," specified Isa Conde, "must try to develop, to gain influence, to grow organically for the purpose of attaining the decisions that are necessary to make opportune and fruitful alliances."

The PCD secretary general said that the most important task consists of drawing important sectors of the people away from the social-democratic influence of the PRD and from the control of the Reformist Party, for the purpose of creating a propensity in the masses to ask questions and to support the anti-imperialist option.

"This plan was approved," he said, "in our II Congress, and at that time it was not said that the PCD contemplates exclusively the possibility of participating only in the 1982 elections, as Professor Juan Bosch recently stated."

Isa Conde said that this position did not exclude unity with the organized revolutionary forces, only that it heightened the few possibilities for success that the political leftist organizations had at a determined moment.

He added that "for that reason we are choosing a path that will contribute to a process of redetermination and regroupment of social and political forces that could lead to a leftist convergence of greater determination, without predetermining its form or its constituents.

"In fact, during the period between our II Congress and the present, we have proceeded in accordance with that line, which has contributed considerably to changing the correlation of political forces in favor of the most advanced ideas," said the political leader.

And he emphasized that "in addition we have stimulated propensities toward unity of action and we have made a significant ideological and political contribution that by degrees is resulting in a change in the framework and in the most negative positions of the forces that declare themselves to be leftist."

Isa Conde said that the Dominican Communist Party has helped to point out "the disillusionment of the people's aspirations that is represented by the Dominican Revolutionary Party which has become the ruling organization.

"The unitary vocation of the PCD has been demonstrated in the participation and in the support that we have given to all the social struggles that have freed the dispossessed classes," said the secretary general of the Dominican Communist Party.

Present at the PCD membership ceremony were Eduardo Aguilar and Hugo Navarrete, representatives of the Farabundo Marti Front, of El Salvador, and tens of leaders and sympathizers of the organization.

Isa Conde also reported that yesterday concluded the first stage of the PCD Membership Campaign, with approximately 47,000 new members.

He said that "the revolutionary policy that we carried out won us sympathy among the masses and that constitutes a triumph for the effort displayed by a great part of our militants."

The political leader said that the effort developed by the PCD militants will be resumed this coming 15 January and will continue "until the closing of the filing of applications for our electoral rights."

FDR LETTER PROTESTS ABUSES AGAINST PRESS FREEDOM

Managua EL NUEVO DIARIO in Spanish 4 Nov 80 p 4

[Excerpts] We have received the following from the Salvadoran FDR [Democratic Front for the Revolution]:

The hackneyed Inter-American Press Society, IAPA, a reactionary organization of the business operators who run the printed communications media, has just decided to question the full freedom of the press in Nicaragua.

On the other hand, it has nothing to say about the monstrous violation of freedom of the press in El Salvador, where more than five newsmen (both domestic and foreign) have been murdered and where the independent press suffered endless attacks which IAPA is quite aware of although it maintains suspicious silence every time. This is happening for example in the case of bombs which are constantly exploded ten or more times, destroying the facilities of the Catholic newspaper ORIENTACION. The same is happening to the daily EL INDEPENDIENTE whose managing editor, Mr Jorge Pinto, has been subjected to many attacks and whose daily was destroyed, to the point where all of the facilities were reduced to ashes. In a similar manner, they tried to finish off YSAX, which they destroyed more than six times, but it keeps rising again from its ashes like the Phoenix, with the help of all Salvadorans and the peoples of the world who defend human rights.

Now we have a new violation against freedom of the press. Yesterday, the young Vicente Ramos was captured at 1100; he is an employee of API/News; he happened to be doing his job. The arrest was carried out by national police and army soldiers on 4th Street East, south of the Salvadoran capital. At the moment of his arrest, Vicente Ramos was wearing blue trousers and a yellow-coffee-brown shirt. So far, the various organs of repression and the army have said nothing about his arrest. Young Ramos was working on the information bulletin which the enterprise puts out.

AIP S.A. de C. publishes this bulletin which is distributed in various government offices and to private employees, as well as at the embassies accredited in this country.

So far this year, API has been subjected to one investigation and many threats against its employees, culminating with the arrest of its managing editor, Mrs Vida Cuadra Hernandez, all because API is the voice of the people and honestly presents the information without selling out to unscrupulous and opportunist members of the Junta and its criminal army.

We ask all press media throughout the world, all cultural workers, all intellectuals, to send telegrams to the Junta, demanding respect for the life of the worker Vicente Ramos and that he be returned to his family and his job.

When will the IAPA send us a copy of its protest?

This year has been particularly tough on the teachers' association. More than 15 comrades were murdered by the criminal hordes of ORDEN [Nationalist Democratic Organization], the UGB, the Death Squad, and other gangs of criminals with commissions in the Defense Ministry of the Christian Democratic Military Dictatorship.

All of these are teachers and some of them are innocent victims of this damnable Christian Democratic criminal regime. Those cynics who, in the name of democracy and the people, murder many persons who have done nothing wrong and who fear nothing, shall pay before the tribunal of history for the blood they shed uselessly. Their downfall is imminent and we wait for their punishment to be carried out. Their condemnation is imminent and necessary. Let them not expect any mercy from the people who suffers from the blows with stoic and heroic attitudes.

PAZ WARNS SOLDIERS OF OUTSIDE THREAT TO NATIONAL SECURITY

San Pedro Sula LA PRENSA in Spanish 17 Nov 80 p 2

[Text] Choluteca--President of the Republic Gen Policarpo Paz Garcia, in a speech delivered Saturday in Choluteca, on the occasion of the celebration of the 21st anniversary of the 11th Infantry Battalion, said that "today as yesterday, elements alien to the country's ideals, bad men in the service of extracontinental interests, are intentionally disturbing the climate of harmony and peaceful coexistence in which our peoples want to develop their lives and artificially seek to create an atmosphere of chaos, insecurity, and pessimism is everybody in order to weaken out nationalism, to take away the roots of our historical tradition, to divert us from the ways of liberty, from our Christian faith and from the permanent values of democracy.

"To confront this threat, which hangs over our future, we will everyday strengthen our domestic defenses and we will guarantee the conditions that are indispensable for safeguarding our international security. But it is not enough to continue to be free in terms our readiness and capacity for the armed struggle. It is indispensable for all the people of Honduras, headed by their armed forces, conscientiously to protect our civic values. We must penetrate into the minds and hearts of all citizens so that the very last of our fellow citizens will understand the high price of peace, the material and spiritual fruits deriving from liberty and the flexibilities which only the democratic system makes possible, so that we may achieve economic, political, and social changes which the people demand of us, in facing the last decades of the 20th century. We have just signed in Lima, Peru, the historic document through which we take specific steps toward the normalization of our relations with the Republic of El Salvador.

"This act, fully backed by justice, equity, mutual respect between sovereign states and international law, is being adopted by a state whose people loves peace, defends peace, and lives by permanently preparing itself to strengthen it. The definition of our borders is as important as our determination to defend them against any attempted violation or insult. For this we live as soldiers, ready to do our constitutional duties which assign us a position in the first line of sovereignty, independence, and liberty of our beloved Honduras."

Bali Castillo Speaks

The unit's commander, Col Daniel Bali Castillo, in an address which was called highly interesting, said that "we are not unfamiliar with the difficult situation

experienced by our Central American sister nations and we cannot be, in spite of the neutrality which is guaranteed by our government and our armed forces.

"We are soldiers and, although we are inspired by a fervent desire to maintain peace as a standard of coexistence, in our nation, we are not unaware that the forces of subversion are not asleep and that violence is all around us.

"Today, more than ever before, we are alert and vigilant because the enemy does not sleep and does not rest in his eagerness to undermine the democratic foundations that constitute our republican way of life.

"We are soldiers of liberty and that assertion and determination places us in a situation of combat against those who, in the service of communist imperialism, try to subvert the moral and spiritual values and the law which we inherited from our ancestors.

"We are soldiers of the West, that is to say, we are Christian soldiers; we cannot conceive any other way of living that does not give us liberty with absolute respect for independent life under the slogan of 'God, Union, and Liberty,' that continuous trilogy which inspires us as soldiers of Honduras; today, as yesterday, the enemies of democracy shall not pass because we are ready, with the highest spirit and discipline, to make right, justice, and the liberty of our people prevail, at the price which the fatherland asks us to pay.

"We are strong because we love and serve Honduras. Let no one underestimate our firm determination as soldiers to maintain the peace of the republic, the stability of democratic institutions, the dignity of the people, liberty and dialogue as standards of social coexistence and national independence against the interests of minorities that have surrendered to the subversive doctrines in the service of international forces."

FINANCIAL EXPERTS: COUNTRY SHOULD NOT DEVALUATE PESO

Mexico City EL SOL DE MEXICO in Spanish 4 Dec 80 Sec B pp 1, 6

[Text] So long as it has oil, Mexico will not find it either necessary or advisable to devaluate its currency. This entails a risk: the country is being debilitated by the high rate of internal inflation. It is possible that, in the future, the peso may "float" independently, with respect to the other hard currencies in the world.

Furthermore, Ronald Reagan (the American president-elect) will not be able to fulfill his offer for next year to reduce inflation in the United States, a country which will begin a slow recovery, owing to the money shortage.

The privileged bank interest rates may perhaps decline considerably during the early months of the year, but it is presumed that they will remain high for a long time to come.

"The latter will obviously hurt the economies of the developing nations, particularly those supplying the American market."

This warning was given yesterday by Stuart Bass, Thomas Campfield and Dimitri Balatsos, vice-presidents in different areas of the exchange market of Manufacturers Hanover Trust Company (MHT), and Hywell Jones, director of the Henley Center for Monetary Studies in London, at the seminar on the outlook offered by the international exchange markets for 1981.

The four men submitted their predictions here yesterday to over 100 bankers, financiers and treasurers of business firms gathered in a room at the Camino Real Hotel, where they were introduced by William D. Klay, vice president and Mexican representative of MHT, which is the fourth-ranking bank in the United States.

Campfield, a consultant on short term international exchange, declared: "The considerations regarding interest rates are again the most influential factor on the foreign exchange market. The increased rates have made it attractive to invest funds to accrue good profits, particularly in view of the capital gains that occur when interest rates drop."

However, he cautioned: "When the market notices that interest rates have reached their maximum point, the dollar will begin to decline."

Campfield expressed the view that the inflation rate in the United States would be between 10 and 12 percent and, in his opinion, "for the Mexican peso, the risk of a devaluation is related to its inflation rate."

Hywell Jones, an expert forecaster for the long term exchange market and director of the Henley Center, predicted a relative improvement for the dollar, despite the fact that the deficit in the balance of payments ($30 billion) is still very large.

He revealed that the pound sterling is overvalued by at least 10 percent.

And, in connection with the Mexican peso, he remarked: "If oil were to be separated from the Mexican currency, its exchange rate would be far lower."

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BRIEFS

OIL DRILLING CONTRACT--Rio de Janeiro--Petrobras has signed a contract with Etesco, Inc. to provide services in drilling wells in Brazilian sedimentary soil using two drilling rigs which belong to Petrobras. Petrobras explained that this is in line with its program of incentives to national industries to acquire their own technology in drilling petroleum wells. [PY021954 Sao Paulo O ESTADO DE SAO PAULO in Portuguese 23 Sep 80 p 25]

PETROLEUM DISCOVERED OFFSHORE--Petrobras has discovered a new petroleum deposit in the Campos Basin, Rio de Janeiro State. This well has been named 4RJS-153 and its original flow has been estimated at 2,000 barrels daily. The well is located between the field of (Pampa) and (Badezo) approximately 80 km offshore and at a depth of 96 meters. [Sao Paulo Radio Bandeirantes Network in Portuguese 1000 GMT 6 Jan 81]

ALCOHOL-POWERED CARS PRODUCTION--Brasilia--According to Marcos Jose Marques, chairman of the National Executive Commission for Alcohol (CENAL), 202,000 new alcohol-powered cars had been produced by the end of November this year. He indicated that 60,000 more cars will be produced in December, thus surpassing the 250,000 target figure established for 1980. [Rio de Janeiro O GLOBO in Portuguese 20 Dec 80 p 17]

ALCOHOL FROM BAMBOO--Scientists at the Food Technology Institute [ITAL] in Campinas and at the agricultural institute of the University of Sao Paulo have discovered that bamboo has an 80-percent carbohydrate content and, consequently, the highest alcohol yield of any alcohol source in the vegetable kingdom. ITAL has set up a pilot plant to fully develop the technology to produce ethyl alcohol from bamboo. [Rio de Janeiro O GLOBO in Portuguese 26 Dec 80 p 13]

COMMERCIAL AGREEMENT WITH VENEZUELA--Brasilia--Marcos Jose Marques, secretary general of the Industry and Commerce Ministry, has reported that Brazil has agreed to sell 600,000 tons of sugar to Venezuela during the next 3 years, and to purchase petroleum at a level estimated at 40 barrels daily during the same period. [Sao Paulo O ESTADO DE SAO PAULO in Portuguese 25 Dec 80 p 18]

GOVERNMENT TAKES FUEL CONSERVATION MEASURES

PA231829 San Jose Radio Reloj in Spanish 1200 GMT 23 Dec 80

[Text] The national government yesterday took a number of fuel conservation measures. The completion of the Costa Rican Electricity Institute's hydroelectric projects will be moved up a year so that all funded projects are expected to be finished by 1988. This means there will be two new plants capable of producing 180,000 kilowatts each. One will produce 90,000 kilowatts and the other one, 40,000 kilowatts.

A program to build small hydroelectric plants has begun with nonreimbursable OPEC funds and advances have been made in geothermal energy so that in 1985 we will have 40,000 [additional] kilowatts. Coal exploitation studies in Baja Talamanca are also advanced and it is expected that the big electrically powered national railroad will be finished in 1981 between Rio Frio and Limon, a distance of 125 km.

Fuel alcohol production will total 10 million liters in 1981, which will be increased until we reach (170) million in 1984. The government has given legal clearance to private business to produce fuel alcohol and the National Production Council has solicited bids to set up privately run distilleries in Los Chiles, Guapiles and (Upala). A mechanical training program is underway with the National Training Institute to adapt gasoline engines to alcohol and pure distilled fuel [hidratados sin mezcla].

The government has set a goal to tackle the petroleum price hike. It won't import any more petroleum in 1981 than can be paid for from the 1980 coffee harvest. Measures are being taken to achieve that goal. A fuel price policy will be practiced to reduce diesel consumption because it cannot gainfully be replaced with alcohol. This will help close the price gap between gasoline and diesel.

Along with strict quality control of fuel sold to the public, the gas stations will close after hours as of 4 January 1981. In the metropolitical area they will close from 1900 to 0600 and in the rest of the country from 1700 to 0500. The idea that government and official agency vehicles will not run 1 day a week is also being supported.

Another strong fuel efficiency measure taken by the government is the ban on parking in downtown San Jose. No vehicles except bicycles and motorcycles will

be allowed to park between 11th and 12th Streets and between 4th Avenue and 5th Avenue. The Transportation Ministry has been ordered to coordinate this measure with the San Jose City Hall.

It has also been decided to install meters in the public transport vehicles as of January and to raise to the utmost consumption taxes on high-speed diesel engines. The import tariff on energy saving equipment will be studied with an eye to lowering it and the establishment and funding of the production of methane gas for energy purposes will be promoted. The study of solar-powered water heaters and modification of diesel equipment into bunker-powered equipment will be promoted.

Gas and diesel price hikes will be announced in early January, presidential sources reported. The diesel price will go up by almost 100 percent, while gasoline will go up 20 percent to close the price gap between the two fuels. A bill will also be introduced in the legislature to raise the road tax on lightweight, privately-owned diesel vehicles not used in the production of goods and services of public interest.

PAPER CRITICIZES TEXACO'S REFUSAL TO REFINE CRUDE

PA041838 Panama City LA REPUBLICA in Spanish 2 Jan 81 p 4

[Editorial, "The First Problem"]

[Text] This newspaper, on Tuesday, published an exclusive report on the threat made against oil which is to be sold to us under special conditions, in accordance with the San Jose Treaty signed by Panama, Mexico and Venezuela.

According to this report, "sources close to the Oil and Energy Commission have reported that the Panama refinery refused to refine oil from Mexico and Venezuela, claiming that the crude imported from those countries is of low quality, and that the byproducts of this crude do not meet commercial standards and would therefore result in losses."

In other words, the Panama refinery refuses to process oil that the country needs; oil obtained, as we said before, under conditions which are favorable to our economy.

We are not aware of the conditions under which the Panama refinery really operates. It has been said that the refinery is a subsidiary of the Texas Company [as published], a U.S. transnational oil company with branches throughout the world. The Texas Company is one of the powerful "seven sisters" of the worldwide oil cartel which controls oil exploitation. Oil-producing nations sell the crude to the "seven sisters," which transport it to their refineries, process it, and market it while controlling prices to consumers to obtain such astronomical profits that President Carter tried, unsuccessfully, to curb them. These oil companies, which have become an untouchable empire and whose scope of operations is unknown by the governments of the world, control the oil business on a worldwide scale.

It is said that the "Texas Company" owns the crude oil produced in Ecuador, and that its subsidiary, the Panama refinery must therefore prefer Ecuadorean crude, although this attitude seriously harms the national economy and development.

This is a serious problem for Panama. It is a repetition of the position of the U.S. transnational company that operated in our country under the name American Power Company. It is now known that this company, under the protection of the Catlin contract, which was signed in 1917, for more than 20 years succeeded in preventing the development of hydroelectric power in our country, thereby causing

enormous damage to our country and people. We believe that in this case, the government should force the refinery to abide by the implementation of the San Jose Treaty. Otherwise, if the refinery imposes its point of view, and if it is accepted without obtaining the opinion of government oil experts, we will suffer situations similar to those caused by the intransigent attitude of the "American power company."

EXPELLED BOLIVIAN LEADERS ARRIVE IN PERU

PY030030 Paris AFP in Spanish 1917 GMT 31 Dec 80

[Excerpts] Lima, 31 Dec (AFP)--Juan Pereira Fiorilo, director of the closed Bolivian newspaper PRESENCIA, arrived here at noon today, deported by the military regime of his country together with a prominent mining leader and other persons expelled for extremist activities.

The accusation of extremist activities is stamped by the Bolivian military on the documents of Pereira; Severo Torres, secretary general of the Siglo Veinte Miners Union; Gerso Justiniano, former president of the Electoral Committee of Beni Department; and students Carlos Valderrama and Roberto Heredia. All of them, however, said they did not know the true motives behind their expulsion, which they attributed to the existing lack of freedom in their country under the regime headed by Gen Luis Garcia Meza.

Pereira, former integration minister, former Bolivian representative to the Andean Pact and director of the Catholic newspaper PRESENCIA, was detained last 23 December. He said that he is apparently accused of disseminating subversive documents, which he flatly denied.

For his part, mining leader Severo Torres acknowledged that the strength of his labor union is momentarily broken, that the mines are occupied by government troops and that many miners have been detained, 13 of them in Cochabamba; while the leader Jorge Killer [as received--presumably Communist leader Jorge Kolle] is under arrest in La Paz. Torres, however, asserted that the Bolivian Labor Federation (COB), whose leaders are living in exile, is preparing itself for resistance to the armed forces regime because, he asserted, there are symptoms of discontent which make Garcia Meza not quite so secure as is apparently believed.

Torres, Justiniano and the students Valderrama and Heredia left for Stockholm this afternoon.

FORTY DEPORTED BOLIVIANS ARRIVE IN PERU

PY091620 Paris AFP in Spanish 0154 GMT 9 Jan 81

[Text] Lima, 8 Jan (AFP)--Expelled by the regime of Gen Luis Garcia Meza after a dragnet operation carried out on Wednesday in Bolivia, 40 exiles from that country arrived unexpectedly here today, with the classic seal "deported for extremist activities" stamped on each of their documents by the Bolivian Government.

Most of them are women and children, relatives of formerly deported men, and an Argentine student, who make up the largest group of persons expelled from Bolivia to Peru since the coup headed by Garcia Meza which took place 17 July 1980.

Mireya Ayala, wife of a previously deported worker, reported that she was arrested yesterday with her two minor children in the mining sector of Potosi, where there are between 200 and 300 miners arrested, and she said she is absolutely sure that 50 bodies have been hidden in that zone.

Eduardo Pita, 26 years of age, the Argentine student of journalism at the La Paz Catholic University, said that he was also detained during the same dragnet operation. He was not given any explanation of the reasons for his expulsion. He assures that he had never participated in political activities.

The unexpected arrival of these persons has changed the normal migratory control system because their flight had not been scheduled, although they were solicitously taken care of by the local officials and by the UN High Commissioner for Refugees (UNHCR), and by the Intergovernmental Committee for European Migration (ICEM). Eleven of them left for Bogota this same afternoon, while the remaining 29 refugees will leave tomorrow for Mexico, after receiving free assistance from those organizations, as revealed by Victor Torres, ICEM representative to Lima, who confirmed that with this group the number of Bolivian exiles assisted here since the military coup now totals 350.

Most of them decided not to make any remarks, arguing that they still have relatives in Bolivia, and are trying to avoid retailations. The deported persons were in a very poor condition due to the fact that they were deported so quickly and were carrying only their most indispensable personal belongings.

SEVENTY COLOMBIANS TO BE DEPORTED FROM VENEZUELA 29 DEC

PA292156 Bogota Radio Sutatenza Network in Spanish 1200 GMT 29 Dec 80

[Article by Guillermo Pena]

[Excerpts] It has been learned here from official sources that the first group of Colombians to be deported from Venezuela, a total of 70 persons, will be turned over to the authorities of the border city of Cucuta early today.

These undocumented persons were detained in Caracas on 25 and 26 December during the first searches conducted by the Venezuelan police to find those persons who had not followed the government's instructions on registration of foreigners who entered the country illegally. At the present time these undocumented persons are undergoing routine investigations to establish if they have broken any Venezuelan laws. Following this they will be taken to Cucuta and turned over to the Colombian immigration authorities.

From another quarter it was reported that the first surprise for the Venezuelan officials looking for undocumented foreigners was the discovery that the majority of persons arrested during the operation were Venezuelans who were not carrying any identification. This caused several unpleasant situations and complaints from those arrested.

It was likewise reported that all Venezuelan sectors support the search for undocumented foreigners, but that this does not mean that there is a collective anti-foreigner hysteria, as has been insinuated in some press reports.

The sources indicated that the Venezuelan technical judicial police are handling the situation calmly, so as to protect the foreigners who are duly registered and offer them the protection of the state.

In Colombia the media is awaiting the implementation of the announced deportation which, according to official Venezuelan statements, will take place in stages to avoid one mass deportation which would cause problems in the border area.

In spite of the Colombian Government's silence on the problem, several protests have been made against the Venezuelan Government's decision to deport the Colombians, who have traveled to Venezuela seeking employment or better living conditions.

One of these protests was voiced by the former president of the Chamber of Representatives' Foreign Relations Committee, former Congressman Ricardo Barrios Zuluaga, who revealed today that Venezuela is violating the border treaties signed with Colombia by deporting these Colombians. He demanded that the joint commission on immigration formed by the so-called Arauca Declaration should meet immediately to discuss the matter.

Barrios Zuluaga recently proposed a trip by congressmen to the Guajira region to reaffirm Colombian sovereignty in the area, but was persuaded by the executive to suspend it so as not to hinder the negotiations underway on the delimitation of sea boundaries.

REPRESSION IN HAITI DENOUNCED BY VARIOUS GROUPS

EDOC on Breaking Relations

Santo Domingo EL NACIONAL in Spanish 9 Dec 80 p 17

[Article by Roberto Marcalle Abreu]

[Text] The seminar on Dominican-Haitian relations sponsored by the Caribbean Studies and Documentation Institute (EDOC) concluded today with an appeal to the national government to break off relations with the government headed by Jean Claude Duvalier in Haiti.

Also at this event, the progressive groups in both countries were urged to launch joint processes of struggle and organization "which could culminate in a kind of federation of the two states."

Such a federation, it was added, "involves mutual recognition of the cultural assets of each state, which are enjoyed in relative autonomy."

The concluding document also stressed the religious problem which has in turn created conflicts between the two countries, since "the historical project of Christian evangelization in the Dominican Republic has been distorted by the participation of the dominant classes.

"This evangelization or Christianity handed down from above 'has projected an image of a Spanish and Christian Dominican character opposed to the Haitian nationality, which has been identified as African and pagan.'"

The document explains that Christianity, seen as a civilized and true religion, was imposed, with a condemnation of all the cultural characteristics of the people having their origin in religious beliefs of Spanish origin.

"In view of the great influence of the Church among the peasantry, it has been an important factor in transmitting a dominant ideology to the exploited masses, tending to strengthen the barriers separating the Haitian and Dominican peoples," the document said.

It said further that the Caribbean peoples as a whole have historically been subjected to domination by imperialist powers through the strategies of penetration

and control, "mainly colonialism and neocolonialism, economic interference by the multinational companies and the financial institutions, and ideological penetration, as manifested in the trilateral theory and the configuration of the national security state."

It added that the dominant classes in the Dominican Republic and Haiti have been the sponsors of the study, analysis and interpretation of the social sciences in both countries.

"They have distorted historical facts in order to conceal the true roots and the social, economic, political and cultural problems of the two peoples," it was stated.

In this connection, the seminar decided to stress the study of the history of events revealing the solidarity between the two peoples, denouncing the way in which the ideological apparatus nurtures an anti-Haitian attitude.

It was also decided to set aside the traditional historiographic cultural analysis claiming the existence of antagonism between Haiti and the Dominican Republic, which is not real.

PRSC Scores Violations

Santo Domingo EL NACIONAL in Spanish 10 Dec 80 p 12

[Article by Hector Garcia]

[Text] Santiago, 10 December--A municipal leader of the Christian Social Revolutionary Party (PRSC) has condemned the wave of arrests of political figures and journalists there launched by the Haitian Government.

Ramon Antonio Cruz Belliard, vice president of the municipal committee of the PRSC in this city, said that the repressive escalation being carried out by the regime of Jean Claude Duvalier against the Haitian people is a product of the decline of the tyranny.

Cruz Belliard said that the Haitian Government has always been characterized by its excessive actions against all sectors, as well as its violations of human rights.

He added that the imprisonment of one of the highest social Christian leaders in Haiti, as well as his daughter, is a sign of the rise this party has experienced on that middle island and the fear felt by Duvalier that the organization can oust him from power.

He expressed his concern at the arrests being made in this brotherly country, while stating that "the whole of public opinion should speak up against the actions of the Duvalier regime."

The social Christian politician added that the Haitian Government has not been content to limit the right to information but is also exerting pressure on journalists, threatening them with imprisonment and other arbitrary actions.

Cruz Belliard urged the international bodies concerned with respect for human rights, as well as the Organization of American States, to voice their protest against the situation to which the Haitian people are subjected.

He said that the situation existing there should be of concern to the entire world and that therefore a struggle should be waged to put a definitive end to it.

CDP on Political Prisoners

Santo Domingo EL NACIONAL in Spanish 10 Dec 80 p 30

[Text] The Dominican Peace Committee (CDP) has indicated that an intensive wave of repression has been launched in the neighboring Republic of Haiti, under the tyrannical dictatorship of the Duvalier family.

This organization, in a statement signed by its secretary general, the painter Silvano Lora, noted that the majority of those persecuted "in a sweep of a new type, represent a public opinion sector tolerated in recent times."

The statement said that this sector functioned so long as the farce of relative respect for human rights was retained, and it noted that this sector includes editors of periodicals, writers, journalists, leaders and fighters for the expansion of democratic freedom.

The statement noted that writer Jean Dominique, the director of Radio Inter, has disappeared, and that this is an individual well known in Santo Domingo in various circles.

The committee asserted that Lunice Joinville was also arrested, and that the writers Constantin Pognou, editor of the daily COQUELICOT; Marcus Garcia, director of Radio Metropoli; and Josepho Eugene, editor of FRATERNIDAD, the organ of the social Christian opposition party, were imprisoned and mistreated.

Those imprisoned also include well-known journalists such as Pierre Clitandre, who writes a column in LE PETIT SAMEDI SOIR, and who recently published a work on trafficking in Haitian manpower.

"The brothers Jean Probert Herard and Gabriel Herard are known commentators on the current Haitian situation and committed writers who denounced the abnormalities and injustices in this brotherly country," the statement by the committee noted.

In this connection, the organization asked the public to voice its solidarity with the Haitian citizens who are struggling under extremely difficult conditions for economic and political improvement, for their constitutional rights and for the release of all those arrested and imprisoned for political reasons.

BRIEFS

COLOMBIA-VENEZUELA DEPORTATION PRACTICES--Bogota--Spokesmen for the Alien Affairs Section of the Administrative Department of Security [DAS] have denounced some irregularities which have been committed by Venezuelan authorities when deporting undocumented aliens. The DAS said that persons holding proper documentation and duly authorized to live in Venezuela have been arrested and it demanded compliance with the respective laws by Venezuelan authorities. It was also reported that deportations of undocumented persons will increase after Saturday, 3 January 1981. [Text] [PA311518 Bogota Radio Sutatenza Network in Spanish 1200 GMT 31 Dec 80]

PCC CHARGES STRATEGY AGAINST CUBA--Bogota, 26 Dec (AFP)--The Communist Party of Colombia (PCC) has charged there are plans "for a new strategy against Cuba" and accused the presidents of Colombia, Venezuela and Peru of promoting these plans. The weekly VOZ PROLETARIA, organ of the PCC, expanded its accusations also to include the presidents of Costa Rica, Panama, the Dominican Republic, Ecuador, El Salvador and Spain. The presidents of these countries attended the commemoration in Santa Marta, Colombia, on 17 December of the 150th anniversary of the death of liberator Simon Bolivar at a meeting described as "democratic summit." The Communist Party noted that this meeting's objective was to study a strategy to stop the advance of the "patriotic forces" in the Caribbean and South America. It added that the Santa Marta Summit was held under the most strict security measures without any apparent purpose other than to pay tribute to Simon Bolivar. VOZ PROLETARIA concluded by indicating that the summit was not democratic but a "rightwing summit," as shown by the presence of the New Salvadoran president, Jose Napoleon Duarte. The Government of Colombia so far has made no reference to the PCC comment. [Text] [PA261513 Paris AFP in Spanish 1446 GMT 26 Dec 80]

CUBA EXTRADITES M-19 MEMBERS--The Colombian Government today asked Cuba to extradite the 19 April Movement (M-19) commandoes that hijacked an Avianca plane 8 days ago and flew it to Santa Marta, Barranquilla, Panama, Mexico and then Havana. Foreign Minister Diego Uribe Vargas made this disclosure. The request has been submitted directly to President Fidel Castro. The M-19 commandoes disappeared Tuesday from the Havana airport and there has been no information on their whereabouts since then. Uribe Vargas said this as he was entering the last meeting of the Council of Ministers this year. Several months ago another M-19 commando unit traveled to Cuba in what constituted the culmination of the seizure of the Dominican Embassy. Regarding this subject, government Minister Zea Hernandez commented that, obviously, if the M-19 commandoes are still in Cuba, the Colombian Government must request the group's extradition. [Excerpt] [PA230238 Bogota Cadena Radial Super in Spanish 2330 GMT 22 Dec 80]

NO RESPONSE ON EXTRADITION--Bogota--The Cuban Embassy in this capital has not responded to the Colombian authorities' request for the extradition of the 19 April Movement [M-19] command that hijacked an Avianca plane in December. The Colombian Foreign Ministry, which made the extradition request, made this announcement. The M-19 command that hijacked the Avianca plane flew to Santa Marta first, then Barranquilla, Panama, Mexico and finally Havana, where it turned itself over to the island's authorities. In the wake of the events which were held to commemorate the 150th anniversary of liberator Simon Bolivar's death, the government proceeded to request extradition, but so far the Cuban Embassy, where steps connected with the extradition request were taken, has not responded. According to a Foreign Ministry source, Colombia will insist on its extradition request this week, as it is based on international agreements signed by the two countries. [Text] [PA042000 Bogota Cadena Radial Super in Spanish 1730 GMT 4 Jan 81]

CUBAN WORKERS TO JAMAICA--Havana, 22 Dec (EFE)--Some 34 Cuban construction workers will arrive in Jamaica in January to put the final touches on three schools donated to Jamaica. One of the schools is for physical education teacher training and the other two are high schools. The physical education school will also receive a donation of equipment. [Madrid EFE in Spanish 0330 GMT 23 Dec 80]

COSTA RICA-PANAMA ELECTRICAL CONNECTION--Costa Rica and Panama will implement a 1978 agreement under which the two countries will connect their electrical network. The program will be initiated in 1981 in Chiriqui Province, Panama, on the Costa Rican border. The program, which will be completed in 1986, will be funded entirely by the Panamanian Institute of Electrification and Hydraulic Resources and the Costa Rican Electricity Institute. MANIFESTO CONDEMNING FOREIGN INTERESTS SIGNED BY GENERALS

Text of Manifesto

Rio de Janeiro JORNAL DO BRASIL in Portuguese 20 Dec 80 p 7

[Text] Sao Paulo--In a manifesto denouncing the activities of multinationals and "a number of economic and social actions directed by immediatist interests generated abroad," Gen Antonio Carlos de Andrada Serpa, businessman Antonio Ermirio de Morais, former Minister Severo Gomes, Senator Saturnino Braga, former Governor Sinval Guazzeli (Rio Grando Do Sul), the pundit Alceu de Amoroso Lima and Gen Euler Bentes Monteiro, among others, announced the creation of a group "In Defense of the Threatened Nation."

The manifesto contains two pages and was distributed to the press yesterday by former Minister of Industry and Commerce of the Geisel Administration Severo Gomes. The signers call upon "men and women of this country regardless of party positions" and explain that the document has no "other ideological connotations beyond traditional Brazilian patriotism." The manifesto asks for "a decisive action to recover the mastery of its own destiny (of the country) and for the recovery of national identity, essential for the consolidation of the political opening on which they also essentially depend."

Who Signed

The copy revealed yesterday by Severo Gomes contains a typed page with the names of the first signers of the manifesto "In Defense of the Threatened Nation." They are: Alceu de Amoroso Lima, Antonio Candido de Mello e Souza, Antonio Carlos Andrada Serpa, Antonio Didier Viana, Antonio Ermirio de Morais, Antonio Houaiss, Ariano Suassuna, Armando Pereira Peixoto, Aurelio Buarque de Holanda, Barboso Lima Sobrinho, Caio Amaral, Carlos Guilherme Mota, Cleantho de Paiva Leite, Cyro Martins, Euler Bentes Monteiro, Evandro Paranagua, Fernando Henrique Cardoso, Goffredo da Silva Telles (author of "Letter to The Brazilians"), Joao Camarao Telles Ribeiro, Jose Honorio Rodriguez, Jose Walter Bautista Vidal, Luiz Carlos Bresser Pereira, Marco Antonio Campos Martins, Paulo Duarte, Pompeu de Souza, Roberto Saturnino Braga, Rogerio Cesar de Cerqueira Leite, Romulo de Almeida, Ruy Lopes, Sergio Buarque de Holanda, Severo Gomes and Sinval Guazzeli.

Complete Text

This is the complete text of the manifesto:

After the Second Great War, the world economy was in a period of great growth, allowing Brazil, with the existence of the economic model initiated in 1965, to become--excepting in qualitative aspects--the eighth economy in the Western World. However, the persistence of that same model without the corrections that would provide for the objectives and needs of the nation, resulted in serious political, economic and social distortions in Brazilian development. That is the reason for the scattered and economically impractical structure of the industrial park, which is divided up among the principal multinational companies; the increase in technological dependence and the deterioration of the educational process; the fraudulent actions taken against the institute which builds healthy nations, the university; the acceleration of foreign indebtedness, attacks on the financial sector, the threat to ownership of national energy resources, the progressive occupation of considerable parcels of national territory by foreign companies, the profound process of alienation of our society, the inexplicable give-away of the Brazilian subsoil and international exploitation, all of which collaborate in an inexorable process of dividing the Brazilian nation.

In the past, when a nation was invaded and colonized, sooner or later there emerged a new culture and a new individual national identity which depended, not on the quality but rather on the relative cultural resistance of the peoples in conflict. The new culture, regardless of which of the two sides became dominant, became a culturally autonomous community and, therefore, had the capability of becoming an independent nation.

What is happening with Brazil, however, has no precedent in history. We are not being subjected to the action, exploiting though it may be, of another nation. We are being subjected to a number of economic and social actions directed by immediatist interests generated abroad and without any commitments to our national life.

Those actions, implemented with the indifferent neglect of Brazilians, with a flagrant indifference to national public opinion, have become more and more frequent. The disregard of national interests with which foreign companies have been carrying out their business in our country can be seen by reading the newspapers every day.

Transactions of that nature, involving significant quantities of national wealth, would not even be considered in any emancipated country. Foreign interests feel authorized to prepare proposals and plans offensive to national dignity because they became accustomed to the excessive tolerance which characterized Brazilian society, and the negligence and permissiveness with which our society has been watching over its own interests authorizes foreign capital to present proposals harmful to the Brazilian economy and offensive to national dignity.

This collection of actions has been systematically and increasingly undermining the bargaining and defensive power of national interests, already substantially weakened. The process of capitulation underway is confirmed by the beginning of the application to our country of some measures advocated by the International Monetary Fund, whose interventionist action will take away a part of our nation's sovereignty.

The objective of the Fund and what it means is that through its activities in Brazil it will acquire a new power that will allow the construction of an even more unfair international economic order than that of the last two decades of our life.

The depersonalization of our nationality demands from Brazilian society a decisive action to recover the mastery of its own destiny and the recovery of national identity, essential for the consolidation of the political opening on which they also essentially depend. Those are the necessary conditions for the realization of the major aspirations of the Brazilian people, the great victim in their misery, of those alienations.

To give form and strength to the movement for safeguarding those national interests, the creation of an entity capable of enfolding all those who are ready to offer their contribution to the analysis, the understanding, dissemination and defense of all that which is related to the preservation and strengthening of the spiritual and moral values of the cultural and material patrimony of Brazil, is already underway.

In this way, without any other ideological connotation besides traditional Brazilian patriotism, we call upon the men and women of this country, beyond all party positions and under the protection of God, to this joint effort in the defense of the rights of the nation.

Generals Disciplined

Rio de Janeiro O GLOBO in Portuguese 27 Dec 80 p 3

[Text] Brasilia (O GLOBO)--Acting Minister of the Army Gen Ernani Ayrosa da Silva, yesterday punished Gen Antonio Carlos de Andrada Serpa with 2 days of house arrest, and reserve Gen Euler Bentes Monteiro, with a reprimand for having signed the document "In Defense of the Threatened Nation."

The punishment of General Andrada Serpa was also due to the lecture he gave on 15 December at the Engineering Institute of Sao Paulo where "He expressed himself publicly on political affairs without being duly authorized."

Basis

The two military men were punished on the basis of Provisions 112 of Annex I and 2 of Article 13 of Army Disciplinary Regulations together with Article 49 of the Military Personnel Code (Law No 5774 dated 23 December 1971) and the attenuating circumstances contained in provision 2 of Article 17 of Army Disciplinary Regulations. Provision 63 of Annex I of the Army Disciplinary Regulations

was also applied in the case of General Andrada Serpa. The orders of the minister of the army are supported by Articles 15 and 49 of the military code.

The following are the provisions of the code:

Article 15-- Rank and discipline are the institutional foundation of the armed forces. Authority and responsibility increase with rank.

Article 49--Public utterances about the actions of superiors or those making demands are forbidden.

The provisions of the Army Disciplinary Regulations are the following:

Article 13--Any actions or omissions not specified in the list of violations contained in the annex quoted above or not considered crimes under Brazilian penal laws but which violate personal honor, military dignity, decorum of class, and other proscriptions established by the Military Code and laws and regulations, as well as those practices against the standards and orders of the service issued by pertinent authorities, are infractions of discipline.

Article 17-- Attenuating circumstances shall be considered as:

Item 2. Relevance of service performed.

Item 63, Annex I--An active duty military man expresses himself on political affairs without authorization.

Item 112, Annex I--Authorize, promote or take part in any collective demonstration, whether it be for making demands or whether it is one of criticism or support for an action by a superior, with the exception of private demonstrations of good, healthy camaraderie with the knowledge of the person being honored.

Punishment

The disciplinary actions signed by the minister of the army are as follows:

"Punishment of General Officer

"1. The Most Excellent Gentleman, General of the Army Antonio Carlos de Andrada Serpa, in a lecture given at the Engineering Institute of Sao Paulo on 15 December of the current year, spoke publicly on political affairs without having been duly authorized; subsequently, he signed a document of collective nature, which was published in newspapers of the country last December 20, critical of the government, which is forbidden by existing legal precepts and regulatory standards.

"Because it is a matter of a general officer of the highest rank with nearly 50 years of relevant service in the army in peace and war, I order, in the preservation of the basic principles of rank and discipline, pursuant to the provisions of Article 15 and 49 of the Military Code (Law No 5774 dated 23 December 1971) that the following disciplinary punishment be imposed on him.

"2. General of the Army Antonio Carlos de Andrada Serpa, for having spoken publicly in a lecture given at the Engineering Institute of the city of Sao Paulo on 15 December of the current year on political affairs without being duly authorized, and for signing a document of a collective nature critical of the government, published in the country's newspapers on 20 December of the current year (No 63 and 112 of Annex I and No 2 of Article 13 of the Army Disciplinary Regulations together with Article 49 of the Military Code--Law No 5774 dated 23 December 1971 with the attenuating circumstances contained in No 2 of Article 17 of the aforementioned regulations, intermediate violation) is sentenced to house arrest for two days. Brasilia, DF, 23 December 1980."

Punishment of General Officer

"1. The Most Excellent Gentleman, General of the Army, Remunerated Reserve, Euler Bentes Monteiro, signed a document of a collective nature critical of the government published in the country's newspapers on 20 December, forbidden to him under the existing legal precepts and regulatory standards.

"Because it is a matter of a general officer of the paid reserves in the highest rank with nearly 45 years of service in the army, I order, in the preservation of the basic principles of rank and discipline, pursuant to the provisions of Articles 15 and 49 of the Military Code (Law 5774 dated 23 December 1971), the imposition of the disciplinary measures which follow:

"General of the Army, Remunerated Reserves, Euler Bentes Monteiro, for having signed a document of collective nature critical of the government, published in the country's newspapers 20 December of this year (No 112 of Annex I and No 2 of Article 13 of the Army Disciplinary Regulations together with Article 49 of the Military Code, Law No 5774 dated 23 December 1971, with the attenuating circumstances contained in No 2 Article 17 of the aforementioned regulation, minor violation) is hereby reprimanded. Brasilia, D.F., 23 December 1980."

More Disciplinary Action

Brasilia (O GLOBO)--Minister of the Navy Adm Maximiano da Fonseca, yesterday delegated authority to the commander of the First Naval District, Adm Alfredo Karam, to decide on whether or not to punish Reserve Naval Capt Antonio Didier Viana, who also signed the manifesto "In Defense of the Threatened Nation," which resulted in the punishment of Gens Antonio Carlos de Andrada Serpa and Euler Bentes Monteiro.

According to the Public Relations Office of the Ministry, the affair will be decided by the commander of the First Naval District because that is the area of jurisdiction over Captain Didier Viana. Like the two army generals, he should be

punished under Article 49 of the Military Code which forbids "any collective demonstration on the actions of superiors or for making demands."

Air Force

The Public Relations Office of the Ministry of Air had no information yesterday on the possibility of punishment for Reserve Lieutenant Brigadier Gen Joao Camarao Telles Ribeiro, who also signed the manifesto and who lives in Belem. However, in view of the punishment of the military men in the Army and possibly those of the navy, Minister Delio Jardim de Mattos must make a decision on the affair early next week.

Reaction of Those Punished

Gen Euler Bentes Monteiro said yesterday that he expected the punishment, which "was the onus for having spoken freely," but he guaranteed that "nothing will change with respect to speaking my mind freely if I can be providing a service to Brazilian society."

The general considered the "classification of the punishment irrelevant" and declared that he had foreseen the possibility of the action by the minister of the army when he signed the manifesto.

"I signed the manifesto together with other illustrious Brazilians and as a citizen profoundly interested in the fate of Brazil. The manifesto is very clear and for that reason I have nothing to interpret or to add, at least at this time, and my signature means that it represents my concerns. I shall preserve my freedom as a citizen as much as I can. The disciplinary punishment is a natural consequence, the price I must pay to preserve this freedom."

Andrade Serpa

Barbacena (O GLOBO)--General Andrada Serpa will appeal to the Ministry of the Army to reconsider the disciplinary punishment imposed on him by the acting minister of the army.

The information was provided by friends and relatives of the general who have been with him at the Borda do Campo Ranch he owns 3 kilometers from Barbacena.

The same sources explained that on 21 December, two representatives of the minister of the army were at the ranch asking General Andrada Serpa to confirm that he had signed the document, as well as the subject of the lecture he gave at the Institute of Engineering in Sao Paulo. In both cases the reply by General Andrada Serpa was in the affirmative.

Even after confirming the signing of the manifesto and the subject of the lecture, General Andrada Serpa did not know for sure whether he would actually be punished by the minister of the army, according to his friends.

ARMY GENERAL, OTHERS PUNISHED FOR CRITICIZING GOVERNMENT

House Arrest

PY262259 Brasilia Domestic Service in Portuguese 2200 GMT 26 Dec 80

[Text] Acting Army Minister Gen Ernani Ayrosa ordered today 2-day house arrest for Gen Antonio Carlos de Andrada Serpa for signing a document critical of the economic and financial policy of the government. By the same resolution, Gen Euler Bentes Monteiro was reprimanded for the same reason. While the latter is in the reserves, the former is a member of the army high command who is not on active service at the present and will be transferred to the reserves in March.

Reprimanded for Signing Document

PY271423 São Paulo Radio Bandeirantes Network in Portuguese 1000 GMT 27 Dec 80

[Excerpt] Sources of the navy and of the air force are certain that Navy Commander of the reserves Antonio Didier Vianna and Brig Gen Joao Camarao Ribeiro (Ret) will also be punished for signing the manifesto entitled: For the Defense of a Threatened Nation. Both officers have already been reprimanded. The note released by the army minister states that the punishments imposed on these officers are aimed at preserving the basic principles of rank and discipline.

COLONEL PUNISHED FOR CRITICIZING SAO PAULO OFFICIALS

PY061200 Sao Paulo Radio Bandeirantes Network in Portuguese 6 Jan 81

[Excerpt] A colonel who had criticized members of the Sao Paulo state administration has been punished with a 20-day jail sentence.

[Begin (Renato Lombardi) recording] Colonel (Sidney Jimenez Palacios) of the military police was punished yesterday by (Arnaldo Passos de Carvalho Braga), commander general of the military police, with a 20-day sentence, which began yesterday. His punishment is due to criticisms he made during the past few days of government officials. Yesterday afternoon, Colonel (Jimenez Palacios) was called to the military police general headquarters, and was told by his replacement, Col (Albertino Lopez de Aguiar) that he was under arrest. [End recording]

COLUMNIST SEES MILITARY AS CAUSE OF FARHAT'S FALL

PY242138 Rio de Janeiro BRAZIL HERALD in English 24-26 Dec 80 p 1

[Special to the BRAZIL HERALD by Herbert Zschech]

[Text] Rio de Janeiro--The dismissal—formally described as resignation as is usual in such cases--of Said Farhat as President Figueiredo's minister for social communication and the simultaneous closing down of the Social Communications Department, SECOM, is seen by observers of the political scene as a narrowing of the president's political bases inside his regime, where the military now wields all the influences, as happened under the previous presidents of the revolutionary regimes after 1964.

This trend toward neutralization of civilian influences in the inner circle of government became visible recently already with the appointment of a general, Rubem Ludwig, as minister of education in the place of the liberal and erudite scholar Eduardo Portella. Planalto sources tried by all means to avoid the impression that a general had been substituted for an intellectual. Gen Ludwig himself stressed that he assumed his ministerial post not as a military man but as a citizen, and hints were given to the press not to emphasize Ludwig's military rank in the context of his new government post. This, however, does not change the fact that Ludwig belongs to, and enjoys the unrestricted trust of the president's military staff while Portella was probably viewed with some distrust.

The case of Farhat is similar. Commentators with inside information had been aware for some time already that Farhat was seen as an element not fully in tune with the military, especially with Figueiredo's most intimate military collaborators--Gen Golbery do Couto e Silva, the chief of the presidential civil office and principal maker of the regime's policy, and Gen Otavio Medeiros, the chief of the secret information service.

Farhat's position had become increasingly weakened for some time, but the immediate pretext for his ouster was said to have been a passage in a speech written by him for the president. The passage said that the political opening made it possible for the military to "return to the barracks." The expression "back to the barrack" used to be employed frequently in opposition statements during the past 15 years and seemed to have a provocative impact on the military. The intelligence chief, Gen Medeiros, reading the speech before it was submitted to Figueiredo, apparently censored the passage as improper. But Figueiredo is said to have decided that no harm would be done by it, and the passage was read by him at a military ceremony.

If this version, attributed to normally well informed sources, should be true, it might seem that the military objections went also against Figueiredo for ignoring them, and Farhat might be viewed as a scapegoat. Such an interpretation is of course unverifiable and will never be officially admitted. As to several official reasons given for Farhat's ouster and the closing of his SECOM office--that it was expensive and inefficient--they have certainly solid foundations. Slogans and pieces of advice to the people on how to vary their diet, naming other no less innocuous themes, were of astonishingly poor taste, childish in style, and sometimes apt to elicit sarcastic commentaries on the part of the masses who certainly would like to vary their daily menues, if they could. If President Figueiredo really concluded that the money spent on this "social communication" was mainly wasted, many people would support him.

This, however, does not change the essential question of whether there might eventually shape up some kind of military stiffening against possible negative consequences of the political opening. Indications are seen by a few press commentators that this really was going to happen. Such information, however, may be viewed with caution because the commentators who convey such impressions are mostly skeptical on the political opening and inclined to advocate a hard line course. Still, it has been widely noticed that recent official statements and speeches by military chiefs attacked not only communism, as seems more or less natural, but also liberal politicians who are too tolerant toward subversive political currents. Remarks of this nature had been rare after the start of Figueiredo's political opening. Their being heard again now could be significant.

It might be even more significant that the air force minister, Brig Delii Jaedim de Mattos, generally considered as the most liberal of the three military ministers and a staunch supporter of democracy, deemed it proper last week in a speech given in Curitiba, to issue a warning to those who "attack" the military. He refused to explain however, on being asked by journalists, what sectors he had in mind on giving this warning, while repeating that "there are some sectors who attack us."

If the military, as it seems, is again strengthening its position possibly in view of social and political instability feared to occur in 1981 as a result of the economic crisis, this does not change a rule observed by Brazil's military all these years after the military revolution of 1964--to keep hands off the economic and financial policy. This has been a wise rule which spared Brazil many unpleasant experiences and blunders occurring in other Latin American countries where the military took full control--often with catastrophic results.

In Brazil today, Delfim Netto and Finance Minister Ernane Galveas are still firmly in the saddle despite many failures frankly admitted by themselves, and despite the undeniable lack of coherence in the pursuit of economic programs. Delfim promises that this will not happen again in 1981, but circumstances evidently may impose another course, just as last year. In the latest weeks, though, the economic policy has come under fire of strong criticism on the part of business leaders, who in some instances spoke with unusual bluntness. And Delfim is under political attack no longer only by the opposition, but by sectors of the government's PDS, mainly in the northeast. His and Galveas' immediate ouster was openly demanded last week by PDS groups.

What makes Delfim's position difficult to weaken, for the time being, is the lack of alternatives for his policy. That each business sector suggests changes that would benefit this sector is only too natural. But no one has come up so far with convincing proposals for an entirely new economic policy to overcome the present crisis which is largely a deadlock. It also centers mainly on the question of whether Brazil should have recourse to the international monetary fund, and if the foreign debts should be renegotiated immediately. As long as even Roberto Campos, the present ambassador in London, and undeniably a national reserve for giving a new orientation to the economic policy in case of a total failure of the present policy, keep silence on what should be done, the regime will doubtless prefer to rely still a while on Delfim Netto.

NEWSMAN DISCUSSES LITTLE-KNOWN FACETS OF GOLBERY PERSONALITY

Rio de Janeiro MANCHETE in Portuguese 27 Dec 80 pp 122F-122H

[Article by Alexandre Garcia: "Who Is Golbery, After All?"]

[Text] There are two Golbery's. At least that is the conclusion of a newsman who knew the first Golbery at a distance, as almost everyone else did, and later discovered the second during 20 months of government palace coexistence.

The citizen newsman, who never had personal contact with him, knew the Golbery "Mr Hyde," the myth, the mysterious, the Machiavellian, the man responsible for all the well-laid plans of the government, the success of which was hailed as "something Golbery did."

The newsman, the spokesman for the Presidency, discovered a Golbery "Dr Jekyll"--a common, simple, intelligent, refined, good-humored, accessible, ironic and kindly man--all of that in the superlative.

Then, as if one were not enough, there are two Golberys?

After all, who is that man whose personality is so wrapped in mystery, praised to the skies by some and cursed by others?

The reporter's testimoney seeks to provide an answer.

As a public man, his name began to be better known by the common citizen as of the Revolution, although Colonel Golbery had been the principal writer of the Colonels' Manifesto in 1952 and had already been the chief of the National Security Council Office of the Presidency of the Republic (a post which had been recently abandoned by Colonel Ludwig) in the administration of Janio Quadros. In 1961 he went into the reserves as a major general.

Golbery Likes Strategy and Politics

The reporter had his curiosity sharpened on this personality while abroad. He became chief of Geisel's Civilian Household, and in Buenos Aires, the Peronist Jacobites called him the ideolog and strategist of "Brazilian imperialist expansionism." However, the only source of information about that mysterious man, his book "Geopolitics of Brazil," was unattainable. There was a xerox copy of the book at the Planalto Palace library. Since not even the author managed to retain

a copy of his book, Golbery proposed a trade. He took the paperback copy published by the Jose Olympio publishing house from the library and replaced it with a carefully bound copy.

Reading "Geopolitics," one discovers that "expansionism" refers to the occupation of Brazilian territory itself. A few months ago, Golbery gave a personal example of adherence to his theory: He sold his house in Jacarepagua on the coast and resettled for good in the recently conquered interior of Brazil, purchasing a place in Lusiania, like Juscelino.

That man, decorated for bravery in the 1932 Revolution and in the Italian Campaign, wrote other classics of the type such as "Strategic Planning," reprinted last year, as well as "Geopolitics of Brazil."

It is obvious that he likes strategy and politics, but medicine and sociology are also among his favorites. He even prepared to take entrance examinations to the school of medicine. His knowledge on the subject today surprises his doctor, Dr Luciano Veloso. His interest in sociology led him to a lasting friendship with Gilberto Freyre.

He has an encyclopedic knowledge, an insatiable urge to know everything about everything. The other day he was studying the operation and construction of a biodigester. "I have to have a good knowledge of the subjects with which the government deals. Besides, I have to look ahead," he said in justification.

He rises shortly after 0500. Sometimes he is already at the Palace at 0700, which he leaves after 2000. He generally leaves his office in Planalto Palace for meetings with the president at 0900 and 1500. He acts as a "team leader;" the expression is that of Heitor Ferreira. When the decisions of the group (Medeiros, Venturini, Delfim and Heitor) are made outside the president's office, as was the case of the appointment of Minister Rubem Ludwig, Golbery is the spokesmen of the house ministers. With the exception of Delfim, he was the ranking official of them all, including Figueiredo.

Generally, the preliminary meetings of the house ministers are held at the round table in his office. The Golbery and Delfim offices are interconnected by an internal door so that they can meet whenever they wish without the knowledge of their secretaries. All of them leave by an internal elevator next to the door of Golbery's office, which runs directly to the President's office or to the garages underground. Thanks to this feature, Golbery can meet with oppositionists several times. He also talks to them outside the Palace.

The Constitution Is His Bedside Book

He usually wears grey suits, white shirts with embroidered initials, and when seen in the hallways, he carries a heavy paper or black leather portfolio crammed with papers under his left arm. His barber attends to him in his office bathroom. He is not a "Figaro" but the head barber of the Palace barbershop. His completely grey hair is cut short.

Good humored, he sometimes ends a serious subject with a witty remark, generally ironic, to ease the tension. He likes to use quotes, improvise rhymes and sometimes finishes a joke with a loud guffaw. The other day the minister of justice was telling him about a number of criticisms by the opposition and he came out with this:

"They are the parrots of Milciades..." (a quote from a story by Humberto de Campos which refers to the parrots belonging to a man named Milciades, which made only a racket within the wall around his house.)

He examines alternatives under the principles of strategy. Faced with a more complicated case, he begins with a hypothesis: "What is the worst possible case scenario?"

When he met me, many times his greeting was this: "What are the lies for today?" referring to the day's newspapers. After the interview I had with ELE ELA (which he did not read), he joked: "I found out that you are now going to become a gossip columnist..."

His most frequent saying precedes his leafing through a small blue book he keeps on the table: "Let us see what the constitutions says."

One of the things attributed to him is that he is cold and calculating. Actually, when his great friend Mario Henrique Simonsen submitted his resignation, Golbery, as soon as he saw that the incident had been consumated, put a lid on his feelings and began to work on the next phase, advising the president on filling the position.

His intimates in the Palace, refer to him (behind his back) as Doctor Go or Obi-wan (an allusion to "Star Wars"). Others call him the "Old Man." The title of "Minister" is used more than that of "General." He is "Golba" to newsmen. Since he does not usually travel with the president, he remains at the Palace playing the role of mainstay.

"He is the father, the master, one of a kind," said his son-in-law Alberto, who is married to Vera, when Golbery was a recently promoted lieutenant colonel.

He has five grandchildren, for whom he has a special way of showing affection. His grandchildren know that anything denied them by their parents they can get from their grandfather if they ask for it. If a grandchild sneezes or hurts himself playing, Golbery becomes extremely solicitous. Illness in the family is what worries him the most. When his son-in-law had a heart attack, the chief of the Civilian Household received the news at home. His first reaction was to pack his suitcase so that he could stay with the patient at the hospital. When his wife, Esmeralda, is sick, he worries every second of the day.

When it concerns him, he minimizes illness and jokes about it. When he became 67, and recently recovered from a prostate operation, he was honored at President Geisel's office. He said: "I have learned one thing, and I am more and more reminded of my old studies on strategy and maneuvers: In the cavalry many times it is necessary to trade space for time. I now see that I am trading time for

space. For each year I live, I am giving up a piece of me. I have already lost the lens and later the vitreous [as published] of one eye; now I have just lost another piece of me. I always believed that one's life should be given for the nation but I did not imagine it would be this way."

On that occasion, Reis Veloso, speaking in the name of the ministers, recalled the three phases in the life of Golbery: "The brilliant military careerist, including doctrinaire writings which even economists in and out of the country acknowledge as valuable; the important businessman and, finally, the man of government." Veloso then added a fourth phase: "Perhaps there is another facet of that very intelligent personality: The somewhat ironic philosopher who pokes fun at himself and at humanity."

Golbery accepted the challenge: "The three phases of which Minister Veloso speaks make me feel like a many-sided figure of strange and even incongruous facets. However, the last of those facets--perhaps that of an individual with a certain touch of cynicism and autocracy--could be the link among the first three."

Some years ago he purchased a 57-hectare place in the town of Lusiania, Goias, 50 kilometers from Brasilia. With difficulties he made improvements on "Friendship Place," where he practically lives today. He built a small barn for cows and pigs and he has a kennel. Dona Esmeralda raises tilapias, carp and tucunares [types of fish] in a pond, in addition to swans, ducks and geese. Golbery does not take part in raising them, although he usually walks around the place looking at things.

His weekends at Friendship Place begin at 0500 Saturday. He begins the day by reading the news after coffee. Later he reads, his favorite pastime, while listening to music. When he sold the house in Jacarepagua, he brought to the place the books that were in Rio. Now he is bringing here the library he has at the official residence of Ipe. He is going to have almost 30,000 volumes, which he files according to his own ideas so that only he can look for anything efficiently. He uses one file per subject. He saves even his books from the first grade, which he spent at the Grupo Escolar Juvenal Muller in Rio Grande, where he was born.

Tired of reading, he also takes a morning walk around the place. After a glass of whiskey, or preferably a glass of old rum, as an apertif, he likes a piece of roast lamb, fried quibe [a Syrian dish of ground meat, cracked wheat and spices], and small fried fish (caught in the pond on the place). He loves the Rio Grande do Sul mocoto [a dish made of calves feet] made by Dona Esmeralda. But those feasts are for weekends. At Planalto Palace his lunch is frugal. A waiter brings his food, prepared in the Palace restaurant, in a white formica box. He lunches with Heitor Ferreira on the conference table in his office. Afterwards, he kicks off his shoes and takes a 20-minute nap on the couch. Dona Lurdinha places the "Do Not Disturb," sign with the picture of a bulldog on it, which Heitor brought from a hotel in Ribeirao Preto, on the doorknob.

Weekend lunch is accompanied by European wine, bottles of which he stores without much thought of sharing. Despite this care, some bottles have disappeared, although he does not know it. He brings the habit of the afternoon nap with him. In the afternoon he reads again and enjoys his records.

Alone in the room, he has been surprised directing the orchestra while listening. And the one who surprised him asserts that his encyclopedic knowledge includes composition and orchestra leadership. In short, there is nothing more obvious than that Golbery is a master.

He goes to bed around 2200 and does not watch television. The color television set made available to him in the Planalto office so that he could watch the lunchtime and 2000 news programs, wound up in Heitor's room.

His passion for books, records and paintings is exceeded by his love for Dona Esmeralda and his devotion to his family. However, he will not even lend books to his disciple Heitor, neither will he borrow books because he would be prevented from marking them with notes. He also likes to dance waltzes and tangos. He is light on his feet and an excellent dancer of the tango, although the last time he danced--with Dona Esmeralda, his love--was on the birthday of his daughter Vera, 2 years ago.

Last Saturday, the 13th, he went to Maria's wedding, a girl practically raised at the Ipe farm. After the wedding, he gave the reception himself as if he were the father of the bride. His employees have been with him many years and have a family affection and relationship. The wedding was held at the chapel of Nossa Senhora de Fatima (the first church built in Brasilia). Maria calls Golbery and Dona Esmeralda "Godfather" and "Godmother."

His eyesight has been the subject of recurring rumors. Some months ago, when the rumors were renewed, a small screw fell out of the frame of his glasses on the carpet. Dona Lurdina, Dona Nancy and Juca Mamede, his aides, began to look for it, while Golbery returned to work. Impatient, he stood up and looked at the surface of the carpet. He found the screw at the first look and made fun of his helpers: "You need an eye doctor, you are going blind."

He has two sets of glasses, one for reading and one for normal usage. But he never uses them; one remains in the upper pocket of his coat with the left temple hanging over the pocket ("so it will not make a hole in the bottom of the pocket") and the other he had been wearing around his neck until he broke the chain last week. Sometimes he prefers to read small print with a magnifying glass.

Self-disciplined, he quit smoking suddenly. He had been smoking more than two packs of unfiltered Continentals per day. At Largo da Misericordia in 1973, he decided to quit, during the time Geisel prepared to take office. As of that time, Heitor Ferreira stopped carrying packs of Continentals bought at the corner.

However, Geisel--also a former smoker--saw himself cut off from the habit acquired during the Castello Branco administration at the Palace of Laranjeiras, of smoking the open packs belonging to his friend. When Golbery was operated on for cataracts, he remained rigidly in bed face up, as recommended by the doctor, without changing position for many days even when he felt muscular back pains.

At the End of the Administration He Will Have 14 Years to a Minister

Anyone who wants to see him angry can spill a drop of coffee on the cover of one of his books, leave fingerprints on the surface of one of his records or let sunlight fall on one of his paintings.

However, he is extremely cordial and prizes his friends greatly. "The greatest certainty I have is that there are friends," he said last 21 August when he became 69. However, because he never refuses to receive friends, he has his peace disturbed many times on weekends or during his lunch or nap at Planalto Palace. However, he always receives people well, without showing any irritation.

His friendship with Ivete Vargas began with Ivete's uncle Umbelino Vargas, who was his classmate at the military school. He is also a friend of show people. Norma Bengell calls him "Godfather," Jards Macale and Glauber Rocha are his fervent admirers. Some weeks ago he received Sonia Braga, Reginaldo Farias, Luiz Carlos Barreto and Nelso Pereira dos Santos. In Asuncion, where he served in the Brazilian Military Training Mission for 3 years (as did Figueiredo) he has friends to this day. One of them honored him by naming his son Colbery. The Paraguayan Golbery is a captain today.

When the term of the present administration ends, Golbery do Couto e Silva should have almost 14 years as a minister (National Intelligence Service and the Civilian Household). However, the effects of his activities will not be limited to that period in Brazilian history. Even before that takes place, Golbery--the single and multifaceted personality--will have already won his place in history.

What Golbery Thinks Today

On Democratization and the Economic Crisis

"Undoubtedly it seems a strange paradox to want to carry forward a democratic liberalization from the political field at this time when there are such negative conditions in the economic area that they insistently demand broader and more effective controls and a centrally coordinated discipline with profound effects in the entire government and social structure. Actually, we have no other choice.

"Much more favorable times were not taken advantage of before for reasons it is not proper to go into now. But that, under any circumstances, does not justify delaying that decentralizing process even more, process which has been demanded as being necessary and urgent. In addition to the fact that opposing pressures, today strong and almost unbearable, would once more accumulate quickly, placing in danger the resistance of the entire system in that enormous pressure cooker in which, as has already been said in past times, the national body changed after a decade and a half of growing pressure."

On the Participation of the People in the Process

"Moreover, among those who view the creative and dynamic 'participation' factor as being more important and critical in democracy than the full guarantee of freedoms, no matter how basic they may be, there is the strong confidence that with the passage of time--not very long--the process of democratic improvement now underway will conclude by awakening new understandings and energies that will come to help decisively in the arduous efforts now being made with difficulty for healing and recovery in the economic field."

On Discipline in the Social Democratic Party [PDS]

"Not even the fear of divisive indiscipline in the government party should frighten us, and certainly not paralyze the necessary and unpostponable decentralizing and democratizing actions."

On the Present and Democracy

"As can be seen, the time is still one of instability and many concerns, requiring matchless mastery in leadership, a good dose of tolerance and negotiating ability.

"Indeed, we all need to reeducate ourselves for democratic coexistence."

VARIOUS SOURCES VIEW NEW FINANCIAL RULES, POLICY

Monetary Council's Opinion

PY302206 Sao Paulo O ESTADO DE SAO PAULO in Portuguese 18 Dec 80 p 31

[Excerpts] In addition to the approval of the 1981 monetary budget and the new interest rate policy for rural credit, the National Monetary Council has decided to establish as of today a ceiling of 50,000 cruzeiros on granting new special and guaranteed checks [cheques especiais e ouro], but has maintained once again the renewal of the existing contracts at the current level, beginning with their respective due dates.

Several other measures have been adopted to strengthen national private enterprises--especially small- and medium-size companies--to substantially increase the minimum capital of all financial institutions, (except for trade banks) and to carry out operations on the "open market." This measure aims at making more difficult the formation of new institutions, improving the financial system and forcing new businessmen to run greater risks, according to Claudio Haddad, director of the Central Bank Public Debt Department.

Thus the investment banks will need to have a minimum capital of 300 million cruzeiros, instead of the current 60 million cruzeiros, if they want to continue operating. The other institutions will be guided by the following figures: financial companies (depending on the kind of financing they grant) from between 4 and 10 million cruzeiros to between 20 and 50 million cruzeiros; dealer companies [distribuidoras] (depending on their capacity) from between 100,000 and 600 million cruzeiros to between 1.7 and 10 million cruzeiros; business-lease companies [empresas de arrendamento mercantil] from 5 million cruzeiros to 50 million cruzeiros; the Sao Paulo and Rio De Janeiro stock market, from 3 million to 15 million cruzeiros; stock markets in Minas Gerais, the federal district, Espirito Santo and Rio Grande do Sul, from 1.2 million to 6 million cruzeiros; stock markets in Parana, Recife and Santos from 300,000 to 3 million cruzeiros; other institutions from 200,000 to 2 million cruzeiros.

Operations at fixed prices (open market), trade and investment banks and societies of brokers and retailers will have to increase from 50 million to 75 million cruzeiros their underwritten capital to strengthen their activities. For the real estate companies, the limit increases from 30 million to 50 million cruzeiros. These institutions have until 30 April 1982 to fulfill these demands.

The Monetary Council also established that private banks must increase the minimum limit of their resources for loans to Brazilian citizens and companies controlled by national capital from 60 percent to 70 percent. The remaining 30 percent will be divided among the foreign companies. During the first half of this year the limit was 50 percent; then the national Monetary Council authorized an increase to 60 percent.

The Monetary Council also authorized medium- and small-size banks to maintain lower compulsory deposits in the Central Bank, but in turn they will have to invest their resources more in small- and medium-size companies. The small banks from the northern and northeastern regions will deposit only 11 percent of their compulsory deposits in the Central Bank, and the medium-size banks will deposit 14 percent instead of the current 18 percent. Establishments in the central-south region will monthly deposit at the Central Bank 28 percent of their deposits if they are small banks and 31 percent if they are medium-size banks, instead of the current 35 percent they are now depositing. To have the right to this preferential treatment, these banks will have to channel more resources from their net deposits to small- and medium-size companies: 16 percent to small companies and 14 percent to medium-size companies. Right now they are investing 12 percent, according to Resolution N. 388.

Paper's Views

PY240159 Sao Paulo FOLHA DE SAO PAULO in Portuguese 21 Dec 80 p 11

[Text] The National Monetary Council last Wednesday approved the monetary budget which, while trying to present a restrictive monetary policy for 1981, still maintains broad subsidies for agriculture and exports estimated at approximately 800 billion cruzeiros. It also maintains the system of open accounts--now called "priority" accounts--to meet the needs of these two sectors of the economy, without any expenditure limitation, so it also has a tendency to accelerate the rate of inflation, according to some government circles.

As Planning Minister Delfim Netto stated while delivering his speech before the Monetary Council, in justifying the new interest rate, the government is granting 7 billion cruzeiros in subsidies to the rural sector, "and this is more than was granted in any other period, whether in absolute or in relative terms."

In fact, an interest rate of 45 percent to cover agricultural credits in 1981 represents a subsidy of 100 percent, considering that the real cost of money in the market is close to 90 percent. Since the monetary officials plan to invest 1,325 billion cruzeiros in the rural sector and 560 billion cruzeiros in the export sector, it is believed that the amount of subsidies will reach 800 billion cruzeiros, thus becoming a strong element of inflationary pressure.

Since the accounts for agricultural credits will remain open, it is probable that the 462 billion cruzeiros budgeted for the next period--although they may represent a growth of 80 percent in relation to the 31 December 1980 balance--will not be sufficient to meet demands, creating an additional source of inflation through unpredicted monetary expansion.

The government has been promising great efforts to keep monetary expansion below 50 percent, even though this target is viewed as overly optimistic even by government officials, and the Bank of Brazil is one of the best examples of those who feel this lack of confidence.

The Monetary Council established this year's expansion of the investments to be made by the banking system--including the Bank of Brazil--at 45 percent, but the most optimistic estimates of the management of the Bank of Brazil indicate that by the end of the year the expansion of Bank of Brazil investments will easily reach 65 percent.

Despite this 65-percent expansion, the Bank of Brazil has been forced to implement drastic restrictions on loans for trade and industry, which have shown a negative trend as compared to last year. Even the funds for investments in the agricultural sector soon vanished from the Bank of Brazil branches while thousands of requests from all over the country were piling up, neglected because of lack of funds.

The prospects for next year are even worse, and the Bank of Brazil will most probably be unable to keep its expansion below 50 percent. The forecast is that the expansion of its disbursements will reach between 70 and 75 percent by the end of the fiscal year despite the desire of the management to follow the guidelines of the monetary budget to the letter. This expansion, well above the preestablished limits, will affect the monetary base and is bound to increase the inflationary pressure.

Since exchange accounts can no longer be used as a mechanism for reducing monetary base because the reserves have already reached the lowest security limit ($6.3 billion, equivalent to 3 months' imports), the government will have to make use of measures which will neither increase inflation nor affect the monetary budget, in order to take care of part of the subsidies. Such will be the case of the 100 billion cruzeiros which will be disbursed by the Federal Savings Bank--in lieu of investments in excess of the 50-percent ceiling--which will go to finance exports, and the 80 billion cruzeiros which will be received by the Bank of Brazil as time deposits and will be used to augment the funds allocated to the rural sector.

In the meantime the Bank of Brazil's oil account will feel no pressure during 1981 because the government has decided to pass on to consumers every hike in the price of imported oil and domestic refining costs even though this policy will stimulate inflation, because the price hikes of oil byproducts, which already include almost 20 various taxes which go to finance development of other energy sources, will be well above the general price index for 1981, as they were this year. The oil account already carries a deficit of $140 billion [as published] but this deficit has been stabilized and it will remain at this level until the National Treasure manages to absorb it.

The reduction of wheat subsidies will also be significant. Out of the 80 billion cruzeiros allocated initially this year, only 65 billion will be actually disbursed thanks to the 240-percent price adjustment implemented for wheat grain and flour through 4 price hikes which took place during the second half of the year. These adjustments will continue throughout 1981 until the ton of wheat grain, which is currently being sold to the mills for 6,500 cruzeiros, reaches the price of 11,400 cruzeiros, which is what the government has to pay for it.

Obviously, increasing the price of wheat to a realistic level means hiking the price of bread and the other byproducts, especially noodles, all of which are foodstuffs whose cost has a significant impact on cost of living indexes, especially on the INPC [consumers price index]. This, in turn, means more inflation.

Even among the planning minister's advisers there are many who believe that by making the interest rates more "flexible" the government has substantially increased the financial cost to the enterprises, which are now trying to pass this additional cost on in prices. Since the government's objective is to keep the cost of domestic money above that of foreign, to facilitate the quest for funds necessary to normalize the balance of payments, the prolonged maintenance of high interest rates abroad--like in the current quarter during which the "prime rate" [given in English] reached 21 percent--could stimulate further growth of domestic interest rates, in order to maintain the difference, which will provide an additional inflationary pressure.

The freedom of prices implemented by the government in lieu of a better reward to the industrial sector, freedom which is being taken advantage of by various sectors for the establishment of price increases far beyond those which they had sought initially when the prices were being controlled by the CIP [Interministerial Price Council], is also helping to increase inflation, as has been acknowledged by the very experts of the Planning Ministry connected with the Supply and Prices Secretariat.

Everything is being done to keep the people from knowing which products have had their prices freed because Supplies and Prices Secretary Carlos Viacava believes that if prices are freed confidentially the psychological factor of inflation, which is always fanned by the information that prices have been released, will be reduced. In any case, it is true that by the end of the year all industrial sectors will be free from CIP control and the Planning Ministry officials charged with carrying out this policy--aimed at increasing domestic savings in the business sector--have no doubts about the high cost of this policy in inflation.

It is perhaps because of all these reasons that the ministers of the economic area, especially Delfim Netto and Ernane Galveas, show little enthusiasm when speaking about the possible reduction of the inflationary process in 1981. Delfim Netto believes that during the first quarter the inflation rate will tend to remain stable at the current level and that by the second half of the year it will begin to decline. Thanks to this decline the inflation rate for next year will be 20 percent less than this year's, that is, somewhere near 90 percent, which is still intolerable for both economy and society.

DEPUTIES FAVOR CLOSER TIES WITH USSR

Deputies Tour Georgia

Rio de Janeiro JORNAL DO BRASIL in Portuguese 16 Dec 80 p 4

[Article by Noenio Spinola: "Soviets Invite Figueiredo"]

[Text] Tbilisi, Georgia--The secretary general of the Communist Party of Georgia, Eduard Shevardnadze, repeated the invitation to President Joao Figueiredo to visit the Soviet Union to the Brazilian legislative mission.

The delegation returned to Moscow yesterday after a heavy schedule in Georgia, which ranged from a trip through the steel pipe foundry of the Rustavi steel plant, question and answer sessions with members of the local administration, to an unusual and certainly unexpected style show.

The deputies came from Leningrad and Kishiniov in Moldavia, where similar schedules were organized to give them a broad view of the political and economic life of the country. Each reacting in his own way, depending on the various leanings of the voters they represent, the legislators remained good-humored and some were surprised with what they were encountering.

Questions were asked about the representative nature of the local chambers (soviets) wages, occupations of the members of the legislative bodies, the organizational form of the regional political life, relationships with the central government and the distribution of tax revenues.

Some became aware that Georgia is the land where Stalin was born when they visited the beautiful collection of ikons of the museum which at another time functioned as a seminary where the deceased Soviet leader studied. In Georgia there are no signs of any cult with any phase of the memory of the man, who after death of Lenin until 1954, ruled the Soviet Union with an iron hand.

Besides the economic and political aspects, the program for the Brazilians included an exuberant demonstration of all the aspects of the cultural and artistic life of Georiga. Many of the legislators expressed their admiration at the care with which the program was organized. Some, like Deputy Celio Borja (Social Democratic Party of Rio de Janeiro), took their own actions: The Carioca legislator attended an Orthodox Mass on Sunday.

USSR Wants Brazilian Ties

Rio de Janeiro JORNAL DO BRASIL in Portuguese 18 Dec 80 p 12

[Article by Noenio Spinola: "USSR Wants More Ties With Brazil"]

[Text] Moscow—The First Deputy Chairman of the Supreme Soviet, Vasiliy Kuznetsov, yesterday described the international situation as "tense and complicated," and, addressing the Brazilian legislative delegation visiting this country, proposed "an even greater cooperation" on the path of lessening tensions and disarmament.

The appeal was made against the implicit backdrop of critical points in relations between the East and West, which range from Poland to Afghanistan and the Middle East. The legislators also received a message from President Brezhnev, by means of Vasiliy Kuznetsov, with the "best wishes" of the Soviet chief of state to the Brazilian people.

Friendly Meeting

The legislative mission, made up of deputies of the most varied political trends and headed by the president of the Chamber, Flavio Marcilio, completed a broad schedule in the USSR. They traveled through three republics: Russia, Moldavia and Georgia, four large cities, they visited tourist attractions, the Moscow metro, whose cleanliness and stable prices they had admired for many decades, and they concluded their work with three meetings in the morning and afternoon yesterday at the halls of the Kremlin. That night they went to the Bolshoi Theater.

From a strictly formal point of view, besides the many speeches and toasts, their work was concluded with a joint note to the press in which the two sides declared they are "interested in the future development of bilateral relations on the bases of the strict observance of the principles of equality, rights, sovereignty, mutual respect and noninterference in the internal affairs of both countries."

Although the main points to which the visit by the Brazilian legislators could lead had already been discussed before, given the obvious political repercussions of the reopening of a dialog interrupted 17 years ago, it was the contacts made during the last two days that led to the cordial and friendly ending seen yesterday. It is possible that the Soviets were also surprised in their expectations, changing the tone of their statements and including the meeting yesterday with the First Deputy Chairman of the Supreme Soviet, something which was not included in the original agenda.

The fact that no reference was made during the entire trip to the situation in Poland and Afghanistan, two regular points on the agenda of western politicians who visit the USSR, also indicates that the legislators preferred to restrict their language to a more general rhetoric without touching open wounds or contributing to increase tensions in international relations even more.

Joint Note

The note revealed to the press avoided the label of "communique" suggested by the Soviets initially. In this way, Deputy Flavio Marcilio tried to eliminate any attempt at speculation as to the role of the Congress and the Executive Branch in the field of foreign policy by an elegant gesture in support of President Figueiredo. The following were the main points of the joint note:

1. Confirms the interest of the legislators of the two countries in "the future development of cooperation in the commercial, economic, scientific, technological and cultural fields."

2. Expresses the joint concern over the international situation and the "conviction that there is no alternative to a lessening of tensions;" it asks for "the curbing of the arms race," and condemns the "aspirations of establishing the hegemony of other countries through any types of pressure." This is the only reference that could be interpreted as a mention of interference in the foreign policy of one or the other superpowers, although the term "hegemony" indicates that the writers were also inspired by the usual jargon of the Kremlin when it wants to refer to China--in the Asian case--or to the western countries when it criticizes them for "imperialism."

3. The note attributes "great importance" to the development of the contacts by the legislators and expresses interest in "expanding and intensifying" that process. It also makes reference to the interest by both countries in developing "access to the benefits of world progress in the economic, commercial scientific and technological fields."

Kuznetsov told the Brazilians that up to now "We have not taken much advantage" of the possibilities of economic and commercial cooperation between the two countries. He recalled, however, the areas where cooperations already exists and pointed to the fact that when Brazil speaks at the United Nations, it has influence, not only in Latin America but in other continents, or at least it is listened to with attention. "In the present tense and complicated international situation," he said, "it is important that the efforts of many countries be increased."

Greater Exchange Advocated

Rio de Janeiro JORNAL DO BRASIL in Portuguese 21 Dec 80 p 8

[Article by Noenio Spinola: "Brazilian Deputies Advocate Greater Exchange With Russia"]

[Text] Moscow--Factions of the center, right and left, represented by the legislative delegation which visited this country, surprisingly agreed on one point: All favored an increase in the exchange between Brazil and the USSR beyond ideological barriers.

"It is not a matter of whether it can or cannot be done," said Deputy Erasmo Dias of the Sao Paulo PDS, "In my understanding I believe that exchange 'must' be increased as an immediate measure in the economic, scientific, commercial and technological areas."

Ideological Frontiers

Ten days spent in Moscow, Leningrad and Georgia surprised the legislators in many ways--some saw snow for the first time in their lives--including the diversity of cultures, climates and races within the same territory. Their statements were recorded by JORNAL DO BRASIL during the trip.

The deputy leader of the PMDB [Brazilian Democratic Movement Party] in the Chamber, Jackson Barreto (Sergipe), believed "the breaking down of international ideological frontiers" which prevent contacts and economic trade between nations with different systems, is important. "Our basic objective must be the well-being of the people," he said. That is why we must improve our trade and political relations with all states."

Asked about the most positive and most negative aspects he saw during his visit, he pointed out "the social gains in the basic fields." A similar opinion was forwarded by other opposition legislators such as Roque Aras and Marcelo Cordeiro, both of the Bahia PMDB. The latter said that his expectations were fulfilled in his first visit to the USSR upon seeing the homogeneous nature of the quality of life in basic areas such as housing, health, education and even clothing.

On the negative side, many legislators referred to the restricted nature of the schedule, which did not allow a deeper look into the day-to-day life or to feel how the ordinary citizen behaves. A view of the Moscow metro was their most direct experience because they were able to observe a reasonable sample of life in a large city, the appearance of the people and those things which generally indicate the degrees of health, hygiene and education of any society.

The Most Critical

The most critical up to now of all those who came here was undoubtedly Deputy Sergio Cardoso of the state of Sao Paulo, who was in Moscow 16 years ago with the then Minister of Planning Roberto Campos. He said that "The truth about Russia is a truth of absolute discipline, of management, of noninterference by the Church in political affairs of any type. In short, it is a system which makes of the country something like a military base ready for anything. That picture is of no use to the Brazilian leftists bent on destroying the little discipline which still remains in democracy."

Asked about what has changed in the last 16 years, he observed that "in the way of discipline, militarism, life with obedience without too much concern about individual human values, Russia has not changed. However, if one were to think in strictly material terms, the country has progressed greatly. In Leningrad I found a practically new city which I did not see when I was there. Many houses have been built, many things. But the country is very rich, it has everything...With discipline everything can be obtained."

Ironically, the legislator said that if the Czarist regime were in Russia now development could be greater than that of today and that "together with a well-fed people with housing, it would be possible to find something more than the treatment accorded on a farm where only the material things count."

Conflict of Theories

On the average almost all the legislators showed surprise with the balanced living pattern. Deputy Erasmo Dias, of whom his fellow voyagers expected more conservative reactions, said: "The Communist Party has in fact managed to structure the government around certain priorities, whether it was by force or by popular acceptance. I cannot measure this aspect because I could not meet the people directly. But there is a sameness of behavior, perhaps too standardized for our liking, which at any rate, within the Soviet principles, has contributed to the resolution of basic problems. If they did not attend to everything, they at least attended to basic needs. If I had to make a plan for Brazil I would follow their example of planned economy, education, health and housing, as I saw here, but would continue with free enterprise in the production of goods and consumption, mixing the two systems to give man, not only the necessary basic infrastructure for any regime, but also free enterprise seeking profit, an increase in production, which I think is indispensable."

Deputy Aluizio Bezerra (PMDB-Acre), of the camp opposing the political faction of Deputy Erasmo Dias, agreed with him, however, in that which refers to relationships between Brazil and the socialist countries: "I believe that relations must increase for our mutual benefit," he said. In his opinion, the negative side he saw in the USSR is still in the supplies of consumer goods. "Although in the essential things the regime already provides for all the classes of the population."

Leorne Belem (PDS of Ceara) considered the lessons of the trip as "very valuable" and said that he could also see that the Soviet Union is reaching its objectives in the basic areas. Claudio Filomeno, another representative of the PDS from the same state, said that the two countries should come closer as the result of the legislative meetings and that the Soviet Union being a developed country in almost all fields," Brazil cannot remain aloof from that."

Jorge Moura of the Popular Party of Rio de Janeiro, said that he is against the automatic alinement of Brazil in blocs because that "goes back to the Cold War, which belongs to the past of humanity." For him the trip has had a strong impression in various aspects, primarily with respect to the homogeneousness of the pattern of the people's lives and the development of the heavy industry sector. "More than ever, international commercial interests cease to be frontiers," adding, "and this trip shall contribute to break the taboos which surround relationships with Brazil."

Rosa Flores of Rio Grande deo Sul is another legislator who confesses being very impressed. In her own words, within 20 years the Soviet Union should have reached important goals in the economy, science and technology. The deputy, who has already been in China, said that she was not surprised at many things she saw here and cited as a good example of international cooperation the Apollo-

Soyuz Project in which Soviet Cosmonauts and American astronauts worked together in space. Mockups of the two spacecraft were at an exhibit visited in Moscow. Some, who were more reserved, like Deputy Dario Tavares of the PDS of Minas, said that they had come to "see whether we have valid options for Brazil," and said they were in favor of "international competition," that is, a play of interests in which each one defends his own. There was no obvious display of interest by the legislators on the problems of Afghanistan and Poland, although some acknowledged that the aggravation of international tensions would only contribute to make relationships between developing nations and industrialized countries difficult.

The crazy quilt which could be made with the statements by each of them would be large but their common denominator is the acceptance of a permanent political dialog between Brazil and the USSR free of the ideological characteristics of the two systems. They had much criticism at the lack of resources which places the Brazilian embassy in this city at a disadvantage in personnel and materials when compared with the other Latin American nations.

DEPUTY WOULD COPY 'GOOD' ASPECTS OF SOVIET REGIME

PY271826 Rio De Janeiro O GLOBO in Portuguese 26 Dec 80 p 3

[Text] Sao Paulo (O GLOBO)--Deputy Erasmo Dias (PDS, Sao Paulo state) who has just returned from a trip to the Soviet Union, yesterday stated that "the objective of the Soviets is to take control of the world and, therefore, the West must prepare to resist."

Dias stated: I continue to be an inflexible anticommunist, but this does not mean that there cannot be an exchange between the two countries, trying to reach a middle way, correcting what is wrong. We cannot live thinking that our regime is good. We must think of the millions of Brazilians who do not have what I have.

The deputy said that the Soviet people have suffered very much from invasions and wars and have found in the Communist regime something that has given them a certain amount of tranquillity and security. Today they have totally free housing facilities, health care and transportation. Much attention is paid to meeting their basic needs.

According to Dias, "in countries like ours only a small minority group is in a position to fulfill all its aspirations, while no attention is paid to the basic needs of the great majority."

In the Soviet Union, he said, the regime provides the majority with the minimum conditions for survival.

He added: Here we talk about freedom, but it is a whimsical concept. If we do not have shelter, health care and education, what good is freedom? Perhaps we could adopt a planned economy in the service sector and maintain free initiative in producing consumer goods. Our regime, with the freedom and everything else, creates problems. I think that good things ought to be copied.

The deputy stressed as a positive factor "the unity and homogeneity of the Communist party and the Soviets." In political terms, he said, you have the Communist party leading the Soviet Union in gender, number and degree [genero, numero e grau]. There is a unity of doctrine. There is also ideological unity, regardless of how false it may be with regard to materialism. But all their leaders speak the same language; they try to reach the same objectives with the same methods. This leads to a unity that makes things disciplined, hierarchically arranged and orderly.

ALGERIA VIEWS PURCHASE OF ENGESA-MADE WEAPONS

PY261735 Ric De Janeiro O GLOBO in Portuguese 24 Dec 80 p 16

[Excerpt] Brasilia (O GLOBO)--Algerian ambassador to Brazil Ahmed Kherbi yesterday reported that next year Algeria will send a high-ranking military delegation to Brazil to study the possibility of purchasing material manufactured by ENGESA [Specialized Engineers, Inc]. The date of the visit has not been established yet and, according to the embassy, the delegation will be made up of generals of the armed forces joint staff.

Next year also Brazil must increase its purchases of petroleum from Algeria. Purchases will increase from 9,000 to 20,000 barrels daily. The Algerian petroleum is of the light type--$40 per barrel--and, according to Ambassador Kherbi, the 11,000 supplementary barrels that Brazil will receive will come from the reduction in sales of Algerian petroleum to the United States. According to the ambassador, although the Algerian petroleum costs approximately $8 dollars more per barrel than the price charged by OPEC, this difference will be compensated for by a lower transport cost.

In addition to the purchase of Brazilian weapons--tested and proved in fighting under adverse conditions in the desert--the Algerian Government also plans to purchase 2,000 tractors and 600 tons of cocoa, and to increase purchases of Brazilian coffee which this year will total 10,000 tons.

According to the Algerian Embassy, Algerian Finance Minister Mohammed Hadj Yala will arrive during the first half of 1981. The visit of this Algerian minister has already been postponed at least twice this year.

BRIEFS

PAKISTANI EMBASSY INVASION PROTESTED--Brasilia--The Pakistani Embassy has sent a formal note of protest to Itamaraty, demanding explanation for the invasion of the embassy on 15 December by the Brasilia police to detain the ambassador's driver, a Brazilian, accused of raping three women. Ambassador Syed Ahmad Hasan Ahsani stated that "this is a very serious event because it is characterized by violence against the embassy." He added that "a foreign chancery cannot be invaded, because it is protected by international conventions." Itamaraty spokesman Bernardo Pericas recognized that the laws of immunity and privilege have been violated. Itamaraty is studying an answer to the Pakistani note, the spokesman stated. Ambassador Ahsani said that he was awaiting the Brazilian answer. He said that he would never contradict the Brazilian penal laws, but that the police should have contacted Itamaraty, so that through the Foreign Ministry he could have been asked to send his employee who has been accused of a crime to a police station. [Excerpt] [PY301556 Rio de Janeiro JORNAL DO BRASIL in Portuguese 24 Dec 80 p 7]

SOYBEAN EXPORTS--Porto Alegre--Despite initial estimates according to which Rio Grande Do Sul State would export 4 million tons of soybeans and byproducts this year, this state has managed to export only 3.4 million tons, for which it will receive more than $1 billion. Soybean exports have fallen short of the original estimate due to what the producers believe to be badly managed government policy. [Rio de Janeiro JORNAL DO BRASIL in Portuguese 2 Jan 81 p 15]

LARGE AGRICULTURAL IMPORTS IN 1980--Francisco Vilela, executive director of the Production Financing Commission (CFP), has assessed the development of the agricultural sector in 1980 and has indicated that 2 million tons of corn were imported during the year. He said that this amount represents 10 percent of this year's overall corn production, and that $380 million was spent to purchase it. The government had authorized the import of 1.7 million tons of corn, but the Agriculture Ministry always denied that imports of corn had reached this figure. Vilela indicated that 42,000 tons of rice and 35,700 tons of black beans were also imported this year. Rice imports cost $22 million and bean imports $28 million, which means that $430 million was spent on these three commodities alone. By curious coincidence, the unprecedented import of 2 million tons of corn took place during the year in which Brazil harvested its record corn crop, 20 million tons. [Text] [PY191356 Sao Paulo Radio Bandeirantes Network in Portuguese 1000 GMT 19 Dec 80]

CONSUMER PRICE INDEX FIGURES--Rio De Janeiro--According to the Brazilian Institute of Geography and Statistics [IBGE], the consumer price index for the period July-November 1980 was 43 percent. [Porto Alegre Radio Guaiba in Portuguese 2150 GMT 23 Dec 802

SMUGGLED ARMS SEIZED--Salvador--The federal police seized 3 million cruzeiros worth of smuggled arms during an operation carried last weekend along the BR-101 highway. The lot of arms included several rifles, revolvers, mauser pistols and other items including a gold-plated revolver. [Rio De Janeiro O GLOBO in Portuguese 24 Dec 80 p 4]

CURRENCY DEVALUATION--Brasilia (BRAZIL HERALD)--Brazil devalued the cruzeiro by 2.003 percent effective Thursday, to 65.170 to the U.S. dollar. The seller's rate rose to 65.500 to the dollar. The devaluation was the 22nd this year for a total of 53.957 percent in 1980. [Text] [PY242012 Rio De Janeiro BRAZIL HERALD in English 24 Dec 80 p 1]

GROWTH RATE--Rio De Janeiro (BRAZIL HERALD)--The Brazilian economy grew at an 8.5 percent annual rate in 1980, according to preliminary data released by the Getulio Vargas Foundation, whose figures are accepted as official by the government. That rate was equal to the country's average annual growth since 1965, and an increase of 2.1 percent over the 1979 figure, the foundation reported. The agricultural sector grew at the highest rate in Brazil's history, increasing by 8.1 percent in 1980. The highest sector growth rate was in transportation and communications, which expanded by 13.5 percent this year. But the foundation warned, "this present rate of growth cannot be sustained," principally because external factors have raised interest rates and made capital formation more difficult. [Text] [PY242012 Rio De Janeiro BRAZIL HERALD in English 24 Dec 80 p 1]

TRADE DEFICIT--Brasilia--According to information yesterday released by the Finance Ministry the cumulative trade deficit by November this year amounted to $2.918 billion. Between January and November 1980 Brazil exported $18.215 billion and imported $21.133 billion. Average monthly earnings were $1.656 billion per month and expenditures $1.921 billion. [Rio De Janeiro JORNAL DO BRASIL in Portuguese 20 Dec 80 p 12]

GROWTH OF EXPORTS--Rio De Janeiro--Brazilian exports experienced a 32.67 percent growth between January and November this year, thus surpassing all official expectations. According to the Foreign Trade Department, the $20 billion target figure established for this year will be reached in December. The foreign currency received from exports so far amounts to $18.2 billion, as compared to $13.7 billion in 1979. The products which earned most for the country were: coffee, iron ore, vehicles and soybean byproducts. [Sao Paulo FOLHA DE SAO PAULO in Portuguese 24 Dec 80 p 17]

INFLATION RATE--The Getulio Vargas Foundation [GVF] has reported that the inflation rate during the month of December was between 6 and 6.5 percent. The same data revealed by the GVF indicate that the index accrued for the preceding 12 months dropped to 111 percent at the end of 1980. In November 1980 the 12-month inflation rate reached 113 percent. [Sao Paulo Radio Bandeirantes Network in Portuguese 1000 GMT 6 Jan 81]

BRAZIL-PARAGUAY RAILWAY LINK TREATY--The governments of Brazil and Paraguay today ratified the railway link treaty which was signed last April on the occasion of President Figueiredo's visit to Paraguay. The ratification ceremony was attended by Paraguayan Foreign Minister Alberto Nogues, Brazilian Foreign Minister Saraiva Guerreiro and Brazilian Transport Minister Eliseu Resende. The railway will link the Paraguayan capital, Asuncion, with the Brazilian port of Paranagua. The railroad--which will go through Guaira, Brazil, and Salto del Guaira, Paraguay--will be completed in 4 years. Foreign Minister Saraiva Guerreiro has said that the execution and implementation of international agreements of this nature are sound evidence of the high level of cooperation existing between the two nations, which are linked by a traditional fraternal friendship and mutual confidence. [Text] [PY192348 Brasilia Domestic Service in Portuguese 2200 GMT 19 Dec 80]

BUDGET FOR STATE COMPANIES--At a meeting held at Planalto Palace and presided over by President Figueiredo, the Economic Development Council has approved the new 1981 budget for banks and state companies, which amounts to 7.844 trillion cruzeiros. As of now, the state companies must consult the Planning Ministry before contracting any new debts. This year's budget is 72 percent higher than the preceding year. [Sao Paulo Radio Bandeirantes Network in Portuguese 1000 GMT 8 Jan 81]

LARGE GOLD RESERVES DISCOVERED--According to the final report of the Mineral Resources Prospecting Company (CPRM), the gold reserves of Serra Pelada deposit total approximately 4,000 tons. That means that this deposit is larger than the Mununtal in the Soviet Union. The Serra Pelada mine could produce up to 70 tons of gold per year if the current system of individual prospectors were replaced by a modern mining enterprise. Currently, 20,000 men using primitive tools are turning out 9 tons of gold per year. [Rio De Janeiro O GLOBO in Portuguese 27 Dec 80 p 1]

BRIEFS

ITALIAN CONGRESSMEN FAVOR RELATIONS--Four Italian deputies of the Christian Democratic Party have met with Foreign Minister Rene Rojas Galdames. They are members of a group of 30 Italian congressmen who advocate the reestablishment of relations at the ambassadorial level between Chile and Italy. Deputy (Antonio Falconi) explained that the strengthening of friendship between the two peoples and the possibility of normalizing relations were discussed with Minister Rojas. He said that as a Christian Democratic congressman he has a responsibility to the government of his country, which is also an EEC member. He said they are interested in strengthening friendship with all countries of the West. He said that he firmly believes that relations between his country and Chile were never broken and have always stayed open. The Italian deputy was invited to the United States by the Reagan transition committee. He said that they advocate the full normalization of bilateral relations. FOREST PRODUCT EXPORTS--The export of forest products from January to November 1980 has reached $428,684,000. This represents an increase of $119 million over the same period in 1979. [PY070154 Santiago Chile Domestic Service in Spanish 2300 GMT 6 Jan 81]

NEW COPPER MINE--Mining Minister Carlos Quinones yesterday inaugurated the Lo Aguirre copper mine which will be exploited by the private sector. With an investment of $71 million, the new mine, which is located 30 km from Santiago, will produce 17,000 metric tons of fine copper per year. [Santiago EL MERCURIO in Spanish 16 Dec 80 p C1]

UNEMPLOYMENT RATE--The economic sciences faculty of the University of Chile has reported that the rate of unemployment in greater Santiago was 10.7 percent in December 1980. It also reported an 8.4-percent increase of the employment rate in the same area during 1980, which means that 98,000 new jobs were created. [PY090058 Santiago Chile Domestic Service in Spanish 1000 GMT 8 Jan 81]

EXPORTS TO ANDEAN COUNTRIES--Santiago, Chile, 4 Jan (AFP)--According to information supplied by the Chilean Central Bank, Chilean exports to Andean Pact countries have increased since this country withdrew from that organization in 1976. Between that year and 1979 Chilean exports to those 5 nations increased by 9 percent and it is expected that the same rate of increase will be maintained in 1980. Venezuela continues to be the main market for Chilean products such as beans, copper, wood and cellulose, but Colombia is not far behind since this year its imports from Chile increased by 65 percent against the 28-percent growth of Venezuelan imports from Chile. [PY062253 Paris AFP in Spanish 1520 GMT 4 Jan 81]

NEW UNDER SECRETARIES--Chilean President Augusto Pinochet has appointed 9 new under secretaries, has transferred 2 to other ministries and has confirmed the other 13. The new under secretaries are: Investigations, Col Mario Messen Garcia, Ret; Economy, Col Francisco Ramirez Migliassi, Ret; Education, Manuel Jose Errazuriz Rojas; Public Works, Col Fernando Hormazabal; Agriculture, Luis Simon Figueroa del Rio; Labor, Patricio Mardones Villareal; Health, Herman Buchi Buc; Mining, Capt Herve Dilhan Boisier; and National Properties, Jose Calderon Figueroa. [PY062253 Santiago Chile Diplomatic Information Service in Spanish 0016 GMT 3 Jan 81]

COST OF LIVING--The National Statistics Institute has reported that the cost of living increased 31.2 percent during 1980. This represents 7.7 percent less than last year's increase which was 38.9 percent. [PY031622 Santiago Chile Domestic Service in Spanish 1000 GMT 3 Jan 81]

ANTARCTIC AIR STRIP--Santiago, Chile, 22 Dec (AFP)--It was disclosed here today that Chile this year will start building a new air strip in the Antarctic near the Gonzalez Videla Base, the nearest base to the South Pole, located in the O'Higgins Peninsula. [PY240302 Paris AFP in Spanish 1408 GMT 22 Dec 80]

AGREEMENT WITH FRENCH COMPANY--The Chilean Telephone Company has signed a $40-million agreement with the French firm Thompson, which provides for the installation of 153,000 telephone lines in Chile. [Text] [PY240302 Santiago Chile Diplomatic Information Service in Spanish 2244 GMT 21 Dec 80]

FRG TO CONSTRUCT ANTARCTIC BASE--Punta Arenas, Chile, 2 Jan (LATIN)--Heinz Dittmann, FRG ambassador to Chile, reported today that the FRG will establish a permanent scientific antarctic base in the area of Wendell's Sea. The diplomat, who is visiting Punta Arenas, 2,500 kms south of Santiago, told the local press that the construction of the base will take approximately 6 weeks and will begin soon. He indicated that the new base will be able to accomodate approximately 350 persons and will have a research laboratory, a meteorological station and other facilities for scientific and technological research. Ambassador Dittmann indicated that only small earth satellite stations manned by three or four persons will operate at first. [Text] [PY042049 Buenos Aires LATIN in Spanish 1451 GMT 2 Jan 81]

SECURITY FORCES ON MURDER--Security services have denied that the student murdered by an extremist organization was an agent of a security organization. They indicated that this accusation is false. Roberto Rojas Alvarez, a 34 year old student, was murdered by three unidentified persons who entered his house in Villa Salvador, Building 9, apartment 301. [Excerpt] [PY301239 Santiago Chile Domestic Service in Spanish 1000 GMT 30 Dec 80]

TRADE FIGURES FOR 1980--Santiago, Chile, 26 Dec (AFP)--According to the Central Bank's foreign trade department, Chile's total foreign trade during the period November 1979-November 1980 reached $10,363,000,000, which represents an increase of 34.2 percent over the same period the previous year. It also adds that the main countries with which Chile trades are the United States, Japan and Brazil, which account for 38 percent of the total trade. During the January-November 1980 period, Chile's total foreign trade reached $9,590,000,000, which represents an increase of 33 percent compared to the same period in 1979. [PY291940 Paris AFP in Spanish 2357 GMT 26 Dec 80]

NEW NATIONAL UNIVERSITY RECTOR--Gen Alejandro Medina (Lloyd) has been appointed rector of the Chilean National University in place of Gen Enrique Morel Donoso, who resigned for health reasons. [PY291940 Santiago Chile Domestic Service in Spanish 1630 GMT 29 Dec 80]

ANTARCTIC AIRFIELD--A group of construction workers has been in the Antarctic since 15 December to extend the airfield of the (Teniente Marsh) Air Force Base from 900 meters to 1,200 meters in order to enable Hercules planes to operate there. [PY291940 Santiago Chile Domestic Service in Spanish 1000 GMT 29 Dec 80]

STUDENTS END HUNGER STRIKE--Santiago, Chile, 29 Dec (AFP)--It has been reported here that nine university students who had been on hunger strike since 10 days ago in the Metropolitan Cathedral to prevent the detention of a student leader, ended their strike today. The youngsters who began their fasting on Saturday, 20 December, in support of student leader Patricia Torras, indicated that they would maintain their position until the interior minister decides to publicly explain the charges against the student. Yesterday 12 other students entered the cathedral to begin a movement of solidarity with their colleagues. A doctor who checked them recommended them to end their strike due to their precarious conditions. The new group of youngsters indicated that they would substitute for the nine students to continue with a 48-hour hunger strike, but they decided to continue the strike until today, awaiting a possible answer to their demands by the Interior Ministry. U.S. ACCUSED OF OPENLY INTERFERING--San Salvador--The U.S. Government is openly interfering in El Salvador, where it has now requested structural changes in the government. The Yankees no longer want the junta. The U.S. Government has asked for changes in the government's structure and in the top command of the Salvadoran Armed Forces. In a position that has been described as open interference in the internal affairs of that Central American nation, the U.S. administration has conditioned the continuation of its aid to the military-Christian Democratic junta on the implementation of basic structural changes in the junta. The above is from a report to the U.S. Senate's Foreign Relations Committee by a special commission that visited El Salvador to investigate the recent assassination of four U.S. nuns. According to William Rogers, former assistant secretary for Inter-American affairs during Gerald Ford's Republican administration and a member of the investigative group, their activity is aimed at establishing a government in El Salvador that can effectively pursue the common objectives of both the United States and the junta. [Text] [PA131717 Managua Radio Sandino in Spanish 1800 GMT 13 Dec 80]

HAVANA COMMENTS ON U.S. PRESENCE--Juan Ramon Medrano, member of the Farabundo Marti Front's Unified Revolutionary Directorate, and Norma Guevara, representative of that organization here in Cuba, held a news conference here in Havana to discuss the current situation in El Salvador and the conditions that exist in that Central American country for staging a final popular insurrection. For more than 90 minutes, the two Salvadoran revolutionaries answered the questions of local and foreign newsmen who were covering the developments at the Second Congress of the Communist Party of Cuba. Commenting on the direct U.S. intervention in the Salvadoran armed conflict, the two leaders told the local and foreign newsmen that more than 200 U.S. military advisers were in El Salvador in September and that Puerto Rican mercenaries and Cuban counterrevolutionaries have also participated in the repressive operations carried out by the military. They added that the presence of Yankee military advisers in El Salvador has not been denied by the United States and they urged the international press to visit the Salvadoran refugee camps which have been established in several Latin American countries so they can hear the testimonies of widows, orphans and other people who claim to have even seen Yankee soldiers patrolling the streets of San Salvador. POLITICAL PARTIES PREPARE FOR 1981 ELECTIONS

San Pedro Sula LA PRENSA in Spanish 1 Dec 80 p 5

[Article by Ramon Murillo Cantoral: "Let Us Recover Our Legal Status"]

[Text] Tegucigalpa--Approximately 1.5 million Hondurans will vote next year to elect the president and vice president of the republic and deputies to the National Congress.

The citizenry will have four political options as it marks its ballots, although one cannot rule out the possibility that some presidential hopefuls might run as independent candidates, following the pattern established by defeated White House candidate John Anderson.

But, we will not learn what the rules of the political game are going to be until the future Election Law is passed by the National Constituent Assembly; at the same time, the National Board of Elections will determine whether the 1981 primaries can also be used for electing political governors and municipal mayors.

As the decisive moment approaches, the citizens--who for various reasons had been unable to vote last April, when we elected the 71 deputies to the National Constituent Assembly--are flocking in large numbers to the election registration places located in the nation's 283 townships.

Four Outstanding Contenders

The Christian Democratic Party of Honduras, the last political group recognized legally, was the first to come out with its presidential candidate whom it presented to the mass of voters. The choice fell on Dr Hernan Corrales Padilla, former university president and a famous dermatologist, who is responsible for a good deal of the political belligerence acquired by the DC [Christian Democratic Party] in recent years.

Although his government program is not yet known, Hernan Corrales did say that, if he were to become president, this would mean a substantial improvement in the living standard of the vast majority of the poor people through the launching of the agrarian reform, the fundamental concern of the last military government, a task which is a little less than secondary for the current provisional government.

The possibility of a DC victory is very remote in view of the fact that this is the first time it is participating in a presidential election. However, it is expected that it will win enough votes to enable it to participate vigorously in the National Congress.

Innovation and Unity Party Spells Out Position

Barely a week ago, the PINU (Innovation and Unity Party) picked Dr Miguel Andonie Fernandez as its presidential candidate; he is the national delegate of that political group and a very able business operator, owner of a pharmaceutical plant and various communications facilities.

Andonie Fernandez is the founder of the PINU and has been its top leader for 11 years, when he decided to form a political grouping within the context of unity of all Hondurans, as manifested during the military conflict with the Republic of El Salvador. At that time, Mandofer was chairman of the National Civic Committee, in other words, he was in charge of civil resistance to the expansionist claims of the 14 Cuscatleca families.

Andonie Fernandez' publicity men present his as "the man of providence" who can put an end to corruption in government which has reached alarming levels in recent years. They also stress his business acumen and the probable benefit which might accrue to the nation's shaky economy as a result of that practical experience of his.

Like the DC, the PINU is not given any chance for a victory at the polls since this is likewise the first time it is participating in a presidential election, although it is believed that it will boost its delegation in the National Congress and will have a positive effect on the conduct of local community affairs.

Zuniga and His First Nomination

The traditional National Party of Honduras is thinking of this time running as its presidential candidate its own top leader, Ricardo Zuniga Augustinus, according to the desire of the majority of the convention members elected during the party's internal primaries in recent weeks.

The veteran political leader would thus have his first opportunity to estimate his popularity among the thousands of Hondurans who would go to the polls because, although he had the Blue candidacy within his reach on other occasions, he decided to yield that honor to other candidates.

Zuniga Augustinus is running the National Party with an iron hand and his decisions are taken as orders by his followers, in the style of the party dictatorship imposed by the late ruler Tiburcio Carias Andino.

The Nationalist candidate has held important posts in government during past military administrations and in his own party, to the extent that he was often identified as "the real power behind the throne," an assertion to which he responds only with a smile when anyone alludes to his "enigmatic" powers.

If we consider the popular verdict registered last 20 April, we can indeed doubt a nationalist victory during the primaries this coming year. But the party's defenders argue that they were harmed by the method used in holding the election and that this time they would win if the elections were "honest and clean."

One must also take other factors into account, such as the victory of the Republicans in the United States and the influence which such results exert on the country's calm political life; there is even talk of personal contact between Zuniga himself and Vice President-elect of the United States George Bush.

The Fourth Challenger

All political analyses and unofficial studies point to a clear victory for the liberal candidate during the coming elections, assuring us in advance that the nation's future president will be Dr Roberto Suazo Cordova, current president of the National Constituent Assembly.

Suazo Cordova is considered the political "heir" of the late liberal leader Modesto Rodas Alvarado who kept his party away from the temptations of power shared for 17 years, although one cannot say the same thing now since all Rodista leaders are enjoying the good life that comes with running the nation.

In order not to run into any obstacles in announcing his candidacy, Suazo Cordova extended the term of the current local and departmental councils of the Liberal Party to make sure that there would be enough convention delegates to pick him as the official candidate during the next convention.

Suazo Cordova thus defines himself as "a man who hates the tinsel and noise of government," noting that he would prefer to spend his spare time talking to the peasants in his home territory of La Paz whose inhabitants are given over to plotting and white magic, according to the liberal leader's opponents.

The political heir of Rodas Alvarado promised to continue the structural changes that were interrupted by the 1963 coup d'etat when the ambitious Col Oswaldo Lopez Arellano defeated the constitutional president Ramon Villeda Morales, thus blocking the almost certain election victory of Rodas Alvarado himself whom he accused of harboring communist and subversive ideas.

The policy implemented by Villeda Morales and defended by Suazo Cordova basically includes the practical implementation of the agrarian reform, diversification of exports, improvement in the economic and social conditions of the workers, and full implementation of human rights and guarantees of a social nature which are a part of the Constitution being debated in the Legislative chamber.

Other Candidates?

In practice it is believed that there will be no more contenders in the political arena although one cannot rule out the possibility that new faces might appear among the traditional parties at the very last moment, especially in the National Party, which is very much given to blending its blue color with the olive-green color of the military.

It is considered probable that other, less belligerent political sectors, such as the Honduran Revolutionary Party, the Communist Party of Honduras, the Popular Progressive Party, and other ideological forces, such as the Liberal Alliance of the People, the Liberal Unity Front, dissident sectors of the National Party, and the Honduran Patriotic Front might also try their luck on this occasion.

If that were to prove possible, it is also assumed that there would be strong candidates to run for the presidency, through independent candidacies, including attorney Carlos Roberto Reina, the businessman Edmond L. Bogran, Dr Enrique Ortez Colindres, Francisco Rodolfo Jimenez, engineer Roberto Galvez Barnes, and the socialist theoretician Mario Sosa Navarro.

LOPEZ-PORTILLO DISCUSSES PRECANDIDATES, OTHER SUBJECTS

Mexico City EL DIA in Spanish 4 Dec 80 pp 6, 7

[Stenographic version of the breakfast-press conference held by President Jose Lopez-Portillo with journalists serving in the presidential press corps, in the Red Room at Los Pinos in Mexico City on 3 December 1980]

[Text] Mr Luis Javier Solana: With your permission, Mr President.

The newsmen who make up the Presidency of the Republic's press corps have unanimously agreed to undertake a group effort. The questionnaire that my colleagues Ofelia Aguirre and Roberto Vizcaino, who were chosen at random, are now going to read was drawn up by all of the members of this news service. They felt that this was the most democratic way that they could all take part in this effort. So then, I am going to ask Ofelia Aguirre and Roberto Vizcaino, she first and then he, if they would be so good, to read the questions.

Question: Mr President, the undersecretary of commerce, Hector Hernandez, agreed that there are grounds for Nobel economics prize winner Klein's statement that Mexico could lapse into the "petrolization" or "Iranization" of its economy. Some groups of economists assert that this development is linked with "dollarization." Is this true?

Answer: First of all, welcome. I am very pleased to have you here. I think that your procedure is a very clear illustration of what the science of criminal law calls premeditation, breach of trust and advantage, and what you call democratization is what I might call a tyranny of the majority. But I am at your service, and with great pleasure.

I am unfamiliar with the context in which Hector Hernandez made that assertion. It would surely be what we might call a simplistic speculation. To speculate, as you know, comes from the Latin word for mirror, "speculum," and so it means seeing reality through a mirror, a mirror of prophecies even. Such a possibility could be voiced and accepted as speculation, like many others. But foreign experts often make simplistic assertions, hasty generalizations, and in the case of Mexico and its oil, I think that this is obvious.

The cases of Iran and Mexico are completely different. Iran is an Islamic country that decided to modernize under an autocratic political regime based mainly on a military buildup, linked to the U.S. economy's desire for it to be

its policeman in the area. It was on the basis of Iran's military buildup that the modernization process began, and not only in terms of technology but also by bringing in foreign specialists, mainly Americans. Its modernization included a cultural break with its Islamic past, which created a very complex mix of tensions that eventually exploded, because ever since the seventh century A.D. the Islamic Middle Ages have demanded input in the modernization process.

Mexico's situation is completely different. Mexico has gradually entered the petroleum era, with the experience of an empire, first in the prerevolution and then in the postrevolutionary period. It staged its social revolutionary at a time when the oil problem already existed and culminated its stand on this issue with Lazaro Cardenas' expropriation, which coincided with a series of developments that diversified its economy and that do not make it dependent on oil. So then, by the time that we made our recent oil discoveries, our country already had an industry, albeit insufficient and with a great many gaps. Its modernization process is under way and, above all, it has already trained manpower. A short while ago, at a meeting of mechanical and electrical engineers meeting, I voiced this thought: Mexico has specialists that can handle the work, on account of what Lazaro Cardenas did, to be sure. Yesterday I inaugurated the Chicoasen plant, which has 100 percent Mexican engineering, etc.

Hence, the country's situation is completely different as far as its process of modernization is concerned.

Moreover, Mexico is not a country that has decided on a military buildup. We spend very little on weapons. We don't have to. The care that we have taken in setting ceilings (which are not taboos but rather the outcome of very rigorous analyses of our economic realities) tells us that we have, in fact, taken into account what happened in Iran and other oil producing countries, so that the same thing does not happen to us. The point is to bring in exactly as much foreign exchange, as many dollars, as our economy can absorb, not in a disorderly way. As you know, we use the dollars to buy things overseas. When the dollars enter the country, they have to be converted into pesos, and starting up the money-making machine is the same as converting dollars into pesos. They can, of course, be considered as reserves, but they no longer have a reserve function to guarantee the peso's parity vis-a-vis the dollar. Thus, it makes no sense to bring too much foreign exchange into the country because this congests our economy and causes inflation.

In addition, our ability to buy things overseas depends largely on the projects that we pursue. This is why we are careful about production ceilings, to coordinate the country's development through oil as a source of foreign exchange and as an input for our own industry. This explains the ceiling. I have also said that in addition we have to reconcile what we spend to extract the oil with what we earn from oil sales, because we could inflate our economy both ways, in the first case because of deficits and in the second because of too many dollars in our economy. Since we are aware of the dollar inflow, of what is involved in the so-called "Iranization," I don't think that it could happen to us. Of course, if we view reality in the mirrors of prophecies, that and anything else could happen. Atlantis could rise up in the middle of the Atlantic, and the Yucatan Peninsula could sink. It could happen, but this is speculation. Hence, I categorically assert the following: the Government of Mexico, which is

responsible for petroleum production, has established a suitable pace of development so that our economy will not be "petrolized" either by borrowing to extract the oil or by congestion from foreign exchange inflows.

Question: Mr President, the second question: The opposition and other sectors assert that economic power has handcuffed political power, which is preventing the government from carrying out structural efforts to benefit the masses. As an example, they point to the blocking of a new Commerce Law and the fruitless efforts against middlemen. Is this true?

Answer: No, not at all. It is not economic power, if by economic power we mean the power that money can give to a certain social class in society, no. The economy as an interaction of domestic production, distribution and consumption and in its international links, has its own structure as a whole, and this forces us to make certain decisions, mainly those that involve what we might call timing. So then, structural decisions in our economy have to be properly timed, and on occasion we cannot make a certain type of decision because we realize that it would have a different effect from the one we intended. There is no social class that can forcefully prevent the Mexican Government from making decisions.

As far as the blocking of a law is concerned, I don't know which one you are referring to. We are concluding an interesting study. I have just received the initial conclusions on restructuring supply in Mexico, and this includes reforms of the marketing system, including, perhaps, the Commerce Code itself. So, there is nothing preventing us from doing so, nor is there any blockage. I don't know which one you are referring to.

And as far as middlemen are concerned, this is not due to economic power; it is due to the cunning of those who take advantage of a free society and lodge themselves in the right places to operate as middlemen. It is hard for us to uncover them, and when we do, it is hard for us to prevent them from engaging in free trade, as guaranteed by our constitution.

Thus, I can categorically assert that there is no economic power preventing the political power from making its decisions. Such decisions must be responsible and in keeping with what circumstances permit. There is no such power. I assert this categorically to the opposition and other sectors.

Question: Sir, there are complaints that the budget monitoring process lacks truly effective tools for auditing expenditures. This, they assert, curbs or nullifies the battle against corruption. It has always been said that each 6-year presidential term in Mexico leaves its batch of millionaires behind. How will you prevent yours from falling into this pattern? Do you agree that the monitoring process has to be improved?

Answer: This was one of the banners that I raised in my campaign and that I have waved from the outset of my administration. I was very interested in having in-depth monitoring and I introduced procedures for all of the monitoring laws, the budget, the public debt, company monitoring, procurement (which is constantly being revised), contracts, etc. So, I am personally interested in

seeing things move forward as much as possible in monitoring procedures, because there is no reason for anything stemming from decisions by the president and his main collaborators to be concealed or to entail a misdeed that deserves to be punished. I am personally interested in having a transparent budget, and I said so ever since the first year I was in office. I have aimed for this ever since I was finance secretary. The presentation of the budget has gained in clarity. The Legislature can, pursuant to its powers, introduce any and all procedures that it deems appropriate to clarify these matters. Monitoring, then, is one of the administrative processes that we have to pay attention to, and it does, in fact, exist.

As to the stories about batches of millionaires every 6 years, well, people say so many things that it's like the case of speculation. It would be interesting to find out who and in what instances. When they have been uncovered, action has been taken, at least under this administration, and I hope that the next one does the same with those who emerge from mine. The measures that we have to take for what is popularly called the "Year of Hidalgo," which really begins in 1981, are measures aimed at greater precautions. We have the legal instruments to do this. There are auditing systems that we might call internal, which the Federal Government applies to itself, and those that we might call external, which the Legislature has to apply. Things can be controlled by combining the legal instruments that we have available, but there will always be someone who has the talent or the opportunity to circumvent them. By their very nature, laws are violable; otherwise, they would be natural laws that would never be broken.

The important thing, then, is to have systems of detection and systems of punishment. Every one that is necessary will be established. I am the person most interested in that.

Question: Mr President, how is the economy of the working classes doing now that we have had an average annual inflation of 25 percent over the last 4 years while wages rose less than 20 percent? Does this mean that the poor are poorer now?

Answer: There are several things that I would qualify here. The problem with statistics is that they lead to hasty conclusions and simplistic generalizations. The economy has not inflated at that constant rate, nor have wages. Inflation rates are conventional factors that each economy figures out in accordance with certain indicators gathered from the economy as a whole but which do not affect all sectors alike. It is rash, then, to draw from these statistics social and political conclusions such as the one implied in this question. There is inflation; that is a fact. But there is another fact: there are jobs, a lot more jobs than in past years; thus families can have more providers (and this largely is also why there is inflation), as they can lump together two and even more paychecks, because the economy makes this possible now.

I would say to you that there are shortfalls on the two extremes of the job range. As far as skilled workers are concerned, not only is the supply low but there is open piracy in the government itself as well. Some branches steal workers by offering them better pay. Many of my collaborators are constantly

complaining: "Look how so-and-so is stealing my men because he pays them more." Hence, there is a limited supply of skilled workers. And the astonishing thing is that the same thing is the case on the lower end of the scale, hard manual labor. There are problems with canecutters, there are problems with rice pickers, there are problems with tobacco planters, there are problems with cotton pickers. In short, all of the toughest, stoop-labor jobs in the field are no longer in demand, which means that people are being liberated, that they are finding jobs somewhere, or that they are underemployed, but in any case they are better paid or in better conditions than doing the tough jobs that they are beginning to leave behind. Since there are more jobs, families have more than one paycheck. But I honestly must concede (I have always done so) that this year the minimum wage is surely going to rise less than the rate of inflation.

Of course, a lot of considerations are in order here. For example, housing rentals is one of the main components in the inflation index, but this does not have much of an impact on the working classes, which have taken care of their housing problem, albeit inadequately. And there are other components of inflation like this. Schooling, for example, is one the components that is constantly reflected in the inflation index, school fees or tuition. Workers send their children to schools that do not cost a cent, public schools. We could continue analyzing each component this way and get a non-sketchy view that would not lead to hasty generalizations but that would instead indicate that one could not categorically assert that the poor are becoming poorer. We can assert, and I assert categorically, that there is inflation, that there are more jobs, that there is greater demand, that there is, therefore, higher inflation and that it would be a good idea to carefully study how these components, which are hastily put at 20, 24 or 26 percent, interact.

I would not recommend analyzing society with such elementary statistical data as these and then drawing conclusions that could be rash. In my view, such a conclusion is not in order based on this index, for the reasons that I have mentioned.

Question: Sir, what is your assessment of futurology [futurismo]? Is it harmful, beneficial or simply unimportant?

Answer: Well, here, as with many other things, the important thing is to know what futurology means. If by futurology we mean man's fortunate ability to foresee the future and make decisions accordingly, to supervise changes and achieve goals (even political ones), futorology as a human quality and condition is an inseparable part of man as a rational being, and from this standpoint I would not bother to term it desirable or undesirable. Man is perhaps one of the few creatures, along with ants and wasps, that are fortunate enough to be able to anticipate the future and take action. From this viewpoint, it is positive.

If by futurology (getting into the political sphere now) we mean intrigue, the shirking of responsibilities, subverting authorities and areas of responsibility to make political headway, shirking responsibilities to find a comfortable spot in the future, it is harmful. If a public official does it, he is abusing the trust that the people of Mexico placed in him. From this standpoint,

futurology is harmful because it means shirking duties and powers and taking advantage of them for personal gain, thus supplanting the general interest with one's own interest. From this viewpoint, it is very negative.

The question seems to be: Is it good, bad or the opposite. To get back to the first meaning of the word, I think that it is reasonable for a politically responsible people and society that is interested in political matters to analyze individuals in order to take stands or anticipate developments. It is a very good idea for people not to be indifferent. I am very pleased that the people of Mexico are interested in analyzing the leading figures who might hold the office of president of the republic. That's fine. It means that our people are responsible, that our people are informed, that our people are interested in their destiny, and I think that this is highly positive. I think that it is a very good idea to analyze prospects. I think it is a very bad idea to pervert the system to bring about perverted solutions. I think that I have answered you.

Question: Mr President, what do you think of the people who would like to succeed you? Could you tell us the names of your five closest colleagues?

Answer: All my colleagues are my five closest colleagues. I don't know the names of any presidential hopefuls. Who is running? How has the person who wants to run come out and said it? Public opinion has pointed to him. Ours is a very peculiar country that has its own political procedure, according to which (except on very few occasions, where it has caused problems) no one says: I am running. It is the party that selects the candidate after looking into him. So, I can assert that no one has come out and said that he is running. If you can tell me the name of someone who has said: I am running for president of the republic, I would be very glad to analyze him right now. Who?

Now then, as far as my closest colleagues are, I already said that all of my colleagues are my five closest colleagues.

Question: Sir, it is commonplace to say that the president of the republic appoints the governors, only now there are complaints that the criterion of friendship is not being balanced out by the needs and the will of the people in each state. People are saying that friendship is the sole criterion and that this has created an array of governors that meet only their commitment to the president, which makes the political reform and democratization nothing more than publicity. What is your opinion?

Answer: What opinion can I express when I think that this is another hasty generalization and oversimplification of our political context. The president does not appoint the governors, nor is friendship the predominant factor in a nonexistent appointment, nor does each party's system of selecting candidates influence the political reform, nor does the political reform boil down to elections, much less democratization. So, though I respect these series of assertions, I think that they are slanted because they are hasty generalizations that are not based on the facts and cannot come to pass, as some would have us believe.

The point is this: Each political party has its own system of selecting candidates. The Institutional Revolutionary Party (PRI) is in the majority in Mexico and election after election it has proved that the majority of the Mexican people agree with it, regardless of what anyone says, because the ideological, doctrinal and political content of its philosophy and of the governments that it has formed when its candidates have won, has always been victorious. So then, because of the very nature of the party, the candidate selection process is two-pronged: the party has factions that represent political interests, and then when the time comes for the general election, each eligible voter casts his own ballot for the party.

What system is used to select candidates in the PRI? Under our system, and this is one of its wise political features, the president of the republic is not only the chief of state, the head of government and the supreme commander of the Armed Forces, but also as the party's candidate, the head of the party, and therefore we would say that he has a deciding vote, as in any majority decision-making system with a deciding vote. His information capabilities comprise those of the party's factions. The president, acting not as such but as a qualified member of the party, voices his opinion, along with high-ranking party members, and the decision is made within the party. It is the party, not the president, that nominates a candidate. Once the candidate has been nominated, the party formalizes his candidacy, the election is held, and the PRI candidate normally wins.

These steps are overlooked in simplistic political analyses, which jump from the president's involvement as a party member to the election victory. The intervening political processes are ignored, generalizations are made, and you get the faulty conclusion implied in this question. The thing is that simple.

It could well be that on many occasions the party and the people will choose a friend of the president as a gubernatorial candidate, and that has happened, but to assert that this is the only criterion for the nomination is groundless. I could go on, but since very shortly you are surely going to ask me about the statement by my personal secretary, well, I'm going to leave myself something to say in reply to that question, because I can see it coming.

Question: Mr President, that is precisely our next question. Your personal secretary said that in Mexico the president designates his successor. Is this true?

Answer: I am going to say all that I have to say with due respect for my personal secretary, and I am going to explain things as they happened, and he won't let me lie.

My personal secretary, a prominent doctor of law, was invited to give a lecture. He brought me his lecture so that I could take a look at it, but I didn't want to, because as a university professor I have a profound respect for academia, academic freedom, freedom of analysis and freedom of opinion. I in no way wanted to show disrespect for my personal secretary by censoring his speech. He is as much a university professor as I was. In what capacity am I going to punish him or correct his academic opinion, with which I disagree? On the other hand, I think that what he did was unnecessary and inappropriate. It has brought

me more problems than solutions. I told him so ever since I heard him. Roberto, why did you have to get yourself mixed up in this squabble? But in any case, he did, and I respect his opinion but I do not share it, because he has simply overlooked the intermediate steps and made hasty generalizations. Eliminate the in-between steps and you jump from a premise to a conclusion, without taking into account other factors.

Moreover, people confuse elections with the candidate selection process that each party decides on as it sees fit. If the PRI gives the president of the republic a deciding vote because he is its most faithful member (and here we have what I call the theory of the party loyalist), well, it has every right to establish such a decisionmaking process.

Why do I call the president of the republic the party loyalist? The president of the republic is the party loyalist, the most loyal of the party's backers, because he no longer has any political ambitions, because he cannot be reelected and, therefore, can view the party's candidate selection process with the greatest objectivity, on the one hand.

On the other hand, within the party the president of the republic (and I again want to stress that you should not confuse my status as president with my status as a member of the PRI) is like a pointer on a balance scale: in assessing the prospects, he grasps the interests, the strengths, the opinions and the circumstances of everyone who represents a faction and, thus, makes up the process, so that he can gradually lean towards the person whom he deems the most suitable.

Technically speaking then, we see that he has a deciding vote within the party, which has chosen this decisionmaking system, as it has every right in the world to do. How do political parties select their candidates elsewhere? The party leaders get together and decide: this, that and the other fellow.

I don't know whether you saw a film entitled "Being There" which had a very interesting scene at the end about how decisions are made regarding candidates in very advanced countries. Each party has its own laws and systems for selecting its candidates. Party members can speak up and propose some change in the decisionmaking process, so that the party as a whole can decide one way or the other, but let the members of other parties choose their candidates any way they want, with procedures as complicated or as simple as they wish.

The PRI proceeds thus: the factions voice their views; the president of the republic is the loyalist because he has the deciding vote; there are discussions, analyses and agreements, and the decision is made. It's that simple.

My friend Roberto Casillas forgot about or was unfamiliar with this process because he has not been involved in any of them, and he voiced a hasty opinion.

So then, gentlement, with all due consideration for the professor, his analysis is inadequate and marked by hasty generalization. That is not the way it is. As for the rest, ask him afterwards. This is what I can tell you.

Question: It would seem, sir, that one of the characteristics of the Mexican political system is that praise is showered upon the president during the last 2 years of his administration, praise that in subsequent years turns into criticisms and grounds for attacks. What is your opinion as a man and as a politician?

Answer: Why are you limiting it to the last 2 years? (Laughs are heard). For those who have the capacity to take praise, it begins from the time that you are an aspiring candidate. "Old fellow, you're the best, you're a shoe-in, you're this and you're that, I'm with you." These people bend over backwards for you. I find this very annoying. I avoid praise, because I am very objective. I know my virtues and I am familiar with my shortcomings. I became president at a quite mature age, when I knew myself and when neither praise nor insults could sway me. I am profoundly objective and rational. I do not enjoy praise. On the contrary, it embarrasses me and makes me feel embarrassed for others. I don't know whether it often happens to you that you feel embarrassed because of what others do. They might not feel embarrassed, but I do.

So then, now that I have described those who voice praise out of convenience, I would describe the people who attack later out of cowardice in the same terms. The human condition makes possible these and other actions, which I regard as signs of inadequacy, lack of class and moral standing.

After and during my 6-year term I am prepared to accept anything that is said about me if it is done respectfully. If it is done disrespectfully, I protest, not because of what is being said, but because I am being shown disrespect. I have profound respect for others and I want to respect them as they respect me. What I am worried about, then, is a lack of respect. Aside from that, people should analyze what I say and do as broadly and as freely as they wish, just as I analyze others. I criticize my critics with the same right with which they criticize me. What are they afraid of?

Question: The now famous issue of the American magazine TOWN AND COUNTRY described a Mexico that most Mexicans are unfamiliar with and that others thought had been forgotten: Mexico under Porfirio Diaz, which obviously did not vanish with the revolution and which seems to grow stronger day after day. What are the people's prospects in this Mexico, the owner of the nation's money and the master of its fate? Will the Mexicans who do not appear in that magazine article really be able to determine their future? Why has the government, born of the revolution, permitted this insulting concentration of wealth?

Answer: An interesting question that sooner or later I would have had to face up to and answer. The question is a complex one, and so it deserves a complex and lengthy reply. Since you have posed it to me, you'll have to bear with me, because it is so interesting that I must do my best not to leave any loose ends. I have to get to the heart of the matter.

My first impression in reading the write-up in the magazine was one of displeasure, because it does, in fact, make a show of insulting wealth, and we are going to see later what is being insulted by such ostentation. Thinking it over later,

I felt that it would be very useful to have a mirror held up to us from the outside to show us our vices and shortcomings and that the scandal that it was going to trigger would enable us to continue with our decisionmaking system to move forward in our ongoing revolutionary process.

The magazine article in itself is without doubt exaggerated. It also makes hasty generalizations and draws misleading conclusions. It says that I am a king, that I was born in Guadalajara and that I was educated in Chile. I am obviously not a king; I was not born in Guadalajara, but my family is from there, and I was not educated in Chile. I took a 4-month summer course in Chile. That's surely how the whole thing must be. They would surely turn a country house into an estate.

But what we can in no way overlook (and this is the moving thing about the article) is that it underscores and illustrates with examples, faces and names the inequitable distribution of wealth and income. There is obviously an unjust distribution of income in Mexico, which this magazine has illustrated with pretentious, forced examples, examples of sublime affectation, if by affectation we mean an exaggerated attempt at elegance. When elegance is sought through exaggeration, it is affected, and the pretentious examples in that magazine are so affected that they curl your hair. This does not, however, erase the tragic fact that income is poorly distributed in Mexico and that such wealth is insulting.

What is being insulted? A code of political and moral standards based on the acknowledged principle of equality. Since I am or since I was a political science instructor, I cannot separate my status as president from my status as a practitioner and theoretician of political science in answering this question and giving my analysis.

Men are, by nature, unequal. No two people are identical, neither in looks, abilities or even needs, except basic needs. Things are unequal by nature.

At what point in history was equality posed as a problem? At one historically identifiable point the Stoics affirmed man's equality by virtue of reason, and the Christians man's equality by virtue of love, and the combination of these two traits, reason and love, posed the problem of equality to political systems, which did not used to be a problem because inequality was the rule. Previous regimes or systems were based on inequality, and therefore it stood to reason that there were slaves and that people had rights over slaves. I am analyzing just this process now. Excuse me for talking at such length, but this is my way of expressing myself.

Ever since the problem of equality vis-a-vis natural inequality has existed, political systems have been looking for ways to resolve the problem of equality. From Saint Agustine's "City of God" to the "Classless Society," people have sought a political prescription for resolving the problem of equality vis-a-vis the natural inequality of man, and no system has been successful. There are some that have gotten close and lessened the gaps, in both systems. I could mention that within the capitalist sphere at present Sweden has narrowed the gaps and made them at least less insulting. The problem of equality has been worked out

on the basis of a very interesting living standard. There are also examples, without doubt, among the socialist countries, such as Bulgaria. In Bulgaria there is basic equality and a certain living standard that makes these inequalities not insulting. But the rest of the world's countries are marked by inequality, and ours is no exception.

But this has become especially tragic in Mexico, because in its historic search for equality it found its own path, undertook its revolution, which became law and a government, and this law and this government, which denounce the insult of accumulated and poorly distributed wealth, are faced with its undeniable existence on one extreme and with extremely poor sectors on the other extreme. This compromises our government but does not detract from its validity. This is one of the things that I want to stress: this is a problem of what is and what ought to be. I am therefore constantly asserting that for the political philosophy of the Mexican people the Mexican Revolution (and I am going to explain later why we are in this situation at this moment) is a valuable tool that our history has given us and it is the best that we could have done in practical terms.

Mexico is a country of synthesis, a crossbred country in every sense. Its own constitution is a very peculiar synthesis, a synthesis in which balance is dynamic because it is dialectic. It combines or tries to combine the anarchist extremes of Flores Magon with concessions to the revolutionary reactionaries, and its content lies in the center of a satisfactory ideological process regarding our keen desire for justice to resolve the problem of equality. It had to combine the entire liberal tradition that stipulated individual rights, such as private property, free enterprise, free trade, right of way, all of the freedoms that are enshrined in our constitution, with social needs in the two spheres in which it had to apply: peasant farmers under Article 27, which affords the possibility of arranging [modalizar] private property to achieve a just distribution of the nation's wealth, and Article 123 to establish a balance among the factors of production. It is a hybrid combination of individual and social rights, in which freedom with all of its risks has to be combined with justice and all of its restrictions.

In reconciling justice with freedom we have done an imperfect but perfectible job, tied to circumstances, some internal, others external, and here I am going to begin answering the question. The Mexican Revolution took place in a rural, almost feudal Mexico that had been penetrated by an economic imperialism that had taken over the modern aspects of its economy, while nationals pursued the traditional aspects: farming and intermediate business, because foreigners were engaged in big business as well as the aspects of modernization. The Mexican Revolution salvaged them and began the process of nationalization and Mexicanization in a very pressured way, because of external circumstances and the domestic population explosion.

Due to the impact of the revolution we moved in a few decades towards a much more populated society and country. This quantitative factor posed a very peculiar qualitative need: the need to create jobs for a rapidly growing population, with all of its social and economic needs.

I cannot go into much detail, but I can assert that after the revolution, which for the purposes of this analysis I am going to situate in 1920, between 1920 and 1940 the petroleum nationalization process took place, coinciding with the Second World War and the establishment of a contextual framework for the nation, the Bretton Woods Agreement, which enabled countries (there were and are many like ours) to initiate industrialization processes, which were, however, inadequate because their aim was merely import substitution.

Under these circumstances, wealthy Mexicans had to be turned into capitalists, because previously they were wealthy individuals living off their investments, their farm lands and their houses in the cities and income from the money that they lent out for other activities.

In general, a wealthy Mexican before 1940 lived off his investments. Starting in 1940 and coinciding with Miguel Aleman's administration, rich Mexicans began turning into capitalists, in other words, owners of capital goods. They began turning their wealth into capital goods; this process has been going on for just 40 years and had to be speeded up first during an economic siege (an external restriction) that stifled our activities and then in the face of domestic inadequacies such as technological dependence and consumption-oriented habits.

This process had to take place while individual rights were respected, such as free trade, private property, the unrestricted convertibility of our currency, free enterprise, right of way and others, and social solutions had to be reconciled with mounting state involvement as the guiding force in the economy, which became especially necessary after the Second World War, when the state by law assumed powers to intervene in the economy.

All of this (and this also happened in other countries) presented us with a pattern of incipient industrial development that was dependent on other nations and very limited, and as part of it the country had to accept ("had to accept" because of need, geography and history) private property, the market economy and freedom of exchanges as unavoidable realities in our case. Any breakdown of these principles brings more problems than solutions.

Our progress, with all of its limitations, took place under these conditioned circumstances. On the one hand, the cumulative needs of the country fostered a system of rapid development that at one point was termed "the Mexican miracle," which filled many of the gaps through an import substitution system and created something very important: a permanent structure of secondary jobs in industry, and accelerated others in commerce, in tertiary activities, which made possible options that our economy did not used to have when it was dependent on the rural sector. We also saw the beginning of what we can call "urbanization," with all of the social and political problems that it brings with it.

Under this development system the country has become urbanized, the wealthy have become capitalists, a true national bourgeoisie appears, a sizable national proletariat appears and develops, and the struggle between labor and capital

begins, with labor governed by a Labor Law that has been amended over time; a system of just income distribution is established based on the labor-capital relationship in the industrial sphere; social security and other programs make their appearance, programs that currently represent justice for those who have jobs and hope for those seeking work. This is why I often say that it is essential to insure the right to work in Mexico, because the right to work is regulated and in effect.

This is why we have to be very careful when we go about modifying the country's economic structure, because everything that the country has achieved from the revolutionary process, particularly from 1938-40 to the present, is contained in a system that we might damage if we touch it, as it is the only perfectible system of true justice that we have. On the other hand, this system, which has given us balance, has enabled us to generate wealth to resolve social problems, some quantitative and other qualitative.

I could tell you here what the revolutionary effort has meant in Mexico's history, but to save time and allow you to ask other questions, I would refer you to my last Government Report. In it I do an analysis that answers these kinds of concerns.

This is what we have done from 1960 til now and from 1960 on back, though we could amplify on this analysis and draw the same conclusions. Revolutionary efforts have been gigantic. If we gage them in positive terms, we reach encouraging conclusions, but we can also gage them from another standpoint. We can gage what we have failed to do. The emergence of a social class that has accumulated wealth and that lives in luxury is shameful for the Mexican Revolution, and on the other extreme, it is just as shameful that people are living in poverty.

But what is happening to us now? This social class has emerged because of the risks of freedom. Since there is private property, since there is free enterprise, since there is the right to work, since there is free trade, since there is right of way, since there is freedom of exchange, since there are many freedoms, some people benefit from freedom and some people are hurt by it. It is up to the state to make the appropriate adjustments.

In our system of law, of individual rights combined with social rights, with respect for guarantees, the only way we have to distribute and redistribute income (I have said this many times and I am going to repeat it now because this is the path that we are following, and while this system exists, it is the one that we will follow) is through a wage policy, a pricing policy, a difficult profits policy, a fiscal policy linked to public expenditures, the agrarian reform process and the efficiency of our nationalized economy, in which the struggle among the factors of production as classes has been eliminated so that it can take place within the framework of the nationalization process.

These are the ways that we redistribute income in a country like ours, with private property, a market economy and free exchanges, in which freedom has permitted these extremes and has not fostered the other extreme.

This insulting concentration of wealth is a challenge to our revolutionary process, which in my estimation cannot be judged so simplistically on the basis of this American magazine. It has pointed out and rubbed in one of the faults that we have to moderate, and we are moving in that direction, constantly taking legislative action. To bolster the fiscal reform I have just ordered several interesting initiatives to do away with front men [prestanombres], to stop them from manipulating interest earnings overseas on us and hiding profits, etc.

And we are doing things like that all the time. How? By seeking a general harmony of things so that the system does not become unstable on us and so that the benefits are greater than the ills that we cause in making decisions. That's why the important thing is a constant political determination to move forward with the process of justice, which is what validates our revolution and its laws. And in this regard we are moving forward.

I could say a lot more, but it would be complementing or rehashing what I have just said. These are my comments to you on this interesting question.

Question: Sir, are Secretary's Garcia Paniagua's fears justified that the brutal inequalities that exist in the country could shatter the social peace at the most neglected link on the chain, the peasants?

Answer: I think that this question, which is also speculation (we are looking into the mirror of future events), was answered in a way in my above comments. This is speculation. A lot of things could happen. Atlantis might even rise up.

Question: Four years into your term, do you think that you have earned some of the forgiveness that you asked for from our underprivileged and deprived citizens, Mr President?

Answer: This is a very painful question because it makes it seem as if I am the only person responsible for the existence of underprivileged people in this country because I dared to ask for forgiveness from the people that I thought ought to be asked for it.

We are all responsible, my friend. I am not satisfied, because there are still underprivileged people. We are making all-out efforts, the ones that our political and economic circumstances have permitted us: through the general actions of public works and spending, including specific action by agencies, as well as in the specific program to help the underprivileged and deprived, COPLAMAR, with its efforts in heath care (including drinking water), communications and housing. We are making the all-out efforts that we can make at this time and we will renew and intensify them as time goes by.

It would be an unrealistic illusion to tell you that I have earned their forgiveness. I would switch the question around: Has Mexican society earned the forgiveness of the underprivileged? I have only been the spokesman of a crisis of conscience, nothing more.

Question: Sir, when you took office, you said that yours might be the last civilian administration in Mexico. What motivated you to make this statement? Has this possibility, which to many represents a dictatorship, vanished?

Answer: I do not recognize the term "civilian," which I never used. What I said was that perhaps the Mexican Revolution had its last chance under me. I do not recall having talked about civilian rule, just about the Mexican Revolution. I said this at a tight moment in the election campaign, in the midst of a crisis that fortunately has been settled, and I can assert that the Mexican Revolution has proved its flexibility and currency because it has been able to provide answers such as the ones that we have implemented and tried to implement, among which I would mention the political reform.

I talked about a chance for the Mexican Revolution, not about civilian rule.

Question: People are saying that Mexico will be the site of the North-South meeting next June. Is this true? If so, how many chiefs of state and which ones have confirmed that they will attend? What is or will be its planned agenda? If those who hold decisionmaking power do not attend, won't this speed up a world confrontation? What is the risk of a failure?

Answer: I dealt with the issue a great deal on my last trip to Europe and Canada. It is not exactly a North-South meeting; it is what we are calling a summit meeting of chiefs of state or representatives of developed and developing countries so that they can express political preferences that could provide guidelines for the United Nations so that progress can be made in relations between these two worlds.

The people who have been involved in analyzing these problems have come to the conclusion that only officials and colleagues, and never the corresponding political representatives, have been consulted in this regard and that it would be a good idea to bring together a limited number of chiefs of state to analyze a set agenda (which has not yet been set) and voice their opinions and make their comments, which could then serve as guidelines for the ideal decision-making body, the United Nations.

This is a process for investigating political preferences, not for making decisions.

The agenda is being drawn up. It has not yet been set, much less agreed upon. A decision has not yet been made as to how many and which countries will attend, and this is one of the touchiest problems.

All indications are that if it is held, it could be held in June. Since a decision has not been made as to who will attend, the agenda has yet to be drawn up. Once certain aspects are firmed up, we will be able to make decisions. But nothing now can be described as certain, except Mexico's desire, with its political commitment, to be useful in a world fraught with suspicion and disorder, like today's world.

This is what I can tell you about this matter.

Question: Sir, one short month before the change of presidents in the United States, could you tell how relations with that country stand? What are the prospects under Reagan? He has said that relations between Mexico and the United States deteriorated under Carter. Is this true?

Answer: I don't feel that way. What's happening with Reagan is what happens in schools and classes when a new kid comes along. They say to you right away: "Hey, Juan says he can beat you up. Is that right?" A new man has entered the political arena, but relations between Mexico and the United States are specific historical and geographic relations. I do not feel that they have deteriorated under Carter. On the contrary, systems were established that have been useful to us in analyzing things, and we can see this with Secretary of State Muskie's recent visit. There have been many peculiar tales going around about relations between Mr Carter and me, which in no way represent deterioration.

So I don't see anything that would justify a categorical assertion like that.

Question: Mr President, people are saying that there is undisclosed friction between Mexico and the United States over the lack of "common ground" in their policies towards Central America and the Caribbean. Is this true? Do you foresee clashes with the Reagan administration over this?

Answer: What I can assert is the following: Mexico has a very firm list of principles in international affairs. This list of principles, which I have called "defensive" in light of Mexico's political and historic conditions, consists of the principle of nonintervention, self-determination, noninvolvement in the internal affairs of others and a peaceful solution to disputes. These are the unwavering principles that we defend for ourselves and for others, because we want the same treatment for others as we want for ourselves. This is our principle.

I have asserted that because they are defensive and insufficient, they require the startup of outside processes to foster peaceful solutions for the development of all countries. This is why we have proposed a new world economic order and a strategy for achieving it, the World Energy Plan.

These are our active principles of international economics. This is our policy line, and we are asserting it vis-a-vis the Carter administration, the Reagan administration or any other government in the world. We don't think that there should be clashes because we assert these principles, because these are principles that are common to all mankind. In the event that these principles are violated, which I do not think will happen, we would make our decisions, but I do not want to portray this as a fight with the new kid in class.

Question: Sir, doesn't our sale of oil to El Salvador (at this crucial juncture for its future) and Haiti represent an inconsistency with our pronouncements in favor of self-determination and democratization in the area and of the need to have respect for human rights prevail?

Answer: A very interesting question. This is an issue of current concern, and I can tell you this: Mexico concluded this oil supply agreement, with favorable loan terms for the countries of Central America and the Caribbean, with the idea that it would be an encouraging example of the feasibility of the World Energy Plan as a strategy for bringing about a new world economic order. It has to be achieved with political good will, and the fundamental condition for this is the recognition that we live in a pluralistic, contradictory world in which the law

is both complied with and violated, but a world in which Mexico cannot set itself up as a judge of what is good or evil nor condemn other countries for their own particular processes, because in that case Mexico would be acting just like the empires when they tie their offers of aid to specific political and economic decisions.

Mexico has to give an encouraging example of a step forward. This is why we feel that we are helping peoples by making these decisions and that by helping peoples we will bolster their capacity for self-determination, which would always be brutally limited by economic crises, and basically the energy crisis.

We feel that Mexico's political good will must create the conditions, to the extent that it can and in the places in which it can be of use, for self-determination and democratization to prevail. The economic crisis is a poor counselor and heightens the internal confrontations in the countries of the region.

I repeat: Mexico cannot set itself up as a judge of what is good and what is evil because it would have to judge itself. Thus, we feel that if we are to be useful to mankind in establishing a more reasonable and just order, we have to practice what we preach and not be guilty of the imperial fault of qualifying and making aid conditional in advance. Just as we are supplying Haiti and El Salvador with oil, we are also furnishing Nicaragua with it, and also without dictating its internal political processes, precisely because we respect its capacity for self-determination deeply.

For all of these reasons and for others that I could bring up in this regard, I have made the decision to keep the agreement we reached with Venezuela in effect, because this is a way of proving that a new international ethics is possible that will enable us to move in the general direction of our goal, without lapsing into the limitations of temporary circumstances which, if we label and condemn them, could become permanent.

Mexico cannot be a judge. Mexico believes in self-determination. Mexico believes in the possibility of a new international economic order. It believes that things can get done and is demonstrating this by its example.

What is stifling the world today is the fact that at all points of the political compass the people who are strong enough to help set themselves up as judges in giving aid and condemn in advance those who do not share their interests or ideas. This process of people constantly judging each other, without being entitled to, poisons international solutions and prevents us from achieving them.

This is why we feel that it is just and appropriate to uphold this agreement so that mankind can see that progress is possible in a pluralistic world towards an order in which all positions are tolerated and that if a country is to be condemned, it should be by suitable forums, not by those who have the capacity to help. That would be my response.

Question: Could inflation and economic problems lead the country to devalue the peso once again? What is the real status of our currency? Is it true that it is gradually being devalued?

Answer: We are forgetting that our currency is floating. We are forgetting something that I mentioned at the outset of this conference. We are forgetting that because the country does not have the internal, self-limiting obligation to maintain parity, there is no reason for it to be buying expensive dollars overseas to sell them cheap here at home and thus reward speculation.

Our currency is floating. What matters is not so much what our currency is worth as how much our economy is worth. What we have to do is take care of our economy.

As far as trade relations are concerned, the important thing is not to let our inflation rate skyrocket with respect to the rate in the country with which we trade the heaviest: the United States. This is the really important thing. This is what we really have to watch out for.

At the moment, the situation is so different from 1976 that many businessmen have formally proposed that we devalue, to boost the country's competitiveness, and this is a decision that certain countries make quite often. Japan, for example, undervalues its currency whenever it can to enhance its competitiveness. But my feeling is that domestic demand is so extraordinarily heavy at the moment that Mexico does not have a great deal to sell overseas and that to stimulate exports we have other supports in our economy without having to downgrade the people's savings, which are in domestic currency.

This is why we are keeping the peso floating, with the logical fluctuations of the dollar and of our own currency that the law of supply and demand dictates in the economy. And we are slipping. Sometimes it goes up, other times it goes down.

What's going to happen with the peso? We have to take a look at the currency exchange reports, which are influenced by temporary economic pressures. The important thing now is for us to forget about the peso and its conversion into dollars as the sole criterion in our economy, as was the case for many long decades.

This is one of the defects that we have to uproot and forget about. What matters is strengthening our economy, combatting, moderating inflation, boosting output, boosting productivity, not turning away from growth, which means jobs, and continuing to spur the country on, which we can do.

Mr Roberto Vizcaino: Mr President, we want to thank you for having taken part in this conference with us and as a token of your press corps' affection, we have a present for you to mark the beginning of the fifth year of your administration.

The President of the Republic: I want to thank you for being here on this occasion and to express to you what these 4 years of constant companionship have meant to me, during which time you have worked hard and experienced both the good and the bad along with me. I want this companionship to continue over the next 2 years and in the years to come, on the same basis, with the same affection and with the same respect as so far. Thank you very much.

DANIEL ORTEGA COMMENTS ON FOREIGN, DOMESTIC ISSUES

Managua LA PRENSA in Spanish 2 Dec 80 pp 1, 9, 12

[Interview with Reconstruction Government Junta members Daniel Ortega; date and place not given]

[Text] Commander Daniel Ortega, member of the Reconstruction Government Junta, answered 20 questions on the country's current and future situation on Sunday.

The 13th Month

[Question] Commander, Christmas is approaching and the government is going to have to discharge its obligation of coming out with the paycheck for the 13th month and proportional vacations. Do you now have the funds to pay out that kind of money?

[Answer] Looking at the 13th month, we know that the ceiling was raised from 1,500 to 3,000 cordobas so that this means greater benefits for something like 70 percent of the workers.

We cannot say that we have vast funds but rather that, looking at the limited resources of the nation and the Nicaraguan people, we are going to see how we can strengthen the Unemployment Fund together with all those who would voluntarily donate their bonuses and their 13th paycheck and then we would have to give that money to those who need it.

[Question] Regarding the army, do we have almost 50,000 men?

[Answer] Yes, indeed. But we are sure that the army will donate its 13th paycheck. There are no problems. They have a high level of consciousness there.

[Question] What is the reason behind the trip by Dr Sergio Ramirez Mercado and Secretary Emilio Baltodano to Venezuela last weekend?

[Answer] As we know, we have had very good relations with the government of Venezuela and with president Luis Herrera Campins ever since the victory of the revolution and we have economic cooperation which substantially benefits Nicaragua and we therefore had to talk about those topics.

For example, they extended the term of the loan covering the debt that was due by January 1981. That money was used to cover corresponding items in our balance of payments.

[Question] Is your worry concerning the problems of Central America due to Venezuela's influence in this area and especially in El Salvador?

[Answer] No. We were talking specifically about the threat to Central America from aggressive attitudes by the inconsistent sectors of the United States, fundamentally, as well as some others in the Central American region.

[Question] Commander Wheelock is in the USSR. What is the reason for his trip?

[Answer] Commander Jaime Wheelock and Commander Henry Ruiz went to that country as members of Nicaragua's delegation to expand economic cooperation for our people.

It is our policy to seek aid in all parts of the world. We have conducted negotiations in Western Europe, in the socialist camp, in the United States, in Latin America, and we are going to continue to do that.

[Question] What answers did they give to the indigenous [Indian] communities?

[Answer] There is a fundamental problem with the Indian communities and it involves land. On that score, Dr Rafael Cordova Rivas presented a briefing which we consider brilliant and which we support fully. The important thing is to find a middle way on that problem.

If we look at the land titles, we would leave many small and medium owners without land. This logically would not help us in solving the problem; it would make it worse, as a matter of fact.

We have to find a way for the Indian communities to recover a portion of their land and this is a commitment which the Sandinist Front has on its program, but within the context of Nicaragua's historical background. We cannot suddenly find ourselves facing a land title which says that all Managua belongs to a certain community; that would naturally be irrational.

El Salvador

[Question] How do you view the situation in El Salvador?

[Answer] I think that, following the latest assassination of FDR [Democratic Front of the Revolution] leaders, what we are witnessing is the tremendous crisis experienced by those who support the governing junta, those who support the current undertaking which by force sustains the establishment in that country and which is simply incapable of coming up with political solutions that would be aimed at restoring a certain tranquility.

These murders are not cowing the Salvadoran people who have a strong, humanized vanguard and we are sure that the people will find a solution to the problem they are having now.

[Question] Look, in the SEDAC, during the meeting of the bishops of Central America and Panama, there was talk that, by the end of December, they would discharge the priests who are working in the government or who are actively engaging in politics in connection with their priestly duties. Have you given any thought to that?

[Answer] Here is how I understand the situation: those priests who are working in the government have been told that they would have the permission of the bishops to continue to do so until 31 December. This means that, from that moment on, it will not be up to them to decide but that the issue will be in the hands of the Vatican.

We have sent missions to the Vatican to take up this matter. We have been met with understanding and we hope that we will continue to get this kind of understanding.

The Salazar Case

[Question] Concerning the persons who were arrested in the Salazar case, when are they going to be turned over to the courts?

[Answer] Well, as quickly as possible. You must remember that the individuals arrested were arraigned in record time, I believe, 5 days. We are going to bring in the rest of those involved and they will then also be turned over to the courts.

The Granada Case

[Question] A problem has just arisen in Granada concerning the issue of transportation taxes. I believe that they are collecting 2 cordobas for carrying a chicken, 3 cordobas for a hog, etc., 4 cordobas per linear foot in ships. What goes on here?

[Answer] That is the first news I have had no that. But I believe that we have to get money from somewhere in order to maintain this kind of transportation which is a modern means of transportation and which we have never had before on the Great Lake.

Budget

[Question] Is there anything new in the budget?

[Answer] We are thinking of starting to discuss it next week, along with the 81 Plan. We have been taking a look at it and we are going to spell it out in detail in order to disclose it this month, if possible.

[Question] Will it be larger or smaller?

[Answer] The ministers have asked us for an enormous amount which of course we cannot come up with in view of the funds available to us.

To give you an example, the Ministry of Health alone asked for more 1.5 billion cordobas for its budget, and that is not the end of it. The Education Ministry wants the same--so you have to make cuts.

We are going to come up with a limited budget.

Council of State

[Question] How are you going to solve the problem of the vacancies on the Council of State?

[Answer] The seats on the Council of State are available to those who have been making use of them.

If they join, well and good, if not, there are many organizations that are asking for representation on that council. For instance we have here the members of the Federation of Indian Communities who are demanding a seat.

[Question] Is there going to be a further hike in the price of gasoline?

[Answer] That does not depend on us. This is a world market problem as we all know.

[Question] Any new taxes?

[Answer] Taxes for the time being will remain what they are.

Final Question

[Question] Here is my final question: What does the Sandinist National Liberation Front and the Reconstruction Junta have in store for us in 1981?

[Answer] In what sense?

[Question] In every sense.

[Answer] The only thing which the Sandinist National Liberation Front and the Reconstruction Government are going to bring us first of all is an appeal for work and participation by all sectors in the revolution.

We want to stress that. We want to make sure that this revolutionary process will really be possible, a process involving the participation of manufacturers, businessmen, big cattle ranchers, etc., together with the workers and the peasants, to the benefit of the vast majority.

EPS MEMBERS COMPLETE OFFICERS TRAINING COURSE

PA232127 Managua Radio Sandino in Spanish 1800 GMT 23 Dec 80

[Excerpts] Some (479) companeros of the Sandinist Peoples Army [EPS] graduated this morning from the officers training course at the Carlos Aguero Echeverria Military Academy. This graduation is part of the "victorious December" ideological drive being undertaken by the EPS to mark the heroic attack on henchman Chema Castillo staged by the Juan Jose Quezada guerrilla commando group on 27 December 1974. The new officers will immediately join the EPS reservist units throughout the nation.

Guerrilla Commander Alvaro Baltodano, responsible for the EPS combat training section, addressed the political-cultural ceremony today. Here are excerpts of his speech:

[Begin recording] On this occasion, we are trying to recover the most valuable and richest experience of the Sandinist National Liberation Front. You recall how the reactionary, turncoat, Somozist press gave labels to the companeros involved in the magnificent attack led by Eduardo Contreras, a member of our national directorate, and the unforgettable German Pomares. It called them people who had received unusual training, as if they were supermen.

However, they had something which permits average men, without much training or resources, to do great things. They had great revolutionary and Sandinist spirit and that was the important and fundamental thing in the attack. They were ready to lay down their lives for the liberation of our homeland and some of them did in fact die. [End recording]

FUSS SEEKS WORKERS' SUPPORT FOR SALVADORAN CAUSE

PA280155 Panama City MATUTINO in Spanish 27 Dec 80 pp 1A, 8A

[Article by Damarys Munoz]

[Text] The Labor Committee of El Salvador has requested that the Panamanian workers demonstrate solidarity for the Salvadoran cause, according to information obtained by MATUTINO from a representative of the Salvadoran Labor Unions Federation [FUSS] Eugenio Alvarez.

This committee is visiting our country to report on the situation affecting the Salvadoran people and workers, as well as to contact workers groups which are in solidarity with the liberation movements in that Central American country.

The committee is promoting the solidarity of the working class in various ways, including economic aid, the promotion of a continental strike (labor strike), repudiation of U.S. intervention, the holding of a world solidarity conference for El Salvador in Mexico City on 21-23 February 1981, and the repudiation of Decree 296, which eliminates the right of public and municipal employees to organize.

The demands made by this labor organization include the release of labor leaders and other political prisoners, the reopening of the university, which is presently militarized, and a halt to government repression in El Salvador, said the representative of the Revolutionary Trade Union Federation, Jose Gallegos.

The Labor Committee's demands against the Salvadoran governing junta include, among other things: respect for workers rights and freedoms and an end to the state of siege which is being used by the army and security corps to repress the Salvadoran people and their democratic and revolutionary organizations.

During its tour of various Latin American countries, such as Colombia, Mexico, Peru and Ecuador, the committee has received support because of worldwide knowledge of the systematic violation of human rights in general and the rights of workers in El Salvador. It is expected that the people of Panama will respond favorably to this just cause of the Salvadoran people.

BRIEFS

SPADAFORA NOT FORMING SALVADORAN FORCE--Guerrilla commander Dr Hugo Spadafora, who fought in Guinea Bissau and in Nicaragua's guerrilla war, will not command any armed group in El Salvador, a source close to him told CRITICA yesterday. According to reports, Spadafora has told Panamanian brigadist who participated in Anastasio Somoza's overthrow that however goes to El Salvador to fight on the side of the popular forces will do so on his own behalf. According to the source, Spadafora does not agree with the idea of forming a brigade similar to the international brigade which he commanded in Nicaragua "because fighting is more tactical now and that calls for a different strategy." Spadafora has reportedly told the brigadists, who ask him daily to form a brigade to fight in El Salvador, to calm down and that whoever wants to go will have to do so on his own behalf. ARMED FORCES NEW CHIEF--As of today Vice Adm (Juan Egustes Sabaveronia) will assume his post as chief of the Armed Forces Joint Command, replacing Gen Pedro Richter (Ret). The Armed Forces Joint Command is comprised of the commanders in chief of the army, navy and air force, who act as chief of the Joint Command by rotation. [Text] [PY021708 Lima Radio America in Spanish 1200 GMT 2 Jan 81]

MOSCOW MAYOR CONGRATULATES ORREGO--Moscow Soviet Mayor Promyslov has sent a congratulatory message to Lima's Mayor-elect Eduardo Orrego Villacorta in the name of the Moscow Executive Council, trusting that the bonds of friendship and communication between the two cities may contribute to the future development and welfare of their respective peoples. "I am certain that the bonds of friendship and communication between our capital cities will contribute to the future development and welfare of the citizens of Moscow and Lima, and of the peoples of our two countries," Promyslov's message stated. It also expresses best wishes for Orrego and the Lima residents from the Moscow residents for the year 1981. [Excerpt] [PA042323 Lima EL COMERCIO in Spanish 26 Dec 80 p 4]

BOMB NEAR HOUSE OF PRESIDENT'S BROTHER--There have been several incendiary bomb attacks in Lima, one of them a few meters away from the residence of Francisco Belaunde Terry, the president's brother. Another bomb attack was perpetrated in [words indistinct] destroyed a car. The bomb attacks, however, did not cause much damage. Observers have noted that the objective of the bomb attacks was to cause panic among the people. The Civil Guard was on the scene of the incident almost immediately and they are now investigating the case. [Text] [PY261419 Lima Radio America in Spanish 1200 GMT 26 Dec 80]

LEADER ADVOCATES DEATH PENALTY--Lima, 7 Jan (AFP)--Oscar Trelles, the president of the Peruvian Senate, has stated that he is in favor of the reestablishment of the death penalty as a means to combat terrorism. Trelles, who is the leader of the Popular Action Party [AP]--the government party--said that the death penalty should be restored to be applied against those that perpetrate attacks, destruction

and murder. Terrorist actions are becoming an increasing concern for the Belaunde administration which has described them as treason and has requested Congress to issue a severe penalty for those involved in them. This is, however, the first time that a high-ranking AP official has openly advocated the reestablishment of the death penalty, following the killing 2 days ago of a policeman on duty. [Excerpt] [PY081502 Paris AFP in Spanish 1856 GMT 7 Jan 81]

NEW OIL WELL--Lima, 27 Dec (TELAM)--Petroperu [state petroleum agency] has confirmed that the Nueva Esperanza oil well in the northern jungle is producing oil with 46.3 degrees API. The well is 3,176 meters deep. It is now producing close to 5,000 barrels daily but can go up to 10,000 barrels daily at the end of the development stage. [PY301958 Buenos Aires TELAM in Spanish 1900 GMT 27 Dec 80]

NAVY OFFICER RETIRES--Vice Adm Jose Montoya Carcelen, chief of staff of the Armed Forces Joint Command, will retire today after 35 years at the service of the Peruvian Navy. [PY301958 Lima Radio America in Spanish 1200 GMT 30 Dec 80]

REGISTRATION FOR ILLEGAL ALIENS ENDS, POLICE TAKE ACTION

Returning Foreigners Warned

PA262254 Caracas Radio Continente Network in Spanish 2100 GMT 26 Dec 80

[Text] The Venezuelan Government has warned that it will take drastic measures against those undocumented foreigners who try to return to Venezuela illegally.

The detention of unregistered foreigners began at the end of the registration period. According to the official figures, some 345,185 undocumented foreigners throughout the country complied with the registration requirement. However, it is believed that thousands of foreigners in similar circumstances did not register, perhaps out of fear.

The announcement that detentions have begun was made by Enrique Aristiguieta (Granja), general director at the Interior Populations Ministry [poblaciones interiores] [title as heard].

Police Arrest Aliens

PA280019 Paris AFP in Spanish 1435 GMT 27 Dec 80

[Text] Caracas, 27 Dec (AFP)--Between 200 and 300 illegal aliens were arrested on the first day of the police operation undertaken by Venezuelan authorities after the deadline for them to legally register expired.

The operation began early yesterday morning, with raids on neighborhoods, job sites, public places, pensions, hotels and inns. Those arrested were taken to the training camp in Tiuna Fort, west of here.

Efren Lopez del Corral, director of the Identification and Alien Affairs Office, said that the from 200 to 300 people had been arrested by 1800 yesterday in the metropolitan area.

Lopez del Corral said he had visited the training camp and the people are being treated well, following instructions from the president of the republic.

In turn Eduardo Loaiza Giordano, commander of the Armed Forces of Cooperation (National Guard), stated that "to avoid unfair and slanderous charges, the work will be supervised by public prosecutors, who will verify that the rights and human dignity of the aliens who failed to register are being respected."

He said that the operation began yesterday morning in Caracas, Maracay, Valencia and Barquisimeto. The operation includes personnel of the National Guard, the Identification and Alien Affairs Bureau, the Directorate of Intelligence and Prevention Services and the uniformed police in every state.

It was also learned that Cornelio Reyes, Colombian ambassador to Venezuela, left for Bogota "to brief his government and spend Christmas in his homeland," according to the morning newspaper EL NACIONAL.

The embassy was left in the hands of Minister Counsellor Mercedes de Herrera, who said that "the Colombian Government is aware of the need for registration and has voiced its satisfaction with the way it was handled."

She noted that "the Venezuelan Government has the right to have aliens register and to reject illegal aliens."

She added that "there was enough time and publicity for our fellow citizens to get legal papers and those who failed to do so will have to face the consequences."

She also denied that Julio Cesar Turbay Ayala's administration has considered closing the border with Venezuela as a result of the upcoming deportations.

She reported that the registration of illegal aliens has revealed an important fact, "that there are 300,000 undocumented Colombians and not over 1 million as was constantly claimed."

Police Round-Up

PA292252 Paris AFP in Spanish 2102 GMT 29 Dec 80

[Text] Caracas, 29 Dec (AFP)--It was reported here today that Venezuelan police have arrested 375 foreigners without identification papers in Caracas and 400 in Barquisimeto. They will be deported from Venezuela.

Police operations continued today for the 3d straight day. Deportations, however, will be ordered only after a detailed evaluation of each case of foreigners without proper documents.

Venezuela had set a 4-month deadline for the registration of foreigners without papers. Once the deadline expired, police began an operation to validate residents, foreigners as well as Venezuelan. The latter, if not properly registered, are being asked to update their identification papers.

Venezuelan authorities have not planned massed deportations, and the Caracas newspapers have said that Colombian media have made exaggerated and alarmist statements on the matter.

Third Country Nationals Held

PA030428 Caracas Radio Continente Network in Spanish 2100 GMT 2 Jan 81

[Text] The police operation to detect undocumented and unregistered foreigners is going to be intensified beginning tomorrow. This was announced by the director general of the Immigration Department, Dr Lopez del Corral.

Dr Lopez del Corral also said that reports from Cucuta claiming that third country nationals are being sent to that border city are false. He said that what occurred in Cucuta is that the Venezuelan authorities rejected a group of foreigners who were trying to enter the country at that point. He said that the group included Dominicans and Peruvians, who use Colombia as a springboard to enter Venezuela illegally.

Dr Lopez del Corral said that only Colombian citizens are being deported to Colombia. Persons of other nationalities continue under arrest in Venezuela, awaiting a decision from their respective foreign ministries.

PLAN VI INCENTIVES TO 'MOVE' CARACAS DISCUSSED

Caracas BOHEMIA in Spanish 8-14 Dec 80 pp 46-47

[Article by Jesus Seguias]

[Text] We are about to enter the year 2001. It is 31 December. A week and a half ago, people began leaving the city of Caracas to visit families in the provinces. Reservations for land and air passage had to be made a month ago. The emptying of the capital city of Venezuela for the holidays is no longer the experience it was during the beautiful, tranquil days of 1980. At that time, compared to today, everyone traveled without a hitch: There were no traffic jams on the freeways; the Caracas-La Guajira highway on Sundays was a "piece of cake." Today things are different. The Army has to be mobilized to control the avalanche of "savage neurotics" who only 20 years ago could be considered normal, common human beings. "They are the children, the models of Caracas," said Jose Ramon to his wife (the country dwellers who live in the house on the first curve of the La Asuncion to Manzanillo highway in Margarita). What prompted his remark was the sight of a "neurotic Caracas family" passing by on their way to take a 2-day rest. END.

"Caracas is unbearable." "This is a savage city." "BOHEMIA is right. . ." "Do me a favor, don't talk to me. Can't you see I'm about to be sick? These lines. . ." All this grumbling can be heard daily in Caracas, but those same people say that the rest of the country (the provinces) is nothing but mountains and snakes.

From the Past

Every democratic government in this country has been promising to move Caracas and decongest it, from Larrazabal to Luis Herrera.

--September 1958: (Decree 359, issued by the Government Junta) orders the expropriation of 6,900 hectares to the west of Santa Teresa for the construction of a new city in the Valles del Tuy.

--April 1967: The English consulting firm Llewelyn, Davies, Weeks, Forestier, Walker and Bor is hired, for a large sum of money, to advise the government on the management of the Ministry of Public Works' urban planning, to devise the basic studies that will lead to a plan of action to develop the Valle del Tuy Medio.

--June 1972: (Decree 1,010, issued by President Caldera) sets aside an area of 4,120 hectares for the construction of the new urban center.

--July 1972: (Decree 1,039) Drs Rafael Caldera, Jose Curiel and Luis Enrique Oberto baptize the new urban center "Ciudad Diego de Losada."

--September 1972: Minister Jose Curiel proceeds to designate an Administrative Committee for the new urban project.

--June 1973: The Special Agency of the Workers Bank (which no longer exists) is entrusted with the implementation of the plans for the new urban center.

--1976: The General Urban Development Plan for Ciudad Losada is concluded, with provisions for the accommodation of 600,000 residents.

--July 1980: More than 800 million bolivars have been spent on the project.

--September 1980: The government announces in the Sixth Plan of the Nation that the project will be halted.

--November 1980: The Association of the Chambers of Commerce and Industry (FEDECAMARAS) and the City Council of Santa Teresa hold a forum at which the government is called upon to explain itself.

--December 1980: Caracans will spend one more Christmas enveloped in the black smoke of a city where life is unbearable, where automobile traffic, pollution, pollution-related diseases, the housing shortage (and housing fraud), crime at all levels, etc., etc., etc. tell us that this capital, designed for 1 million people, can no longer support the nearly 4 million who live there. While official spokesmen tell us that the industrial deconcentration projects have been halted, they claim that we will be assured of a "tranquil, calm life." How lucky are those who have the means to buy houses in Miami, and take a trip every year to the Church of San Marcos in Venice, or to see the sampans of Hong Kong or the prostitutes of Amsterdam or Paris!

A Candidate Who Promises. . .

When Luis Herrera was running for president, he promised to give a final boost to the development of Ciudad Losada. Now he is at Miraflores, at the end of Avenida Urdaneta. There he repeats what he said on the campaign trail. He will orient his government's actions toward the immediate implementation of the infrastructure projects, requiring an estimated budget of some 3 billion bolivars. He made this announcement on 13 February 1980.

But. . . The Usual

However, the president is of one mind and his advisers of another. They have recommended, through the Sixth Plan of the Nation, a huge tome which everyone is talking about but no one understands (witches don't exist, but they fly, they fly. . .), on page 17 of the volume concerning Industrial Development, "that no financing or incentives be provided for the industrial sector located or to be located in areas considered to be highly concentrated or sufficiently concentrated,

particularly metropolitan Caracas and its area of immediate influence (Tuy Medio-Guarenas-Guatire) and the industrial axis of Puerto Cabello-Tejerias."

The first incentive that would motivate anyone to migrate to one place or another is economic. If there is no center of economic attraction in the provinces for the "excess" population of Caracas, the transfer of the capital city will remain a myth.

If not the Valles del Tuy or Guarenas-Guatire, what will be the site that will attract thousands of volunteers to unclog Caracas? Anacoco? El Amparo de Apure? La Piedra del Cocuy?

The removal of more than 3,000 industries from the metropolitan area, when these industries supply Caracas with important products, could never be considered feasible if they are moved very far away. That would be sheer folly. It is no coincidence that nearly all the studies made have suggested that the Valles del Tuy would be ideal.

The City Waits. . .

Meanwhile, a city with an area of 100 million square meters to accommodate more than 1 million inhabitants and more than 3,000 businesses, with an efficient system of transportation ranging from the railroad to modern freeways, with coherent urban regulations, with green areas that are easily maintained, waits in forlorn silence. Its pompous name is "Ciudad Diego de Losada."

Another city, with an area of less than 100 million square meters, far more than 3,000 industries, and a population that is approaching 4 million, without adequate highways, without green areas and with excessive urban concentration, choked with environmental pollution, awaits the solution to its problems amid the neurotic clamor. It is called "Caracas, of the red roofs, a city of exquisite aromas and dreamy tranquility."

BRIEFS

SUPPORT TO SALVADORANS PROPOSED--The Venezuelan Committee of Solidarity with El Salvador has proposed the creation of a so-called anti-interventionist front to promote respect for the rights of the Salvadoran people to their self-determination. In a communique issued in Caracas, this committee stressed the need for all the progressive and revolutionary forces in the world to remain alert in order to neutralize any attempt to carry out an interventionist maneuver in El Salvador. It also condemned the political and military aid that the U.S. and Venezuelan Governments are giving to the Salvadoran regime. Meanwhile, in Paris several French Christian organizations expressed solidarity with the Salvadoran people's struggle for liberation and demanded an end to the repression being carried out by the genocidal military regime of El Salvador. [Text] [PA280230 Havana International Service in Spanish 1600 GMT 27 Dec 80]

PEACEFUL POLICY STRESSED--Gen Hector Rodriguez Ravelo, acting defense minister, belittled a statement by Colombian Defense Minister Alberto Ruiz Novoa who has said that Colombia should be militarily on a par with Venezuela. [Begin recording] [Rodriguez Ravelo] As a citizen he is absolutely entitled to express his opinion and concern. I believe his statements will not affect the relations between our two countries greatly. [Question] What implications could this call to an arms race in Colombia have on relations between our two countries? [Answer] The Colombian defense minister can express his opinions, just like I or any other Venezuelan citizen can. I do not believe that this would lead to an arms race. [Question] Is Venezuela preparing now or has it ever prepared a plan to invade Colombia? [Answer] Venezuela is well-known for its policy of nonaggression. [End recording] [Text] [PA230210 Caracas Radio Continente Network in Spanish 2100 GMT 22 Dec 80]

OIL PRODUCTION, EXPORTS DECLINE--Caracas, 21 Dec (AFP)--It was officially announced here today that Venezuela produced less oil in 1980 than in 1979. Venezuela's average oil production in 1980 was 2,158,000 barrels per day, while in 1979 it was 2,356,000 barrels a day. This represents a reduction of 8.43 percent. However, official figures reveal that while Venezuelan oil production declined by 8.43 percent in 1980 in relation to 1979, exports of crude declined by 11.91 percent. Average exports in 1980 were 1,790,000 barrels a day, while in 1979 the average was 2,032,000 barrels a day, representing a reduction of 242,000 barrels a day, the official data concluded. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PLANS TO DEVELOP EL CERREJON DISCUSSED

Bogota EL SIGLO in Spanish 14 Jul 81 p 12

[Article by Raul Rodriguez P.]

[Text] Very few of us Colombians are aware at this time of the real long-range socioeconomic benefits our country will derive from the largest-scale mining project to be undertaken in Guajira over the next several years, a period during which Colombia will cease being dependent upon its coffee sales and will become, if not the largest, at least one of the largest exporters of coal, a mineral that will undoubtedly play a decisive role in the future lives of human beings.

Although the contract signed by the national government with a U.S. firm for the exploitation of the mineral in the northern zone of El Cerrejon has been the object of controversies and criticisms on the part of various political and economic leaders, perhaps the direct cause of these misunderstandings lies with the government itself, which has lacked a system of reporting to communicate to the country what this contract consists of and how it is going to work.

In view of this hardly justifiable attitude of the government, the American firm INTERCOR [International Colombian Resources Corporation], the company that will provide the technology and half the costs of the project, decided to initiate a campaign of information designed to make known all aspects concerning the exploitation and marketing of this coal.

In view of this, the economics editors of Colombia's leading news media visited the United States last week, where INTERCOR is engaged in several projects similar to the one it will be undertaking in Guajira.

EL SIGLO, cognizant of the need of Colombians to become familiar with all these aspects, begins today the publication of a series of articles on this topic, based on its observations at the coal mines of Rawhide, in the state of Wyoming in the United States, and at the maritime ports of Vancouver, Canada.

Open-Pit Mining

In the first place, it must be made clear that El Cerrejon's coal will be mined by the method known as open-pit mining, which is very different from the traditional method we Colombians know, namely, underground mining.

Open-pit mining methods are used where the mineral is located in broad, shallow formations covered by a few layers of earth that must necessarily be removed; the sites, however, are subsequently converted to farming and grazing areas through the process of backfilling the terrain, which has been programed by INTERCOR.

In the El Cerrejon zone to be worked by INTERCOR together with CARBOCOL [Colombian Coal Company, Inc], coal reserves have been calculated to total 1.6 billion tons, one-fourth of which will be extracted over a period of 23 years, which is the duration of the contract, after which Colombia, using the infrastructure built for this first phase, may continue exploiting on its own the remaining reserves and reaping the profits from marketing the mineral.

In other words, once the coal is "produced," the pit that remains will be filled with earth which, using modern fertilization techniques, will be made suitable for the growing of farm crops and pastures for cattle, as we have seen done in the zones of the state of Wyoming that have already been worked.

Technology and Infrastructure

According to calculations, the production of 1 ton of coal in El Cerrejon will necessitate the removal of 11 tons of earth, a process that will require the use of heavy machinery never before seen in Colombia.

This equipment will consist basically of shovels, breakers, dump cars with a capacity of around 200 tons, storage bins, and sophisticated and and flexible mineral transfer systems, based fundamentally on transfer by railway facilities.

The important point regarding the use of this technology is that, contrary to what has been affirmed by various national technicians and politicians, it will not produce negative effects on the environment, since, thanks to the exploitation, processing and transport methods used by INTERCOR, it will be possible to control the emission of dust, which, as is well known, is highly injurious to the health of human beings.

From the explanations given to the Colombian journalists by the American technicians, it is abundantly clear that the method to be used in exploiting our coal will produce no detrimental effects to the environment and that, on the contrary, it will result in improvement of the soils involved, which as in the case of Guajira today are arid and unsuitable for the production of food.

It is impressive to see, in those regions of the United States, the present state of terrains where open-pit mining operations have been carried out and that are now hectares upon hectares of farming and grazing lands.

The Mining Railway

While the rest of the country is virtually devoid of a railway transportation system, in Guajira a wide-gauge rail network extending over 150 kilometers will be built, over which trains of more than 120 cars will haul material to the loading port that is to be located in what is now Bahia Portete.

The railway cars used in the United States have a capacity of 100 tons; this means that each train hauls more than 10,000 tons, which have been loaded in barely 1 and 1/2 hours and are unloaded in less time than that, owing to the unloading system, which in the case of El Cerrejon will be even more modern.

As of now, the type of locomotive to be used in Colombia is still the subject of a study being conducted to determine whether it will be of the electric type or of the ACPM [articulated compound propulsion Mallet] type as in the United States. What is certain is that it will be a wide-gauge bed and will be the first industrial-scale railway ever built in this country, comparable in specifications to the largest mining railways in Australia and even in the United States itself.

The Maritime Port

To learn the characteristics of the port that is to be built in Guajira, we Colombian newsmen and two top officials of INTERCOR visited the coal port facilities of the city of Vancouver, Canada.

One of these ports is capable of loading ships of over 120,000 tons in 48 hours, using modern systems for unloading rail cars, storing the coal and loading the ships. It handles 10.5 million tons annually, a total that is to be exceeded by Bahia Portete, which is to start exporting coal by 1986.

Observation of the systems used in Vancouver makes clear their speed, cleanliness and the efficiency with which ships are loaded, without contamination of the environment or the congestions to which we are accustomed in our traditional and inadequate Colombian maritime ports.

Furthermore, the area occupied by the port is small in relation to the tonnages handled, all of this thanks to the machinery in use and to the personnel, who have previously been trained for this work; something of this nature is already under way in our country, where CARBOCOL and INTERCOR are already training a goodly number of Colombian operators with the cooperation of the SENA [National Apprenticeship Service].

In the ports of Vancouver, the price of coal reaches $68 per ton, to which is added $4.50 for loading operations; in other words, a ton of coal delivered to the port costs $72.50.

On the basis that Colombia expects to export more than 10 million tons of coal annually, it is easy to calculate the enormous volume of foreign exchange the country will receive from this operation, remembering, however, that during the first 23 years of operation Colombia will be entitled to market half the production, in addition to royalties to be paid by INTERCOR.

Investment and Jobs

In the state of Wyoming, an eminently coal-rich zone, there are more than 12 mines in production, two of which are operated by Exxon through the Carter Mining Company and are located in the township known as Guillet, where the total investment in these two projects was $140 million.

In Colombia, the investment will be greater, totaling $3 billion, by virtue of the larger infrastructural facilities to be built here and because the project is on a larger scale than the Guillet one.

The cost of all these works, which are to be completed in 4 years, will be shared equally by CARBOCOL and INTERCOR, so that the export of coal can begin by early 1986.

But in addition to the works directly related to coal operations, facilities will also be built for the accommodation of the 4,000 employees and laborers who will take part in the operation, such as a small town with all needed public services, as well as two airports--one located at the mines and the other in the maritime port.

Assuming these facilities duplicate those of the Guillet mines, the workers will have the benefit of health, education and recreation centers as well as modern communications facilities.

The government's "slowness" to explain to the country the characteristics of the programs it is planning to carry out in the coming years is perhaps easy to understand. But the case of El Cerrejon is a pathetic example and it will surely serve to induce the Colombian economic and political authorities to realize the importance of a effective communications process in situations of this nature, since it begets us little to hear talk of ambitious projects and programs if all these far-reaching plans and their benefits are to be the knowledge solely of the highest management levels of government.

Over the next several days, readers of EL SIGLO will be informed of other aspects of this so-talked-of El Cerrejon project and will thus have sufficient facts in hand to define their own positions with respect to the new situations involved. And thus, the country will know what to expect from a program that has been characterized as the vastest ever undertaken in all our history.

COAL DEPOSIT BIGGER THAN EL CERREJON FOUND

Bogota EL TIEMPO in Spanish 10 Jul 81 pp 1-A, 6-A

[Text] Coal deposits bigger than those of El Cerrejon, in Guajira, have been found in the district of San Juan de Arama, in Llanos Orientales, according to reliable diplomatic sources.

The discovery was made by international research organizations, according to information disclosed to EL TIEMPO.

This fragmentary report states that the size of the deposits is such as to exceed that of the deposits in Guajira, where reserves are estimated to be more than 1.4 billion tons.

This promising new prospect in the mining sector coincides with a recovery in oil production, in that today, in fact, the Andalucia Sur well starts commercial production in Huila, where, for the first time, a partnership contract has been signed between Colombian investors and ECOPETROL [Colombian Petroleum Enterprise].

This well will produce 3,500 bpd [barrels per day] initially, but, thanks to the prior exploratory work done by PETROCOL [Colombian Petroleum, Inc], oil prospects in southern Huila are very favorable.

Production at El Cerrejon will begin in 1983 with an initial volume of 400,000 tons annually, from which revenues are expected to be of the order of $400 million.

The contracts and the certificate of marketability issued by the government have been the object of much controversy, especially on the part of Senator Luis Carlos Galan, who has demanded a renegotiation.

Investments totaling in excess of $3.5 billion have been planned at El Cerrejon to build practically an entire city, a 170-kilometer railway line, two airports, and a special-purpose port able to accommodate ships of up to 100,000 tons, with plans under way to enlarge it for ships up to 250,000 tons.

Once production is in full swing, the national treasury could receive some $24 billion annually from the El Cerrejon operation.

The partnership agreements for the exploitation of El Cerrejon were signed on Riohacha on 5 September 1980 by CARBOCOL [Colombian Coal Company, Inc] and INTERCOR [International Colombian Resources Corporation]. Their duration is 23 years.

The sums involved are significant if one takes into account that according to reports from the international research organizations concerned and from diplomatic sources the San Juan de Arama deposits are larger than those of El Cerrejon.

The world market today totals some 50 million tons annually, and Colombia, without the Llanos Orientales deposits, could capture as much as 10 percent of that market.

The market price of a ton of coal today can be between $40 and $60, but since coal is certain the fuel of the future, it is believed that as time goes on its price will continually rise.

According to the government, the country has enough coal, nickel, uranium and gold to overcome any possible future exchange problems, including short-term ones, offsetting the effects of the sharp drop in international coffee prices.

HYDROELECTRIC MINI-PLANTS PLANNED

Bogota EL TIEMPO in Spanish 13 Jul 81 p 6-A

[Article by Special Correspondent German Navarrete]

[Text] Popayan, 12 Jul --Colombia begins planning today, using its own designs, the construction--with national technology, money and human resources--of the first hydroelectric miniplant, which will have a capacity of 250 kilowatts. The project is expected to be a pilot for Latin America and will benefit millions of low-income inhabitants of small population centers.

The first miniplant will actually be built in Argelia, Cauca, at a cost of 20 million pesos, and will provide the basis for a "National Plan for the Exploitation of Small-Scale Hydroelectric Resources" in localities that cannot be supplied electricity from the networks because of the extremely high costs involved.

The inauguration of this national technological step forward took place on the premises of the Council of Popayan, in the presence of the vice minister of mines and energy, Carlos Zambrano Ulloa, with the signing by Ricardo Tribin Acosta, manager of the ICEL [Colombian Electrical Power Institute], of contracts with the Universities of Cauca and Valle for the design of a national prototype for the mentioned miniplant.

This act marks the first step taken by the country toward technological independence in a field that in coming years will demand investments on a larger scale than any Colombia has ever been called upon to make, to fully emerge from the energy crisis it has undergone over the past months.

This view was shared by Vice Minister Zambrano Ulloa; the manager of ICEL, Tribin Acosta; the governor of Cauca, Gerardo Bonilla Fernandez; the mayor of Popayan, Juan Manuel Caicedo; the head of the Institute's Division of Alternative Energy Sources, Eutimio Becerra Reyes and the head of the Institute's Division of Finance, Oscar Paredes Zapata; the manager of CEDELCA [Electric Power Plants of Cauca], Jorge Bolivar Munoz; the rectors of the Universities of Cauca and Valle; and some 100 government officials, members of the Council and the Congress, and civic leaders of Cauca; all of whom attended the signing of the contracts.

A Model for Latin America

Alfredo Constain, researcher with the Energy Group of the University of Cauca, German Oramas, an expert in medium-scale hydroelectric developmental projects throughout the regions of Colombia with the same university, and Antonio Vargas, of Pereira, concurred in the view that the joint government-university effort launched today in Popayan "is destined to make a profound imprint on our national scientific and technological research effort."

Martin Cuevas of ICEL, for his part, emphasized that with the Argelia project the Institute is orienting its activity toward resolving the energy shortage problems of a vast number of rural inhabitants, using the country's own technology and resources.

He said, "Through these contracts, the University of Valle will provide the designs, calculations and technical consultation for the fabrication, assembly, testing, putting into service and evaluation of the electromechanical and hydraulic equipment of the miniplant, at a cost of 4 and 1/2 million pesos, while the University of Cauca will be responsible for providing the designs, assembly, installation, putting into service and evaluation of a self-powered and automatic hydrometeorological station inside the miniplant, at a cost of 1/2 million pesos."

A Colombian Achievement

The spokesmen for the universities--Hector Monroy for that of Cauca, and Jaime Aguilar for that of Valle--agreed that the contracts signed with ICEL "eliminate the separation that has existed between the two universities, bringing them together in programs that as of now constitute a real national achievement for the generation of energy at low cost."

They pointed out that this step "greatly favors the university scientific and technological research ambit and will become a readily available model for the ideal road by way of which the professionals of the future will be better prepared by the universities, which have the responsibility of helping the nation in this respect."

Tribin Acosta explained that the Universities of Cauca and Valle were chosen for this program because they already had the necessary qualified personnel on their staffs and sufficient technical resources.

BRIEFS

OIL STRIKE IN CHARCO LARGO--Santo Domingo, 25 Jul (CANA-REUTER)--Dominican Republic President Antonio Guzman announced today that an oil strike had been made in the southern area of Charco Largo. Speaking on a television and radio broadcast the President said the quantity and quality of crude oil struck had still to be determined. He said the government had been exploring for oil in the region since the end of last year. In his broadcast Mr Guzman called on Dominicans to thank God for this promising event which foresees a better future for the republic. After his speech hundreds of people rushed into Santo Dominican streets to celebrate the announcement. The Caribbean republic imports most of its oil needs. PEMEX ANNOUNCES THREE PETROCHEMICAL PLANTS

Mexico City EL DIA in Spanish 24 Jun 81 p 7

[Text] Yesterday, the general director of PEMEX [Mexican Petroleum], Julio Rodolfo Moctezuma, announced the construction of three new "Cangrejeras" for the purpose of meeting the domestic petrochemical demand, and stated that this industry will strengthen the nation's balance of payments.

Moctezuma, who attended a breakfast attended by the highest ranking representatives of the private sector, stressed that, in the future, Mexico would give a particular impetus to its exports, because "we cannot expect the traditional products of a tropical country to be able to serve as the support for the Mexican external market."

Nevertheless, the director of PEMEX pointed out that, "Now that we have finished La Cangrejera, we realize that we shall soon be unable to supply the market with the products generated there.

"Over a period of 20 years, we shall have a population of over 100 million inhabitants and the pace that Lopez Portillo has imposed on our economy will enable us to have access to an economy that is four or five times superior to the present one.

"Therefore, Mexico has devoted its efforts, and the best of its technology, to laying the foundations for the development of the national petrochemical industry."

At the same function, engineer Carlos Mireles, head of CANACINTRA's [National Association of the Processing Industry] petrochemical sector, disclosed that Mexico ranks second in Latin America in the production of basic petrochemicals, and it is anticipated that, by 1982, our country will be the Latin American leader in this sector.

He reported that secondary petrochemical production in Mexico had increased at a rate of 8.5 percent per year, on the average, during the period 1971-80; and, not satisfied with these results, "our sector has decided to expand many of the already existing production units, and to build new industrial plants, with an estimated investment of 55 billion pesos, which will make Mexico the Latin American leader in the production of secondary petrochemicals by 1985."

Julio Rodolfo Moctezuma: "Petrochemistry could be the great solution for Mexico's future."

PEMEX THREATENS TO SHUT DOWN WELLS

Mexico City EL SOL DE MEXICO in Spanish 5 Jul 81 Sec A pp 1, 5

[Text] Ciudad del Carmen, Camp., 4 Jul (OEM)--There is an interval of only 15 days left in which to recover the pace of crude exports, and if the current situation continues, it will be necessary to "choke" producing wells.

For the present, it has already proven necessary to delay three wells on the Campeche Platform, which would cause the level of 2.75 million barrels per day to be reached, from going into production. This is because the storage facilities, which now have a capacity of 8.7 million barrels, are about to reach their maximum volume of accommodation.

The foregoing information was given to EL SOL DE MEXICO yesterday by technicians from Mexican Petroleum's [PEMEX] southern zone, who stated that the current production rate in the country exceeds 2.5 million barrels per day.

It was explained that the domestic consumption does not exceed 1.2 million tons, and that the rest is allocated for export. However, as a result of the decline in external purchases, the storage facilities are now saturated.

The technicians noted that new installations have recently been incorporated in Cactus, La Cangrejera and Pajaritos, for storing the oil from fields all over the country; and it is expected that, in the future, thanks to the acceleration of the work, one new storage tank will be put into service each month.

Nevertheless, it was reported that the space is not available at present, and if the lack of exports lasts another 15 days, it will inevitably be necessary to "choke" the wells, especially in Campeche Sound, which supply the largest production in the country, and from which the level of 2.75 million barrels called for by the authorities will be reached.

The Mexican Petroleum southern zone technicians remarked that, for the time being, it has been necessary to delay the operations on three wells drilled on the Campeche Platform which were due to go into operation currently.

It was claimed that the work on these projects would continue in this way until there is a change that would make it possible to evacuate the storage tanks, at least at the same rate at which the crude is being extracted in the oilfields.

According to the reports, with the wells that are about to go into production in the Gulf of Mexico, the production level of 2.75 million barrels per day will be reached. However, it will apparently not be until the market recovers that Mexican Petroleum's production will increase again.

Meanwhile, the technicians are remaining in a state of anticipation, and are of the opinion that, whatever the solution is, it cannot take more than 15 days to arrive, because the storage facilities cannot accommodate any more.

PEMEX: NO 'CRISIS' IN PRODUCTION, PRICING

Mexico C. EXCELSIOR in Spanish 27 Jun 81 Sec A pp 1, 15

[Text] Yesterday, in announcing a new, "far more dynamic and diversified" price policy, the director of PEMEX [Mexican Petroleum], Julio Rodolfo Moctezuma Cid, stated that the company has started negotiating the revaluation of Mexican crude on the international market, and expects to obtain a new price that is $2.00 higher than the present one.

During a press conference held at the conclusion of a lengthy meeting with President Lopez Portillo and the economic cabinet, the official remarked that the current upheaval on the international oil market has prevented PEMEX from selling 310,000 barrels of crude per day, representing a loss of 230 million pesos during the same interval.

The cancellations of crude export quotas are from the United States, the Philippines, Sweden and India, which, the PEMEX directed noted, want to secure preferential prices owing to the uncertainty of the market.

However, Moctezuma Cid expressed optimism and confidence. He said that PEMEX has the ability "to come out ahead, with flying colors, and even strengthened by the crisis;" and he announced that, "as of this afternoon, orders for Mexican crude have been received from about 20 customers."

He commented that the energy saving policies undertaken by various countries, simultaneously with the overproduction policies of certain Arab nations, have fostered a market situation wherein the demand has been clearly reduced worldwide. Mexico has only a marginal role in this, and hence this market crisis has inevitably affected the national programs and economy.

During the conference, which lasted over 2 hours, Moctezuma Cid said that, based upon the behavior of the international markets, PEMEX would gradually change its production and price policies.

He reiterated the fact that PEMEX is not in a state of crisis, noting: "We have merely failed to sell what we had calculated."

He claimed that the company could not be said to have a deficit, but only lesser sales.

Mexico Will Not Join OPEC

The PEMEX director also remarked that Mexico would not join the Organization of Petroleum Exporting Countries (OPEC), stating: "There is no intention of doing so." He declared that this position has been clearly explained by President Lopez Portillo and claimed that he "would have nothing to add to it."

He provided the newsmen with details on the progress of negotiations on the international market, pointing out that, despite the rumors spread by the international press agencies, neither Canada nor France has made announcements about reducing their purchases from Mexico.

He said that the governments of those countries have also expressed willingness to study substantial increments in Mexican crude, and Colombia, another requester, has also carried out good negotiations regarding prices.

He asked that doubts and misunderstandings be dispelled regarding the PEMEX export platform, commenting: "Our platform entails 1.5 million barrels as an annual daily average. But, for reasons associated with weather conditions, there are days in which it is impossible to reach the figure that has been established. We shall attain it, but it is not a reality at the present time. The exports are lower. In order for us to achieve them, there must be a prolonged effort at the end of the year, and perhaps until the beginning of 1982."

Sales Must Be Diversified Now

Julio Rodolfo Moctezuma Cid subsequently stated that PEMEX, in response to the current crisis, must diversify its marketing system, and make it far more speedy in a situation such as this.

He noted that, by the middle or end of next year, it had been planned to complete and put into operation the Salina Cruz cargo buoy for ships with a large capacity. According to the new investment program, it is expected that this buoy will be put into operation by the end of November or the beginning of December.

The new PEMEX director declined to answer a question about the reasons for the resignation of his predecessor, engineer Jorge Diaz Serrano. He confined himself to referring the query to the responses given by the secretary of patrimony and industrial development, Jose Andres Oteyza, to a group of deputies.

He also stated that the $2.00 increase in the current price of Mexican crude is not yet in effect. He remarked: "I would like to be able to give you a date, and say that it would be kept. But no one knows how long this situation is going to last. I think that the gamblers would lose at present, if we set a date. It is difficult to predict...."

He commented: "Our negotiations are having a high percentage of success. But obviously, we cannot guarantee 100 percent. We believe and hope that they will be successful; but there is a percentage of uncertainty which might mean the opposite, at the present time."

OIL PRICE CUT MEANS LARGE LOSS TO TREASURY

Mexico City EL DIA in Spanish 24 Jun 81 p 7

[Text] Yesterday, Guillermo Prieto Fortun, undersecretary of revenue in the Secretariat of Finance and Public Credit, stated that the federal government is making a greater effort each day to base Mexico's economic growth, estimated at 7.5 percent, on internal savings and not on external financing through loans.

During an interview after he opened the Third Fiscal Symposium sponsored by the National Bar Association, the finance official announced that Mexico would fail to receive 40 billion pesos (by way of taxes), owing to the drop in the price of oil.

That sum represents 4 percent of the internal financing; however, the figure will depend on the changes in hydrocarbon prices.

Prieto Fortun explained that the policies for modernizing the tax system would not lag.

During the course of the conversation, the undersecretary remarked that the present public spending is insufficient to meet the country's economic and social needs.

The interview proceeded as follows:

[Answer] The receipts for 1981 will exceed 955 million pesos, nearly a billion pesos.

[Question] How much will this amount to in terms of percentage?

[Answer] Approximately 40 percent growth over 1980.

[Question] Several economists claim that our economic growth is based on credit and loans from abroad. What is your opinion?

[Answer] They are entitled to say what they think; but I believe that the country has been making a very substantial effort to finance our public spending increasingly with sound funds from domestic savings and taxation.

[Question] When it was announced that there would be a $4.00 drop in the price of oil, it was also stated that Mexico would fail to receive $1.2 billion, in addition to this. How much will the state fail to receive in the form of taxes?

[Answer] Well, we estimate what the government will fail to receive in tax funds as a result of the drop in hydrocarbon prices and of this type of current situation at 40 billion pesos. But this could vary if there is a change in prices, as is anticipated, in the immediate future.

[Question] From the standpoint of total revenue, what percentage does this aforementioned sum represent?

[Answer] Approximately 4 percent. (And then he added) failing to receive that amount does affect the country, but efforts are being made to increase the tax funds, so as to meet the expenditure requirements. (The official stressed) any upset, however small it may be, must have an impact on us.

[Question] In the event that the decrease in oil prices is permanent, in what other way can the state accrue revenue?

[Answer] We are making very significant administrative efforts to remedy this loss of receipts. We do not think, by any means, that we can cover the total funds which will not be accrued. But everything possible is being done to expand the base of taxpayers.

The country is changing in the tax area; a group of measures to modernize the entire tax collection system is being considered.

I do not think that these policies and actions to modernize the tax administration will lag.

[Question] Could the taxpayer be hurt as a result of what we fail to receive on account of the oil?

[Answer] No, because there would be no changes in the laws, unless Congress orders or puts into effect some new amendments.

We have to operate with the current legislation, and in keeping with the laws that have been passed. So, the effort is aimed at having those who are not paying enter the tax system.

[Question] Mention has been made of a deficit in the balance between the state's revenue and outlays; and some banking institutions even claim that the government's spending amounted to 62 percent, while the revenue totaled 43 percent.

[Answer] I must say that there has been a substantial effort to curb public spending and to increase the internal revenue. Of course, the policy tends to close the gap in the deficit, so as to cover the budget to an increasing extent with our own funds.

(He also explained) that public spending is done through a program, and in relation to the country's needs. Anyway, the volume of spending is still insufficient to meet all the needs of our people. I believe that it is in this respect that we must expend a great effort.

BRIEFS

RUNAWAY GAS WELL CONTROLLED--Ciudad del Carmen, Camp., 2 Jul--The PEMEX [Mexican Petroleum] superintendent's office in this locality announced that the 7-B Xicalango well, which has to date wasted 150 million cubic feet of gas, will be under control within a maximum period of a week. Forces from the Seventh Military Naval Zone extended a safety cordon over a radius of 4 kilometers to prevent an explosion. The aviation authorities were also requested to cancel flights near the damaged well. The danger of an explosion on the Atasta Peninsula where the 7-B Xicalango well is located increased when an accumulation of gas occurred in the area. The superintendent's office announced that, tomorrow, the moving of the damaged well's derrick would begin, to facilitate the effort to control the emerging gas, an effort in which dozens of highly trained technicians under orders from engineer Felipe Espinosa Caviedes are participating. The office added that the pumps, heavy machinery and other implements will be removed from the area to facilitate access to the Atasta Peninsula. The damage caused by the gas emanation was estimated at 10 million pesos. [Text] [Mexico City EXCELSIOR in Spanish 3 Jul 81 Sec A p 32] 2909

CORPOVEN INITIATES MONAGAS EXPLORATION PROGRAM

Caracas EL UNIVERSAL in Spanish 5 Jul 81 p 1-29

[Article by C. R. Chavez]

[Text] Maturin--CORPOVEN will drill a total of two [sic] development wells in the state of Monagas over the next 5 years in order to increase production in the Orocual, Onado, Tacat, Tonoro, Aguasay-Caro Norte, and Jusepin fields, announced the president of the oil firm, Dr Frank Alcock, during his very brief visit to this city to attend the 37th assembly of FEDECAMARAS [Association of the Chambers of Commerce and Industry] along with representatives from PDVSA [Venezuelan Petroleum].

Concerning plans for exploration in the state of Monagas, Alcock said that CORPOVEN has a total of 384,800 hectares allocated for which it has exploratory responsibility. This represents 14 percent of the area of this eastern state.

"The seismographic program conducted by CORPOVEN for the next 5 years in the northern area of Monagas includes the recording, processing, and interpretation of 1,300 kilometers of seismic lines, plus the drilling of eight exploratory wells," said the president of CORPOVEN, who then added that in the northern part of this state his firm is working the fields of Orocual, Manresa, Jusepin, Pirital, Punta Gorda, Mata Grande, and Tacat.

He also reported that some significant discoveries of light petroleum and gas have been made in the fields of Orocual and Tacat. "In Orocual we plan to drill four wells to verify and quantify the reserves discovered with the ORC-18 well, which was drilled this year to a depth of 14,500 feet." He added that the ORC-18 was used to evaluate in depth the Cretaceous and Oligocene levels.

Dr Alcock pointed out that the results obtained from this well and the reconditioning of the ORC-15 and ORC-17 wells, also in the

Cretaceous levels, tend to confirm the extent and total volume of the reserves of this area, thus favoring immediate development in the area.

As a result of the exploration in the Tonoro area of the Tacat field, in 1980 CORPOVEN found a large accumulation of gas with its Tonoro 3-X well. It is now drilling the Tonoro 4-X well, from which intermediate profiles were taken. Their interpretation revealed the existence of 235 feet of gas and petroleum sands. "This will help us to evaluate the potential of the area, in which we have a program for about four exploratory wells," reported the president of CORPOVEN.

As for exploratory plans for the central part of Monagas, Frank Alcock announced the surveying of 4,400 kilometers of seismic lines for the 5-year period in question (1982-1986), and said that the plans for this region include the drilling of 33 wells over the next 5 years.

In the central part of Monagas, CORPOVEN is working the fields of Onado, Aguasay-Norte, Acema, and Casma-Soledad.

Alcock said that some major discoveries of medium petroleum were found in the fields of Onado and Aguasay in 1979 and 1980. "In that area we plan to drill 13 exploratory wells to verify and quantify the reserves found earlier." He added that the plans include developing the region by drilling 33 development wells.

On CORPOVEN's production in the state of Monagas, he said that it is 80,000 barrels of medium and light petroleum a day.

He pointed out later that at present five of the firm's ten drilling rigs are operating in Monagas, and seven of its 15 repair rigs. He said that the investments in these activities have amounted to about 310 million bolivars.

He added that work is proceeding on projects to use the gas from Oritupano and on the gas injection plant at Acema, along with the development of the Onado field. All together, these projects represent expenditures close to 300 million bolivars over the next 2 years.

BRIEFS

NEW OIL TANKER--With the incorporation of the "Sinamaica," a modern ship for transporting oil, LAGOVEN, the operating subsidiary of Venezuelan Petroleum, now has six tankers in its fleet, with a sea transportation capacity of 294,554 cubic meters. LAGOVEN spokesmen announced that the "Sinamaica," built in Japanese shipyards, comes to replace the "Lagoven/Maracaibo," which has already completed 22 years of service and is part of a program for replacing tankers that have ended their useful life. The new ship for oil transportation began its activities in a simple ceremony attended by representatives of the regional executive board, Dr Alirio Parra, director of Venezuelan Petroleum, representatives of the Ministries of Transportation and Communications and Development, COVINCA [Venezuelan Corporation for Development of the Shipbuilding Industry], representatives of the Office of the Comptroller General of the Republic and of other agencies, in addition to local authorities. The "Sinamaica" is commanded by Sea Captain German Marin and has a 31-man crew for its crude oil transportation operations between Venezuelans and abroad. Some of its characteristics are: 213 meters long, 32 meters beam and 19 meters depth, with a maximum speed of 15 knots. The ship takes its name from the lagoon located in the northwest of the state of Zulia, from which--historians note-- is derived the name of "Little Venice," assigned by the discoverers to the area and which later was extended to the whole territory [of Venezuela]. OIL WELLS REACTIVATED--With reactivation and greater development of the old Pedernales oilfield, in the Orinoco Delta starting this month LAGOVEN, a Venezuelan Petroleum subsidiary, hopes to produce again amounts similar to what was extracted in the past. Oil operations in Pedernales started at the beginning of the decade of the 1930's and continued until 1964. Some 52 wells had been drilled there, of which 29 proved to be productive and 23 were abandoned. The specific gravity of the crude produced in Pedernales ranges between 17 and 28 degrees API [American Petroleum Institute]. At present, LAGOVEN is scheduled to tackle a program of reactiviation and greater development of this old field envisaging the drilling of 43 wells up to the end of 1983. The Pedernales field is located at the mouth of the Pedernales Channel and opposite the town of that same name, in the delta of the Orinoco, between Cotorra and Capure islands. Now, just as before, drillings will be accomplished in the smooth, swampy water of the delta. In order to perform these drilling jobs, LAGOVEN has contracted, for a 3-year period, the services of a barge specially designed for operating in this smooth, swampy water ranging in depth from 1 to 10 meters. With reactivation of the Pedernales field, expansion of LAGOVEN activities in the eastern part of the country continues, entering upon an intensive program of exploration on the continenal shelf in the Gulf of Paria and north of the Paria Peninsula. [Text] [Caracas EL DIARIO DE CARACAS in Spanish 16 Jul 81 p 11] 10042

MENEVEN ORGANIZATIONAL CHANGES--Some major changes in MENEVEN were announced yesterday by the president of this PETROVEN [Venezuelan Petroleum] subsidiary, Dr Juan Chacin Guzman. Newly established were the Major Projects Division and the Refining Supply and Planning Division. A new manager was named for the Puerto La Cruz district. The Major Projects Division, based in Caracas, will handle a variety of projects conducted by MENEVEN, including the Oriente LGN or Cryogenic Project and the modification of the Puerto La Cruz refinery, along with others which will be undertaken by the firm. Named to head the Major Projects Division was the engineer Lorenzo Monti who has worked in the petroleum industry since 1964. Since 1975 he has been district manager of Puerto La Cruz. Before that time, he had worked in supervision and management in the MENEVEN refinery in that area. Mr Monti has taken a number of specialized courses abroad, holds membership in professional organizations, and in the past taught petroleum engineering in the University of Oriente. The president of MENEVEN announced the appointment of the engineer Jose Luis Gonzalez as the new manager of the Puerto La Cruz district. Like his predecessor, he has lengthy experience in the petroleum industry, which he joined in 1966. He has taken a number of specialized courses at various institutions. In the last 4 years he has been successively service manager, engineering manager, and operations manager in this district. The president of MENEVEN, Juan Chacin Guzman, also announced the integration of the functions of manufacturing and supply. For this purpose the Refining Supply and Planning Division is being established, to be headed by the engineer Fernando J. Alezones. Mr Alezones also has broad experience resulting from his years of work in engineering, supervisory, and management positions in general at the MENEVEN refinery in Puerto La Cruz; most recently he has worked at the Supply Department in Caracas. 'POLITICAL WEEK' COLUMN REVIEWS SINAI PARTICIPATION ISSUE

Buenos Aires LA NACION in Spanish 26 Jul 81 pp 8-9

[Article: "Should Our Troops Go to the Sinai?"]

[Text] On the distant sands of the Sinai, about 100 Argentine troops might be helping to open the doors to a new status for the country in international politics.

Diplomats and military strategists are at work here considering the profits and losses that could potentially accrue to Argentine from its agreement to form a peace-keeping force for the purpose of guaranteeing the demilitarization of the Sinai, once the Israelis evacuate the peninsula in April 1982. What is involved is something quite simple: to ascertain which, in the end, would carry more weight on the scale of the nation's enduring interests: the losses or the profits.

The Military Committee, comprised of the commanders in chief of the Army, Navy and Air Force, and the president, is still in the process of evaluating this sensitive issue which, from all appearances, could prove to have more significance in the overall shaping of Argentine foreign policy than the Beagle conflict itself. This week, Foreign Minister Oscar Camilion, after citing the advantages and disadvantages of sending Argentine troops to the Sinai, predicted to the Military Committee the adverse opinion of San Martin Palace. That position on the part of Dr Camilion came as no surprise. The development movement, of whose ranks he is a member, had already expressed a negative view.

The day before yesterday, LA NACION questioned the Casa Rosada, and the latter replied that, although it might be interpreted that Camilion had voiced opposition to the sending of troops to the Middle East, it was impossible to describe that position as final. In fact, the Casa Rosada maintains that the informational material that Argentina has accumulated on the subject is still far too uncertain to reach an irreversible conclusion as yet.

The history of the matter is as follows. By virtue of the Camp David agreements of September 1978, between Egyptian President Anwar Sadat and Israeli Prime Minister Menachem Begin, with the assistance of President Jimmy Carter, Israel was obliged to make a gradual withdrawal from the Sinai. This arid and virtually unpopulated peninsula which, however, has an area three times that of the state of Israel, was occupied militarily by the Israelis after their resounding victory in the Six-Day War of 1967.

On the map shown on this page, the reader can discern the areas and dates wherein Israel's pledged withdrawal has been taking place, as a result of Camp David. The white area indicates what remains to be implemented by April 1982.

It has been agreed that the complete abandonment of the Sinai will be accompanied by compliance with a group of guarantees, to be overseen by third parties for about 2 or 3 years. No territory the size of the Sinai, but any piece of land, has an exceptional value for Israel. In the long run, its military human resources depend on the mobilization of its reserves; and this mobilization is known as time, and there is no time, unless there is a geography which hampers the enemy's advancement toward Israel's vital targets.

'Non-Paper'

Two months ago, in Washington, the State Department's undersecretary for strategic affairs and defense, Jim Buckley, called together representatives of several countries to talk to them about the purpose of an international peace-keeping force in the Sinai. Our country was one of those invited to attend, together with Australia and Uruguay, among others.

At the conclusion of his remarks, Buckley left in the hands of those present something which has been in vogue in Washington since the time of former Secretary Cyrus Vance: in fact, he left a "non-paper," a "non-paper," literally speaking, which is less than a memorandum, but which also has an informational purpose, even though it has been prepared to avoid the slightest responsibility.

From what we know, San Martin Palace and the political leadership of the Army, Navy and Air Force are working fundamentally on the basis of a "non-paper" insofar as evaluating the United States' interest in forming a peace-keeping force is concerned.

What does that paper say? Rather than saying, it asks. It asks something like: "Well, fellows, what can we count on from you?" The paper indicates a few points: The peace-keeping force would be formed with three battalions, and there would be accommodation not only for the participation of Army members, but also that of the Navy and Air Force. As for the naval questions involved in the Israeli withdrawal from the Sinai, for the present, the major maritime base of Sharm-el-Sheik is in action. As for the airmen, those attained as a result of the Israeli abandonment of the airport at Etzion, near Eilat, should be mentioned, among many other aspects.

On Friday, 17 July, in London, Egyptians and Israelis initialed an agreement whereby they proposed to the United States that Mr Leamon R. Hunt serve as acting general director of the international peace-keeping force being formed. According to the dispatch which the Argentine ambassador in London, Ortiz de Rozas, sent to the Foreign Ministry, that force would contain 2,000 men supplied with only "personal weapons." The Americans are said to have pledged to provide 700 troops and to supply all the backup personnel that may be necessary. In his wire, Ortiz de Rozas ventured to say that it was his understanding that the Commonwealth would contribute a certain number of troops. This conjecture on the part of the ambassador in London is important, because one of the points that San Martin Palace and also some members of the military leadership have found very sensitive stems from two questions: "If we go, with whom do we go, apart from the United States?" "Do we go only with Fiji, which was the first to suggest that it would agree to be in the group?"

What Camilion Said

From what has been learned, Camilion put forth to the Military Committee some rather weighty arguments in his opposition, on principle, to Argentina's joining the peace-keeping force. Let us observe them, without an order of priorities: 1) Thus far, the composition of the countries joining that force has created a problem; in other words, we cannot go with Fiji alone; 2) the limitation set by Israel and Egypt on the joining of the force by countries which have no relations with them creates another problem, for example, with the majority of African countries; 3) consideration must be given to the self-exclusion of the NATO countries, because of their reservations relating to Camp David (in this regard, our Foreign Ministry might assess what Raymond Aron said yesterday in LA NACION about Mitterrand's receptiveness to the agreements between Sadat and Begin); and 4) it would cause enmity with the nonalined and socialist countries.

Those arguments may be debatable, but they are serious. On the other hand, what might prove to be a low blow among high-ranking echelons in the Foreign Ministry is the fact that, in private talks with the press it is being claimed that, essentially, the United States and Israel are not really interested in having Argentina in the Sinai.

If this were so, the issue would have to be considered closed. But is it really so? The queries made by LA NACION among Israeli sources in Buenos Aires indicate quite the contrary. The larger the number of countries present in the Sinai, guaranteeing the demilitarization of the region, the better for Israel. Could a country as internationally isolated as Israel perhaps by playing a different card? Might it not be interested in Argentina, where there exists one of the strongest Jewish communities in the world?

Where Egypt is concerned, no one could say anything different from what Foreign Minister Boutros Ghali said during his visit to Buenos Aires in the middle of the month. In fact, he confirmed that his government is interested in Argentine participation in a peace-keeping force. Upon visiting President Viola, Ghali delivered to him a personal letter from Sadat. We know that Viola has already answered that letter, but since Sadat said nothing in it about the sensitive matter on which we are commenting, the Argentine president avoided embarking on the subject, for his part.

Uncle Sam

Finally, it remains to be learned whether it is true that there is a kind of American indifference about our possible decision. To date, there has actually not been anything except that mere "non-paper" of the State Department. On one occasion, the American ambassador talked with Camilion about the Sinai issue, but without conveying any official position, almost as if he were transmitting a personal opinion. Ambassador Shlaudeman has traveled to the United States, and has returned, and he has said nothing new other than what was already known. Our military men unquestionably expect him to say something to explain matters, especially the military who advise the commander in chief of the Army. It is not without reason. On 5 August, Lt Gen Galtieri will be going to the United States, and it is feasible that he do so with the best information available on the subject.

It is precisely concerning what the United States may be expecting of Argentina that involves the essence of what may be, depending on the direction taken by events, a matter of extraordinary proportions for our foreign policy. Through its "non-paper" and the coolness of its politicians and diplomats, the United States may be making a poker game out of all this. Does it, perchance, want to see our cards first, before putting its own on the table?

What exactly is Uncle Sam seeking? To learn how far we are willing to follow him, spontaneously, in a matter so vital to his interests (and, obviously, those of the West) as the Middle East? Among members of the Army leadership, one hears lately a comment containing more than meets the eye: The United States pays well, and if you don't think so, consider what it paid for an expeditionary force that Brazil sent to Europe during World War II.

Today, even if it wanted to, Brazil could not send any force that would be met with adverse feelings by a considerable portion of the Arab world. It is prevented by its dependence in the area of hydrocarbons, and also by the nature of its very special relations with black Africa. That is not exactly Argentina's situation.

Would our affirmative response to the question of the Sinai be sufficient reason to prompt the United States to make a historical restatement of its relations with Argentina? Whoever has the answer to this question will have an enviable vantage point from which to find out what steps it befits Argentina to take in all this.

From PC To the Military

With the headline "Not One Argentine Soldier To the Sinai," the newspaper QUE PASA, official organ of the Argentine Communist Party [PCA], claims that going to the Sinai would mean embroiling the country "in the most aggressive, irrational and rash policy in memory during recent years." The PC, consistent with its pro-Soviet policy, lauded a declaration by leftist political leaders and entities, at the end of which one observes the noteworthy presence of the Peronists Paulino Niembro, Fernando Torres and Florencio Carranza. We say noteworthy because the declaration warns that, if Argentina becomes present in the Siani, it would break "a political tradition of neutrality." What neutrality are they talking about? Could it be the neturality upheld at all costs by the Radical president, Yrigoyen, or the Conservative president, Castillo, which was broken when Peron was vice-president and war minister; that is, when Argentina declared war on the Axis, in early 1945? In the historic photo in which that declaration was signed, Peron appears to be laughing; one does not know exactly why, but laughing. There are warning laughs.

Although the interpretation is our own entirely, after contemplating the national situation we think that we note a greater predisposition among the leadership of the Army than in the Air Force or the Navy, to stress what might be the most advantageous aspects of Argentine participation in the international peace-keeping force. We point this out despite the need to emphasize that everyone, absolutely everyone here still has the issue in the process of analysis and information gathering.

It is understood that the State Department had promised to take action to have the United Nations Security Council approve the establishment of the peace-keeping force.

But it is also understood that, a few days ago, it made a move, and perceived that the Soviet Union would be relentless in the exercise of its veto power.

A working paper prepared by the Argentine Army General Staff notes that the formation of a force such as the one planned for the Sinai at Camp David has legal backing in Articles 42 and 43 of the United Nations Charter, on action in the event of threats to peace, a break therein or acts of aggression; and essentially in Article 52. The latter states that this charter does not oppose the existence of regional accords, and that the members of the United Nations which make them "will expend all possible efforts to achieve the peaceful settlement of controversies of a local nature, by means of such accords or agencies, before submitting them to the UN Security Council."

Vulnerability

A force of 2,000 men has a political significance rather than being military in nature, especially when it must be located between two armies with the potential of those of Egypt and Israel. It is also true that the UN did not give its approval of Camp David; but the complete withdrawal of the Israelis is one aspect of those agreements, and not the most favorable one for Israel. Is there any Arab leader willing to shout his opposition to having that territory returned to Egypt?

However, it is noted in San Martin Palace that, to a considerable portion of the Arab world, such a territorial recovery would be a betrayal of the Arab cause; because it would leave the option of war definitively impaired, inasmuch as Egypt is the only one of those countries with a sufficient number of troops to confront Israel. Viewed from a different angle, is not conducting a peace-keeping mission precisely the definitive impairment of an option for war?

Argentina has its vulnerability in the international realm. The issue of the missing persons is still current. Votes that we could give away by going to the Sinai are also votes that we might lose within a few months, when Argentine diplomacy seeks the reelection of Dr Jose Maria Ruda to the International Court of Justice, and of Dr Julio Barboza, to the Commission on International Law, in Geneva. But are the enduring interests of the republic, the consistency of our position in the world and the allies that we are willing to select implicated therein?

Congratulations From Videla

If it had to make up part of three battalions, Argentina would not go merely with officers and subordinate personnel. To send recruits it would, indeed, strip a politically complex flank in the internal area, although perhaps affecting the families more than the young men. After the experiences in Tucuman and with Chile in 1978, one may be sure that a call for volunteers would be made successfully. But, even so, it is possible that, if the situation should arise, military regulations would allow for an even more feasible response, for example, through the incorporation into a special military corps of the candidates accepted in the petty officers' schools.

There is no dearth of precedents, including actual war experience. In 1962, the "Espora" and the "Rosales," under the command of Admiral Arguelles, took part in the blockade on Cuba, while the Tenth Army Brigade was enlisted here. In the soccer

war between Honduras and El Salvador in 1969, troops from the Army and Air Force participated in a cease-fire mission. Near the end of the Six-Day War, as members of a UN force, the then Majs Iriart and Franculli, and Capts Gomez Pola and Caffarena, all from the Army, Maj Flyger and Capt Anastasio, from the Air Force, and Corvette Capts Escobar and De Marco, were in the Middle East, as observers. Flyger and Espina were wounded on the banks of the Suez Canal. Our flyers also saw action in the former Belgian Congo.

Whatever Argentina's final decision is, it should be made with deliberation. There is plenty of time for it. Meanwhile, it has been over 2 years since President Videla congratulated Sadat and Begin for the Camp David embrace.

DAILY COMMENTS ON REAGAN LATIN AMERICAN POLICY

PY262333 Sao Paulo O ESTADO DE SAO PAULO in Portuguese 18 Jul 81 p 3

[Text] Whenever there are elections in the United States and a new President takes office, Washington announces a new policy for Latin America. Invariably, however, all these policies present two notes in common. They begin with a total ignorance of Latin American reality and, a short while later, they fall completely into oblivion leaving things as they were before. With Ronald Reagan, however, American diplomacy has presented preceptible changes. Generally positives, but there are no indications that the American Latin American policy has departed from its eternal routine. On the contrary, the White House and the State Department are beginning their offensive in the same direction, putting the wrong foot forward.

A few days ago in this column we commented on the failure of the Bahamas meeting designed to launch a "Mini-Marshall Plan," and coordinate the policy of the countries of the region toward confronting subversion promoted by Cuba in the hemisphere and especially in Central America, Canada, Mexico and Venezuela participated in the meeting, and the only country to adopt a more realistic and more constructive position was exactly Canada, a country which is not Latin American and which is not affected by the problems of the hemisphere.

Now President Reagan seems disposed to undertake a new effort for the same purpose, promoting a meeting with the heads of state of the three countries that took part in the conference in an attempt to "salvage" what couldn't be rescued in the Bahamas. At the same time the White House Chief decided to send the new U.S. ambassador to the OAS, J. William Middendorf, to South America. Middendorf has already begun his peregrination to Peru, Chile, Argentina, Uruguay and Paraguay in the hopes of convincing the governments of those five countries to isolate Cuba even further and to pressure Fidel Castro into withdrawing his support for guerrillas. His mission should later be completed by the Under Secretary for Inter-American Affairs, Thomas Enders who, according to reports, will visit Peru, Brazil and Paraguay.

It would be enough to list the countries included in the three diplomatic initiatives to show that Brazil, undoubtedly the most important country in the hemisphere, is relegated to a modest second level. Both parties are responsible for this, meaning Washington and Brasilia.

As for the United States, it is frequently carried along by its ignorance about Latin America, as we said before, in not perceiving the differences in origin, traditions and development that make the Americas practically two worlds apart, or even three if one cares to include the United States and Canada. Limiting ourselves to Latin America, however, it seems that the United States can't perceive the difference between Haiti and Brazil, or between Barbados and Argentina.

Aside from Canada, only two countries from Latin America were invited to attend the Bahamas meeting. Two countries which find themselves in the special situation of having to take outwardly anti-American positions in order to satisfy the leftists in their home territories. Such countries, as it was seen, even dared to ask the United States to finance the failed Cuban regime and the communication of Nicaragua. Aside from choosing its interlocutors poorly, the United States wounded the susceptibilities of Colombia and Panama which protested their being excluded from the encounter.

Colombia is a country which could have served as a link for approaching Brazil, since the Colombian president will be our guest in the near future. Not only Bogota was excluded from the Bahamas meeting, but Brasilia was left off the itinerary of Middendorf. In compensation, Middendorf will visit countries which at present are the target of a large international campaign aside from having, because of their geographical position, little to do with what occurs in the Antilles.

If President Reagan is trying to show that he won't let himself be influenced by international campaigns directed in accord with purely ideological principles, his gesture is laudable. This independence has been, up until now, a characteristic of his diplomacy. Moreover, the distinction accorded to countries like Uruguay and Paraguay by the Middendorf mission is not justified by any possible result and is merely going to make Washington the target of new anti-American campaigns. The embarrassment could be spared if, without excluding Uruguay, Paraguay and Argentina from the OAS ambassador's itinerary, his journey were extended to include all the capitals of South America.

Here, however, one cannot omit pointing out that the marginalization of Brazil is also the fault of the sorry diplomacy currently put into practice by Itamaraty. Breaking in the name of an ill-defined "responsible pragmatism," with our alliances and our traditions, those currently responsible for our diplomacy merely concern themselves with forcing an unnatural inclusion of Brazil in the so-called Third World with which it has not traditions and hardly any interest in common. Instead, they distance Brazil from its natural position as the major country of the hemisphere, depriving it of the possibility of exercising a mission, if not of leadership--a word banned in Itamaraty's "index" [book on diplomatic conduct]-- at least of mediation, for which Brazil is destined because of its position and its traditions.

The result is that, at a time when the country should be occupying a prominent position, one sees it condemned to an undeserved second place.

EDITORIAL SCORES REAGAN POSITION AT OTTAWA SUMMIT

PY242228 Sao Paulo FOLHA DE SAO PAULO in Portuguese 23 Jul 81 p 2

[Text] As predictable, the main economic topic at the Ottawa meeting--which brought together the heads of state of the seven most developed capitalist countries--was the current U.S. monetary policy.

From the standpoint of the European countries, that policy which has a definite restrictive shade to it, is responsible for the high U.S. interest rates which cause double difficulty to the Europeans. On one hand, those interest rates lead to an overvaluation of the dollar against their currency because such high rates stimulate a strong flow of financial resources toward the United States. Such overvaluation of the dollar, in turn, raises the price of European and Japanese dollar-based imports [oil for instance] thus hiking the domestic inflation rates. On the other hand, the only expedient to curb or at least moderate that adverse evolution seems to be that of also raising interest rates in the other developed capitalist countries, an expedient which would only deepen the serious recession some of them are experiencing, as is the case in the France, Great Britain and Italy.

From the standpoint of Brazil, the current U.S. monetary policy has had quite adverse consequences which explain our special interest in the Ottawa meeting. In the first place, the U.S. policy also pushes upwards the interest rates on international loans, which follow the trends of the U.S. financial market. This way, the servicing of almost two-thirds of the foreign debts increases because they were contracted at readjustable rates. In the second place, since the devaluations of the Brazilian currency is pegged to the U.S. dollar, the cruzeiro has in fact come to be overvalued in relation to European currencies, thus hurting our exports to that area and, conversely, stimulating imports from that area. Finally, another damage to Brazilian exports is caused by the fact that the high international rates discourages the maintenance or formation of primary products stockpiles in the developed countries, thus seriously curtailing our exports of those products. Incidentally, this circumstance is partly responsible for Brazil's exports performing below expectations during the first half of this year.

As predictable as the central economic topic at the Ottawa meeting were the U.S. resistence to changing its monetary policy and Reagan's argument that soon interest rates will decline as a result of the success of his domestic economic policy. This argument, based on the conviction that the inflation will

substantially and simultaneously abate as the economy gains vigor, was sufficient to deprive Ottawa of any important economic decision because the meeting even lacked a deliberative character to ponder issues and decisions carefully. In addition, the fact that the opponents of the U.S. monetary policy do not have any effectively retaliatory economic power to prod the United States into reviewing its monetary policy must be taken into account. It could be noted as a minor but folksy detail that Reagan may have been helped by the masochistic conservatism of Mrs Thatcher who preferred not to press for changes in U.S. interest rates despite the fact that her country is the most vulnerable to the effects of such rates.

Thus, once more, as has been the tradition since the 1920's, other developed and developing countries can only hope for the promised results of the U.S. economic policy whose spirit has always been, as it is now, one of olympian disdain for the eventual adverse effects which that policy has had on the rest of the world at diverse critical periods. This is a hope fraught with uncertainties because there are justifiable doubts about the consistency of Reagan's economic program due to the fact, among others, that the U.S. annual inflation rate, contrary to the monetarist tenets the Washington government adheres to.

DAILY QUESTIONS DELAY IN VOTE ON FOREIGNER'S LAW

PY310322 Rio De Janeiro BRAZIL HERALD in English 30 Jul 81 p 2

[Text] After the recent publication of the proposed amendments to the foreigner's statute, the impression prevails that the interested parties are not actually playing a comedy of errors but are affected by strange inhibitions. It is not quite clear why a long series of debates and negotiations between the minister of justice and various groups concerned with the problem of the immigration issue now seems to have reached a stage of immobility.

The text of the new statute seems to take into account nearly all the relevant objections raised in the congress and by the church against the statute enacted last year. Does there exist other points calling for a revision, in addition to those already mentioned?

This is likely because no law is ever sufficiently perfect to not require more and more adjustments to varying social and economic circumstances, but it is undeniable that the most controversial items in last year's statute have been corrected in the new project.

At the moment it is not clear why the opposition parties are now reluctant to approve the project, after even the church hierarchy has asked for "benevolence" in discussing the definitive statute.

The project eliminates the most controversial item in the present statute which permitted the expulsion of aliens even though they have Brazilian spouses and children economically depending on them. The project makes only one restriction--they must have been married for more than five years, to prevent fake marriages. The five-year term is liable to criticism for being too long, but in principle, the issue has been solved in accordance with Brazilian tradition.

The new project eliminates the bureaucratic rule that aliens seeking naturalization have to undergo medical tests. Safeguards against extradition of aliens have been extended and the functioning of foreign religious organizations has been facilitated. The same guarantees are foreseen for scientific, social, benevolent and other associations of foreigners. The entrance visa for foreign missionaries is to be granted for longer terms with the possibility of becoming definitive. What are now the reasons which cause opposition groups to delay the procedures for the enactment of the new statute--an attitude which has already

caused a statement of concern by the Nuncio? The deadlock looks irrational because it has not been explained so far. If the opposition wants to obstruct the issue, it will incur the disapproval of those for whose interests it pretends to fight. What are the reasons for the delay in sending the new project to the congress where some items still could be corrected.

CSO: 3001/219F

EDITORIALIST ON 'FAILURE' OF OTTAWA SUMMIT

PY240234 Sao Paulo FOLHA DE SAO PAULO in Portuguese 23 Jul 81 P 2

[Text] The meeting of the leaders of the seven richest nations has ended without even an inkling of agreement. They did not even manage to open lines for understandings and this is bad for everyone--industrialized and developing countries, mainly for the latter.

The immediate consequence of Ottawa is to make unnecessary the North-South conference scheduled for October in Cancun, Mexico. If the leading nations of the capitalist world do not have a common position on the economic problems they are facing, they will hardly act as a bloc when making concessions to alleviate the hardships of the developing countries.

How will they discuss interest rates for third countries if the question continues unsolved among the seven? It is obvious that there will be no result at all of this. Therefore, the failure at Cancun will be inevitable unless the Third World representatives--16 presidents, including President Figueiredo--go there united and intent on obtaining advantages at any price.

The failure will be inevitable and foreboding. Worried over their own misfortune, the rich nations seem to have forgotten that a leadership position presupposes the existance of nations to be led. If the developing countries are led into bankruptcy, the entire Western system will sink with them, and we are not too far from disaster.

To see that this is so, it will be sufficient to look at the repercussions of the Ottawa failure on Brazil's situation. The other big partners could not persuade Reagan to change his domestic economic policy which is geared to fighting inflation with high interest rates. On paper this is nothing but a divergence among the rich, but for Brazil that small divergence means an expenditure of something like $15 billion to service its foreign debt over the next 12 months.

Even with continuously rising exports, Brazil will not earn sufficient foreign exchange to pay interests and buy the oil consumed. The country will have to resort to foreign loans for its common imports, remittance of profits, foreign debt amortizations, and to meet all the other external obligations it cannot perform any magic.

And that is only one of the implications of the disagreement among the industrialized countries. Since they will continue with their recessive policies, the price of primary products will remain low due to reduced demand. Moreover, capital which might be interested in coming to Brazil will demand extra advantages because it can earn 25 percent per year while staying home.

In sum, the prospects for Brazil and for scores of countries in a similar situation are not bright at all. The rich countries are killing the hens which lay the golden eggs.

GOVERNMENT ISSUES REMINDER ON POLITICAL RECESS

PY302154 Santiago Chile Domestic Service in Spanish 1730 GMT 30 Jul 81

[Text] Today all the Chilean intendants, governors and mayors were given instructions on the implementation of the law, currently in force, regarding the political party recession in case any person, entity group or movement tries to violate it.

In this regard, Jorge Fernandez, director of the government communications agency (DINACOS) after noon today disclosed the Interior Ministry's position by pointing out that the government will prevent any action which may serve as an excuse to alter the institutional process underway, since violating the political party recession goes against the government and citizens joint desire which was voiced with the approval and ratification of the current constitution.

At the same time the government will not hesitate in strongly preventing the citizenry's participation, currently carried out through the organization for voluntary workers (Voluntariado) and neighborhood organizations, from being orchestrated by persons or groups thus distorting the appeal made by his excellency the president of the republic on 11 September. In this appeal he asked all the citizens to join their respective counties in order to strengthen the participation of those organizations.

Therefore, the communique released by DINACOS points out that any political party activity aimed at reviving or forming political parties or movements--should they be in favor or against the current regime--will be considered a violation of the political party recession.

All the intendants, governors and mayors of the country were given special instructions in this regard today.

GOVERNMENT BANS FORMER CONGRESSMEN'S MEETING

PY292033 Paris AFP in Spanish 0233 GMT 29 Jul 81

[Text] Santiago, Chile, 28 Jul (APP)--The Chilean Government today refused to authorize a so-called circle of former congressmen to hold a meeting on next 1 August to commemorate the 170th anniversary of the establishment of the National Congress. Interior Minister Sergio Fernandez said in a communique that a group of former parliamentarians have characteristics which lend themselves to presume that there is an intention to carry out, under this disquise, activities which contravene the norms in force regarding the recess of party politics, since the national congress was dissolved on 24 September 1973.

Two weeks ago the circle of former congressmen, in the process of organization, asked the Santiago military command for permission to hold a meeting at a downtown hotel in this capital in order to study the role played by the national congress in Chilean history, as stated by the organizers of the event. The petition then went to the Interior Ministry which forbade the meeting today, saying that it would be against the recess of party politics in force in Chile since 11 September 1973, when a military uprising toppled the government of the late socialist President Salvador Allende.

The communique added: This ministry has never believed it to be suitable to authorize meetings of institutions which are only in the stage of organization but has always waited to make a decision on the subject until the bodies are organized and it becomes possible to verify that their aims and structures are compatible with the juridical order in force.

The communique said that the study which prominent historians and analysts may make regarding the national congress is of the greatest interest. "Since it will become possible to appraise, within the framework of respect it deserves as a republican institution its merits and contributions to our civic development, as well as the defects which, unfortunately, prevailed during some stages of its functioning with all the consequent damage to the country."

The circle of former congressmen would be made up of former parliamentarians of the most diverse leanings, such as conservatives, Christian Democrats, radicals and socialists, under the presidency of former conservative Senator Hugo Zepeda.

ISSUE OF SOVEREIGNTY IN ANTARCTIC DISCUSSED

Santiago EL MERCURIO in Spanish 12 Jul 81 p A3

[Editorial: "Antarctic Rights"]

[Text] On occasion of the holding of the eleventh consultative meeting of the parties to the Antarctic Treaty, the discussion on exercise of national sovereignties on that continent came up again.

Preservation of our Antarctic sovereignty has two main policy aspects that must be taken into account: one, international in nature and the other, domestic in nature. The first aspect pertains to the possibilities that Chile's sovereignty, like the sovereignty of the other claiming nations, may actually be safeguarded within the framework of the negotiations in progress and of the future prospects for cooperation under the 1959 treaty. These columns have pointed out several times that it will be indispensable, in this field, to reconcile those national claims with an international system, without having either of these aspects entirely ruling out the other one.

Actually, in view of the fact that the Antarctic system has active participation both by nations claiming sovereignty and by others that do not recognize territorial claims, it is imperative for the solutions that may be achieved to have a high international component, as has been true of the treaty itself and of the convention on conservation of living resources. Nevertheless, in order for there to be an agreement, it is also necessary for those international regimes to take adequate account of the rights of those who are exercising their sovereignty in the region. Up to now, this has always occurred satisfactorily.

The chairman of our country's delegation to the above-mentioned meeting, Ambassador Fernando Zegers, has stressed the importance of carrying out, together with Argentina, a policy of joint defense of the respective Antarctic rights. Undoubtedly this is a desirable, positive measure, because both countries recognize each other's claims mutually and have pledged their Antarctic cooperation.

In addition, strengthening of our Antarctic rights has a domestic dimension, consisting in the national policies that will make Chile's continued presence on that continent and its development possible. In some fields, these policies have been successful and are contributing constructively to this objective. The permanent activity of the bases maintained there by our country and improvement of the sea

and air links between the mainland and the Antarctic are some outstanding examples in this connection. In other fields, however, serious deficiencies cannot fail to be observed.

The scientific research being carried out by Chile depends on the unselfish dedication of university scholars, without the existence of any significant support whatsoever as part of a development policy, except with regard to the necessary logistic facilities. The administrative structures participating in this field are characterized by their slowness and scanty flexibility. This has led to a questioning of their present effectiveness.

It would, perhaps, be advisable for this domestic dimension of the problem to be subjected to very careful study by the government authorities, because, if the Antarctic national policy measures are not consistent, in some cases, with the dynamism observed abroad and with the tendencies of Antarctic cooperation, our own rights could turn out to be affected.

CARDINAL CONDEMNS RESURGENCE OF VIOLENCE

PY241844 Paris AFP in Spanish 0153 GMT 20 Jul 81

[Text] Santiago, Chile, 19 Jul (AFP)--During mass held in this capital today Chilean Cardinal Raul Silva Henriquez made a fervent appeal to preserve dialogue and peace as well as the respect of all human rights in Chile and the world.

In a mass closing the 42nd International Eucharistic Congress held at the Lourdes Basilica, the Cardinal strongly referred to the resurgence of violence registered in the country the past few days.

At present our country is facing serious problems. We are faced with acts of terrorism and violence which we strongly condemn wherever they should come from or whoever they may be carried out by. He added that we cannot accept violence.

He said that the church has stated this by every means and at all times. The cardinal added: "We have been preaching this for 10 years now but nobody has listened to us. The church's protest hasn't been listened to.

Political violence in Santiago has resulted in four victims during the past 2 weeks. The last victim was Maj Ingrid Olderock of the Carabineros militarized police forces who was shot in the skull by a commando of the underground Popular Resistance militias.

The wave of violence started when a government agent of the National Intelligence Agency (CNI) was machinegunned by presumably leftist elements, followed by the murder of two members of the Movement of the Revolutionary Left (MIR), who were acting underground.

In this regard Cardinal Silva Henriquez stated: "We are really sorry about the climate of difficulties and so much violence we are experiencing at present. Our fatherland is entering a tremendously conflictive and difficult situation."

At the church which was crowded with believers, the head of the Chilean church recalled that a great fatherland can only be created through dialogue, respecting everyones rights.

He added that it is necessary to pray for all the men of good will of this world, which are the great majority, for all those who love Chile and those who love their fellowmen to follow the path of dialogue justice and peace.

Cardinal Silva Henriquez ended stating that we will pray that violence will end to make room for dialogue, justice, tranquility, peace and order which stem, precisely, from justice.

DEATH THREATS MADE AGAINST CNS LEADER

PY251353 Paris AFP in Spanish 2028 GMT Jul 81

[Text] Santiago, 22 Jul (AFP)--It was reported today that a leader from the dissident Union Coordinating Board (CNS) has requested court protection from death threats made by an apparently anti-Marxist secret group.

According to the report, unknown persons painted the hammer and sickle on the door of Hernan Jofre Ponce's house, and then, through anonymous phone calls, they warned him that he would meet the same fate as the leftist painter recently assassinated in Santiago by the self-style GAMA rightist commando.

GAMA this month claimed responsibility for the execution of an outlawed socialist party's leader who had been machinegunned on a street in this capital.

Jofre Ponce was imprisoned at the beginning of July together with nine other members of the Union Coordinating Board, charged by President Augusto Pinochet's government with claiming undue labor representativity.

CNS's President and Secretary General Manual Bustos and Alamiro Guzman are still in jail while the trial requested by the government is underway.

The Union Coordinating Board brings together centrist and leftist workers who reject the socioeconomic policy of the regime headed by General Pinochet since the overthrow of socialist President Salvador Allende in 1973.

The CNS last month submitted a memo listing its requests, and the government reacted by urging judicial action against CNS's leaders, who were referred to as communists.

APPEAL FOR WHEREABOUTS OF RETURNED EXILES

PY241622 Paris AFP in Spanish 1712 GMT 21 Jul 81

[Text] Santiago, 21 Jul (AFP)--Two Chileans in exile who tried to return to the country with forged documents were arrested in Argentine territory and handed over to the Chilean police 5 months ago. This was stated here today by a French lawyer who requested information on the whereabouts and fate of the arrested persons.

The legal action undertaken by attorney Jean Paul Levy, from Paris, is in favor of nurse Jose Alejandro Campos Cifuentes and farmer Luis Quinchavil Suarez who were stopped by Argentine border guards when they were crossing over the border to Chile on 19 February in Paimun.

Across the border from Paimun, 840 km south of Santiago, the Chilean army and air force are currently persecuting a group of leftist guerrillas who, according to the government have established a network of camps and refuges in a wooded area in the foothills of the Andes mountain range.

In the appeal submitted to the Santiago Court of Appeals attorney Levy states that after being arrested, Campos and Quinchavil were handed over to the Chilean authorities in compliance with an agreement between the respective police forces.

Levy himself pointed out that the two Chileans were carrying forged documents when they were arrested.

It was recalled that Campos and his friend had been incarcerated by President Augusto Pinochet's regime after late socialist President Salvador Allende was ousted at the end of 1973. Later their sentences were commuted to banishment and they reportedly sought asylum in Europe.

Attorney Levy is acting before the Chilean courts on behalf of the International Federation for Human Rights, the International Movement of Catholic Lawyers, the Pax Romana Organization and the Association of Independent Lawyers.

BRIEFS

MINISTER SCORNS PSEUDOLEADERS CRITICISMS--The Minister Secretary General of Government, Julio Bravo, today said that the government will not hesitate to implement all the necessary measures established by the constitution to face Marxist aggression. He also reaffirmed once again his faith in the Chilean workers and in their authentic representatives. He emphasized that their frank and loyal attitude noticeably contrasts with other pseudoleaders who prefer to use cunning and ill-intentioned criticism void of any positive contribution. These remarks were made by Bravo during a labor seminar on national modernization and development with the participation of more than 300 union leaders from around the country held in the facilities of the private employees union in this capital. [Text] [PY292210 Santiago Chile Domestic Service in Spanish 1730 GMT 29 Jul 81]

LEADERS REPUDIATE UNION COORDINATING BOARD--A group of 12 union leaders from the capital and the interior repudiated the National Union Coordinating Board (CNS). They stated that the organization lacks representativity and that it follows the instructions received from the [words indistinct]. (Juan Sanhueza) leader of the single Huachipato union, of the eighth region, stated that it is true that the workers have problems but that those problems will be solved through the corresponding channels. He added that we do not need foreign persons to come and interfere in the union leaders' activities aimed at solving the problems. In referring to the problems and concerns of the workers of Huachipato he stated that they are awaiting collective bargaining and have requested legal advice from the Labor Ministry under secretary for this. [Words indistinct] Labor Director General (Ramon Suarez) go to the eighth region. The remaining union leaders also voiced their full repudication to the CNS and charged it with being nothing but a facade for international communism. [Excerpts] [PY231930 Santiago Chile Domestic Service in Spanish 1730 GMT 23 Jul 81]

CARABINEROS CARRY OUT DRAGNET--Santiago, 25 Jul (AFP)--The Chilean police have arrested 2,505 persons, checked 5,300 vehicles and thousands of suspects throughout an operation which was launched on Friday and ended today. During the special dragnet carried out by Carabineros, suspects, persons without documents, prostitutes, illegal tradesmen and drunken drivers were arrested, according to the semiofficial news agency, ORBE. Police sources claimed that in recent months an average of eight taxi robberies, five deaths in traffic accidents and at least 30 crimes against persons or properties have been taking place in Santiago de Chile between Friday and Saturday. The same sources stressed the recrudescence of violence in the Chilean capital where the leftist Popular Resistance Militias

(MPR) have claimed responsibility for bank robberies, attacks on police stations and the assassination of various secret agents of General Augusto Pinochet's government. At the same time an alleged rightwing commando self-styled GAMA, has claimed having killed two leftists last week. [Text] [PY252015 Paris AFP in Spanish 2000 GMT 25 Jul 81

BRIEFS

OPPOSITION CHARGES HARASSMENT, SEEKS GUARANTEES--Bogota--The opposition sectors have asked the government of President Julio Cesar Turbay Ayala for full guarantees in the upcoming electoral campaign. After a meeting held today with the Bogota government secretary, Ricardo Correa Cubillos, the national opposition union denounced the militarization of the capital and the harassment to opposition sectors. The opposition sectors also expressed surprise over what they called the government's pretentiousness in connection with the granting of authorization to hold meetings behind closed doors, which they regard as unconstitutional and illegal. [Text] [PA291645 Bogota Cadena Radial Super in Spanish 2330 GMT 27 Jul 81]

FOREIGN MINISTER TO ANDEAN MEETING--Bogota, 29 Jul (AFP)--Colombian Foreign Minister Carlos Lemos Simmonds announced here today that he will participate in a "summit meeting" of Andean Pact foreign ministers that will begin on 24 August in Caracas. Lemos Simmonds, a 48-year old lawyer and newsman, accepted the invitation to the meeting that was made by Venezuela Foreign Minister Jose Alberto Zambrano Velasco through the Venezuelan Embassy in Bogota. Lemos Simmonds said that the "summit meeting" will include the foreign ministers of Colombia, Bolivia, Ecuador, Peru and Venezuela, and that the meeting is an offshoot from an earlier meeting the same foreign ministers held with Venezuelan President Luis Herrera Campins in Caraballeda in May. Lemos Simmonds said that "the meeting will allow us to seek means for strengthening the integration process of the five Andean countries." Lemos Simmonds will travel to Caracas 1 day before the meeting is scheduled to begin. [Text] [PA300030 Paris AFP in Spanish 1407 GMT 29 Jul 81]

GUERRILLA ACTION REPORTS--Bogota, 21 Jul (AFP)--Military spokesmen reported here today that one guerrilla died and two others were captured by the army in northwestern Colombia. The 4th Brigade, headquartered in Medellin, announced that the rebels belonged to the pro-Chinese people's liberation army which operates in th Uraba area, near the border with Panama. In Bogota 20 persons were arrested during raids made following yesterday's attack on the presidential palace, in which only two persons were badly hurt and minor damage done. Among those under arrest is Manuel Martinez, defense lawyer for Jose Antonio Navarro, one of the leaders of the extremist 19 April Movement, M-19, who is currently facing a court martial at La Picota jail. Also arrested were other presumed M-19 guerrillas who were recently released after serving their sentence. [Text] [PA241419 Paris AFP in Spanish 0025 GMT 22 Jul 81]

IDEOLOGICAL CONTACTS, PROPAGANDA, WESTERN MEDIA DISCUSSED

Havana CON LA GUARDIA EN ALTO in Spanish Dec 80, Jan 81

[Two-part article by Silvio Jova]

[Dec 80 pp 28-29]

[Text] We recently read a document of great historical importance: the report to the Seventh Congress of the Communist International that was presented magistrally by the Bulgarian leader Georgi Dimitrov. The report dates from 1935, but we saw in it numerous issues of current, and not just historical, interest. One of the principal issues on which he focused attention was the phenomenon of fascism and its way of serving the exploiting classes while using language full of demagogic slogans. We then understood how much the imperialists have learned from the methods used by the fascists and especially by its Nazi variant, on hearing President Carter speak about different events.

By no means can the imperialist propaganda media baldly reveal their true intentions. They disguise everything with a varied assortment of attractive slogans and words such as "freedom," "democracy," "human rights," and others. In this way, their entire policy remains covered by empty, but effective, phrases. Moreover, combined with this, which we could consider general in nature, just as the Nazis did several decades ago, they have campaigns more limited in scope that are oriented toward young people, workers, farmers, women, blacks, religious people, intellectuals, the military, and, in general, toward each class and social group that is oppressed in one way or another and whose interests run counter to those of the imperialists.

However, these campaigns are increasingly losing their rational character; that is, they cannot be based on valid reasoning capable of convincing. Of course, in the countries where capitalism rules, the general atmosphere is one of inundation with information, whereby it is possible to briefly turn the people's attention from fundamental problems. Day by day, however, it becomes more difficult to say something on the radio, on television, or in the movies and encounter a daily situation different from that suffered by the worker in the flesh. Even the traditional formula of divide and conquer becomes more dangerous because the bourgeois social system contains enough contradictions to be fostering others artificially. As a result, propaganda gives way to manipulation of the consciousness.

Manipulation depends on some elements of human psychology that derive from its animal heritage. It should be no secret to anyone that in man there are physical,

chemical, and biological processes, but that man is not a physical body, nor a chemical compound, nor an animal; he is a markedly superior being, for he is capable of consciously transforming nature through the use of tools. That is, he is a worker able to solve problems in an increasingly better way. Also, he has that capability in common with his fellow men; that is, living in society.

Manipulation springs from the existence in man of a number of unconditioned reflexes that arise and develop in childhood. When the human personality becomes defined during youth because of the social life that has been shaping each of its characteristics, we find that, as the saying goes, "Each person is a world." That world not only is full of ideas, knowledge, skills, and abilities but also possesses feelings and emotions. It interacts within itself in complex processes by which man identifies, evaluates, plans, and acts. But there is a number of mechanisms in these processes that need not be learned, e.g., fear, sexual attraction, the digestive system, defenses from attack. These constitute a unit responsible for watching over human survival; the scientific study of them receives considerable attention throughout the world. The imperialists have studied them--and are studying them--with great care.

Hence the great pornography business that enjoyed a boom recently throughout the capitalist world, based on the acquisition of thousands of millions of dollars in earnings from the human being's powerful sexual mechanism. The use of violence in their movies is also the use of that system in the human mind where fear and the capacity for defense and attack to save one's life, etc., are mixed. Hence a number of elements has been discovered that can unleash these mechanisms and systems without participation by the "polite" part of man's consciousness. An example is the research concerning colors that provoke certain reactions of excitation. With a certain intensity and other characteristics, sounds, too, can provoke simple involuntary acts. Through the combination of several of those resources, unthinkable actions can be produced for a time.

However, if we also take into account that in the very process of teaching, effective methods have been discovered for fixing ideas, such as repetition, the linking of the word with corresponding images and sounds, the coupling of new content to be learned with aspects of the student's daily experience, etc., we find that imperialist propaganda possesses sufficient resources to manipulate people's consciousness, and that they sometimes act contrary to their principles and interests. Obviously, for this to occur, it is necessary that the person constantly be in a favorable environment, such as that existing in any capitalist society, in which the school, the communications media, the social organizations, the government, and practically everything is designed to hide reality, presenting it concealed and distorted. In socialism, because its social system--and within that, education--is a means for man to become increasingly in touch with reality, it is practically impossible to manipulate man because he is taught the truth; and Marxism-Leninism begins with the raising of man's consciousness to full understanding of nature, society and thought and the laws that govern his development. Socialist man is free because he knows reality and cannot be manipulated. This is unquestionably so if man does not turn his back on socialism and oppose it, allowing himself to be penetrated by various routes.

[Jan 81 pp 22-23]

[Text] One of the most important media of propaganda and agitation is personal contact, direct discourse between people without an intermediary or with a minimum of mediation--for example, a microphone. It is the most effective way of transmitting ideas to others, especially because it is possible to immediately perceive the positive, negative, or neutral reaction of the recipient of the message.

Perhaps it would be appropriate, since at times the best intentions are frustrated by a poor beginning, to explain at the outset what we call propaganda and what we call agitation. In daily life, the two terms are used in nearly the same sense, but there actually are differences. Propaganda is systematic and is intended to inculcate a body of developed ideas that correspond to the interests of a social class.

Agitation is more limited; that is, it embraces one or two ideas, but it seeks a more immediate response from people, focusing for that purpose on their emotions, their feelings. For example, a lecture on capitalist exploitation, its essence, and the economic laws governing it is propaganda, although, given our situation in the ideological struggle, it has elements of agitation. But an act of rejection of a counterrevolutionary deed is agitation, for it moves us to condemn our friends.

The imperialists also have their direct agents for their ideological work. However, there is no question that in that critical field the Revolution can bring much greater resources into play.

Who is the agent for the enemy's direct propaganda? He who at times of most intensive aggression of all kinds by the American government and its lackeys against Cuba serves as emissary to their disseminators of propaganda. As a rule, their sources of information are the capitalist countries' broadcast transmitters, whose distorted versions of events they undertake to spread among innocent or politically and ideologically untutored people.

Where do these agents come from? Their natural origin is the social groups, sectors, and classes hostile to the socialist transformation of society in general and of our country in particular. Because of their origin, the exploiters who were affected by the revolutionary laws constitute the chief bastion of reaction, but not the only one. There are also those who were a part of the repressive apparatus serving those classes, as well as all the social parasites generated by the system: the criminals, hoodlums, gamblers, and so forth. Since 1959 there has been a process of the social cleaning up of Cuba, but there are still remnants of that society, although insignificant in number.

Now, the capitalist system in Cuba also had the characteristics of underdevelopment. This meant that for the American imperialists Cuba represented:

--A place of amusement for lazy Yankees could experience strong emotions.

--A market for placement of their products under advantageous conditions.

--A "reserve" country where they could find what the monopolies needed at a given moment: whether a vote at the United Nations or a boxer to entertain the public and in passing to squeeze a few dollars out of the workers in gate fees and bets.

Therefore, everything that lay outside these needs of the financial oligarchy had to develop on its own. The levels of education, public health, social security, etc., were minimal in order to guarantee earnings, and they were not lower because of the Cuban workers' constant struggles.

In our history we see that revolutionary struggles developed precisely within the bounds permitted by the system established in Cuba by the United States, who made use in part of what they found useful in the Spanish colonialism endured for 400 years. Outside the "limits" of what was permissible, there appeared distorted solutions for a number of the country's vital problems.

For example: Because there were not enough doctors, there were quacks; culture was restricted for the masses, so a pseudoculture developed; there was inadequate housing, so unhealthy tenements and slums were created; and so on.

In combination with this, the army of unemployed that the capitalists maintained as a result of their system's law of capital formation* also created a number of marginal occupations that allowed a precarious subsistence. However, in the capitalist society the major objective that this instilled in everyone was to "get rich," or, what is the same thing, to "have more things and money than the others." This meant, too, obtaining wealth by the shortest route, which undoubtedly was not that of work but rather that of political and social parasitism. To achieve that it was necessary to prepare, to train, from early childhood.

With the triumph of the Revolution, the basis for "exclusion" disappeared; but this problem persists. It is an objective phenomenon independent of the will of the revolutionaries, whose immediate, total solution is not possible because of that very inherited underdevelopment, with its economic characteristics and partial scarcity of natural resources. A whole variety of semiproletarians and dispossessed remain as a legacy of that situation, surviving at the cost of the difficulties inherent in any revolutionary process, aggravated in our case by two factors: the constant threats of military aggression by the imperialists and the criminal blockage with which they attempted to destroy us economically.

Those elements, that is, the enemy's ideological agents, masquerading at times as religious figures or as intellectuals, primarily use the method of rumor to spread false and generally alarming news. At the same time, they carry out quiet little ongoing campaigns against all revolutionary measures, especially those involving issues related to the supply of goods. They choose as their audience

---

*The explanation of the essence of the general law of capital formation makes it possible to understand the antagonistic nature of this formation. On the one hand, it leads to an increase in the wealth held by capitalists, and, on the other, to the worsening of the situation of the laboring class and other working sectors.

those who are likely to repeat like parrots what they hear, for they are too lazy to read a revolutionary newspaper or magazine, or, because of their cultural limitations, which they have not tried to overcome, they lack the insight to distinguish between the truth and lies. Let us take into account that lies can be adorned with numerous details that make them more attractive, whereas the truth cannot be altered.

To counteract this direct action of imperialist ideology, it is necessary to carry out constant agitation among the masses. It is not enough, though, to want to do it. It is necessary to know some basic points to avoid errors in this important work. In the first place, it must be systematic; that is, at each meeting, in any activity, it is necessary to give the revolutionary message, taking into account the specific situation in which the country finds itself. Second, it is necessary to adapt the presentation of revolutionary ideas being given to the context in which we find ourselves: In a commemorative or reverential activity, the tone must be suitable and different from that used in a festive gathering or a cultural/recreational ceremony. Third, we cannot overlook the characteristics of the person or persons listening to us; that is, their age, cultural level, temperament, political development, and so forth. We should approach young people on the basis of their inexperience and uncertainty, their optimism and strong need to learn. Women, especially housewives, who daily face a number of domestic problems, must be given special treatment. In short, we must not forget that the best content can be misinterpreted because of the use of an inappropriate form.

Finally, who is responsible for carrying out this job of agitation? All revolutionaries can do it, but each one in the field where he is best prepared, remembering that each day it is necessary to study, read the press, increase our knowledge with guidance from our leaders and especially from Fidel's extraordinary teachings.

Agitation correctly performed shall contribute to the development of new ideas and attitudes consistent with socialism, while also serving to demolish capitalist concepts, new and old, obvious and hidden. In this way, the enemy is also defeated in the ideological struggle.

'RADIO HAVANA' ON INTENSIFICATION OF CIA ACTIONS

PA212235 Havana International Service in Spanish 0000 GMT 21 Jul 81

["World Events" Commentary]

[Excerpts] The current U.S. Government has given a green light to the Central Intelligence Agency, CIA, to intensify its activities throughout the world.

The current capture of five Cuban-born counterrevolutionaries who infiltrated Cuba through the coast of Matanzas Province to assassinate President Fidel Castro confirms that the CIA continues to use all possible means to achieve its objectives.

The U.S. espionage office was created in 1947 almost at the beginning of the so-called cold war, when campaigns of persecution and imprisonment of progressive U.S. citizens were carried out. The history of the crimes it has committed throughout the world is long.

Who isn't aware that today the CIA is using all its resources to try to destabilize the progressive governments of several countries of Africa, Asia and Latin America? Even inside the United States, the CIA has used its criminal resources to support the most reactionary and fascist U.S. sectors. The assassinations of President John Kennedy, his brother, Robert, and black leader Martin Luther King have been described as a result of conspiracies in which the CIA was not uninvolved. These assassinations were not the result of simple actions of individuals, as the U.S. courts ruled.

In an effort to cover up the activities of the organization which were made public by a Senatorial committee in 1978, the CIA reiterated that it would keep secret documents related to the crime in Dallas. Frank Carlucci, the then-second in command of the espionage organization and current defense under secretary, said that the disclosure of certain documents would affect the protection of important sources of the espionage organization.

Despite this reality of CIA's dirty role inside and outside the United States, in April, reforms in the CIA code of conduct introduced by the government abolished a 1978 executive order which limited its actions. The CIA can now carry out its secret and subversive actions inside and outside the United States. The dirty work of the CIA is now considered by the Washington government as a matter of national security.

FIDEL CASTRO SCORES UNITED STATES ON SOUTH AFRICAN POLICY

Havana GRANMA WEEKLY REVIEW in English 26 Jun 81 p 1

[Text of message from Fidel Castro to Akporode Clark on the occasion of the International Day of Solidarity with the Struggling Peoples of Southern Africa]

[Text]

● *UNITED NATIONS, June 16 (PL).— The head of state and government of Cuba, Fidel Castro, sent a message to Akporode Clark, president of the Special Committee on Apartheid, on the occasion of the International Day of Solidarity with the Struggling Peoples of Southern Africa being commemorated here.*

In his capacity as chairman of the Movement of Non-Aligned Countries, Fidel Castro condemned the United States for the military, economic, political and diplomatic aid to the South African racist regime.

The full text of the message is as follows:

On the occasion of the International Day of Solidarity with the Struggling Peoples of Southern Africa, we express our solidarity and support for our struggling African brothers and sisters, who every day sacrifice their lives in an unequal battle for independence and for fundamental and inalienable rights — rights denied to them under the wicked and inhuman system of apartheid by the racist minority now usurping power in South Africa and Namibia

The process of decolonization has now reached its final stage. Supported by the world's progressive forces, the national liberation movements are making important headway, and in spite of all the difficulties they face, the day is fast approaching when the last bastions of colonialism and racial oppression in southern Africa will be demolished.

In contemptuous disregard of the decisions of the United Nations, the Organization of African Unity and the Movement of Non-Aligned Countries, the South African Government has refused to withdraw the troops illegally occupying Namibia, upholding the apartheid regime there and thus promoting the exploitation of the Namibian people and the plunder of their natural resources. Led by SWAPO, their sole legitimate representative, and supported by constantly growing solidarity, the Namibian people continue to rebel and struggle against this oppression.

Apartheid violates all the fundamental principles of civilized society. By its very nature it is an irritant, a provocation and a threat to international peace.

In spite of countless efforts made by the United Nations, the Organization of African Unity, the Movement of Non-Aligned Countries and other international organizations on behalf of southern Africa's oppressed peoples, the racist regime in Pretoria is waging a racist war against millions of people, continuing to occupy Namibia illegally and threatening and attacking its neighbors, which are peace-loving sovereign states. It is to blame for the increasingly tense and explosive situation in that part of the African continent.

The Pretoria regime persists in a policy of bloody repression against the black population which forms the overwhelming majority in the country, jailing, torturing and murdering their fighters and applying the harshest measures against the entire people. Even women and children have been killed on the streets and in the prisons.

We all angrily recall the savage slaughter of peaceful demonstrators in Soweto in 1976, the South African regime's repressive answer to the African population's wholehearted rejection of the policy of racial discrimination. We recall, too, the Cassinga massacre, when hundreds of Namibian refugees were murdered in Angolan territory, in violation of that country's territorial integrity and sovereignty.

The policy of apartheid and the illegal occupation of Namibia can only be maintained with the help of certain powers, such as the United States, whose support to apartheid was denounced by the foreign ministers of the members of the Coordinating Bureau of the Non-Aligned Countries at their recent meeting in Algiers.

During the 6th Summit Conference of the Movement of Non-Aligned Countries held in Havana, the heads of state and government paid homage to the heroism displayed by the South African people and their liberation movement, praised the Namibian people and SWAPO for intensifying and carrying forward the armed struggle, and reiterated their conviction that this form of struggle must be given total and active support if the full liberation of Namibia is to be hastened.

We condemn South Africa's continued violation of the principles of international law. Relying on military, economic, political and diplomatic aid from the Government of the United States and its allies, it is committing aggression against Angola, Mozambique and other neighboring countries.

We further condemn all attempts by the imperialists and South Africa to uphold the legal status of the puppet regime set up in Namibia, with which they are trying to silence the world's demand for the independence of Namibia and to make its people lay down their weapons.

Once again we show our solidarity with the Namibian and South African peoples and with all other peoples struggling to obtain their legitimate rights. We condemn the economic activities and interests of the imperialist and colonialist powers in southern Africa, which prop up the racist South African minority regime in order to safeguard their own economic and strategic interests.

Finally, we wish to make it clear that we will never forget those who have fallen in defense of the most basic human rights, those who have dedicated their lives to struggle for the equality of all, social justice and world peace.

U.S. DICTATED RESULTS OF OTTAWA SUMMIT

PA251905 Havana International Service in Spanish 0000 GMT 25 Jul 81

["World Events" Commentary]

[Text] The results of the meeting that the world's seven most industrialized capitalist countries held in Ottawa did not surprise anyone. Long before the opening of the so-called capitalist summit, which was held on 20 and 21 July in the Canadian capital, it was a known fact that although there might be certain differences between the United States and some of its allies, the results of the meeting would be defined by Washington's policy.

This is why the final declaration signed by Great Britain, France, the FRG, Canada, Italy, Japan and the U.S. reprsentative mentions exclusively those matters that concern the defense of their powerful economic and political interests.

A few days before the opening of the Ottawa summit, the U.S. press declared, on the basis of State Department sources, that efforts must be made to keep the differences among the allies from being publicly discussed and President Ronald Reagan's first appearance in the international arena from turning into a failure.

Canadian Prime Minister Pierre-Elliot Trudeau confirmed this shortly afterward, when he said at a news conference that not too many specific things should be expected from the meeting.

After 2 days of work at the capitalist summit meeting following a number of important and decisive meetings previously held by Reagan with French Chief of State Francois Mitterrand and with FRG Chancellor Helmut Schmidt, the final document was released.

In the first place, the document admits that the current policy of fighting inflation by means of the high interest rates implemented by the United States will continue for some time. In other words, Washington imposed its monetary policy even though this means making the other nations' stabilization measures more difficult while influencing both their exchange rates and their economies.

Neither did the Ottawa meeting offer any hope of a change in the discriminatory conditions that characterize the current international economic order. Proof of this is the fact that the seven allies conditioned possible aid to developing nations mostly to reinforcement of the capitalist powers' economies and to the

elimination of obstacles to investment capital. As can be imagined, all this implies the intensification of economic, political and military pressures against the so-called Third World.

With the capitalist summit meeting's political declaration, the United States also obtained support from the other participants for the anti-Sovietism that characterizes its current policy. Once again it was shown that Washington maintains its opposition to detente and support of the arms race. To this end, it has created and holds in reserve the false idea of a Soviet threat.

In spite of the fact that both France and Great Britain asked that Israeli attacks against the Arab countries be condemned, only once was it mentioned that the military escalation and the constant violence in the Middle East are deplored. The adoption of such positions will not curb Tel Aviv's expansionist fury, which is encouraged by Washington.

Everyone is familiar with the concern of some of the U.S. associates over U.S. policy in both the Middle East and Africa, its negative attitude regarding the negotiations on disarmament and the obstacles it raises to the solution of the problem in Namibia. Nonetheless, the final document of the Ottawa meeting does not mention this variety of views. On the contrary, all the participants endorsed Washingon's recalcitrant position, thus helping prolong and worsen the already serious problems of the capitalist society, further intensifying international tensions and making the people's efforts to obtain justice more prolonged and painful.

TURBAY ACCUSED OF PANDERING TO U.S. INTERESTS

PA290350 Havana International Service in Spanish 2310 GMT 28 Jul 81

["Our America" Commentary]

[Excerpts] The Nicaraguan Government has vigorously rejected the slanderous accusations which Colombian President Julio Cesar Turbay Ayala made on 20 July against this Central American country.

The protest is contained in a note which Nicaraguan Foreign Minister Miguel d'Escoto sent to Carlos Lemos Simmonds, his Colombian colleague.

Opening the regular sessions of the Colombian Parliament, President Turbay Ayala said that in the new Nicaragua, there is neither less poverty than in the past nor greater respect for human rights than during the Somoza tyranny. In addition, he accused the leaders of the Sandinist revolution of encouraging imperialist passions.

In his note rejecting these absurd accusations, the Nicaraguan foreign minister says it is unbelievable that Turbay Ayala has made the serious mistake of criticizing the Nicaraguan Government in a field in which, according to published reports, is one of Colombian domestic policy's weakest areas.

It is highly significant that Julio Cesar Turbay Ayala has launched these charges against the new Nicaragua at a moment when the aggressions and threats of the U.S. imperialists against the Sandinist revolution are increasing.

Of course, nobody is astonished because once again, Turbay Ayala takes up a reactionary and proimperialist stance in this case. The person who today occupies Colombia's top position has always done this. However, one would have expected that Turbay Ayala might have been more moderate, more intelligent, in discussing issues for which his government has been criticized, especially by the Colombian people themselves.

It is obvious that the Colombian chief of state, besieged by a domestic economic and social situation that daily provokes more popular protests, has been able to find no other solution to his problems than to openly join the aggressive policy of the Washington government.

We must recall that as soon as the U.S. Government stepped up its campaign against Cuba, Turbaya Ayala severed diplomatic relations with our country. And now, when the imperialist campaign against Nicaragua becomes more intense, the Colombian president attacks the Sandinist revolution.

It is known that the Washington government has offered President Turbay Ayala several loans in an attempt to redress Colombia's dire economy. The Washington government has also offered support for the Bogota government's claim to the Caribbean islands and cays which United States snatched from Nicaragua half a century ago and later ceded to Colombia.

It is also known that the United States conditioned the fulfillment of these promises with Colombia's severing of relations with Cuba and its support for anti-Nicaraguan postures.

By satisfying these U.S. demands, Julio Cesar Turbay Ayala draws close to the most aggressive positions of the imperialists but therefore draws farther from the interests of the people of Colombia and of all the peoples of our America.

UNITED STATES SEEN OPPOSING UN, UNESCO AIMS

Havana GRANMA WEEKLY REVIEW in English 21 Jun 81 p 7

[Article by Luis M. Arce]

[Text]

THE UNITED States has taken action against the UN and UNESCO in an effort to reduce them to mere appendages of its foreign policy, while at the same time proclaiming support for the Organization of American States (OAS), its "ministry of colonies." Vice-President George Bush has strongly attacked the UN and UNESCO and even threatened them with a loss of funds and other punitive measures.

An unidentified State Department spokesman quoted by the New York Times said the United States would use a carrot-and-stick policy in those institutions, based on how the governments represented there voted on issues of interest to the United States.

Such gall is unprecedented, but anything can be expected from the Yankees. And the diplomatic brutality of the United States has very concrete objectives.

This year the UN General Assembly will initiate the round of global negotiations for the establishment of the New International Economic Order. Matters of great concern for humanity will be discussed, such as energy, trade, finance, export of raw materials and, in general, everything that hampers the economic development of Third World nations.

With this in mind, the United States is opposed to a strong UN which would be capable of forcing the imperialist powers to yield to the demands of the underdeveloped countries. Nor do they want an organization like UNESCO which sponsors campaigns to end illiteracy in Third World nations and opposes the news and information monopoly held by a small group of imperialist corporations.

At its latest meeting in Belgrade, UNESCO voiced the need for a New International Information Order and as a result Vice-President Bush accused the organization of calling for "international censorship."

But while Bush makes attacks on the UN and UNESCO, he says his government will support and strengthen the OAS.

Of course, the OAS has always been a ministry of colonies of the United States and now the Reagan administration requires its services to implement a so-called Marshall Plan for Central America and the Caribbean. This plan would serve as a cover for U.S. political, military and economic backing for bloodthirsty regimes such as those in El Salvador and Guatemala and intensified attacks on Cuba, Nicaragua and Grenada, the national liberation movements and the struggle of other patriotic and progressive forces in the region.

Given the pressing nature of the economic and political problems in the Third World, it is laughable that the United States should be involved in "development" programs like the Marshall Plan. The result of that plan, implemented in Europe after World War II, was a big increase in the export of U.S. capital and the extension of the U.S. sphere of influence.

The fact of the matter is that the Reagan administration, in opposition to the Movement of Non-Aligned Countries, is trying to take the global negotiations out of the UN in order to cause them to fail and prevent the establishment of the New International Economic Order. This failure would help the United States maintain its neocolonial system of economic exploitation and political domination.

The attacks on the UN and UNESCO; the proposed Marshall Plan for Central America and the Caribbean; the abortive attempts to set up a reactionary organization similar to NATO in the South Atlantic and another grouping of this sort in the Pacific; the attacks on the Soviet Union, Cuba, Nicaragua, Vietnam, Kampuchea, Angola, Afghanistan, Ethiopia, Grenada and other countries are all part of the same game, a very dangerous game through which the United States seeks absolute world hegemony, a goal not in keeping with this day and age.

NICARAGUAN AGRARIAN REFORM HELPS PEASANTS

PA032243 Havana International Service in Spanish 0000 GMT 2 Aug 81

["Our America" Commentary]

[Text] For more than four decades the Somozist dynasty controlled important Nicaraguan economic sectors, including 30 percent of the arable land in the country. Hunger, misery, illiteracy and poor health became worse during this time. After the victory of the revolution on 19 July 1979, the Latifundiums which belonged to Somoza and his henchmen were immediately confiscated. A total of more than 900,000 hectares of land were recovered in this fashion.

However, this land could not be turned over by the Nicaraguan state to the peasants because it was being used and contained large agroindustrial installations which made the subdivision of the land absurd. According to the national government of reconstruction's program, other Latifundists were not affected but were urged to increase production for the benefit of the country's economy in order to feed the people.

At the same time and to prevent the exploitation of the peasants, price ceilings were set for land rentals. However, the generosity of the revolution clashed with the unpatriotic attitude of many Latinfundists who refused to rent their land to peasants who were anxious to till it and left the land unused or simply went abroad and abandoned it.

Therefore, 2 years after the revolutionary victory, a little more than 1 percent of the landowners of Nicaragua were holding 47 percent of the country's arable land while 60 out of every 100 small landowners held only 5 percent of the arable land. It so happened that 100,000 peasants had no land at a time when 1.2 million hectares owned by the Latinfundists were left untilled.

As a result, the peasants demanded a radical transformation of this unbearable reality in a country in which its revolutionary leaders are trying to eliminate the exploitation and misery inherited from the Somozist past. This is what the peasants were demanding, not only for their individual intersts, but for the welfare of all of society which must increase agricultural production which generates the principal export products, such as coffee, meat and cotton.

These demands were met this past 19 July, the day of national liberation, when at a rally held on the second anniversary of the victory over Somozism, Commander Daniel Ortega, coordinator of the government junta, made public the proposed agrarian reform project, which was immediately brought to the Council of State and approved on 24 July.

The law will be applied against land left untilled or abandoned by their owners as well as by those persons who left the country after the revolutionary victory and did not return. The beneficiaries will be the colonizers, tenant farmers and other intermediaries, the peasants without land, the cooperative and agrarian reform enterprises, the producers who know how to till it, fighters of the liberation war and relatives of martyrs who want to farm.

We cannot live in peace, said Nicaraguan Agrarian Reform Minister Jaime Wheelock, as long as there is misery in the country because if misery is terrible anywhere, it is terrible in the rural areas. With the agrarian reform law which was approved, Nicaragua seeks principally to abolish exploitation and misery of the large peasant majority and to answer the peasants' most legitimate historic aspiration, the right to own land.

DEVELOPMENT OF U.S. NEUTRON BOMB SCORED

Havana GRANMA WEEKLY REVIEW in English 21 Jun 81 p 7

[Article by Oscar Ferrer: "The Neutron Bomb: Capitalistic Logic--Property, Not People"]

[Text]

HIGH-LEVEL POLITICAL and military decisions in the United States tend more often than not to ignore world public opinion. With willful disregard of the aspirations of humanity, Washington adopts antipopular and unreasonable measures that not only seriously threaten international peace and détente, but also lessen the possibility of making headway towards disarmament and give new impetus to the arms race instead of bringing it to a halt.

The U.S. Department of Energy has just announced in Washington that it has begun manufacturing components for the neutron bomb. Many millions of dollars in resources have been allocated to building this bomb, an ideal capitalist weapon, since it destroys human life but, by using radiation instead of explosive force to kill people, leaves intact all factories, buildings and other facilities within its radius of impact.

According to the announcement from the Department of Energy, production of a new nuclear warhead for the Lance missile has just begun. It added that production of a new nuclear artillery missile capable of carrying a neutron warhead will start in July.

The measure was taken in spite of the fact that the mere suggestion that this terrible weapon may eventually be produced has on several occasions prompted huge protest demonstrations against the United States in countries all over the world.

It was in April 1978 that President Carter, under pressure from an avalanche of protest against the United States from all over the globe, was compelled to announce that his country had postponed production of the neutron bomb "indefinitely," reversing his earlier announcement — that the bomb would be produced — in view of the wrath of all peace-loving peoples.

Later, in October 1978, in flagrant disregard of the April decision, he ordered production of a new generation of nuclear warheads capable of carrying neutron bombs, gave instructions to modernize the Lance missile system and signed a law authorizing funds for producing the basic components of the neutron bomb.

This new move also met with international repudiation and some Western European countries refused to become launching pads for these weapons — another setback for the White House and the Pentagon.

But as soon as the new U.S. administration was inaugurated, Pentagon chief Casper Weinberger baldly declared that he favored stationing the neutron bomb in Europe. This prompted more protests and criticism of the U.S. Government for endangering peace and spurring on the arms race.

Unquestionably, Washington's new decision to give the green light to the neutron bomb will again be justly and strongly condemned by the international community and by the people of the United States themselves, who are the ones that will have to pay for producing this weapon with the deductions from the social welfare budget.

It is time the U.S. Government realized that the whole of humanity is against the neutron bomb.

U.S. WORKER EXPLOITATION, MONOPOLIES' ROLE EXAMINED

Havana CON LA GUARDIA EN ALTO Feb 81 pp 14-15

[Article by Silvio Jova]

[Text] Recently, while riding in a bus, I heard the following fragment of a conversation between two adult citizens the subject of which is obvious:

"Have you heard anything about your uncle?"

"Sure, man. The other day he sent a letter to his sister, another aunt of mine."

"How's he doing?"

"He seems to be fine. He says that he has a job now and earns twelve dollars a day."

"Twelve dollars a day! Well, it's true that the person who has a job never has problems."

That was all I heard, but the last remark was more than enough to realize how much confusion there was in that mind. Actually, anyone who analyzes the situation in the United States and the other capitalist countries becomes convinced of the amount of ingenuousness or of evil intent underlying the expression "has no problems" when speaking of a worker in such a system.

When the exploitation of man by man arose in servitude several millenia ago, there began a process in which those who were owners of the basic means of production expropriated a part of the labor of the masses for their own private benefit. The different forms of servitude evolved: From it feudalism arose, and from that, oozing mud and blood, the bourgeois system. Throughout this development, a minority of society exploited the great masses of workers.

Capitalism itself was transformed. Its exploitive essence remained the same and continued to be based on the appropriation of surplus value by the bourgeois class, which was united with other exploitive classes and groups left over from feudalism and even servitude. At the end of the last century, though, the process of "free" competition and the appearance of certain productive sectors that required enormous investments gave rise, through the concentration and centralization of capital, to monopolies. These were enormous manufacturing, commercial,

banking, service, etc., enterprises of gigantic size and financial resources by means of which they could acquire a huge profit and have a decisive influence on /all/ [in boldface] spheres of social life. That is the imperialist phase.

We stress /all/ [in boldface] because the monopolies, owing to their power, encompass whatever physical and spiritual activity takes place in society. Even the labor organizations--the antithesis of capitalism--have been penetrated, sabotaged, and hampered in a thousand more or less crude or subtle ways.

Under state monopoly capitalism, the present form of imperialism, this control over all of society reached inconceivable levels some years ago, serving only as subject-matter for science fiction. In the large capitalist countries, private life is an illusion for hundreds of millions of people.

Let us look at an outline of the present mechanism with which the monopolies squeeze the workers (and squeeze not in a figurative, but rather a real, sense). It is appropriate to note, first of all, that the term "workers" includes various social sectors and classes. They are all those who live by their own personal labor. First is the proletariat, dispossessed of the means of production and therefore forced to rent or sell its labor to achieve subsistence for itself and its families. Poor and medium-size farmers, clerks, artesans, etc., are also workers. Now, today there is progressive proletarianization of all manual workers or intellectuals. All the exploited sectors and classes are assuming very similar characteristics, and their particular and common interests are merging. This socialization of production makes clearer a structure in which an increasingly small dominant group exploits an immensely greater mass of the people.

Because of the above, let us first analyze the "classic" mechanism of capitalist exploitation; that is, the acquisition of surplus value and the methods of making it grow continuously. The productivity of laborers in the developed capitalist countries is high. This enables the wage-earning worker to produce value equal to his wages within an increasingly small part of his working day; he spends the rest of it on creation of value to be divided by the financial oligarchy among it and its allies and agents.

As if that were not enough, technical development under capitalism leads to the constant pushing into the street of tens of thousands of laborers, with which a growing reserve of labor is created, which causes a decline in the wages of those who have the "good luck" to be employed. In the 24 most highly developed capitalist countries, there are around 20 million unemployed. In the United States, for example, there are approximately 8 million acknowledged unemployed; but there are many more partially employed. Those 8 million constitute 7.6 percent of the working-age population. In the underdeveloped capitalist countries, as a rule, the percentages of unemployed are two-digit figures. It should be recalled that in Cuba at the time of the triumph of the Revolution, it was around 20 percent.

But what happens to the wages of those who have the uncertain luck to keep their job? -- and with all this we are responding to the dialogue with which we opened this piece -- For one thing, they suffer the effects of a runaway inflation characterized by an annual increase in prices, which reduces the buying

power of the money held by the workers. In the eight most highly industrialized countries in the capitalist sphere, this inflation stood between 10 and 20 percent in 1979.

An essential element for analysis of the exploitation of workers under monopolistic conditions is the policy that the monopoly firms can adopt -- because of their total control over the country's economy -- of "Take it or leave it." That is, they impose totally artificial prices, buying cheap and selling dear, creating artificial scarcity of a product, etc. By this method they also wipe out the small and medium-size businessmen through manipulation of various resources intended to force them into bankruptcy and shift them toward the proletarian or semiproletarian sectors.

Shall we continue? Next come taxes. One item serves as an example: 20.7 billion dollars have to come out of the pockets of taxpayers in Canada. In the United States, the worker's monetary contributions to the bourgeois state for the maintenance and strengthening of the system are much greater in the form of taxes of all types: municipal, state, federal, and so forth. And what are those taxes used for? Primarily to nourish the monopolies, especially those in the military-industrial complex, by means of an increase in expenditures for the arms race.

However, the exploitive mechanism does not end here. A daily, crushing bombardment by radio, press, television and other media drives the workers to use their money on tempting offers of luxury goods and products of questionable quality with an unending proposition: "If you don't consume such-and-such an article, you can't be considered a reliable, modern, praiseworthy, etc., man or woman." One case is that of the violence promoted by programs and publications full of crimes of all types whereby one solution is offered: the purchase of weapons for defense from the wave of murders, rapes, and attacks incited by the same people who sell the arms.

Of course, we cannot forget that those who belong to the sectors of the population that suffer discrimination because of their color, sex, or nationality experience twice the exploitation, with lower wages, greater unemployment, fewer opportunities to advance, and a guaranteed portion of scorn. In the United States, unemployment among blacks is over twice that of whites (14.2 percent as against 6.7 percent in October 1980).

In concluding, we will touch on other issues that still do not exhaust this subject. The first is that of the situation of the countries that depend on the imperialists. Their unfavorable position makes them victims where the monopolies can unload crises; and, as is evident, those who suffer the consequences in those countries are the workers.

Second, exploitation is not only a limiting to the minimum for survival, with little food and housing, health, and education problems. It is also the spiritual suffocation that keeps hundreds of millions of people forced to live in ignorance and unenlightenment, without access to the cultural treasures accumulated by generations of workers, and the moral swamp of prostitution, vice, and corruption that constitutes bourgeois society.

We can add, moreover, the extremes reached by the exploitation. The criminal repression of malcontents and dangerous people, with thousands of murders, torture, and daily disappearances; and, along with it, the slow death from hunger and incurable diseases of millions of men, women, and children.

Yet, as Lenin said in 1920: "Imperialism is the anteroom of the social revolution by the proletariat. This has been confirmed on a worldwide scale in 1917."*

CUBA CONDEMNS RECENT ISRAELI AGGRESSIONS IN LEBANON

FL211510 Havana Domestic Service in Spanish 1400 GMT 21 Jul 81

[Text of undated communique released by the Cuban Foreign Relations Ministry]

[Text] The actions of the Tel Aviv government are once again stirring up world opinion, but this time the events are particularly alarming because of the criminal nature of the attacks which have taken place a few days ago against the Lebanese civilian population claiming hundreds of killed and wounded victims among the citizens. Making these events still more serious, spokesmen of the Zionist government have proclaimed with an incredible callousness the intention of continuing the indiscriminate attacks on civilian Lebanese objectives.

These latest Israeli aggressions, as well as the one recently carried out against the Iraqi nuclear plant, are obviously part of a sinister plan, duly coordinated with U.S. imperialism, with no less a purpose than the physical elimination of the Palestinian people and the intimidation of the Arab peoples with the aim of imposing by force the policy outlined in the Camp David agreements and the separate Egyptian-Israeli agreement.

In view of this serious situaton, Cuba together with the other members of the nonaligned countries' movement states in the strongest terms its condemnation of this expansionist, aggressive and criminal policy on the part of the Zionist government and its imperialist backers.

In compliance with government instructions, the Ministry of Foreign Relations is holding consultations with the most directly affected parties in order to promote with the nonaligned countries' movement practical measures which will contribute to putting an end to these repeated Zionist aggressions and compel the Israeli Government to respect the most elemental norms of international law.

BRIEFS

ETHIOPIA'S MENGISTU RECEIVED--In Addis Ababa, Socialist Ethiopia's President Mengistu Haile Mariam and Hector Rodriguez Llompart, minister-president of the State Committee for Economic Cooperation, have held cordial talks. Llompart heads Cuba's delegation to the third meeting of the joint commisson for economic, scientific and technical cooperation. The top Ethiopian leader hailed the fruitful results of cooperation between the two nations and the support that Cuban internationalist combatants gave to the Ethiopian revolution when it was treacherously attacked from abroad. Likewise, Mengistu Haile Mariam noted the importance of Cuban cooperation in various sectors of the Ethiopian national economy, mainly in agriculture. Rodriguez Llompart conveyed to the chief of the Ethiopian revolution warm greetings from Commander in Chief Fidel Castro, and said that his mission's objective is to strengthen still more relations between the two countries. HAIG'S STATEMENTS REPORTED--Yankee Secretary of State Alexander Haig has expressed his support for intensifying the brutal and criminal U.S. economic and trade blockade against Cuba, which was established 2 decades ago. In statements before the U.S. Senate Finance Committee, Haig said he favors the intensification of what he called restrictions against Cuba, rather than alleviating them in the present situation, according to a report carried by the AP news agency. AP says that Haig made the comment the following day after Cuban President Fidel Castro had denounced in a speech the possibility that behind some epidemics in Cuba could be a U.S. biological warfare. [Text] [F1291421 Havana Domestic Service in Spanish 1045 GMT 29 Jul 81]

U.S. NAVAL MANEUVERS--The United States has begun in the Atlantic Ocean the biggest military maneuvers it has carried out since last World War II. The maneuvers bear the code name Ocean Venture 81 and are designed to perfect all aspects of sea warfare. Two hundred fifty ships, more than 1,000 aircraft and 120,000 military personnel will take part. The exercise is to be carried out in six stages beginning in mid-July until mid-September. It will take place simultaneously in the northern and southern Atlantic Ocean, the Caribbean basin and the Norwegian and Baltic seas near the Soviet border. The Pentagon and the allies of the United States intend with this exercise to intimidate Latin American countries, overrule European protests against the deployment of U.S. medium-range nuclear missiles, try to impress the socialist community and further aggravate international tension. [Text] [FL231136 Havana Domestic Service in Spanish 1045 GMT 23 Jul 81]

AGUILERA CONSTRUCTION SITES VISITS--Julio Camacho Aguilera, member of the PCC Politburo and first party secretary in Havana City, has toured the capital's El Presidente and Plaza hotels which are undergoing repairs. The party leader expressed interest in the progress of repairs and restoration and difficulties being confronted in the supply of materials and manpower. In the case of El Presidente Hotel, he indicated the need for including it among projects that have been assigned priority. Investments in that hotel amount to more than 1 million pesos, and the architectural project calls for restoring it to its original appearance as well as the installation of a central air conditioning system, the addition of 18 rooms in eight floors, an arts and crafts store, a nightclub, a cafeteria, a bar and a swimming pool. [Text] [FL082223 Havana Domestic Service in Spanish 2130 GMT 8 Jul 81]

FMC CADRES COURSE--Antonio Perez Herrero, alternate member of the Politburo, has presided over the seventh graduation of the Federation of Cuban Women [FMC] Fe del Valle Dacres School in Havana. The graduating class consisted of 96 students from Cuba and 20 other countries in Asia, Latin America and the Caribbean. Dora Carcano, member of the Central Committee and secretary general of the FMC, made the closing remarks and highlighted the highly satisfactory results of the current political-ideological improvement course which concluded within the framework of the celebrations of the 28th anniversary of the attack on the Moncada Garrison. [FL071649 Havana Domestic Service in Spanish 1100 GMT 7 Jul 81]

EJT HONORED--Army Gen Raul Castro, second secretary of the PCC Central Committee and minister of the Revolutionary Armed Forces [FAR], has sent a congratulatory message to the Youth Labor Army [EJT] for its outstanding work in the 1980-81 sugar harvest. The message said that the effort of the EJT along with all other forces involved in the harvest was a decisive factor in the successful completion of the task. It adds that an additional 7 million arrobas of sugarcane were manually cut this year and that productivity per canecutter was 25 arrobas over that of the previous harvest. The number of groups having cut 1 million arrobas or more of sugarcane rose by 25. Army General Castro makes special note that all this was achieved in a shorter amount of time. [FL211627 Havana Domestic Service in Spanish 1045 GMT 21 Jul 81]

RODRIGUEZ, HART AT SHOW--Politburo members Carlos Rafael Rodriguez and Armando Hart attended a show last night organized by Greek composer Mikis Theodorakis at Havana's Karl Marx theater. The first part of the show was devoted to pop and folk songs. The second part features the oratorio "Canto General" with words by Pablo Neruda. The oratorio was included in the show as a special request from Commander in Chief Fidel Castro. "Canto General" will be performed in other countries of Latin America as a cultural offensive in favor of peace. Last night's performance was dedicated to the fighters of El Salvador. [Havana Domestic Service in Spanish 1000 GMT 25 Jul 81 FL]

MARTYRS DAY CELEBRATION--The day of the Martyrs of the Revolution, 30 July, was celebrated in Santiago, Cuba, with the placing of wreaths and a ceremony at Callejon del Muro, where Frank Pais, top organizer of the 26 July Movement in Santiago, was killed in the struggle against then President Fulgencio Batista. Main speaker at the event was Isabel Tamayo Rios, a member of the PCC Politburo in

the municipality of Santiago, who highlighted Pais' revolutionary history. Subsequently, the hundreds of people attending went to the martyr's square, where they observed 1 minute of silence in honor of Frank Pais and others who were killed in the struggle against Batista. [FL302036 Havana Domestic Service in Spanish 1700 GMT 30 Jul 81]

CUBAN-SOUTH YEMEN TALKS--In Aden, the Cuban-Yemeni intergovernmental cooperation committee today concluded its work with the signing of a protocol on various spheres of the economy and social development. [Text] [FL041748 Havana Domestic Television Service in Spanish 1700 GMT 4 Jul 81]

CAMAGUEY SCHOOL--Enrollment at the Jose Marti Higher Pedagogical Institute in Camaguey, the capital of the province of the same name, has increased this year to 5383 students. The city has a population of 243 603 and the province of 665 406. Camaguey is 570 kilometers east of Havana. A total of 257 of the 280 members of the faculty are doing research, as are 948 students. Students entering the Institute after having finished the 12th grade, working toward a degree in education. The students who will contribute to the upbringing of present and future generations of communists as well as aid to other sister nations, can choose from 22 careers offered by the four departments of the Institute. At next graduation in July, more than 1000 students will get their degrees, making a total of nearly 3000 graduates of the Institute. This is a worthy tribute to the 26th of July, the anniversary of the attack on the Moncada Garrison. Work on the Jose Marti Institute will soon be completed. When finished, the Institute will have cost some 7 943 000 pesos, of which some 4 000 000 pesos' worth of work has already been completed. EGP COMMUNIQUE NOTES OPENING OF NEW WAR FRONT

PA280240 Havana International Service in Spanish 2310 GMT 27 Jul 81

["Our America" commentary]

[Text] A few days ago, the Guatemala's Poor People's Guerrilla Army [EGP] issued a communique in which it reports on the opening of a new war front, which encompasses Baja Verapaz Department and parts of Chimaltenango, Quiche and Sacatepequez departments in the north and west of Guatemala.

Under the name of Augusto Cesar Sandino, it adds, the new guerrilla front operates in an area of approximately 7,000 square km in the mountainous region of the Sierra Madre, where some 400,000 Indians live in poverty.

The EGP also reported that in its first political-military actions, the soldiers of the new guerrilla front have caused numerous casualties to the army and have carried out dozens of revolutionary propaganda operations, executions of henchmen and attacks on military posts of the dictatorship.

After recalling that the Augusto Cesar Sandino front is the sixth created by the EGP, the organization stressed that this is proof of the strength and determination of the Guatemalan people to overthrow the genocidal military clique that is misruling the nation and to install a revolutionary, popular and democratic government that responds to the true desirers for liberty of the great alienated masses of workers and peasants.

Further on, the EGP charges that the U.S. Government is openly interfering in Guatemala, whose despotic regime is upheld thanks to the plentiful military, political and economic aid of the United States.

In this regard, the rebel group states that its main armed actions are aimed at enterprises or individuals who are actively backing the genocidal regime of Gen Romeo Lucas Garcia and that practice has proven that in addition to despoiling the nation's natural wealth, the American companies act in complicity with the reactionary forces that usurp power in Guatemala and follow closely the aggressive and interfering policy Washington maintains in this and other Central American countries.

It underscores that early in July guerrilla commandos carried out armed attacks against the U.S. Eastern Airlines Company and the U.S. Chamber of Commerce.

To this effect, the EGP calls on the U.S. companies operating in Guatemala not to join the futile efforts of the regime to conceal the massacres being committed against the people and to misinform world public opinion regarding the true situation of this small Central American country.

As the armed struggle spreads each day with greater intensity across Guatemala, new charges of the dictatorship's corruption and inability come to light. One charge that was made did not exactly come from the progressive forces of that country and it involved the charge that the generals who are ruling Guatemala are guilty of conspiracy, inability, corruption and fraud. This charge was made by five high-ranking Guatemalan military chiefs who asked not to be identified in statements to the Mexican newspaper UNO MAS UNO. They accused Romeo Lucas Garcia, the leader of the regime, of being involved in shady business in the purchase of arms to seize, along with other generals, hundreds of millions of dollars. The generals, they added, have stolen more than $250 million, with which they have become very wealthy while we die in battles against the guerrillas.

That is why, in order to put an end to genocide and corruption, the revolutionary forces of Guatemala are increasing their action, convinced that the people will achieve true liberty and independence only through an armed struggle.

CANCUN PREPARATORY MEETING

Foreign Ministers Arrive

FL302259 Mexico City NOTIMEX in Spanish 2230 GMT 30 Jul 81

[Text] Mexico City, 30 Jul (NOTIMEX)--The foreign ministers who will take part in a meeting to prepare for the summit on cooperation and development scheduled for October in Cancun, began arriving today in this capital. The foreign ministers of the FRG, Hans-Dietrich (Genscher), the PRC, Huang Hua, the Philippines, Carlos P. Romulo, and the Ivory Coast, Simeon Ake, arrived today.

All is in readiness for this prepartory meeting in which 22 [as received] foreign ministers will take part. They are the foreign ministers of Algeria, Australia, Bangladesh, Brazil, Canada, China, France, the FRG, Guyana, India, Ivory Coast, Japan, Mexico, Nigeria, Philippines, Saudi Arabia, Sweden, Tanzania, United Kingdom, United States of America, Soviet Union, Venezuela and Yugoslavia.

Tight security measures are in effect around the convention center and the hotels where the ministers are staying. Approximately 600 newsmen from all over the world are accredited to cover this meeting on which world attention is focused. There is a press room with some 50 telephones and 60 telex machines through which news reports may be filed to all points of the world.

Mitterrand To Visit Mexico in October

PA311611 Paris AFP in Spanish 1601 GMT 31 Jul 81

[Text] Mexico City, 31 Jul (AFP)--French President Francois Mitterrand will pay an official visit to Mexico from 19 to 21 October, prior to the opening of the North-South Summit of Cancun, it was announced today. Mexican Foreign Secretary Jorge Castaneda made the announcement following the 1-hour meeting Mexican President Jose Lopez Portillo held with French Foreign Minister Claude Cheysson.

Ministers' Agenda Ready for Cancun Talks

FL311527 Bridgetown CANA in English 1315 GMT 31 Jul 81

[Text] Cancun, Mexico 31 Jul (CANA-REUTER)--Foreign ministers from 22 countries meet in this Mexican Caribbean resort tomorrow to prepare for an ambitious summit converence on bridging the gap between the rich and poor nations.

The ministers who represent countries as diverse as the United States, Tanzania and China will be drawing up a framework for the "North-South" summit first proposed 17 months ago by an international commission chaired by former West German Chancellor Willy Brandt.

The Cancun meeting follows hectic activity behind the scenes over the past year while countries which favoured the summit worked to persuade more reluctant ones that such a conference could lead to action rather than just resolutions.

Provided the ministers smooth out the potential procedural sticking points, the leaders of the 22 nations will hold their summit in this lush new resort town in October.

The Mexican organizers said they wanted the Cancun summit to be informal enough to let the leaders get to grips with the problems free from the constraints of set speeches.

The Brandt Commission, whose recommendations will form the main terms of reference for the summit, urged global discussions on the transfer of economic resources to poor countries, international energy and food plans and reform of the world's economic and monetary systems.

Summing up the widening gulf between the wealthy "North" and poor "South," the Brandt report said beginning the search for solutions was "not an act of benevolence but a condition of mutual survival."

Few of the leaders appear to disagree with the commission's conclusion that profound changes are needed, but they differ on what methods should be used to redress the world's economic imbalance.

Some, such as U.S. President Ronald Reagan, would prefer to tackle the problem by stepping up bilateral cooperation and investment by private industry.

Others, particularly in the Third World, want the creation of a new and more just economic order through global negotiations.

Mexican President Jose Lopez Portillo, who has worked to establish Mexico as a major voice in the developing world, said recently, "Developing countries do not merely require aid, but a new world order."

The views of developing countries which generally welcomed the Brandt report find strong support among richer nations like France, Canada and Austria.

The new socialist administration in France has been particularly outspoken, criticizing the United States for alleged indifference to the problems of the Third World.

Foreign Minister Claude Cheysson who will attend this weekend's meeting, said North-South relations were heading for crisis "if this subject which is a priority for us is only marginal or secondary for the Americans."

The gloomiest prospect of all according to the Brandt report is that this gap in wealth, health and general quality of like is growing wider.

Among the problems to be tackled at this week-end's meeting and the October summit are energy--rich countries accuse developing oil powers of following a strategy which drives up prices and hits hardest at those nations that can least afford increased import bills.

Commodities--about 60 per cent of the world's basic agricultural and mineral commodities come from the Third World, which is demanding more protection against the cyclical nature of market demand which, when prices are low can cripple a producer country.

Some nations are heavily dependent on one product, for example, Zambia (90 per cent of its export revenues from copper), Cuba (80 per cent from sugar) and Gambia (80 per cent from groundnuts).

Trade and finance--developing countries are particularly hard hit by high interest rates currently at record levels in the United States because they encourage local currency flights, increase import bills and discourage investment. Their widespread criticism of Mr Reagan's monetarist policies has the support of most European countries which are also affected.

No joint communique is expected from this week-end's conference which will be held in closed session. The 22 countries attending are: Algeria, Austria, Bangladesh, Brazil, Britain, Canada, China, France, West Germany, Guyana, India, Ivory Coast, Japan, Mexico, Nigeria, Philippines, Saudi Arabia, Sweden, Tanzania, United States, Venezuela and Yugoslavia.

Castaneda Notes Importance of Cancun Meeting

FL011923 Mexico City NOTIMEX in Spanish 1841 GMT 1 Aug 81

[Text] Cancun, Guintana Roo, 1 Aug (NOTIMEX)--In international relations regionalism must have precedence over the forces of chaos and private interests and must be adapted to the world's political and economic life. This was the message sent today by Foreign Relations Secretary Jorge Castaneda to the foreign ministers participating in the preparatory meeting for the North-South dialogue of chiefs of state scheduled for next October.

When the working meetings began, all of which are private, the Mexican foreign secretary stated that peace and world stability will depend on development and this, in turn, on a sincere international cooperation. He asserted that the time has come for a great crusade to defeat fear and death, hunger and injustice and to establish the reign of equality and hope. He said this initiative is aimed at finding a common language, reducing differences between the different positions and seeking formulas which will make it possible for widening the scope of freedom of justice and human well-being.

Castaneda Gutierrez expressed confidence that this meeting of foreign ministers will assure the greatest success possible of the next meeting of chiefs of state and government. He added that this meeting is the result of a great collective effort and will take place after overcoming various obstacles, not of a circumstantial nature but which are minor reflections of greater contradictions existing in the world.

Castaneda stated that the problems of our time have a dimension which makes them different and, because of this, the topics of peace, disarmament, collective security, social justice, independent development and so forth are of concern to all peoples on earth.

Havana on Preparatory Meet

PA030529 Havana International Service in Spanish 0000 GMT 2 Aug 81

[Text] The meeting of the heads of state of the developed capitalist countries and other developing countries that will be held in October at the Mexican sea resort city of Cancun will be of a political nature, and will not lead to negotiations. This was said in the final document approved by the foreign ministers who prepared the agenda of the so-called North-South dialogue.

During that preparatory meeting the recent happenings in the international cooperation field were evaluated. The principal topics to be considered at that meeting were defined and the preparations for the meeting were completed.

The foreign ministers agreed that at that meeting the heads of state will discuss subjects relating to international cooperation for development and reactivation of the world economy, including such topics as the secure supply of food, agricultural development, staple goods, trade, industrialzation, energy and monetary and financial matters.

It was also agreed that the discussions should reflect the complexity of the current problems of the world economy and include an exchange of ideas on North-South relations, and other additional matters.

At this meeting to be held in Cancun in October, the heads of state of 8 developed capitalist countries and 14 developing courtries will be present. Also present will be UN secretary General Kurt Waldheim.

SOCIALIST LEADER ASKS FOR RETURN TO CALM

PA191525 Managua LA PRENSA in Spanish 12 Jul 81 pp 1B, 12B

[Text] The Nicaraguan Socialist Party [PSN] is greatly concerned over the political pressure that has built up in Nicaragua in the past few weeks in connection with different causes, said PSN leader Domingo Sanchez Salgado ("Chaguitillo") upon being queried by newsmen.

Speaking with a very serious expression and emphasizing his words in connection with this very interesting issue, the PSN leader on Thursday night broadened his idea about seeking calm formulas for positive solution of national situations.

This is the first time that a leader of the extreme left has indicated the grave danger threatening Nicaragua's social peace unless formulas such as Sanchez Salgado pointed out are found. He added: "If they are not sought, incidents that may be painful for the Nicaraguan people may occur."

"The PSN loves peace and national harmony and we are seriously concerned over the situation that is arising little by little due to different causes," said the socialist leader. He did not elaborate on the type of situations, but he did show interest in a solution to the obstacles that have been arising in the past few weeks as well as a positive frame of mind regarding Nicaraguan problems.

Going into further detail for Radio Corporacion's "10 on the Dot" newscast, Domingo Sanchez Salgado stated in general terms that a series of issues has been poisoning the political climate and provoking dangerous confrontations.

Everything seems to indicate that the PSN will implement a specific plan, outline definite positions regarding national problems and announce several proposals--to the parties of the revolution and the democratic sectors, as well as to the Sandinist National Liberation Front [FSLN] national directorate--for initiating a dialogue that will begin a return to political normalcy in this country.

He said that the Nicaraguan people are greatly motivated by fraternity and solidarity with noble causes and that it would be a great shame to have to return to violence. This same idea has been expressed by other political, labor and

business leaders who believe that from day to day this ideological confrontation reduces the possibility of a positive and workable short-range social program for Nicaragua with the full participation of all national sectors.

The initiative has been launched by a leftist leader who has seen these perils and, without hiding his preoccupation over the high pressure of the confrontations, says it is necessary to return to the course of national harmony.

SWISS PAPER VIEWS POLITICAL SITUATION IN SURINAME

Geneva JOURNAL DE GENEVE in French 6 Jul 81 p 1

[Article by Richard Beer, special correspondent in Paramaribo: "Socialism in a Handkerchief"]

> [Text] "The New Suriname," "People's Revolution," official slogans are numerous in the Republic of Suriname, the former Netherlands Guyana. The sergeants who took power on 25 February 1980 speak of socialism. Speeches, publications, but also shadow play, self-criticism and a population which does not commit itself. What does the "revolutionary process" in Suriname mean?

Paramaribo is steeped in its usual torpor. The capital constitutes half of the country in terms of inhabitants, but it is calm, well kept, with Dutch security guaranteed. The former colonial city is far from being prosperous, but the poverty is not shocking, even the outlying suburbs seem /acceptable/ [in italics]. Nowhere does a visitor see any sign of the revolutionary process either. Here, there are no graffiti on the walls, no pubs where theoretical discussions are held, and no halls for debates between the militants and the people.

In the absence of a revolutionary climate, it is always possible to start a conversation with the numerous strollers hanging around the river port. Lifting their bottle of local beer, they laugh but say nothing about the regime, the process, the /new freedom/ [in italics]. The Chinese dominate among the small businessmen and the restaurants. Certainly not happy, they make no effort to laugh and they want to know nothing. Finally, the reporters of local newspapers take a certain distance with regard to political events. Spontaneous sympathy, indifference, primarily suspicion. But of what?

The current use of the adjective "new" is revealing. Without structure, program or responsible "faces," it is very difficult to know what is happening in the bauxite republic. Six years after independence, this small country with its 350,000 inhabitants finds itself in the middle of a turbulent political situation. There are numerous speculations, in spite of some settling down during the last few months. The curfew is still in effect at night.

On 25 February of last year, the international news agencies transmitted short dispatches announcing a successful coup in Suriname. It was what was referred to as "the revolution of the sergeants," with African inspiration. Even though it is located in South America, the former colony's population is primarily of African, Indonesian and Indian (Hindu) origin.

Prime Minister Henck Arron was immediately dismissed and his government accused of corruption. A National Military Council [NMR] took charge of the destiny of the country. Henck Chin-A-Sen, a "non-compromised" nationalist pooitician, became head of the interim government.

People Perplexed

The following period would prove to be rather confused. In the month of August 1980 parliament was closed. President Johan Ferrier, last governor under the Dutch administration, was replaced by Chin-A-Sen, thus uniting both the functions of head of government and head of state. Was this a radicalization or a normalization? Observers could no longer keep track of events when, a short while later, three sergeants of the NMR were imprisoned, accused by their colleagues of having stirred up "a leftist coup with the support of Cuba."

If the outside world was having trouble following the subtleties of politics in Suriname, the population was even more perplexed when it was made aware of what followed: on 6 March of this year, Commander in Chief Major Daisi Bouterse (previously a sergeant major) gave an unexpected press conference. In the presence of the "leftist" sergeants he announced that henceforth they would be reinstated in the Military Council as "valorous allies of the first hour."

The circus was not over yet; another coup, this time from the right, was attempted by two sergeants, also from the "first hour" of the February revolution.

"Here we are, faced with problems which are typical of countries which acquire independence," noted Roy Medina, leader of the C47, the most important of the four union groups.

Medina explained that the February revolution was a "total surprise":

"As a matter of fact, as a revolution it was rather bizarre. The non-commissioned officers were dissatisfied. Among other things, they did not have the right to form a professional union. So, they simply seized power without any previous experience in politics."

But the militants are no longer alone. Bouterse, "the strong man" of the Military Council, listens more to the civilians. President Chin-A-Sen is not a puppet. It is generally believed that he is the source of compromises between civilians and the military, a skilled politician who knows how to maneuver with moderation.

Not Pro-Cuban

On his left, the new Minister of Foreign Affairs Naarendorp (a civilian) continues to strengthen his position. As a matter of fact, Naarendorp had expressed himself in favor of a rapprochement with Cuba long before the spectacular return of the "leftist" sergeants.

The supreme executive body is no longer the NMR. Now there is a Political Council [PR], composed of three military men and three civilians, and presided over by Chin-A-Sen.

"We are neither pro-USSR, nor pro-Cuba," emphasized Dick de Bie, spokesman for the PR. "And on the economic level, we are not headed for nationalization; we don't have the means for it. First, we want to secure a larger part of the profits in the bauxite and timber sectors, dominated by the Americans and the Dutch, for ourselves."

If one wants to define the regime in Suriname today, one might refer to it as a national socialism tinted with Chinese idealism. The priorities of the "model" are agriculture and education. "A small format nationalism," as a Dutch reporter put it.

POLITICAL SCIENTIST VIEWS FUTURE CONSTITUTIONAL DEVELOPMENT

Paramaribo DE WARE TIJD in Dutch 20 Jun 81 pp 1,15

[Report on speech by political scientist Jules Wijdenbosch, organized by the National Military Academy and presented at the Independence Hotel on 18 June 1981: "Wijdenbosch Does Not Want To Hurry With Constitution -- People Must Get Used to New Situation"]

[Text] "It is absolutely impossible to bring about a new constitution in the short term. The people must be given the opportunity to get used to the new situation. The people must themselves determine what the administrative organization should look like, but the leaders must give the people of Suriname the opportunity to assimilate the new situation and give them a sense of values before expressing themselves on the constitution and the new form of government."

This was said Thursday evening by political scientist Jules Wijdenbosch, during a speech organized by the National Military Academy [NMA] at the Independence Hotel.

Truth From Discussion

The speech, entitled "Political Order and Legitimacy," was very well attended, and a large number of military personnel and policemen were among the audience. Minister of Army and Police Laurens Neede thought that it was a good initiative to discuss the basics of the new society. "The youth, workers, farmers, cultural organizations, religious organizations, the business world cannot escape the duty to come up with ideas for the new society." This according to the minister, who gave the assurance that the government does consider positive suggestions. "There are different kinds of truth," continued Neede, adding that only those things are true which are the result of varied discussions among large segments of the population, with the sole aim being what is best for the country and the people. He called on the National Military Academy (the official name for this new institute is still being discussed) to provide follow-ups to this lecture and also to visit the various regions with educational and training meetings, in order to involve the people in the formation of the new society.

NMA President H. Berggraaf (MA Pediatric Sciences, MA Education) gave assurances that this institute would fight to its last breath to lead the country to where we want to go. According to Berggraaf, the lecture by Wijdenbosch, who is a political science teacher at the NMA and who has already published several books (among others: "Outline of the Republic of Suriname -- Its Own Style 1974"), should be seen within the framework of the transition phase which Suriname is currently experiencing. "The people of Suriname are getting ready to take their fate into their own hands,

via such bodies as the Planning Council and the Assembly. We should not isolate ourselves from the rest of the world, but we should start by organizing ourselves within our borders," he said.

Binding Decisions

The political scientist defined a political order as "any organization in which decisions are made which are binding for the members." This means that a society is composed of various political orders. A union, a functional group, an organization, people's committees, a nation state, yes even a gang of thieves is a political order. However, Wijdenbosch focussed on the nation state as a very special political order in terms of what happens in society. Indeed, the nation state makes the most important and far-reaching decisions for its members, while it is also an organization which the great majority of the people (except for foreigners who voluntarily accept this nationality) did not join voluntarily. He referred to political reality, which involves who makes the decisions and what decisions are made, as an important element of the political order.

"It is well known from past parliamentary practice who was supposed to make the decisions, who made the decisions and what decisions came out of it." As second element, the speaker referred to the political division of labor, which is formed by the foundations of the political organization. Elements of the organization perform various tasks and have a certain relationship with the government, for example the position of the business world relative to the government or the relationship between the three social partners, government, unions and business world.

According to Wijdenbosch, by checking on how the distribution of labor is achieved it might be possible to normalize (relatively speaking) an excess of power by one of the partners.

Revolutionary Energy

As third, and for his purpose the most important element, the speaker referred to the political regime. This then concerns values (goals or principles), standards and power structures according to which activities take place within a political system, in short the form of government. In his lecture, the political scientist wanted to check on the rightness of the regime, so that the aspect of legitimacy can be brought into play when a decision is made on a new regime. He defined legitimacy as the degree to which the distribution of power in a country is viewed by the citizens as being right. To introduce the aspect of legitimacy in the situation of Suriname today means that all existing and yet to be formed organizations such as unions, enterprises, people's committees, functional groups, etcetera, will have to function as canals, carrying the ideas of the citizens concerning the distribution of the spaces within which they have to live to the competent authorities.

Wijdenbosch further pointed out that a political order is not a static phenomenon, but rather a very mobile one. He could not at all support the idea that the organization of the nation state is not a dynamic process and that radical revolutions are not among the possibilities. "Political order and political changes are an extension of each other. Political order could hide a potential for revolutionary energy. In many cases, blind belief in the status quo, especially by the elite who protect the status quo, has been repudiated.

Pattern of Expectation

The political scientist indicated that in many parliamentary democracies, mobility expresses itself in self-organization, the phenomenon whereby spontaneous extra-parliamentary actions occur as a result of the powerlessness of the established political system to respond adequately to the needs of the citizens. In their struggle for freedom, young countries are faced with the problem of having to solve all problems at once, such as nation building, political and mental adjustment, reorientation toward the political system, awareness of standards and values and the legitimation of the power structures during the transition, he said.

In his opinion, another aspect is the meaning of disorderly events in the political order. "It cannot be said precisely beforehand that a phenomenon will be disturbing to the order, if no attention has been paid to the political expectations or the pattern of political expectations."

To illustrate this, he noted the situation in Ghana under Nkrumah. There, the constitutional values and standards were not integrated in the pattern of political expectations. The citizens expected all politicians to be corrupt and thus politicians who appealed to the constitution actually deviated from the pattern of expectations.

Wijdenbosch believes that the Surinamese variation on the Ghanaian pattern of expectations lies in the fact that the citizens expected politicians to work primarily for their own interest, and that this situation was tolerated through inertia and the fear of violence.

Inertia, Fear and Advantage

Political science assumes that there are four reasons why citizens accept requirements, specifically:
1. Acceptance out of inertia: people are tired of being in the opposition.
2. Acceptance out of fear of violence: actions which are dangerous to the administration are countered with violence.
3. Acceptance for expected advantages: groups of people who expect a direct advantage from the new regime.
4. Acceptance out of a belief in the justness of the rules of behavior: one proceeds from the assumption that the leaders are capable of implementing the rules.

The speaker indicated that the first three possibilities refer to a situation where the political organization is not considered to be legitimate.

"A system is legitimate when the system is a product born of public opinion concerning the organization of the space within which the people want to live," he emphasized. In his opinion, this means nothing other than that the people must express their opinion about the system which is applicable during a certain period, and in the case of Suriname it means that the basis for a new constitution must be the result of the Surinamese people's thinking about the administrative organization of the country. In his opinion, the people must be given enough time to complete the process of thinking about the division of space. During the current transition phase, the results of this process could be transmitted to the rulers via functional groups. Wijdenbosch saw a place for intellectuals only in terms of testing the people's conceptions and producing the most viable reflection of these popular

conceptions. "What may not happen is for four people to sit around a table discussing what the people want and then offer this to the people as a constitution, because then we would not have a legitimate system." Hence, Wijdenbosch stated that before and after 1975 Suriname did not have a legitimate system, because there had never been a popular verdict on the form of government and there was only talk of the election system derived from the form of government.

Continued Testing

The speaker said that large scale social discussions, organized by functional groups, will have to be set in motion in order to determine public opinion. The people have never done any of this, and, in his opinion, they should be given the time to learn this. "We are talking about years here, but we must dare to say: let it take years, as long as something good comes out of it." Finally, Wijdenbosch suggested the development of an institute to test continually the legitimacy of the yet to be formed new system, because it could well be that things may conform to public opinion in 1980, but no longer do so in 1995.

During the discussion which followed, Wijdenbosch was immediately asked how much time he thought would be necessary to get to know public opinion. He felt that this was a difficult question, involving matters such as nation building, mentality and education. Considering the parliamentary period we just left behind, during which it became clear that after 4 years the citizens were not yet able to judge an administration (shifts were constantly taking place and small parties could hold the balance of power), he was thinking in terms of checking after 4 years to see how far the citizens had gotten in their thinking about these elements. According to him, the institute would have to be composed of functional organizations, and their representatives in the institute must always consult with their organizations.

Mr Wijdenbosch also said that a new economic order cannot be developed without first organizing the political order, which a great many people in the audience did not appreciate. These people thought that economic interests should be the starting point for action toward a political front, and in this context they referred to the front formation surrounding the SURALCO [Suriname Aluminum Company] and the OGEM [Overseas Electric and Gas Company] conflict. Discussion leader Berggraaf quickly brought the discussion to an end, pleading "lack of time."

FLIGHT OF CAPITAL BLAMED ON LACK OF CONFIDENCE

Caracas EL UNIVERSAL in Spanish 5 Jul 81 p 2-1

[Article by Jorge Villalba]

[Excerpts] According to the former minister of finance, Hector Hurtado, the flight of capital that is now affecting our economy is not a problem caused by interest rates, but is rather due to the lack of a favorable climate for investment in Venezuela.

The former minister of finance, who was asked about the problem now facing the economy due to a loss of currency that has been calculated at approximately $100 million a day, which has led the economic cabinet to meet with the Central Bank in order to weigh possible solutions, declined to express his judgment of the situation, saying that to do so he would have to make some very detailed analyses that go beyond the scope of a press statement.

Nonetheless, he added that in his opinion, the fundamental problem lies in the fact that the climate is not favorable to investment and therefore the people are unwilling to invest their money in Venezuela, and prefer to invest abroad.

"For that reason, the fact that interest rates are a few percentage points lower here is only a secondary problem. The true problem is that the government has managed to do what no one had ever done before. That is, that with a superabundance of income, with an extraordinary exchange situation, and with a very high level of reserves, the government has managed to discourage everyone from investing in Venezuela, because of its contradictory, vacillating, and undirected economic policy."

Hector Hurtado added that the true solution will have to begin with a change in this climate of lack of confidence, and he stated that until this is done, anything else will only be a superficial remedy.

A Revaluation is Inappropriate

In addition, the Social Christian deputy and president of the Federation of Associations of Economists, Jose Miguel Uzcategui, to some extent deemphasized the importance of this issue.

In his opinion, the growing movement of currency in recent months is not yet of an alarming nature, since these operations are apparently influenced by a number of factors, including the use of currency for vacations, and on the part of businessmen, merchants, and industrialists for end of the year sales.

Nonetheless, he agreed that the difference between Venezuelan interest rates and rates in the international market may have some influence in creating a speculative attitude and an inducement to make use of higher interest rates abroad.

Furthermore, when asked about the differences of opinion between the economic cabinet and the Central Bank about the measures to be adopted to slow down this flight of currency, Uzcategui warned that any decision made by the Central Bank can not be absolutely monetary: it must not fail to take into account the economic and social effects of more expensive money on national activities and investments in the nation.

In conclusion, returning to the initial point of the flight of capital, the economist and Social Christian parliamentarian said that one factor that will influence the solution of this problem will be stability in the economy, as a result of an effective recovery in a climate of confidence and optimism.

CASTRO HURTADO HEADS 'NEW GENERATION MOVEMENT'

Caracas EL NACIONAL in Spanish 8 Jul 81 p D-9

[Article by Mario Villegas]

[Text] Maj Gen (R) Arnaldo Castro Hurtado today became president of the New Generation Movement; he had previously supported some of its positions.

The announcement of this decision made by the national board of this organization was made yesterday morning at a press conference. The secretary general of the New Generation Movement is the psychologist Vladimir Gessen Rodriguez.

Castro Hurtado is replacing Jose Marsicobetre as president of the New Generation Movement. Marsicobetre introduced the new president and former military commandant to the journalists and guests present. Castro Hurtado is visibly enthusiastic about his entry into political life.

In officially turning over the presidency of the movement to General Castro Hurtado, Marsicobetre said of him that he is an honest, fair, and courageous man, "the sort of man the country needs." He said that from now on the New Generation Movement has assumed adult status and will work to begin the conquest of the future.

Also present at this ceremony, along with Castro Hurtado, Marsicobetre, and Gessen Rodriguez, were: Brig Gen (R) Francisco Leon D'Alessandro, Egildo Lujan Nava, Arnoldo Molina Canino, and Col (R) Juan Tineo Arismendi, who are also leaders of the New Generation Movement.

Remarks by Castro Hurtado

In response to a question by the representative of EL NACIONAL about whether his membership in this party will not take away some of the possibilities for strong support for him in an independent position, General Castro Hurtado said that the sole condition he imposed on

the New Generation leaders for his support was that the organization should become a broad national movement in which all Venezuelans over the age of 18 can take part without restrictions of any sort.

He stated that he is not the party's presidential candidate, and he said that the movement's standard-bearer will be the person who supports its positions and is able to win greatest acceptance from the nation. He said that the party candidate could be someone of the stature of Arturo Uslar Pietri or Humberto Fernandez Moran, or even a retired military officer like himself, also a potential candidate.

A reporter asked if it could be inferred from his previous statement that talks have been held on this issue with Uslar Pietri and with Fernandez Moran. Castro Hurtado replied that he had mentioned them as meritorious national figures who have recently spoken of their concerns about the present situation of Venezuela. He also mentioned Mayz Vallenilla, Jovito Villalba, and Rafael Pizani.

Another reporter asked what real strength the movement can bring to bear against the political machines of the AD [Democratic Action] and COPEI [Social Christian Party]. He answered honestly, saying that his movement had started at zero, but he said he was certain that it will surprise the political machines.

He commented that at this time the New Generation Movement is being organized and reorganized, and he said it is going to be joined by a number of minority groups which have promised to support the New Generation Movement. According to the retired military officer, the New Generation Movement is going to present itself as a national movement which will express itself on all federal levels.

"We are going to show the parties of failure that we are capable of uniting the people of Venezuela, and of giving those parties the lesson they deserve."

"To Fight But Not Cry"

In a written statement which he gave to the press, Gen Arnaldo Castro Hurtado said that the nation is now going through a time of anguish and uncertainty.

"The president of the republic," he said, "has called all the representative sectors of the nation 'crybabies,' 'pessimists,' and 'prophets of doom,' whenever they point out to the national government the series of errors or omissions that have worsened the precarious situation of Venezuela. I say to the president that we are not 'crybabies' or 'pessimists.' Still less are we 'prophets of doom." As a child I learned that the Venezuelan 'fights but doesn't

cry.' Now, along with all my compatriots, I am saying this. This sort of blackmail, this applying of labels whenever we call for our rights as citizens, must end. We are not pessimists. What is happening is that we can not continue to be accomplices in this social devastation caused by the 'parties of failure.'"

Castro Hurtado, who described himself as a "soldier of the republic," said that in the past he had served while wearing the uniform of the armed forces.

"Today I wear civilian clothes, but this is still combat dress. The struggle continues, now without arms, but with ideas and with reason, in support of our national constitution, which I used to defend when I was in the army."

The lengthy statement which Castro Hurtado gave the press contains a series of proposals for the program that will guide the objectives of his movement. These guidelines are designed for state reform and contain other important measures which will support the interests of the large national majorities.

In the end, Castro Hurtado, now a political leader, repeated his presidential aspirations in the following terms:

"I am not a presidential candidate. I would like to be, in order to carry forward the banners which have so often been trampled underfoot by the AD and COPEI leaders. It would have been easier for me to have accepted a position and its corresponding benefits, which they offered me, and to earn a salary that I didn't deserve. I know very well the step I am taking, and I thought a great deal before taking it. I know that I am risking everything, but I am prepared, along with all my fellow citizens, to conquer the future. I prefer this to wearing the 'muzzle' that has debased so many people."

HERRERA'S VAGUE FOREIGN POLICY GOALS CRITICIZED

Caracas EL DIARIO DE CARACAS in Spanish 14 Jul 81 p 6

[Article by Demetrio Boersner: "A Foreign Policy Without Definite Goals"]

[Text] Of the various policies of the present government of Venezuela, the foreign policy is the one most criticized, rightly, because it is inconsistent and has tended to lessen the country's prestige in the international community. The unsatisfactory nature of that policy is owing to the fact that it observes no kind of clearly defined goals or priorities. Foreign policy guidelines have changed several times abruptly and inexplicably.

The present government should have retained the following from the previous foreign policies of President Caldera and President Andres Perez, which really were consistent:

The basic goal that sums up the nation's interest most completely should be the goal of complete autonomous or independent development. Progress toward that great objective of complete, autonomous development requires policies of subregional and regional integration, solidarity with the Third World, strengthening of OPEC, Latin American coexitence with ideological pluralism and sound geopolitical balance, constant insistance on the north-south dialogue and international promotion of principles like self-determination, nonintervention, anticolonialism, antiracism, promotion of democratic values in the broadest and least dogmatic sense.

It actually seemed, in the first period of the present government--from 1979 to 1980--that this point of view, inherited from previous democratic governments, would be maintained. In particular enormous importance was given to the Andean Pact and that is positive. But a great mistake was made when politization of the subregional agreement was encouraged, not positively to create common political bodies and to try to coordinate a common foreign stand with regard to great international problems, respecting domestic sociopolitical difference, but rather in the negative sense of advocating promotion of the social Christian movement and its ideas. In acting in this way, the Andean Pact was divided and weakened.

Nevertheless, no sooner had the Andean Pact been weakened, when, instead of trying to save and revitalize it--something that is still possible and also very desirable, because what is involved is the only Latin American subregional instrument that has "nationalist" norms, directed against dependency on foreign capital--the Venezuelan

Government forgot it and took an abrupt leap toward an inexplicable "global strategy" (sic), consisting in quick trips to various regions of the world, mostly for the purpose of hurling accusations of cold war that have very little to do with our national interest (the USSR may be extremely disagreeable in Afghanistan and within its own bloc, but it has behaved in a friendly way toward Venezuela and is the only great power that always defends OPEC).

The "global strategy" has given rise to the impression that Venezuela is an unconditional follower of the United States in the new cold war (something that is not true, because we know that this is not the personal intention of the president), and, in addition, a vacuum has been left in our subregional and regional foreign policy, with the result that a disoriented, concerned national public opinion is letting itself be fascinated and obsessed by border and territorial problems that should be only one aspect of an overall foreign action based on Latin American and Caribbean solidarity.

But it is never too late to rectify.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BRIEFS

NEW PETROLEUM FIND--A new deposit of petroleum has been found in Caribe Uno well, area I, Alta Verapaz Department, according to an announcement made yesterday in a press conference by Jorge Luis Monzon, secretary of mines, hydrocarbons and nuclear energy. The conference was held at the office of journalist Carlos Toledo Vielmann, public relations secretary at the Office of the Presidency, and attended by Vielmann and Erick Meza Durate, undersecretary of mines and hydrocarbons. Monzon reported that the new find occurred in Caribe Uno well, area I, Alta Verapaz Department, and that the well had been drilled by ELF-Aquitaine; the crude oil appeared at a depth of 7,200 feet and is expected to yield an initial daily production of 800 barrels. On the same occasion, the hydrocarbons official stated that, after further technical tests, the new well will be put on a commercial basis and that there are good prospects for other productive wells in the vicinity. He also said that, if all goes well with Guatemala's oil policy which, although obviously slow in producing results due to technical reasons, is proving to be beneficial to the country, by 1982 we shall be producing 12,000 barrels of oil daily, thus providing Guatemala with an annual income of 72.5 million quetzales. "The next oil shipment," he said in answer to a reporter, "will be made from Santo Tomas de Castilla in a few days and will amount to 130,000 barrels, as is occurring every month, with the same average quantity of crude oil." [Text] [Guatemala DIARIO DE CENTRO AMERICA in Spanish 8 Jul 81 p 5] 8568

USUMACINTA USE QUESTIONED--"A hydroelectric project on the Usumacinta River cannot be carried out unilaterally. It is a border river and any use of its waters must be made jointly," journalist Carlos Toledo Vielmann, public relations secretary at the Office of the Presidency, said yesterday. The official was referring to statements made by Peten Governor Guillermo Pellecer Robles, who reported that "Mexico is planning to build a hydroelectric plant on the Usumacinta River without reaching an agreement with the Guatemalan Government." Toledo Vielmann pointed out that the Mexican and Guatemalan Governments had appointed joint committees representing both countries to discuss the engineering requirements involved in the construction of the hydroelectric plant. "A project of this type," he said, "cannot be carried out unilaterally inasmuch as the Usumacinta waters will have to be used by both countries. I do not know how far the engineering on this project has advanced, but I insist that the project must be carried out jointly by the Guatemalan and Mexican Governments." MINISTERS AGREE TO REACTIVATE COMMON MARKET

Guatemala DIARIO DE CENTRO AMERICA in Spanish 9 Jul 81 p 6

[Text] Reactivation of the Central American Common Market was one of the principal resolutions adopted during a meeting of Central American ministers of economy held at the end of last week at ECLA headquarters in Mexico City.

This decision was announced yesterday by Valentin Solorzano Fernandez, Guatemala's minister, during a press conference at his office.

A Success

The minister called the meeting a success in view of the resolutions passed and the fact that this action was the result of initiative by our country.

Among the resolutions approved, it was agreed to coordinate any efforts made by Central American countries to obtain foreign aid and to coordinate the degree of representation of the various countries of the isthmus in the forums at which this type of aid will be administered.

It was further resolved to give the world the impression that efforts are being made on behalf of a system of integration and that such efforts are being carried out jointly without interfering with each country's individual administration.

A resolution was also passed to continue the practice of reviewing tariff and customs regulations, support the recently established Central American Common Market and coordinate and consult on the coffee problem which is presently affecting producer countries.

In addition, the ministers agreed to meet as often as necessary. One of the most conspicuous developments was the position taken by Nicaragua, Costa Rica and El Salvador in favor of reactivating the Central American Common Market.

Area's Present Requirements--$20 Billion

Solorzano Fernandez also revealed that Central America needs about $20 billion to maintain its present rate of development.

Representatives at Meeting

The following were present at the meeting held in the Mexican capital: Honduran Economy Minister Ruben Mondragon; Guatemalan Economy Minister Valentin Solorzano; Nicaraguan Industry and Trade Minister Alejandro Martinez Cuenca; Honduran Finance and Public Credit Minister Valentin Mendoza; Nicaraguan Integration Director Orlando Solorzano; Jose Miguel Alfaro, Costa Rica's second vice minister of industry and commerce; Jorge Alberto Pena, El Salvador's vice minister of planning; Guatemala's Vice Minister of Economy Gilberto Corzo; Ramon Medina, of Honduras; and Dr Gerth Rosenthal, secretary of ECLS in Mexico City.

VENEZUELAN, COLOMBIAN MILITARY FORCES COMPARED

Bogota EL TIEMPO in Spanish 17 Jul 81 p 6-A

[Text] Caracas, 15 Jul 1981--Venezuela spends three times as much as Colombia on military equipment, but its armed forces are less in number though they have better war materiel at their disposal, a local magazine underscored here today.

The magazine ZETA, which is published in Caracas, dedicated all of its latest edition to a comparative study of the military power of the two neighboring countries pointing out that "Colombia has some 150,000 men under arms--if the 60,000 men of its National Police are included--of whom 63,000 belong to the Army organized into 10 infantry brigades."

"The armaments of the Colombian Army include M4 medium tanks, M3-A1 light tanks, M8 and M20 armored vehicles, 48 105mm guns and 40 40mm guns," it pointed out.

"The Colombian Navy has some 9,000 effectives, of whom 3,000 are marines," it noted.

"The Colombian Navy has two 209-class submarines, two pocket submarines, three destroyers, six frigates, 16 small patrol boats and a craft for transporting tanks," if said.

"The Colombian Air Force has grown rapidly to a strength of 6,000 men with 18 French Mirage planes, of which 14 are warplanes (Mirage 5 COA) and 4 are trainers. It has a bombing squadron equipped with B-26 Invaders and a few Lockheed AT-33's," it added.

The Venezuelan magazine also pointed out that "The Colombian Air Force has one C-130 Hercules, 23 C-47 and five C-54 planes for transportation purposes."

Venezuelan Armament

In the view of ZETA, "on paper, the Venezuelan Army shows up with 27,000 men, somewhat less that half of those of the Colombian. The superiority of the Venezuelan depends on 142 ZMX30 tanks and an additional 40 AMX13 lighter tanks of French manufacture."

"Venezuelan artillery appears superior to the Colombian with 135 105.1mm guns and 20 AMX tanks armed with 155mm howitzers," the publication added.

"The Venezuelan Navy has some 9,000 men plus 4,000 marines, and has four somewhat obsolete frigates as well as six missile-launching frigates recently acquired from Italy. There are four operational destroyers, four submarines under construction, six torpedo boats and 21 coastal launches," it pointed out.

"The Venezuelan missile frigates have individual AB-212 helicopters for anti-submarine warfare," the magazine ZETA noted.

"The Venezuelan Air Force has some 5,000 effectives and 240 aircraft of various kinds, and its two combat groups are equipped with Northrop F-5 and Mirage planes.

"The F-5's are fast airplanes. Some 15 of them are fighter-bombers and four are reconnaissance planes and trainers," it said.

"There are also four Mirage-5 fighter-bombers, nine Mirage-3's and another two Mirage trainers, as well as 20 F-86 fighter-bombers and 22 British Canberra bombers."

FAILURE OF CGT STRIKE ANALYZED

Historical Precedent

Buenos Aires LA NACION in Spanish 23 Jul 81 p 9

[Text] One afternoon in the summer of 1975, Mr Jose Maria Villone showed up at the old editorial offices of LA NACION on San Martin Street. He made an ostentatious entrance, surrounded by an impressively large convoy of well-known faces. Bodyguards are, in fact, meant to impress, but they impress all the more when they are prominent government figures. At that time, the nation did not know whether Mr Villone was a "prominent figure" because he was President Martinez de Peron's press secretary or because, no less significantly, he was a well-known figure in what Mario Firmenich the Montonero described a few hours ago as "Lopez Rega's Mafia."

What was not in doubt in the summer of 1975 was that Mr Villone was acting as a full-fledged servant of the man who was still social welfare minister, the former lieutenant but by then chief of ordnance, Lopez Rega. It was a time when veteran political feature writers lent a silently indifferent ear to the threats that one or another thug or crony leveled at the press every so often because they were annoyed by a piece of writing that rubbed them the wrong way. On that occasion, the only one we remember that he descended on LA NACION, Mr Villone was extremely worked up. The temperature on that afternoon of January 1975 was far from comfortable, and our visitor's temperature made it even more uncomfortable. Thus, Mr Villone had to take off his jacket to continue his protest over a commentary in which Minister Lopez Rega did not come out looking too good. The commentary had unquestionably touched on one of the most sensitive aspects of Mr Villone's boss's political situation: his strained relations with the Armed Forces, viewed in light of the complications that arose in the Massera-Mrs Peron-Lopez Rega triangle after the president took a vacation in Mar del Plata, where she stayed at Chapadmalal and the Marine Non-Commissioned Officers School.

When it looked like Mr Villone had finished essaying all of the favorable arguments that could be expected of him in connection with Lopez Rega, he uttered one final argument, one last appeal explaining why we should support him: "The liberals are making a serious mistake by attacking Lopez Rega," he said, "because he is the only obstacle preventing the labor leaders, starting with Lorenzo Miguel, from making Peronism a Labor Party."

From Illia to Lopez Rega

Four months later, in May 1975, Economy Minister Celestino Rodrigo was pushed over the edge by Casildo Herrera, the secretary general of the CGT [General Labor Confederation], and Lorenzo Miguel, the secretary general of "the 62" Peronist Trade Union Organizations. Rodrigo had been a Lopez Rega protege, and his downfall, universally known as "el Rodrigazo," led to exile 30 days later for the astrologer who had climbed the highest amid the quicksands of Argentine politics. We could not in all truth say that during the union mobilization that shattered Lopez Rega's far-reaching power, most of the superior officers of the Armed Forces were apathetic about the ultimate outcome. After all, it was up to these officers to finish the operation off, because they were the ones who put the former social welfare minister on the plane that took him out of the country.

A chapter remains to be written on the relations between the army and Argentine politics in recent decades. It will have to discuss how some sector of the military might have actively accompanied Peronist labor leaders during the 1960's, when the battle plan against Dr Illia's constitutional government was launched. We now have some usable reference material in this regard in the form of Timerman's confessions to General Camps when he was detained in the latter's custody. "I was the founder and editor of CONFIRMADO," he told his guard. "The magazine's main incentive, main goal was to lay the groundwork for the overthrow of Arturo Illia, on the assumption that the Armed Forces would occupy the power vacuum, because that was our theory, the power vacuum, and that the figure we had to put before the public was General Ongania."

We are finally now learning the details about things we always assumed we knew. When all is said and done, what did it all mean when the big shots in the Peronist labor movement attended Ongania's inauguration wearing ties and other finery?

New Developments

Of course the Peronist labor leaders later tried to turn against the military regime that began in June 1966, but they failed in several rash attempts, among other reasons because of dissension among their ranks. Nevertheless, if we compare yesterday's rally with similar rallies in the 1950's and 1960's, we will notice that union power is more divided than ever and that labor protests are child's play compared to 10, 15 or 20 years ago. Whether we liked it or not, a work stoppage used to be more or less what the word denotes. "Stoppage" obviously comes from "to stop." But what connection is there between "to stop" and the rally that, according to general estimates, more than 80 percent of the country's production work force ignored, even including among the strikers those who have been laid off?

True, this time we cannot point to suspicions that one or another military group or sector encouraged the stoppage. Nevertheless, it is noteworthy that never before have we had so many reasons to conjecture that in certain manu-

facturing lines (textiles or metallurgy perhaps?) the owners did not offer convincing resistance to a worker battle plan.

Yesterday's partial and, therefore, unsuccessful work stoppage was intended to be a self-styled example of former Peronist labor movement practices. No one better than a true nonparticipant like Mr Lorenzo Miguel, who was traveling in Europe yesterday, embodies this new eagerness to resurrect the old and seemingly outmoded idea that without "the 62" Peronism is nothing. We must therefore conclude that Deolindo Bittel, the notary, had a keen grasp of the situation when the day before yesterday at the multiparty meeting he turned a cold shoulder to the appeal by another of his fellow party members to elicit from the five attending parties a declaration of explicit solidarity with the rally of the so-called "CGT." If the labor leaders become more important, what role will politicians like Bittel be left with?

We quite properly said the so-called "CGT" because its show of strength yesterday is not in keeping with a true labor union federation. In any case, the name still poses an inconvenience (that will have to be resolved somewhere along the road) for everyone and particularly for its adversaries in the National Labor Commission (Jorge Triacca, Luis Guerrero) and the Commission of "the 20," which did not support the work stoppage.

The General Context

Meanwhile, we should not lose sight of the general context in assessing yesterday's rally. More people than we can remember in the past are saying today that the country is going through its worst economic crisis ever; the workers' buying power has been declining across-the-board; the unemployment rate has been nearing the critical five percent mark, and in a nutshell, there is appreciable nationwide dissatisfaction with the course of events. In light of all this and given the encouragement that the Communist Party and other kindred forces (which had reservations about the April 1979 strike) gave to the Peronist labor leaders who organized yesterday's protest, how could the demonstration have been so relatively ineffectual? The greatest irony that a police chief can allow himself was afforded yesterday morning to General Sasiain, who at an early hour felt he could reasonably take half of the special surveillance service troops he had assigned off the job.

One backed the work stoppage; the other wanted no strike and a social truce. In a nutshell, two union factions vied yesterday for something that might by this time be impossible now that Peron is dead: control over all of the labor forces that rally to the ambiguous cry of "the banners of Peronism."

Without Ideological Substance

The protest a few hours ago by part of the Peronist labor movement showed what populism consists of: sheer action, devoid of ideological substance, contrary to what Mrs Peron's press secretary thought he saw in this labor movement. It was union member against union member yesterday in a bid to strengthen one faction and give it decision-making capability over the other. Years ago they also invoked the name of Mrs Peron, thus hoping to govern through her. And they

also took up arms against the Montoneros and the ERP [People's Revolutionary Army], but without providing a properly clarified ideological response. With their weapons and with the assertion that Peron was the sole authority, organized labor confronted Firmenich and company, just as in 1962 they challenged Peron's authority and forced him to accept the electoral showdown that he was opposed to.

Looking at the overall context, we must conclude that yesterday's stoppage was an even bigger failure than the last general strike ordered in April 1979 by the Commission of "the 25," the predecessor of the "CGT." Mere action, ordered from the top down, has been insufficient in itself to produce a truly serious happening in the country.

Apart from this, the union members who still support Mrs Peron's "leadership" will have time to reflect on the prospects that might be opened up by this fellow Firmenich, who has just said without batting en eye that the release of "Isabelita" was "a triumph of the people."

Lack of Confidence

Buenos Aires LA PRENSA in Spanish 23 Jul 81 p 18

[Article by Manfred Schonfeld: "The Protest That Went Unvoiced"]

[Text] The protest that was supposed to have been expressed through yesterday's "rally" (a general work stoppage, in other words) has for now been held back and has gone unvoiced. There was a work stoppage, but it was very limited. It was not the genuinely large-scale strike that would have virtually shut the country down, as its organizers (the labor leaders of the so-called new "CGT" [General Labor Confederation]) had anticipated and as certain segments of the population had been expecting, some fearfully, others hopefully.

It makes little sense to bandy about percentages of absenteeism in this or that line of production or services. Numbers can easily get confused, especially in the case of industries in which, in any event, an increasing number of companies have closed down either because of a lack of work, because they are being liquidated or because they have gone bankrupt.

One thing is certain: no matter how relatively important the absenteeism figures and percentages are (for the reasons I have noted and for others), the general strike was not successful; it failed.

When a work stoppage like this (whether you call it a "protest rally" or a "general strike" and whether or not it is political in nature) is successful, you can sense it in the air, and there is no need to compare numbers from official, semiofficial or private sources. When a country is shut down by decision of its union organizations (whether labor unions, employer unions or a combination of the two, examples of all of which are to be found in world history), public opinion feels and takes note of it in a practically natural way.

If we gage yesterday's events on this basis, it becomes obvious that the protest did not hit home with the masses.

Reason for Failure

Although I do not feel it would be of much interest to examine (even for immediate journalistic purposes) the ups and downs of the absenteeism curves by field of employment or geographic area, partly because of the aforementioned difficulties in establishing figures that accurately represent the facts, I do feel, however, that we ought to reflect on the reason for the strike's failure.

I feel that among the several explanations that could be cited, three stand out. Two are relatively superficial, while the other might represent an attempt to analyze the matter a bit more deeply.

Of the two explanations that I termed superficial, one will more than likely be advanced by the government. It will simply claim that if the "protest rally" failed, it was because most of the public did not heed the appeal by its organizers and that if they did not heed it, it was because, in good conscience, most of the public does not feel a need to protest or to join a protest and that if they do not feel this need, it is because, in general, things are not as bad as some people (the government's critics in particular) say they are.

The other explanation (which I also termed superficial) is the one we can expect from the organizers of the "rally." For the time being, they will try to demonstrate that it was not a failure, point out all of the organizational and other difficulties that hampered the prospects for success and claim that many wage earners were afraid that their employers would use their absence as a pretext to try and fire them without compensation, etc.

They will also advance the argument, if not publicly, at least in private, that the absenteeism in the manufacturing sector should be considered double what the cold figures indicate, inasmuch as public transportation was in operation; in other words, the workers who took part in the stoppage did so with the knowledge that they could not cite the lack of transportation as an excuse.

A Possible Deeper Reason: Lack of Trust

As I suggested, the two explanations I have outlined (which are diametrically opposed in terms of their source and purpose) touch merely the surface of current realities in Argentina.

My interpretation of the present situation is that the country's population is more deeply mired in disbelief and lack of trust than in any other period of its recent history.

They do not trust the authorities, but they do not trust political leaders either. As far as organized labor is concerned, they do not even trust heads of unions, some of which are intervened while others are guided by bosses and and chiefs of days gone by whose authority has not been put to the test, who have not agreed to have their mandates renewed by the rank-and-file and who are suspected by the masses that make up the rank-and-file (more than likely quite rightly in many cases) of either not being as honest as they seem, of making deals with whomever is available (government, business, etc) without consulting the rank-and-file or of knowingly acting against the will of the rank-and-file or of being responsive to other partisan interests.

Behind the Back of the Sovereign

If we start with the premise that in a republic, in a democratic system the citizenry is the sovereign, then our citizenry must be noticing that there are more and more groups in our country that are acting behind the back of the sovereign, and not just temporarily or during a brief time of emergency, but rather with prospects that such a situation will become something lasting and institutionalized.

These groups consist of all those who are in some way involved in the interplay of powers (government leaders, military officers with political power, civilians who are allied with these military officers, party leaders who hope to ally themselves with the military and with the civilians who have power, and last but not least, prominent labor leaders who have been in such alliances for some time now or who entertain the hope of entering one).

With each passing day, our sovereign citizens feel more and more powerless vis-a-vis the densely intertwined tangle of all these forces, increasingly fed up with seeing how they operate behind their backs or over their heads, and less and less in the mood to denounce what they by now accept (after so many repeated disappointments) as a supposedly incurable national malady.

If there was no large-scale protest yesterday, I do not think it was because there is no reason to protest. There are more than enough reasons; even a child can see that. Nor do I think that it was because the protest was organized by one sector instead of another; organizational shortcomings do not cause large-scale demonstrations to flop when people really want to express what they feel.

The reason for the failure is that events (the sum total of events, the conclusions that people arrive at based on them) are winning out over most Argentines by default. People do not expect major changes; they are resigned, have too many problems of their own and have even lost their desire to protest.

If the government thinks, however, that this reflection of the country's socio-labor and spiritual realities has not [illegible]d it a victory, it is wrong. It's better to mount a skittish animal tha[illegible]e that is being, shall we say, worn out.

UNION LEADER DISCUSSES COUNTRY'S CRITICAL SITUATION

Havana JUVENTUD REBELDE 1 Jun 81 p 4

[Interview with Enrique Mora, Trade Union leader and delegate of the newspaper employees of that country and to the sixth Latin American Seminar of Journalists.]

"The critical situation in which the people of Costa Rica live becomes more difficult and delicate due to the sizeable concessions obtained by the agricultural and industrial bourgeosie and certain transnational companies which have brought the country to the worst economic crisis in the last five decades."

The foregoing was told to this newspaper by Enrique Mora, member of the Journalists' Trade Union of Costa Rica and delegate to the Sixth Latin American Seminar of Journalists which is meeting at the Union of Cuban Journalists [UPEC] headquarters in Havana. Mora pointed out the facts which engulf Costa Rica in an economic collapse: the 50 percent devaluation on the currency,increase in unemployment, the bankruptcy of many small and medium-sized businesses as well as wide-spread social deterioration. All this, as to be expected, has provoked a reaction from the country's working masses.

The traditional political parties, adds Enrique Mora, tied to the interests of the bourgeosie and imperialism maintain that the difficult situation existing in Costa Rica will be resolved once the new government is installed after the elections scheduled for next year. However, he added, this is nothing but an optical illusion, since the International Monetary Fund (IMF) controls economic life of the country and will continue to make the rules for the new leaders to follow.

Mora stated "It is no secret that imperialism openly manipulates the political and economic life, not only of Costa Rica, but of many other nations on the continent."

He pointed out that an example of what was stated previously is the 41 million dollar loan which the Costa Rican Government had requested from the IMF in order to ameliorate in some way the deteriorated economic situation. Notwithstanding, surprisingly, the IMF granted 345 million dollars together with the approval of the United States Senate of a donation of 25 million dollars more, but tied to the condition that Costa Rica comply with strict orders from Washington.

One of the orders, he pointed out, was that the Costa Rican Government break consular relations with Cuba, together with similar undertakings in the international sphere. In the national arena, state expenditures of a social nature have already started to be reduced drastically and affect the fields of health, housing construction, education, and the work plans for popular recreation.

Likewise, Mora pointed out that the break in consular relations with Cuba was defended by his country's government based on a document which Cuba had circulated in the United Nations last December 30, and which became known by "chance" five months later, but it is not by coincidence that the Carazo government repeats it just when millions in IMF "aid" and the new North American administration becomes feasible.

Enrique Mora stated finally that, faced with the ever deepening recession, the popular responses have not been long in coming and during the last few weeks Costa Rican workers have intensified their protests. Strikes have been initiated to demand lower prices for necessities, better wages and a guarantee of no lay-offs.

EDUCATION MINISTER REVIEWS EDUCATION PROGRESS

Havana GRANMA WEEKLY in English 5 Jul 81 pp 3-4

[Text]

Comrade Deputies:

IT GIVES me great satisfaction to present to the National Assembly of People's Power this report on the achievements, difficulties, shortcomings and immediate perspectives of education in our country. Since the document was sent to you in advance you will by now have been able to verify how the changes introduced in the field of education over the past 22 years of revolutionary endeavor are amply and minutely recorded in it. My task now is to elaborate on its fundamental aspects, making reference also to the Ministry of Higher Education, which is an integral part of the National Education System.

It is truly a wide gap that separates our present educational development from what existed before the Revolution. Before 1959, education was conditioned by economic, cultural and social underdevelopment, and throughout the history of the neocolonial republic it was one of the sectors that showed the utter neglect and lack of attention with which it was regarded. Schools today, with their principals, teachers, students, administrative and service staffs, are genuine state institutions for learning and teaching. Under the direction of the Party and supported by the youth and mass organizations, they are fully integrated into the process of constructing a new socialist society, a society of which they are one of the main products.

The population census taken in 1953 revealed the deplorable conditions education was in at that time. Out of a population of 4.4 million people over ten years of age, 1 032 000 were totally illiterate — 23.6 percent of that population. A total of 547 000 children between six and 12 years of age were not enrolled in school, and school attendance of those that were enrolled averaged 60.8 percent.

Nowadays Cuba is one giant school: one out of every three inhabitants is studying. If we exclude children under six, the figure becomes one out of every two.

The average educational level of the population is 6th grade, and conditions now exist for raising that average by approximately one grade every three years.

Commander in Chief Fidel Castro's description of education before the Revolution in **History Will Absolve Me** is an impressive accusation:

"Our educational system is perfectly compatible with everything I've just mentioned. Where the peasant doesn't own the land, what need is there for agricultural schools? Where there is no industry, what need is there for technical and vocational schools? Everything follows the same absurd logic; if we don't have one thing we can't have the other. In any small European country there are more than 200 technical and vocational schools; in Cuba only six such schools exist and the graduates have no jobs for their skills. The little rural schoolhouses are attended by a mere half of the school-age children — barefooted, half-naked and undernourished — and frequently the teacher must buy necessary school materials from his own salary. Is this the way to make a nation great?"

The panorama presented by the old society in 1958 can be summarized in the following figures. Only 56.4 percent of the children were enrolled in elementary school, and just 88 000 teenagers attended intermediate level schools; 10 000 teachers were unemployed and the budget of the Ministry of Education amounted to just 79.4 million pesos (11 pesos per inhabitant). What actually went into education was substantially less since many millions found their way into the pockets of the corrupt politicians of the time.

But depressing as it was, that situation could not prevent Cuban public schools from always being a storehouse of the fighting history of our people, their heroes and the best cultural traditions of Cuban nationality. The thoughts of prominent teachers of the last century — Varela, Luz Caballero and Mendive; the teachings of Martí; the unyielding rebelliousness of Frank País and Pepito Tey; these are some of the highest expressions of the patriotism of many Cuban educators who did their best to build better schools and a greater nation.

And today over 1.5 million children in that nation are attending elementary school and over 1 170 000 teenagers are enrolled in intermediate education; some 200 000 future professionals are being trained at university level; over 950 000 students in the various types and levels of education are reaping the benefits of boarding and semi-boarding schools; we now have over 210 000 educational workers, a political, ideological, scientific and technical force whose professional level is constantly rising. In this nation we have earmarked 1349 million pesos annually for educational expenses, equivalent to 138 pesos a year per inhabitant.

The Revolution inherited a centralized and corrupt educational administration, public schools that lacked everything, while the private schools were attended by the children of the privileged class, whose uniforms served to emphasize class distinctions instead of identifying the type or level of education being received by children and young people.

The same evils also afflicted the universities. Enrollment there was structured to conform essentially to the interests of the bourgeoisie instead of to the needs of the country's development. For the sons and daughters of the working class, admission opportunities were practically nil. But historical tradition and prevailing objective conditions meant that the student body claimed the higher education centers as bases for agitation and struggle against corrupt politicians and against dictatorships like those of Machado and Batista, that shed so much of our people's blood.

Immediately after the triumph of the Revolution, profound changes began to be introduced in education. Examples of how the educational services were expanded in the first years were the creation of 10 000 new schools, particularly in the countryside; the conversion of army barracks into schools; and the nationalization of all private schools.

A shortage of teachers and professors was the greatest difficulty that educational development came up against in these years. But we always found revolutionary solutions. To bring education into the country's remotest areas, 3000 volunteer teachers signed up to go to the mountains and later set up the Frank País Vanguard Teachers' Brigade.

Launched in early 1961, the Ana Betancourt educational project was aimed at improving the cultural level of peasant women and helping them along the path to true liberation. Over 150 000 young girls from the mountains improved their school education and then were able to contribute to the transformation of our countryside and to take part in other tasks of the Revolution.

The Literacy Campaign, coming at the time of the great victory at Playa Girón, was another of the Cuban people's great achievements. Besides its huge educational value, it was also a key factor in the country's economic and social development. Its martyrs, Conrado Benítez (teacher), Manuel Ascunce Domenech (student-teacher) and Delfín Sen Cedré (worker-teacher), all murdered by bandits in the Escambray Mountains, gave their lives to this epic endeavor.

The result of that battle was something priceless: a new principle, a concept of education which copes with it integrally, including its social aspects. This is summarized in one of our slogans: "Education is a task for us all."

This year marks the 20th anniversary of the Literacy Campaign and it gives us great revolutionary pride that other peoples of the world can benefit from the experience it gave us.

After the Campaign, a mass scholarship project was announced. The first group of scholarship holders was made up of 40 000 literacy teachers. Many of the rich mansions of the bourgeoisie who had fled the country were used for this huge project, and the residential suburbs of Havana and other cities were soon overflowing with the sons and daughters of workers and peasants.

All these measures contributed to meeting the basic educational needs of children and teenagers in urban and rural areas, without distinctions of sex, race, place of residence and economic level; and in spite of the legacy of past neglect, the Moncada program was quickly carried out.

As of 1961, day-care centers were established, open to children after their 45th day of life, providing care and education in a healthy and happy environment and enabling a growing number of women to start working and take active part in the life of the society. By March 1981 over 96 000 children were enrolled in 832 day-care centers, but for several reasons places available are still below demand.

From 1959 to 1974, elementary school enrollment figures showed a steady rise. In 1975 they began to drop as a consequence of a reduction in the number of students in grades below those normal for their age group, and later because of the lowering in the birthrate. The figure now is 1 592 000 students. Owing to the large number of those who have reached the 6th grade, starting in 1972 intermediate education began to grow steadily, and accordingly higher education enrollment figures went up too. Over the five-year period just ended (1976-80), intermediate education enrollment figures went from some 629 000 students to over 1 177 000.

Special educational programs for children and young people with physical and mental handicaps and behavior problems did not exist at all before the Revolution. This year they had an enrollment of 28 000 students. In spite of the increase registered in this branch over the last few years it is still not possible to meet all needs, especially those of minors with serious behavior problems who run the risk of getting worse if they are not given adequate treatment. Steps to solve this problem are being taken at present.

The adult education program has played a leading role in helping to increase the cultural level of our people. It was organized in the wake of the Literacy Campaign and has given more than 1 400 000 people a 6th-grade education, through the systematic effort of the Central Organization of Cuban Trade Unions, the other mass organizations and the Ministry of Education. Our workers have already started the Battle for the 9th Grade, and are resolutely determined to emerge victorious and make their contribution to the economic and social development of the country.

The Revolution has always paid attention to the training of teachers and professors. The various teacher training programs which existed up to 1976 have been combined in a national network of schools in charge of training teachers to work in schools, preschools, and special education and as school librarians. The higher pedagogical institutes train personnel for teaching the intermediate levels and the Institute of Educational Improvement for working people.

All elementary school teachers who started working without the required training have now graduated. This is a very important step towards the general improvement of the quality of teaching and education as a whole, and is in line with a resolution adopted at the 1st Congress of the Party.

We should mention the important role played by the Manuel Ascunce Domenech University Pedagogical Detachment, which made it possible for students to continue studying at a time when there was a big enrollment boom at the intermediate levels.

In his closing speech at the 2nd Congress of the Young Communist League (UJC), Comrade Fidel posed the need for Cuban youth to organize a movement of 10th-grade students who would be trained as professors, combining their studies with teaching activities. This would go down in educational history as an example of a revolutionary solution, which was carried out with enthusiasm and rigor. The UJC has played a very important role in all this.

There are now more than 162 000 students in the various teacher training institutes. Of these nearly 61 000 correspond to higher pedagogical institutes, whose enrollment was only 5000 some ten years ago.

Following the victory of the Revolution more than 151 000 teachers and professors have graduated and have been active protagonists in the drive for educational development. They have made it possible for us to make our internationalist contribution to sister nations right now more than 3500 Cuban teachers and professors are fulfilling this lofty mission in Nicaragua, Angola, Mozambique, Ethiopia and other parts of the world and by next September there will be 4500.

The training of skilled workers and intermediate technicians has also been given top priority.

In 1959 there were merely three dozen official institutions for technical and professional training, with an enrollment of 15 000 students. In this school year there are 403 institutions with an enrollment of 228 000 students. These figures include educational institutions which are under the jurisdiction of other state agencies and over which the Ministry of Education has methodological control.

To meet the needs of the national economy there are 110 careers for intermediate technicians and 125 for skilled workers, divided into 16 branches. The objective is to turn out specialists with a wide range of abilities.

The social and ideological factors existing prior to the Revolution which excluded women from nearly all technical professions have virtually disappeared. In the current school year, 45.7 percent of the student body, that is, more than 104 000 students, are women.

Since the victory of the Revolution more than 258 000 technicians and skilled workers have graduated from the National Education System, not to mention those of other agencies.

In many schools we have confronted problems in the training of students due to a lack of equipment, antiquated technology, shortage or lack of material for practical work and, in some cases, the lack of workshops. To all this we must add that many production or service enterprises have not offered students possibilities for on-the-job training.

All of these factors, together with the lack of technical bibliography and trained teachers, have adversely affected the academic level of many graduates. Resolution No. 356 of the Executive Committee of the Council of Ministers provides for the furnishing of these institutions with the specialized materials they need and care and upkeep of such material by the corresponding agencies and local organs of People's Power. This has led to great improvements and we are pressing to see that it is fully implemented.

The victory of the Revolution laid the groundwork for the transformation of higher education. The 1962 university reform set guidelines of the highest importance for its development.

In the 1959-1960 academic year there were 28 university disciplines. Now there are 144 disciplines, in keeping with the needs of the economy, science and culture. Higher education students have been encouraged to participate in scientific and technical activity, research, and links between study and work, in accordance with the requirements of their professional training.

In 1959 there were three official universities. The national educational network now contains 39 institutions of higher learning, covering nearly all the provinces. Enrollment has increased from about 15 000 students to a present figure of nearly 200 000. Of this figure 51 percent are workers who are also studying. There are also more than 7000 Cuban students training in the socialist countries, some 6300 of them in the Soviet Union.

Now all children and young people who finish the 6th or 9th grade can be sure of going on to study at the different institutions that make up the national network. Nearly 16 000 children and young people from various countries, mainly Africans and Nicaraguans, are able to study in our country as an expression of Cuba's internationalist policy.

During the period 1976-80 the number of graduates from all institutions of the National Education System was as follows:

— 1 293 000 elementary school students, more than the total of such graduates in the first 16 years of the Revolution;

— 574 800 junior high school students, 7.2 times more than in the previous five-year period;

— 105 100 senior high school students, 4.4 times more than in the previous five-year period;

— 165 500 skilled workers and intermediate technicians, four times more than the previous five-year period;

— 67 400 elementary school teachers, 3.6 times more than in the previous five-year period;

— 755 000 adults achieving the 6th grade, 115 000 graduating from junior high schools and 45 000 from the worker-farmer university extension program;

— 25 500 junior high school teachers graduating from special part-time courses;

— 2473 physical education teachers;

— 62 562 graduates from institutions of higher education, including 23 800 teachers of intermediate education. This figure is 2.7 times more than the previous five-year period.

In the field of intermediate education the figures for the last five years are about equal to the total number of graduates from 1902 to 1975, not including the adults.

As can be seen, one of the biggest achievements of the last decade has been the flow of students through the National Education System. This has meant that during the 1976-80 period there has been a big change in the "educational pyramid" — the ratio between elementary, intermediate and higher education enrollment. In 1958, out of every 100 students, 88.7 were in elementary

school, 11 in intermediate education and 0.3 in higher education. Now the ratio is very different: 54 in elementary education, 40 in intermediate education and six in higher education. The pyramid is thus very similar to those of the developed countries.

The big increase in graduates from junior and senior high school made it possible to increase entry requirements from 6th to 9th grade for teacher training and schools training skilled workers and intermediate technicians, and from junior to senior high for higher pedagogical institutes. These measures will be very important in raising the academic standard of future professionals.

In order to help accomplish these aims, 1577 new educational institutions have been built in the last ten years at a cost of more than 1500 million pesos.

This whole process of educational development has been carried out amidst an intense class struggle characterized by direct confrontation with imperialism, its attacks, its economic blockade and its diversionary ideology.

The leading role taken by our glorious Communist Party in formulating and correctly implementing educational policy has facilitated these educational transformations and the work done by our people in education. The theses and resolutions adopted at the 1st and 2nd Party Congresses clearly stated the objectives, indications and guidelines which our schools are applying towards the communist upbringing of new generations.

The support of society as a whole for educational tasks, a factor of great importance, is reflected in the school itself; we see the influence of the Party, the UJC, the Trade Union of Workers in Education and Science, the José Martí Pioneer Organization, the Federation of Students of Intermediate Education and the Federation of University Students.

The school councils and parents' committees are important means for linking the educational institutions and day-care centers with the community. The family is represented in them, along with members of the Committees for the Defense of the Revolution, the Federation of Cuban Women, the National Association of Small Farmers and the unions. Their aim is to ensure that the schools and day-care centers fulfill their social responsibility.

Together with the extension of educational services there has been a substantial change in the role played by the school in the upbringing of children and young people. An important contribution towards this objective has been made by linking study and work. Steps towards this were first taken in 1962 in the mountains of the eastern part of the country and continued in Camagüey and other provinces until it became nationwide, with the implementation of the program known as the School Goes to the Countryside. Full realization of the idea of combining study and work was achieved with the schools in the countryside, conceived by Fidel and based on the application of this important pedagogical principle set forth by Marx and Martí.

Linking the school to society as a whole has been a constant concern of the Revolution. The students are directly influenced by the Revolution and whenever they have been called upon to carry out extraordinary tasks they have responded enthusiastically and conscientiously. A clear indication of how the children, adolescents and young people of Cuba think and act has been their incorporation into the difficult and complex tasks posed by the Revolution. Their participation in productive work and internationalist tasks, their zealous mass participation in the March of the Fighting People, their integration into the Territorial Troop Militia in response to the threat of armed attack, are examples of the revolutionary feelings of our young people.

The intense work done in the educational field from the very start of the Revolution had its share of problems and shortcomings. However, the valuable pedagogical experiences which we were accumulating and the level of development reached laid the foundation for defining and facing up to the necessary changes.

The Congress on Education and Culture held in 1971 became a debate among Cuban educational personnel which shed light on their political and ideological awareness. It also posed the need for a profound study of the contents of education in order to resolve the incongruities in the curricula and programs, the lack of coordination, the fact that in some fields we were not keeping pace with the development of science and technology, the acute shortage of personnel and materials. Furthermore, the insufficient enrollment capacity in intermediate education, the problem of children who started school late or had to repeat grades. This led to a "bottleneck" in elementary school enrollment and underlined the urgent need to search for solutions to these problems.

Thus we had to revolutionize the very concepts of education. This led to the Plan for the Improvement of the Education System, whose objective was to make education conform to the society we are building, that is, provide the new generations with the appropriate political, intellectual, scientific, technical, physical, moral, aesthetic, polytechnical, work and patriotic-military training. We had to give the National Education System a scientific foundation in line with the methodological and organizational principles of socialist pedagogy.

The Plan's first stage was one of diagnosis and analysis, which revealed the lack of a coherent system of general education. There was a structure for dealing with the different educational levels but without a systematic concept. Elementary schools were supervised by a leadership which structured its activity vertically in relative interdependence with the junior high schools, and these, in turn, with the senior highs. We did not have the current concept of general polytechnical and labor education which covers elementary and intermediate levels and which now constitutes the core of the system.

Technical and professional education was also structured in a vertical manner with no links to general education, leading to incongruities in the contents of education.

Training of teachers was handled by various branches of the Ministry of Education and there were no links to the general education for which teachers were being prepared. A similar lack of coordination existed in other branches.

In order to solve these problems we had to improve the National Education System, focusing on integrity, interrelationships and links that determine its structure. It also had to ensure the harmony of objectives, content and methods along with continuity of education and the organization of teaching and educational work.

In general terms, the results of the initial stages of the Plan have been satisfactory. It has succeeded not only in introducing new curricula and textbooks and defining material needs, but has also come up with a new educational structure and a series of extracurricular activities

to confront this gigantic task. All this has contributed to increasing the students' educational level.

The 1st Congress of the Party approved and determined the objectives and scope of the Plan; it determined the social function of school, its guiding role; the need to strengthen educational work and to train and constantly improve the teacher's qualifications as a political and educational cadre in charge of introducing new plans, programs and textbooks.

We also worked out a plan for upgrading the teaching staff so that they would be acquainted with the educational programs and materials before they were applied. Various methods have been used to accomplish this, including seminars and classroom visits aimed at improving methodology.

In this complex task and the radical changes it implies, problems naturally arise as a result of the process of development and the objective and subjective conditions under which plans were elaborated and applied. Also involved is the struggle between the new and old.

The main problems and shortcomings in the implementation of the Plan have resulted from inadequate understanding of the new programs, incorrect use of educational methods and means, lack of materials, inadequate methodological training, and lack of rigor and a demanding attitude in applying evaluation norms.

We have taken the necessary measures to cope with all these problems, such as the recently concluded seminar for heads of departments and teachers of mathematics, physics and chemistry and guidelines for remedial work in Spanish, reading and math.

We have been aided in all this work by specialists from the USSR and the GDR, who have offered us their valuable experiences.

We must stress that this is a permanent process which will lead to new and more complex scientific and pedagogical tasks.

As a result of the institutional changes made from 1976 on, the new structure of leadership and administration in education on the municipal, provincial and national levels has helped consolidate plans for educational development all over the country and has led to substantial improvements. There has been notable progress in the field of inspection and methodological aid, as shown by the fact that from January 1977 to May 1981, the Ministry of Education alone carried out 78 inspection visits to provincial departments, 2576 to municipal departments and 23 420 to individual schools.

School organization is today accorded the priority it deserves as the basis for the work of the school and the decisive factor in the education of children and young people.

Efficient school organization means fulfillment of the schedule, daily and otherwise; fulfillment of norms for productive work; attendance and punctuality of leaders, teachers and professors, students and noneducational workers; taking full advantage of the workday; respecting social and individual property; observing standards of proper behavior and personal appearance; and maintaining proper relations between students and teachers within a framework of socialist morals.

SCHOOL ORGANIZATION SERVES AS THE BASE FOR THE ENTIRE TEACHING ACTIVITY OF THE SCHOOL

There are institutions that have come a long way in this field and, as a whole, progress has been made. However, other centers continue to have problems and shortcomings, such as absences and lack of punctuality on the part of teachers and professors, which has an adverse effect on the students. This situation is particularly acute in rural areas.

In order to improve the quality of elementary schools we must establish both morning and afternoon sessions. Only 27 percent of all students are now attending two sessions a day and in some provinces, such as Las Tunas, Granma and Guantánamo, virtually none are. Given the gradual decline in elementary school enrollment, we will be able to gradually increase the number of students attending two sessions a day.

The basic organizational form of education is the classroom. It is here where the main objectives of the school programs and curricula are fulfilled. Results this year reflect progress over previous years, but are not 100 percent satisfactory since inspections have detected a number of deficiencies. Because of this we are strengthening methodological work and systematic control, because all classes must be good ones, increasing their level in accordance with our development.

An important element in the teaching and educational process is evaluation, which controls results and serves to guide its direction.

The evaluation system makes it possible to detect the educational problem in time so that teachers and students can adopt the necessary measures to prevent irreversible failures at the end of the school year. It is designed to anticipate the nonfulfillment of goals and any setbacks in learning, and it seeks to encourage the students and overcome their shortcomings.

The inspections made have shown that the evaluation system is not fully mastered in all cases and that its application does not always abide by the established norms. These difficulties are found at the various levels and subsystems. We found one example of this in the first two grades of elementary education, where some students were promoted without justification.

Upon completing 1st grade, all the students are supposed to move on to 2nd grade, along with their teachers. In 2nd grade, teachers should work with those who have shortcomings in order to bring them up to par with the rest of the class. No student should be promoted to 3rd grade unless he has mastered the objectives of the preceding grades. Promoting any student unable to read and write to 3rd or a higher grade constitutes a violation.

Investigations made showed that out of over 900 000 students in 3rd to 6th grades, a little over 28 000, or 2.9 percent, couldn't read or write. Today this figure has dropped by more than half, thanks to the steps taken to remedy such irregularities. Although the figure is not significant, to us one single student wrongly promoted merits special attention.

We are also working to remedy the poor preparation of senior high school graduates due, among other factors, to lack of correct study habits and academic discipline.

Promotion is the fundamental indicator of the efficiency of teaching and educational work. It should be the result of the proper organization of daily work, the sound application of the system of teaching principles, the systematic upgrading of the teaching staff, individual and collective study on the part of the students, an enthusiastic emulation program, rigorous educational work and close ties with all student, political and mass organizations.

Promotion should respond to systematic and serious work on the part of the teaching staff and it must necessarily become a struggle for quality. The goal is that all the students be promoted on the basis of mastering the required knowledge.

The goal of the school is that all the students get satisfactory results, as a consequence of good teaching and educational work. The teacher's dedicated and selfless efforts, the creation of a favorable environment for study and work, the careful attention to individual differences, the encouragement of every student and the maintaining of high standards are all fundamental aspects in achieving high rates of promotion. In no way can the application of evaluation norms imply concessions that conspire against academic rigor.

In our commander in chief's own words:

"Promotion is a very important question. No promotion can take place if the requirements have not been fulfilled. Now, when we speak about the quality of promotion, this does not by any means imply that the rate is unimportant. A promotion rate of 40, 50 or 60 percent is not good enough. Therefore, we must struggle for top promotion with top quality. That's our task, that's the slogan that sums it all up. I repeat, top with top."

Promotion rates obtained since 1975 are high and this is a big improvement over the results obtained during the 1960-1970 period. This is especially so if we consider the enrollment boom in intermediate education as of the 1975 school year and the requirement that students pass all subjects before going on to the next grade. Over the last five years the promotion rate has been stabilized, but we must take a more demanding attitude and pay greater attention to quality.

Likewise, prevention of dropouts is a concrete example of the results of the schools' work. In the 1959-69 period, retention rates were very low and although great progress was made in the period between 1970 and 1980, they are still not satisfactory. In the last few years of the preceding five-year period there was a slight drop in the intermediate level, affecting the enrollment rate in the 13-16 age group.

At the start of the 1980-81 school year, the rate for this age group was 79.8 percent, considering population estimates and official enrollment figures for each age group.

According to a study undertaken in February 1980 in cooperation with the State Committee for Statistics which covered 28 municipalities and 23 percent of the population in this age group, 92.5 percent of the young people were in school. However, we must await the results of the upcoming census to confirm this and determine the real magnitude of the problem.

Among the factors which cause dropouts are problems of a sociocultural nature, such as marriage at an early age, which affected some 11 000 students in the 1979-80 school year. Schools will win the battle against dropouts with efficient work and the backing of the school councils, political and mass organizations, the family and society as a whole, and with the elimination of the socioeconomic and cultural factors which have an adverse effect on certain segments of the population.

Educational work can be characterized as a continuous process of shaping the personality of the child or young person. This is a complex task because it is not limited to the school alone. The home life, the example of the parents and teachers, the influence of fellow students, friends, radio and TV programs, cinema; activities of the student organizations and the community in general must form a single coherent, multifaceted system. That is why integral education work directed towards a common objective is so important; all pertinent social factors must come into play.

The school undoubtedly plays the key role in this series of factors. In every educational institution, educational work is carried out in the classroom, in the laboratory, in the workshops, in the cafeteria, the lounges, dormitories, as well as in political, ideological, productive, sports, recreational and cultural activities; that is, educational work is present in every aspect of student life.

Educational work also involves school organization; teaching itself; the work of political and ideological training; correct combination of study and work; vocational training and professional guidance; art education; physical education and sports; participation of the school in political and patriotic-military education, the teaching of Marxism-Leninism; norms of acceptable social conduct, an understanding of ethical values and establishment of a favorable climate for study and work.

Our goal is that educational work be adequately reflected in the upbringing of children and young people. We have made progress in this field but much still remains to be done in order to achieve satisfactory results in all educational institutions. In some cases this work is not accorded the importance it merits; each and every one of the factors is not always dealt with in an integral fashion and at times the work is done in an irregular, routine and superficial manner.

At boarding schools, where the student spends the major part of his time, educational work becomes even more important.

Notable progress has been made in these institutions during the course of this school year, but there are still schools which require great attention and help so that they can use school organization, control and high standards as tools for increasing the efficiency of their work.

It is clear that certain schools are deficient when it comes to instilling correct habits and standards of social conduct and developing a critical attitude towards wrongdoing. There have been ostensible changes and we are constantly strengthening pedagogical and political work and taking a demanding attitude in the schools and in educational leadership positions to eliminate negative conduct, some of which is rooted in the problems which confront society and which schools must help solve. However there are still losses and destruction of social property, lack of discipline and punctuality, late return after leaves, inadequate personal relations among students and between students and teachers, lack of correct habits of social conduct and inadequate hygiene.

Schools must undoubtedly give priority to the work of improving the students' social conduct and manners. We seek conscientious discipline, that is, that good conduct and behavior reflect the principles and standards of communist morality.

Discipline is not one more aspect of educational work but rather the result of its efficiency. Thus we stress improved educational work; every teacher and professor in every school must fulfill his or her educational role

and the work of teachers' collectives must be systematic, uniform and coherent.

Political and ideological training of the students is closely linked to the study and knowledge of Marxism-Leninism, now being systematically taught in the different branches of our educational system. We still don't have enough professors nor enough of the basic texts.

Political and ideological education goes hand in hand with patriotic and military education. Courses on technical-military training, which are being tried out in some schools, will be taught in all senior high schools in the coming school year.

Physical education and school sports, along with art and cultural education, are key factors in the shaping of a communist personality.

Achievements registered in the field of physical education and school sports are well known. However, numerous problems and shortcomings exist: students who skip classes, misuse of class time, inadequate participation in sports activity and, in some schools, the inadequate use, care and upkeep of sports facilities. Another problem is the lack of sports materials, chiefly in elementary schools and special education. The Ministry of Education and the National Institute of Sports, Physical Education and Recreation are presently involved in projects to promote mass participation and improve the quality of the work being done in this field.

Progress has been made in art and cultural education in the different branches of the educational system, especially in elementary schools. With a view to overcoming existing problems and shortcomings with regard to professors, curricula and materials, the Ministries of Education and Culture have taken a series of measures that are reflected in a work plan of the next five years. Such measures reinforce the work that must be done by the school to improve the level of cultural activity.

The combination of study and work, a basic principle of Cuban education which has a decisive influence on our children and young people, has been favorably commented on at the two Party Congresses. The need to improve upon its application in the different branches of education has been stressed.

In elementary schools we now have nearly 600 vegetable gardens and more than 800 productive plots, in which more than 330 000 students are involved. The School Goes to the Countryside program still makes a notable contribution to the economy of the country, with large numbers of students at the intermediate level working on various crops. Problems and shortcomings which still exist in terms of organization and supply are being worked on by the various agencies involved, which are taking a more demanding attitude and striving to exert effective control.

The junior and senior high schools in the countryside supply the principal work force for certain citrus, tobacco, coffee and other harvests and the students' work has been satisfactory.

Absences and lack of punctuality, inadequate sanitary conditions and diet, nonfulfillment of norms, failure to clearly define tasks and shortages of materials are among the problems we are trying to solve.

The scientific-technical clubs, an effective means for vocational training, are being increasingly strengthened and now number more than 31 000. About 480 000 elementary and junior high school students participate in them, that is, a third of the students in those grades. As provided for in Decree 63 of the Executive Committee of the Council of Ministers, work is being done to increase participation in these clubs and raise their quality.

Inspections and reports by the Ministries of Education and Public Health indicate that hygienic and sanitary standards at schools have improved. Among the difficulties which still remain we should mention the serious problems related to the physical condition of some urban and rural centers, the lack of ventilation, illumination and water, inadequate preparation of food, malfunctioning and leaks in new schools caused mainly by faulty construction work and inadequate care and upkeep.

Together with the Ministry of Public Health we are working on a national student protection program for the 1981-83 period, which will be put into effect in the coming school year in coordination with the corresponding department of People's Power.

In some provinces there is a lack of school furniture. Efforts have been made to solve this problem by the start of the next school year.

In the last few years we have also had problems related to delays in the completion of schools and the search for and training of educational and service personnel — all of which affect the students.

The installation and use of laboratories and workshops, and the distribution, redistribution and use of textbooks are other fields with problems which we are working to solve.

We must mention the fact that the Ministry of Culture has made a great effort to have textbooks for the coming school year ready before June 30 so we can send them to the schools before classes start. This will solve a problem we have faced for years.

We should likewise mention the extraordinary work done by collectives of textbook authors. As a result of the increased need posed by the Improvement Plan, during the last few years more than 1000 new titles have been published, making a decisive influence in the development of current educational programs. The groups writing these materials are made up of representatives from the Academy of Sciences, institutions of higher learning, production and service institutions, teachers, professors and methodologists from the municipal, provincial and national levels, under the supervision of the Central Institute of Pedagogical Sciences.

One thing which has helped improve the quality of education is the stability of cadres, chiefly school principals. In order to cope with the sharp boom in intermediate education during the last ten years, we had to select more than 18 000 new leadership cadres. This gave rise to a lack of stability and technical cadres in the municipalities. In many cases methodologists and inspectors were sent to work at new institutions or those with insufficient leadership cadres, and thus had to neglect their previous responsibilities.

The Ministry of Education and the local organs of People's Power have worked to organize and develop the cadre pool and reserves, achieve better control, and undertake systematic evaluations and continuously upgrade personnel to achieve greater efficiency and better placement and promotion of teachers and administrative personnel.

The new system of promotions and graduated pay scale has constituted a step forward for educational workers in the recognition of their merits, while contributing to the stability of teachers, professors and other pedagogical cadres.

Our quantitative and qualitative achievements allow for constant and systematic increases in the quality of education and improvements in the work done by the school; indeed, they require us to struggle for them. Thus, we are continuing to develop the Improvement Plan in order to better the material and technical foundation

of education and intensify scientific and pedagogical activity.

Over the 1981-85 period enrollment in elementary school will continue to decline. Careful study will be given to the future development of the elementary school network, so that while not building schools with low enrollment we will be seeing to it that no child is without a school, no matter how remote the area where he or she lives. Surplus school capacity resulting from declining enrollment will be used to have more children attending two sessions daily, thus increasing the quality of teaching and education in general.

In order to further the overall training of students there will be an increase in physical education, labor studies and art education.

Junior high school enrollment has reached its peak and is expected to remain at its present level, or perhaps decline slightly, in the coming years. With the present installations, and those to be built in this five-year period, we will be able to keep pace and cope with future needs. The teachers we already have, plus those currently in training, will bring departments up to full strength.

We will continue transferring students, chiefly from the eastern provinces to other provinces, to see to it that they continue studying when they finish 6th grade and in order to involve the greatest possible number of students in the study-work program.

In the 1981-85 period some 848 000 students will finish 9th grade. Of these, 412 000 will continue studying in polytechnic schools or institutes and 300 000 in senior high schools; 136 000 will train for careers in education, public health and technical and professional fields. This enrollment structure fits in with existing capacity and the needs of the socioeconomic development of the country.

Senior high school education will continue developing. At least 11 senior high schools in the countryside will be finished in the 1981-85 period, and some junior highs will become senior highs, so that the majority of the students at this level will be participating in the study-work program.

The prevailing promotion and retention rates indicate that 226 000 young people will graduate from 12th grade. Some of these will go on to institutions of higher learning and some of those who don't will study to become intermediate technicians in schools for technical and professional training and in schools of other state agencies.

There are 230 000 students at present in technical and professional education and in the 1981-85 period 44 new polytechnic schools will be built with a capacity for 28 600 students. The number of graduates will come to 375 000 in this five-year period basically as a result of students who enroll with a 9th-grade education. This means the number of graduates will be 2.1 times greater than in the 1976-80 period. In order to improve the training of skilled workers and intermediate-level technicians we are working to better the material and technical foundation of the schools, finish construction work and install workshops and laboratories. These centers must be used efficiently and should be linked to industry.

The continuation of the studies started by the Central Planning Board and aimed at giving us detailed information about the need for skilled labor in the national economy is very important. Breakdowns both by region and by stage are necessary. Such information will make it possible for us to plan enrollment by careers and provinces appropriately, and make the necessary changes in school capacity.

There is a clear need to improve the training of elementary schoolteachers who received their training in systems existing prior to the present plan and need to be brought up to par with those now graduating from teacher training schools. There are more than 1000 teachers in two-year courses set up to cope with this problem, and in the future these studies will be an indispensable qualification. Teachers will also be able to obtain a university degree in elementary education. In the coming years teachers in intermediate education will be required to have a full university education.

In the field of adult education, following on the results obtained in the Battle for the 6th Grade, we will continue working along with the Central Organization of Cuban Trade Unions to ensure that most of those who have not already done so reach the 9th grade. Workers will have the opportunity of completing and improving their technical training in night courses and other special programs of technical and professional education.

It won't be easy to surpass many of the rates and qualitative levels reached in the last few years in terms of enrollment and number of graduates. However, in terms of qualitative improvement we have unlimited possibilities ahead of us.

Now more than ever before, we must take a more demanding attitude and be more efficient in our work. The struggle for quality is the main task of the Ministry of Education in a process that will always require the total mobilization of all forces, because every stage of development will pose greater requirements than the previous one.

Obviously, quality means increasing the scientific, pedagogical and political-ideological training of teaching staff and, in general, educational workers. That is, better work by all those in any way involved with the teaching and educational process. The focus of our work will be the drive for greater efficiency in all aspects of the system, both external and internal.

Efficiency in the internal aspects of the National Education System means cutting down on dropouts in all branches of education; seeing to it that the enrollment rate of young people over the age of 12 who are in school increases; stability and satisfactory flow of enrollment throughout the system; fulfillment of all norms which deal with optimum organization of education and teaching; permanent upgrading of leadership cadres; strengthening support work for the school done by the family, the community, agencies, social institutions and especially political and mass organizations, all of which are part of the school councils. There must be unwavering demands for the fulfillment of all educational objectives and the responsibilities which correspond to each and every person in this great task.

External efficiency has to do with turning out students who can continue their studies and become part of the production or service process with good skills and a full awareness of their responsibilities as workers and members of society; students with sound scientific training and ideological principles. That is, we must educate people whose knowledge, ability and attitude go hand in hand; people willing and able to serve their country wherever necessary, in line with their duty to it and the principles of proletarian internationalism.

The quality of education means better organization and teaching work, better educational work, more discipline, study and training.

Fidel has summed all this up as follows:

"In the coming years our efforts must focus on quality in all fields. Quality in the content of education and

teaching, quality in organization, quality in shaping personality and the awareness of students, quality in discipline and the fulfillment of duty for educational cadres, leaders, department chiefs, professors and all workers in education!"

Comrade deputies, we have presented a detailed report on the development of education, the achievements obtained, problems, shortcomings and the immediate outlook, and we also mentioned some of the measures which were taken to cope with the shortcomings and solve the problems.

Our Revolution allots huge sums of money to the development of education. There may be some material problems, which we will gradually solve, but the matters which we must solve right away and on which we are focusing our attention are subjective matters that depend on us and hamper the development of education. That is something we can solve and are duty bound to do so.

We realize that there is no room for concessions or tolerance in education. We strive to greatly increase the level and quality of education and teaching in all fields. The drive for a demanding attitude and efficiency is the core of our work.

In order to accomplish all this, we count on the wise leadership of the Party, the resolute efforts of the organs of People's Power, the firm and enthusiastic backing of the Trade Union of Workers in Education and Science and the participation of youth and mass organizations.

Our teachers and students are aware of the fundamental tasks they face: production and defense. In education, production means greater quality, discipline and efficiency in work at school; defense means an alert and intransigent stand in the face of the threats, provocations and diversionary maneuvers of the enemy. It also means taking up arms if necessary.

In our advance we are inspired by our people's highest values; their traditions of struggle, unyielding stand in the face of the enemy; their fighting spirit, patriotism, dedication, internationalist spirit and sacrifice. These values are present in the teachers and they are based on the will to work tirelessly with Martí's concept that the best way to say is to do.

We are convinced that "education is the most powerful weapon available to mankind in order to create an ethic and a conscience, to create a sense of duty, organization and discipline, a sense of responsibility."

In all this noble effort, Fidel's teachings guide and inspire our revolutionary pedagogical development in its drive to obtain the supreme objective: the communist upbringing of the new generations.

CSO: 3020/130

RAFAEL RODRIGUEZ ADDRESSES CMEA SESSION

Havana GRANMA WEEKLY REVIEW in English 12 Jul 81 p 8

[Text]

Official version of the speech by Carlos Rafael Rodriguez, member of the Political Bureau of the Communist Party of Cuba and vice-president of the Council of State and of the Council of Ministers, to the 35th session of the Council of Mutual Economic Assistance (CMEA), on July 2, 1981, in Sofia, Bulgaria

Esteemed Comrade President;

Esteemed Heads of Delegation of Member and Invited Countries;

Dear Friends:

THE CUBAN delegation is grateful to the Bulgarian Communist Party, the Government and people of Bulgaria for the friendly welcome we have been given in beautiful Sofia in bloom, the capital and the political center of your fraternal country.

On the express instructions of Comrade Fidel Castro, first secretary of the Central Committee of the Communist Party of Cuba and president of the Council of State and of the Council of Ministers of our country, I want to transmit to the Bulgarian Communists and the people as a whole, and to their dear leader, Comrade Todor Zhivkov, our satisfaction over the success of the 12th Congress of the Bulgarian Communist Party and the victorious advances of Bulgarian society and the economy which were reflected at the Congress.

We would also like to greet all the heads of governments and their representatives gathered here as members of the Council and its delegations. We are pleased to be sharing in the work with guest delegations from countries of Africa and Asia who like us are striving to overcome underdevelopment.

We congratulate you, Comrade Filipov, over the new duties in government leadership which you have been assigned and we wish you great success in this new and important responsibility.

As we meet in this 35th session, we must not only review the results of the work of the Council and its agencies during the period between the 34th and 35th sessions, but also of the work done since 1971 when, with the participation of the Parties and governments then represented in CMEA, the Comprehensive Program was agreed upon.

On reviewing the Executive Committee's report on this decade and comparing our results with those of the world economy as a whole, the superiority of socialism and the certainty of its future victory are made even clearer. The growth of member states during the decade has, of course, not been uniform. Development rates are still unequal and some countries, Cuba among them, are still far from reaching the levels of development and culture attained by the most advanced members of our socialist community. Nor is development linear and continuous in the member states nor in the community as such. Part of the reason for this is that trade between the countries building socialism and the major developed capitalist powers means that the socialist countries have not been able to completely escape the negative consequences of the ups and downs of the capitalist economic world and the inflation which is an outgrowth of that.

THE SOCIALIST ECONOMIES ARE ADVANCING STEADILY AND DEPENDABLY

However, what is notable in the report presented on the results of a decade of implementation of the Comprehensive Program, is that, in spite of all the problems of the moment

and the shortcomings, the socialist economies are advancing steadily and dependably, both in the field of material production as well as in scientific and technical development and increased well-being for the people, which is in essence the main purpose of socialism and communism.

Meanwhile, in the same decade, capitalism has experienced one of the most uncertain periods in its sinister history. The uncertainty continues and will continue because the problems which affect the capitalist economies and capitalism as such can't be solved for good, and it is increasingly difficult to come up with palliatives and temporary solutions.

Over the last ten years there were two occasions when the permanent crisis facing the capitalist system grew so serious as to remind everyone of the financial bankruptcy of 1929 and the ensuing period of the great depression, which lasted several years.

The contradictions between imperialism and the developing countries also became more acute. The underdeveloped countries' desire to have a New International Economic Order is becoming increasingly hard to bring about within the framework of the global negotiations and the misnamed North-South dialogue. Protectionism, the transnationals' offensive and high interest rates are the arrogant response of the big capitalist countries.

The developing countries' over 500 000 million dollars in debts pose a threat to the creditors, the private capitalist banks, and call into question the existence of continued stability on the world financial scene. Sharp contradictions and economic chaos are undoubtedly the key features of the capitalist world.

An analysis of the Comprehensive Program yields totally different results. There are problems which still haven't been solved and some things have moved ahead slowly but the balance sheet presented by the Executive Committee in the report (for which we thank Comrade Lukanov) confirms the strengthening of the socialist community and shows irrefutably that there is a firm scientific policy, agreed upon by all of us, which determines through the Comprehensive Program the specific long-term cooperation programs and joint programs for the realization of common objectives. This leads to solid evolution in the course of which work methods are improved, problems are solved and shortcomings are overcome.

It wouldn't be right for Marxists to close their eyes to certain evident realities. The flunkeys of the capitalist society have made a big uproar about the problems which also developed in the socialist community. But we know — and they know too — that these painful and dramatic situations are not the result of less effectiveness of the socialist system in economic development and the organization of society, but rather the result of mistakes and shortcomings which, far from representing socialist ideas and methods, stem from ignoring or forgetting such ideas and methods.

The progress made in carrying out the Comprehensive Program and the specific programs mentioned in the report is pointed in the right direction.

We share the view expressed in the report regarding the growing role of the International Bank for Economic Cooperation and the International Investment Bank in contributing to the development of our economies. For our part, we are grateful for the cooperation we have received from those two banks of the socialist community and from the central banks of the member states in carrying out Cuba's economic cooperation programs and in helping us resist the financial siege laid on us by U.S. imperialism, which has been tightened due to the aggressive stand of the Reagan administration.

CUBA, VIETNAM AND MONGOLIA: THE CONSTRUCTION OF SOCIALISM UNDER PARTICULARLY DIFFICULT CONDITIONS

We want to stress the importance of the method of holding regular talks on the problems of our economies. As far as Cuba is concerned, we have taken a further step in this direction by establishing long-term links between Cuba's development efforts and our permanent ties with the USSR and the other CMEA member states.

Cuba, esteemed Comrade President and comrade heads and members of delegations, belongs to that group of countries with less development which the report focused on and to which it dedicated a specific chapter. It recognized that Vietnam, Mongolia and Cuba undertake the construction of socialism under especially difficult conditions.

The fact that we are far away from the European socialist countries and close by to U.S. imperialism makes our situation even more serious. It's not just the question of economic blockade — both commercial and financial — and of political isolation which the United States wants to impose on us, to which end it puts pressure on its allies in Europe and Asia and its servants in Latin America; in addition, as everyone knows, we are subjected to the direct and brutally expressed threat of a military blockade, aggravated by insinuations of a direct attack on our country.

Nevertheless, the efforts of our working class and people as a whole, led by the Communist Party of Cuba and its leader, Fidel Castro, coupled with widespread international solidarity and the constant and decisive cooperation we receive from the Soviet Union and other sister socialist nations, have made possible the steady growth of the Cuban economy.

In his Report to the 2nd Congress of the Communist Party of Cuba, which was held at the end of the decade in question, Comrade Fidel Castro said that the Gross National Product increased by an average of four percent a year in the 1976-80 period at regular prices and, as such, was less than anticipated. This reduced growth rate shows, as far as Cuba is concerned, its partial economic dependence on the capitalist market and the impact the world price of sugar has on it.

But this figure does not fully reflect the growth process of the Cuban economy. In the 1976-80 period, investments came to 13 200 million pesos, 75 percent more than in the 1971-75 period. Of this sum, 35 percent was invested in industry and 19 percent in agriculture. Another healthy sign is that we have increased the participation of CMEA member states in Cuba's trade.

There are other indicators of the serious effort being made by the Cuban working people.

The electrical industry grew by just over nine percent a year in the last five years. Productivity of labor increased at a rate of 3.4 percent a year in the same period, an indication of greater efficiency. There was of course a steady increase in the number of people employed, but at the end of the period, full employment proved difficult due to the fact that the children of the baby boom that occurred 20 years ago as a result of the victory of the Revolution reached working age. This initial population increase dropped off to adequate levels as a result of the economic and social development of our country.

The Efforts To Promote Agricultural Mechanization Which Started 20 Years Ago Are Now Bearing Fruit

The efforts to promote agricultural mechanization which started 20 years ago are now bearing fruit. This is due to the participation of thousands of experts and intermediate technicians in agricultural work as a result of the successful educational programs of the Cuban Revolution. Results in the output of root and other vegetables and citrus fruit are evident. Dairy production in Havana province, with some 100 000 dairy cows, has made possible yields of more than 1.2 million liters of milk daily and 12.3 liters per cow this spring.

If we review the Cuban economic picture over the last decade, the results are even more than ten percent a year. The infrastructure was given a boost during the decade. Construction of schools, hospitals and roads increased notably, the merchant marine reached a deadweight of more than 800 000 tons. We have started to systematize industrial development and there was notable progress in the machine and chemical industries. The productivity of labor has increased and the ability of our economy to overcome problems has been demonstrated. The sugarcane and tobacco blights have been quickly eradicated. This year's sugar harvest, although still of limited volume because of the cane smut blight, was the most efficient in Cuban history, and the tobacco harvest was the largest ever.

THE IMPORTANT ROLE OF SOCIALIST COOPERATION

Cuba would like to reemphasize in this 35th session the important role that socialist cooperation, especially from the Soviet Union, plays in our economic development. The opening of the sugarcane harvesters factory, the systematic increase in our electric energy output, the development of our machine industry, the enormous help provided in constructing the nickel plant in Punta Gorda and the first stages of a nuclear energy plant are just some of the areas where we have benefited from Soviet cooperation. This cooperation extends to all spheres of activity, including technological assistance and scientific and technical cooperation.

The German Democratic Republic has recently been involved in several important cooperation projects in Cuba. These include the Karl Marx cement factory, with a production capacity of 1.5 million tons annually, double what the country produced in 1959. The 26 de Julio agricultural tool factory, built with Bulgarian cooperation, will open in the province of Holguín on the date commemorating the assault on the Moncada garrison. Hungary has worked with us in the transportation industry, while Czechoslovakia has played an important part in developing our electrical and machine industries.

In addition to these bilateral cooperation projects, there will be multilateral cooperation in the construction of the Las Camarioca nickel processing plant, with the combined efforts of most of the CMEA member countries. Agreements on the participation of each country will be finished in the next few months, the work schedule will be approved in September and the ground of the plant has already been broken.

Furthermore, during this five-year period, Cuba will begin to see the results of its participation in the joint production and development programs in electronic computation and its specialization in equipment for the sugar industry.

We should recall that at this session of the Council two programs specifically related to our country are scheduled to be finalized. The first relates to the sugar industry and will help Cuba fulfill its pledge to develop its capacity as the principal sugar supplier for the CMEA, with the cooperation of the member states. The second relates to citrus fruit and will allow for a high level of citrus consumption in the socialist countries. In 1980 Cuba exported about 185 000 tons of citrus fruit to the socialist community, and it plans to increase that amount steadily from now on.

This brief explanation of our country's process of economic development over the last decade confirms the fact that today the only valid means of overcoming underdevelopment and satisfying the hopes of the people is socialism. That is why we attach such importance to the growing cooperation of the CMEA with developing countries.

THE INTERNATIONAL SITUATION IS BECOMING INCREASINGLY TENSE AND DANGEROUS

Esteemed Comrade President, the 35th session of the CMEA takes place at a time when the international situation is becoming increasingly tense and dangerous. Once again the language of the cold war is being used and steps are being taken to stimulate the arms race and nuclear rivalry. Attempts are being made to justify acts of blatant military aggression such as Israel's attack on Iraq. The internal stability of socialist countries is being threatened.

Under these circumstances, the high ideals embodied in socialism become even more compelling. Without making any concessions or retreating in any way, socialism has delineated a peace program in response to the threat of war, through the wise and mature words of Comrade Brezhnev at the 26th Congress of the CPSU and at the Congress of the Communist Party of Czechoslovakia. We subscribe to this program. Cuba, which is prepared to defend every inch of its soil and to keep its obligations to help defend the Third World countries and the socialist countries against any insane military adventure, thus confirms the clear statement of the first secretary of the Central Committee of the Communist Party of Cuba, Fidel Castro, at the Party's 2nd Congress. Cuba wants peace and will work with all those concerned about peace.

Thank you very much.

MILITARY ENTERPRISES HOLD REVIEW MEETING

Havana VERDE OLIVO in Spanish 14 Jun 81 pp 56, 57

[Article by Ruben Fonseca]

[Text] The third meeting of chief mechanics from Military Industrial Enterprises [EMI] took place at the Grito de Baire EMI since, in 1981, that enterprise registered the highest achievements in the spheres of production, planning and others.

Attended by representatives of all the EMI's, the meeting was pleasant and thorough and so were the six reports covering every basic aspect of the tasks performed by chief mechanics from the viewpoint of the resolutions dealing with work safety and hygiene and with standardization.

The purpose of the meeting was to discuss and approve proposals to improve the regulations applicable to that specialized field: the Service Regulation for Chief Mechanics and the system of preventive planned maintenance of powered machines.

During the meeting, which lasted 3 days, chief mechanics and Soviet experts who attended the meeting shared with the others their experiences in their respective fields of expertise explaining how they do their work.

To help publicize their experience regarding the maintenance of machine-tool equipment, there was an exhibition next to the hall where the meeting took place. It had more than 300 exhibits and innovations created by the various military industrial enterprises.

There is no question that the exhibits are proof of the progress made by experts and innovators in their various enterprises.

Before summing up the meeting, the engineer Lt. Col. Jose R Sauquet gave incentive awards: the first prize went to chief mechanic Luis Amalio Alvarez Morales of the "Grito de Baire" enterprise; the second prize to the engineer Capt. Eulalio Estiu Alonso of the Gran Revolucion Socialista de Octubre enterprise and the third prize to Lt. Cmdr. Jose Barreras of the Granma Revolutionary Navy enterprise.

The third conference of chief mechanics was unquestionably more rewarding than previous ones from the viewpoint of the caliber of the speeches delivered and position papers discussed and of the exchange of experiences.

PREMIUM PAY FOR SERVICE WORKERS DISCUSSED

Havana JUVENTUD REBELDE in Spanish 10 Jun 81 p 2

[Article by Adolfo Gomez]

[Text] We devote this column to answering a reader's letter sent to us by Daysi Roque who works for the Articolor photographic laboratory in Havana City.

Daysi writes that she is an office clerk, grade A, working in that unit of the Diez de Octubre Municipal Services Enterprises where workers are entitled to receive a premium payment for overfulfilling the targets of the economic technical plan for the first 6 months of this year.

This benefit was granted to the production workers as well as to the production manager, the quality control manager and the administrator. Daysi wonders why office workers are not entitled to that premium payment.

After consulting the State Committee for Labor and Social Services [CETSS], that agency explained that Decree No 50, issued by the Executive Committee of the Council of Ministers on 19 October 1979, stipulates that premium payments will apply to manual and service workers as well as to administrators, technicians and managers. The last three categories will receive the premium if they are directly connected with the production process or with the service activity.

In the First Annex of Directive No 379, issued by the CETSS, the section dealing with photography dispatching does not mention any administrative worker as being entitled to premium payments.

This is because during the discussions and reviews carried out by that State Committee with the Ministry of Domestic Trade and with the National Union of Commercial and Restaurant Workers, it was decided that office workers employed in that type of establishments are not directly connected with the production process and, therefore, will be excluded from the benefits mentioned in the said directive.

In conclusion, it is evident that administrative workers employed in these photographic plants are not entitled to receive premium payments since they are not directly connected with the production process.

However, the CETSS considers that it has the duty to make the required adjustments in the above-mentioned case if, in this particular instance, an administrative worker was directly connected with the production side of the delivery of services.

If this applies to Daysi's case (or to other workers in the dispatching section under similar circumstances), they should get in touch with the Department of Commerce and Gastronomy of the State Committee for Labor where they will be given specific instructions to determine whether changes to the provisions are required.

This column would be very pleased if those who take steps to clarify and rectify this matter would let us know the outcome of their action to inform our readers.

HIGH SCHOOL GRADUATES WORK PROGRAM EXPLAINED

Havana JUVENTUD REBELDE in Spanish 10 Jun 81 p 2

[Text] Graduates from higher education establishments and from intermediate higher level technical and vocational schools who are assigned to centralized positions should sign a work contract with the agencies to which they have been assigned to do their Social Service.

By that contract, which cannot extend beyond 3 years, the graduate commits himself to do a specific job in the post to which he has been assigned and to observe the rules of work discipline, the collective contract and the by-laws of that agency.

On the other hand, the agency must assign to the graduate a job or post in his field of specialization or study, must pay him wages and must comply with the working conditions and other working rights stipulated by the law as well as those contained in collective contracts and by-laws.

The type of contract used will be the standard contract which indicates, among other things, the job or position, a detailed job description, the workplace and work schedule, the duration of the working day, the amount to be paid and the method of payment.

Contract conditions will become void if they entail giving up or impairing the rights of the workers recognized by the law, if they violate those contained in collective work contracts or in the by-laws, or if they grant rights which are not specified in the regulations in force.

It is understood that the contract will be changed if the agency's requirements call for the worker to be transferred--his transfer can also take place in an emergency situation--when the type of work involved is discontinued or for reasons of indiscipline or promotion.

Those graduates who are not selected for centralized positions in accordance with the Annual Appointment Plan prepared by the Central Planning Board, can be directly engaged by entities without being subjected to the regulations applicable to the Social Service.

FAR POLITICAL SECTIONS HOLD NATIONAL MEETING

Havana VERDE OLIVO in Spanish 14 Jun 81 pp 56, 57

[Text] The Troops Construction and Housing Political Section organized a seminar for the party's organization front which was attended by organizers, documentators, secretaries of adjunct commissions and professional secretaries of party committees.

The main report presented at the meeting introduced, in a spirit of criticism and self-criticism, various aspects of the party's internal life such as: preparation and running of meetings; report on the planning of the party political work; recruiting and growth activities, and others. It showed that 81 percent of the new members recruited in that military branch were workers who are directly involved in the production of material goods. The situation regarding criticism and self-criticism was also assessed as were other aspects of the party's work.

During the discussions on the report, there were many statements aimed at solving the problems raised and other problems which come up in party work. These problems were seriously analyzed by the participants.

Another important aspect of the seminar were the position papers introduced by some party leaders and by secretaries of adjunct commissions.

There was also a visit to a brigade of the Military Construction Enterprise No 5 where the group secretary and the activists spoke about what that enterprise was doing to support production particularly about their efforts to promote quality work.

The chief of the construction department summed up the meeting and he mentioned how important it was to fulfill the 1981 Economic Technical Plan and to complete the projects on schedule and with the required quality work.

He also said that it was necessary to enlist the cooperation of the masses to solve problems arising in the enterprises and to step up party work in the oversight and strict management of the enterprises and units.

MININT 20TH ANNIVERSARY HELD, FIDEL CASTRO PRESIDES

Havana VERDE OLIVO in Spanish 14 Jun 81 pp 10-13

[Text] "Today there can be nothing more important for us than knowing that 20 years ago, actually a little longer, we undertook this task in conjunction with the people and now we have arrived here with the people. Our common bonds, far from becoming weaker, have grown extraordinarily stronger. We have not become separated from the masses and never will. Our achievements are their own achievements. Our strength is theirs, our authority is their authority, our thinking is their thinking. We are now and always will be what Camilo said about our Rebel Army: the people in uniform."

These are the words of Interior Minister Ramiro Valdes Menendez, a member of the Politburo, during his closing speech at the principal ceremony marking the 20th anniversary of the founding of MININT [Ministry of the Interior], held 6 June in the Karl Marx Theater.

Commander in Chief Fidel Castro, first secretary of the party Central Committee and president of the Council of State and of the government, presided over the ceremony along with other members of the Politburo, Secretariat, and Central Committee, members of the leadership group of MININT, heads of invited delegations from other nations attending the 20th anniversary celebrations, specialists from allied nations working in Cuba and family members of MININT combatants who died fighting the enemy.

At the ceremony a speech was made by Lt Gen Ywing Churbanov, of the Soviet Union, who stated he considered it a mission of honor given him by Leonid Brezhnev, general secretary of the CPSU and chairman of the Presidium of the Supreme Soviet of that nation, to deliver the warmest congratulations to the MININT combatants on their 20th anniversary and to all the Cuban people, wishing them yet more victories in the construction of the new society.

Special remarks were made also by the representative of the fraternal people of Nicaragua, Commander of the Revolution Tomas Borge, interior minister of that nation, who in the leadership of the Sandinist National Liberation Front and the ministry he heads, delivered an affectionate greeting to the MININT combatants and to all our people.

Later he emphasized that it was difficult to state in words the affection, respect and gratitude felt by the people of Nicaragua and their revolution toward the Cuban people and their revolution.

In another part of his speech Borge stated, "The imperialists took away our wheat, but they will never be able to take away our dignity and pride. They can make ashes out of us and wipe us off the map but they can never make ashes of our dignity."

At the beginning of the ceremony, after the playing of the national anthem, a group of Pioneers presented tableaux of certain aspects of the labor of MININT combatants. After the scenic presentation, groups of Pioneers brought flowers to Fidel and the others in the presiding group. Then a Pioneer read a communique, and lastly tribute was paid to Fidel and Ramiro by representatives of the Pioneers.

When he continued with the ceremony Ramiro Valdes noted that all the political and mass organizations, all the agencies and the whole people, beginning with a fraternal greeting from the FAR [Revolutionary Armed Forces] and especially its minister, had gladly joined in the celebration of these 20 years of struggle, efforts and achievements by MININT.

He noted the extraordinary value of this demonstration of confidence, this total unity, this support and affection from our people, and added that there is nothing which could stimulate them more or more properly reward the extra efforts and sacrifices of the MININT workers, nothing which could make them feel more dedicated and willing to give their all in order to improve even more the quality and efficiency of the work of this organization.

After reviewing the origin and development of MININT and the work its members have accomplished during these 20 years in defending the revolution and the victories of our people over internal and external enemies, Ramiro Valdes expressed thanks to the party, to the political and mass organizations and the state agencies for the valuable help given to the interior ministry, and gave thanks especially to the persons who have been its leaders and guides, the most zealous and vigilant protectors of the authority, prestige and fighting strength of this ministry, that is, Fidel and Raul.

In another part of his speech he called to mind the glorious combatants who have given their lives over these 20 years and marked with their blood the road to this 20th anniversary. Of them he said, "Today they are our watchful conscience, our inviolable commitment, our flag of combat."

Ramiro Valdes concluded by saying, "On a day like this 20th anniversary we can say with no fear of being mistaken that there will be no road too difficult for us and no task too complicated for us to complete, that we shall defend until death if necessary the welfare and tranquility of our heroic people. We will never fail to follow the guidance of the one who has been our infallible leader over all these long years; we will always carry in our hearts his firmness, his soicism and his unquenchable faith in victory; we are and always will be untiring sentinels of the nation and the revolution."

Conferring of Service Award on the Minister of the Interior

Interior Minister Ramiro Valdes conferred the Distinguished Service Award on Commander in Chief Fidel Castro at a solemn ceremony on the evening of 6 June at the Cubanacan ceremonial hall.

This high MININT honor was conferred also on Gen Raul Castro, second secretary of the party Central Committee and FAR minister, and also on Comrades Juan Almeida, Ramiro Valdes, Guillermo Garcia and Sergio del Valle, members of the Politburo. Another recipient of the award was Gen Abelardo Colome, alternate member of the Politburo.

Fidel and Almeida in their turn conferred the Distinguished Service Award on the Minister of the Interior and on a group of generals, chiefs and officials of that agency, beginning with Gen Juan Abrantes, first vice minister of MININT.

This high honor was conferred also on various members of the Central Committee, heads of state agencies and other comrades in recognition of their services to the interior ministry.

The various proclamations of the interior minister conferring the awards were read to the assembly by Col Haydee Diaz.

After the award ceremony, Fidel and the other members of the Politburo chatted fraternally with the persons who had received the decorations and with the other guests. It was an unforgettable evening.

BEST EJT BRIGADE IN CURRENT CANE HARVEST HONORED

Havana VERDE OLIVO in Spanish 21 Jun 81 p 56

[Article by Miguel Benitez: "1980-81: EJT's Greatest Sugar Harvest"]

[Text] The role performed by the Youth Labor Army (EJT) in the sugar harvest which was just completed clearly deserves review here in terms of some of the totals attained, which prove again that this organization is Cuba's greatest resource for manual cutting of cane.

The accomplishments are especially praiseworthy in view of the fact that in the last harvest the EJT forces supplied 13 mills with more than had been planned initially; obviously the cane cutters made an all-out effort.

The results are compelling: during this harvest the EJT cut one-fifth of the cane harvested manually throughout Cuba and 11 percent of the total refined product.

Average productivity per worker was 300 arrobas, 117 percent of the figure planned and the highest average attained by any group working in the harvest.

In productivity alone there was an average increase of 25 arrobas per worker. All the groups exceeded their production quotas, especially Pinar del Rio and Matanzas, whose figures went up 89 and 45 arrobas per worker, respectively.

As to the delivery of cane to the refineries, the EJT met its goal of 106 percent with a total of more than 620 million arrobas. It is noteworthy that in comparison with last year's harvest 7 million additional arrobas were harvested this year.

It is especially important that this increase in the amount of cane cut was accomplished during a harvest which was 20 days shorter than last year's. In this year's harvest the EJT also harvested more than in any other of the eight in which it has participated.
